"The discussion on 'practice as the sole criterion of truth' was a key battle in bringing order out of chaos and reversing the course of history. Shanghai was not only late in coming out with its stand and hesitant in voicing out its view, Che Wenyi, the then director of the Propaganda Department, also repeatedly prohibited discussion on this subject. It was only after the fourth plenary session of the Central Committee, when the trend had become very clear that 'Che' was discarded to protect the 'shuai' [referring to the pieces in Chinese chess] 'that wheels of the Che were made to roll.'

"Some people who are not acquainted with the truth of the matter regard Peng Chong as a pragmatist. He himself also seems to regard himself as such. It is not surprising that the venerable D (referring to the scientist) said you 'have missed the larger picture.' Let me ask you: Judging from his actions, what does he have in common with Zhao Ziyang and the others?"

I asked: "It is not true that Shanghai's economy was not plunged into chaos and has recovered quite rapidly?"

Mr C took a sip of tea and then smirking, he said: "They do not deserve the credit. The industrial base of Shanghai has always been good and its financial income constitute one-eighth of total national revenue income. Under the control of the 'gang of four,' the policy was 'create chaos in the whole country but maintain stability in Shanghai.' Therefore, in this respect, things continued on their normal course in Shanghai and there was really no chaos. So, the 'troika' used this as their capital to show off their achievement to the central authorities and to show that their policy of 'three nots' (not eliminating the pernicious influence of the gang, not implementing party principles and not carrying out policies) is a 'secret formula.'

"They are so lenient toward the 'gang of four' and their remnant followers yet so ferocious toward young people who dare to pursue and uphold truth and ordered the execution of one such young man. To use the word of the 'gang of four': Is this not monstrous absurdity!"

I was surprised and asked: "Was there such a thing?"

Mr C answered without any hesitation: "Yes! This news has been secretly spreading among the people of Shanghai!"

"Please, Venerable Sir, tell me the details."

"I do not know the full details of the story. According to my friend, what happened was:

"There was a student in the school of physics of the Huadong Normal University who was very good in his studies. He was dragged out to be criticized and struggled against by the workers' propaganda team as an example of 'white and expert.' They prohibited him from reading books on physics and ordered him to read only works on Marxism-Leninism.

"This student had a certain doggedness and took everything seriously. He thought that if they went me to study Marxism-Leninism well, then I will do that and have a look at what Marxism-Leninism has to offer. From then on, he studied hard day and night and read through almost all works by Marx, Engels, Lenin and Stalin. He also almost memorized the whole of 'Capital' and carefully read the works of Mao Zedong. He compared Mao's work with his predecessors' and with his own words and deeds during his old age. The conclusion he arrived at was: Chairman Mao's words and deeds during his old age has nothing in common with the principles of Marxism-Leninism. In a group study session, he quietly presented this view. Naturally, this immediately entailed great disaster. The lackeys of the 'gang of four' and the workers' propaganda team accused him of 'launching a vicious attack' and being an active counterrevolutionary.

He refused to admit this 'crime' and was therefore thrown into prison. After the smashing of the 'gang of four,' he was released as a result of the 'leniency' of the new leadership. But still, he was considered to have reactionary viewpoints and was isolated for interrogation. One day, he wrote a letter to his fiancee saying that he did not want to hide his views and had written them down in detail for her to see as soon as it was opportune. He also declared solemnly that: The marriage of two individuals has to have a common ideological basis. If she agreed to his views, they could prepare to get married after he obtained his freedom, if not, she was requested to look for another partner in order not to waste their time.

"This letter fell into the hands of the powerholders. That very night, several husky men broke into his room. He immediately tore the draft of his essay into small pieces and intended to swallow them. The intruders choked him and forced him to spit them out. However, the small bits of paper could not be put together again. They then beat him up and ordered him to rewrite the piece. He wrote his views down in detail. Aside from the point I mentioned a while ago, he also held that Chairman Mao despised and hated intellectuals. This was first manifested during the antirightist campaign in 1957 wherein he tried to punish one to serve as a warning to a hundred and suppressed a large number of intellectuals. This made other intellectuals afraid to think independently and 'to say careless things and make careless moves.' At that time, Chairman Mao noticed that there were also people in the party who were disobedient and who disagreed with his method. He then persecuted Peng Dehuai and launched the antirightist campaign. After he succeeded he made further step-by-step preparations and finally, launched the Great Cultural Revolution.

"He also said that the proletariat ought to be open and aboveboard and ought not to engage in conspiracies. As to political trickery, that was a political degeneration.

"Naturally, the powerholders at the Normal University at that time thought that these views constituted unpardonable heresy. They immediately ordered the arrest of this student and he was thrown back into prison. This case was reported to the municipal CCP committee which was headed by the 'troika.' The municipal CCP committee reported to the central authorities. It was alleged that Wang Dongxing, who was then in charge of personnel, judged this to be a serious case of counterrevolution and 'ordered' the execution of the offender. Thus, this firm and uncompromising young man lost his life!"

I immediately asked for the name of the young man.

"The professor who told me the story spoke with a Ningbo accent. I did not hear clearly. The name is Wang Shengeng or maybe Wang Xinggang."

"When did this happen?"

"Autumn of 1977."

"That is shocking! Zhang Zhixin was persecuted to death by the 'gang of four' and their diehard followers in Liaoning. How could this lawless thing happen nearly 1 year after the smashing of the 'gang of four'!"

Mr C said coldly: "What is so strange about that? Later, they stubbornly opposed and resisted the discussion on practice as the sole criterion of truth. Therefore, it is not surprising if at that time, they thought that this violated the forbidden zone of the god and--that his case demonstrated a counterrevolutionary act punishable by death."

Mr C also sighed and said: "At least with regard to ideological framework, three leadership groups belong to one family. They are against stability and unity and mobilizing all forces that can be mobilized to build the four modernizations. They hate the so-called pragmatists. The past few years have been eventful in Shanghai. At one instance, the tag of 'son of the general' was put on a municipal CCP committee member who did not toe their line. At another, various rumors about His Excellency, Mr Deng, were cooked up. This could not be accidental."

I brought up the subject of Wang Shengeng (or Wang Xinggang) again. I asked him what has happened to this case.

Mr C said: "After the fifth plenary session, the Central Committee hastened the pace of rehabilitating cases of miscarriage of justice. This case was considered a case of injustice and was rehabilitated. The present party committee of the Normal University seems to be daring and resolute. It firmly believes that Wang's case was unjustly handled and has brought the complete files of this case to the Central Committee to ask for full rehabilitation.

"Since Chen Guodong assumed the post of first secretary of the Shanghai party committee, he seems to have resolved to effect a thorough overhaul in Shanghai. Wang Daohan, a veteran cadre who really knows about industry has been appointed as the third secretary. I have heard that the second secretary is Hu Lijiao (present second secretary of Henan) who used to be the director of the organizational department of the South China Bureau. From these indications, I think an organizational house cleaning is on the way.

"Of the remnant followers of the 'gang of four,' 18 have been arrested, including Xu Jingxian and Zhu Yongjia. Recently, three cases were exposed in Shanghai. First, the Baoshan Iron and Steel Works used construction capital to buy luxurious cars. Second, warehouses have allowed a large quantity of wool to be used as raw material to pile up and rot. Third, an expert on refrigeration left for the United States in disgust because the units concerned have refused to follow orders from the central authorities to employ him. All this, taken alongside the central authorities' repeated exposes on Dazhai, the Bohai No 2 incident and the dismissal of Minister of Petroleum Industry Song Zhenming, indicates that the Central Committee is very serious about a thoroughgoing house cleaning in Shanghai. However, we will also have to wait and see how the case of Wang Shengeng (Wang Xinggang) will be handled."

'LIAONING RIBAO' URGES REFORMATION OF INSTITUTIONS

SK041200 Shenyang Liaoning Provincial Service in Mandarin 2200 GMT
3 Oct 80

[Excerpts from LIAONING RIBAO 4 October commentator's article: "Popularize the Vigorous Mood of Reformation on All Fronts"]

[Excerpts] The article states: Reformation is a top priority task of crucial importance in our efforts to achieve the four modernizations. Our task is clear: positively and systematically carrying out reformations in all fields--from the economy and politics to ideology and culture--by constantly reviewing past experiences, conducting intensive research and investigations and summing up correct ideas.

Is not the socialist system incomparably superior? Why should we bother to carry out reformations? To such a question we should answer: When we refer to the superiority of socialist system, we are referring to the fundamental system of socialism. This superiority can only be manifested through various specific institutions. Among the institutions currently in effect, many were modeled on foreign methods. Some were handed down from the revolutionary war period in which the historical conditions were exceptional. Moreover, some distinct feudal remnants remain in our current institutions. Most important of all, because of the left-leaning ideology over the past 20 years, we were occupied by class struggle and ignored institutional reforms. This led to great losses. The superiority of the socialist system was restrained by unreasonable economic management systems and the systems of state leadership. This is one of the important reasons our country's productive forces developed so slowly and the people's livelihood failed to improve for so many years.

Some people are concerned that reforming institutions will hamper the upholding of the four basic principles. These worries are totally unfounded; for reforming the malpractices in the institutions meets the requirements for upholding the four basic principles. Nothing is inconsistent between reform and upholding, and it is groundless to put the former in contention with the latter. Upholding the four basic principles while evading the reform of current malpractices can be nothing but a manifestation of ossified or semiossified thinking--a sham upholding. Nevertheless, some people argue that since institutions are formulated and practiced by men, we had first better solve the problem in man's ideology and work style. Such an idea is one-sided and incorrect. It admits man's influence over institutions but ignores the limits institutions impose on men. Experience has shown that the various mistakes we made in the past were admittedly related to the work style of some leaders, but the more crucial factors in these mistakes lay in the shortcomings of organizational and working systems. A good institution serves to restrain evildoers from running amuck, while a bad institution frustrates good people or even drives them to become evildoers. We are not saying that individuals are free from responsibilities; what we are saying is that problems in the institutions have a more fundamental and long-standing effect on the overall situation. If we do not firmly reform the malpractices in the institutions, our past mistakes will reappear. The problems in the institutions affect the destiny of the party and the country. We must not treat them lightly.

The article concludes: No reforms have enjoyed smooth sailing. All kinds of outmoded conventions, bad customs and traditional and conservative ideas could become obstacles to reformation. Ideological struggles are inevitable. They reflect the struggle between the advanced and backward tendencies in the people. Our Communist Party members are vanguards who are supposed to be determined in carrying out and promoting reformations through concrete actions. The conditions and the times are now ripe for us to embark on the task of reforming and perfecting the systems of the party and state leadership and bringing them in line with the requirements of the four modernizations. We are confident that we can achieve our goals if we firmly follow the party's leadership, rely firmly on the masses and advance resolutely and steadily.

JILIN ISSUES CIRCULAR ON CHECKING LAVISH ENTERTAINMENT

SK061128 Changchun Jilin Provincial Service in Mandarin 2200 GMT 5 Oct 80

[Excerpts] According to a JILIN RIBAO report, the Discipline Inspection Commission of the Jilin Provincial CCP Committee issued a circular on 12 September to the party organizations at all levels throughout the province on the case of (Zhong Changshan), who indulged in lavish wining and dining.

Comrade (Zhong Changshan), deputy chief of a production section under the provincial Medicines Administrative Bureau, was dismissed from his post for ignoring party discipline and indulging in lavish wining and dining when he led an inspection group to check various pharmaceutical factories in the Changchun district.

While inspecting five county pharmaceutical factories and three factories in the urban areas in Changchun Municipality, (Zhong Changshan) spent more than 700 yuan of public funds in wining and dining. He also received some 90 yuan worth of gifts, including cups, cases of tea and medicine.

On the morning of 22 May, (Zhong Changshan) led a 17-person inspection group to check the (Hongyu) Pharmaceutical Factory in Changchun Municipality. (Wang Zhizhong), responsible person of the factory and deputy chief of the Jilin Provincial Medicine Company, arbitrarily decided to give the inspection group a warm reception. They ate a ten-course dinner, drank three bottles of Maotai and smoked five packs of China filter cigarettes, spending some 80 yuan in all. In order to account for the money, (Wang Zhizhong) violated the financial and economic disciplines. He made a false report on the sale of four cases of medicine and did not keep proper accounts.

In order to respect the party discipline, rehabilitate the reputation of the company and educate the offenders, departments concerned decided to dismiss Comrade (Zhong Changshan) from his post as deputy chief of the production section under the provincial Medicines Administrative Bureau in line with the proposal of the provincial CCP committee's Discipline Inspection Commission. The provincial Medicines Administrative Bureau had already ordered (Wang Zhizhong) to stop working and to examine and give an account of his mistakes. His case will be handled after further investigations. He will be given appropriate punishment. It also decided that all comrades who had participated in lavish wining and dining should compensate in full with money or grain coupons according to the local regulations and standards. Those who incited people to violate disciplines should be held responsible. All gifts received by the inspection group should be returned to the owner without exception.

In this connection, the JILIN RIBAO published a short commentary today: "Those Who Deliberately Break the Laws Should Be Severely Punished." The short commentary states: It is actually not a hard job for Communist Party members and state cadres to give up lavish wining and dining and to forget about giving banquets and sending gifts. However, this unhealthy trend has not been thoroughly checked even after the issuance of the guiding principles. Some people continue to disregard the guidelines. Their tricks are more heinous than before. The main reason for this is that they ignored the party disciplines and acted recklessly on the pretext of serving the public. Furthermore, some leading comrades failed to make a decision to check this unhealthy trend and were too lenient in handling these cases. They even helped offenders to shirk their responsibilities. This is one of the keys to the emergence of such offenders.

Our party has decided to rectify the party work style. This aim will certainly be fulfilled. Anyone who ignores the repeated orders and instructions of the party and deliberately breaks and defies the law is making a mistake. (Zhong Changshan) is an example.

NEI MONGGOL CCP COMMITTEE CONGRATULATES RESTORATION OF XINGAN LEAGUE

SK050558 Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 3 Oct 80

[Text] The Nei Monggol Regional CCP Committee, the Standing Committee of the regional People's Congress and the regional People's Government recently sent a message to the Xingan League CCP Committee and the Xingan League administrative office warmly congratulating them on the restoration of the league's organizational system.

The message noted that the State Council's approval of the restoration of the Xingan League's organizational system is another major policy decision affecting the administrative divisions of the Nei Monggol Autonomous Region. With its honorable revolutionary traditions, the Xingan League made great contributions to the founding of Nei Monggol region. Since the founding of the Nei Monggol region, and particularly during the 30 years following the founding of the People's Republic of China, the cadres and masses of various nationalities in Xingan League have nurtured the revolutionary tradition, done arduous pioneering work, worked hard for the prosperity of the country and made great efforts to establish a new socialist life. Therefore, industry, agriculture, animal husbandry as well as cultural and educational undertakings have been well developed in the league, contributing to the region's development and prosperity.

In conclusion, the message called on the leaders and people at all levels in Xingan League to further criticize the ultraleft trend of thought under the accurate guidance of the party Central Committee's lines, penetratingly implement the party's policy toward nationalities, conscientiously carry out the eight-point policy on readjusting the national economy, consolidate and develop political stability and unity, emancipate minds and work arduously in unison to achieve still greater successes in various fields of work to build Nei Monggol region into a place characterized by prosperity and unity and new contributions to the four modernizations of China.

Xingan League is a vast territory with abundant natural resources situated in the eastern sector of Nei Monggol region. In the east, it adjoins Nenjiang Prefecture of Heilongjiang Province, and in the west, it neighbors the People's Republic of Mongolia. The total length of its borders is 122.5 kilometers. In the south, it adjoins Baicheng Prefecture in Jilin Province and Jirem League in Nei Monggol region and, in the north, it neighbors the Hulun Buir League. Its total area is 59,450 square kilometers, including Horqin Youyi Qian Banner, Horqin Youyi Zhong Banner, Jalaid Banner, Tuquan County and Ulan Hot Municipality. The capital of Xingan League is located in Ulan Hot Municipality.

The main economy of Xingan League is animal husbandry. Its grasslands account for 77.3 percent of the league's total area. Therefore, it has great potential for developing animal husbandry. At present, it has some 1,888,000 head of livestock, 5 times what it had in 1979. As for the league's industry, it has grown large from nothing. Now there are iron and steel, machinery, building materials, textile, fur, meat, dairy, sugar and wine industries. Its industrial products not only supply the league, but are also marketed in other provinces and municipalities of the country. Its hand-woven carpets, [words indistinct] and paintings are welcomed on the international markets.

Xingan League is inhabited by minority nationalities, with Mongols making up the majority of its population. It has a total of 1,307,000 people, including Mongolian, Han, Man, Hui, Korean and 13 other nationalities. Among them, 444,000 are minority nationalities, accounting for 34.3 percent of the league's total population, and 424,000 are Mongols, or 32.4 percent. It is one of the places whose political, cultural and educational undertakings are relatively well developed. It has some 2,000 primary and middle schools and some 300,000 students.

'BA YI RADIO' ACCUSES DENG XIAOPING OF LEAKING STATE SECRETS

OW052010 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 5 Oct 80

[Text] At a group meeting of the third session of the Fifth NPC, some deputies from the PLA proposed that a new set of regulations suiting the present situation be formulated to replace the "Temporary Regulations About Safeguarding State Secrets" promulgated in 1951. This is a timely proposal. No doubt, a new set of regulations in this regard will help to improve work on safeguarding state secrets and correct the situation of serious leaking of secrets because of some comrades' vague concept about keeping secrets secret.

Once a state law is promulgated, everybody in the country must abide by it and there should be no exception.

However, a certain central leader placed himself above the law, abused his power and prestige to trample on the state law and reveal vital state economic and military secrets. Not long ago, another incident of leaking top secret military information occurred, this time involving Comrade Deng Xiaoping. On the basis of the six-point agreement reached between Vice Chairman Deng and U.S. Secretary of Defense Brown, U.S. military experts wrote up a so-called analytical report on the present condition of the Chinese armed forces. Information contained in this report is supplied by organizations concerned on Comrade Deng Xiaoping's personal instruction. This information includes table of organization, deployment and technical equipment of our armed forces and the production situation of our defense industry as well as a quantity of top-secret information. At the same time, Americans also have obtained a detailed table of items of technical equipment urgently needed by our armed forces. After concocting the so-called analytical report on the basis of these top secret documents, the Americans solemnly assured Vice Chairman Deng that they would never diverge the contents of this report. American leaders never respect other countries' sovereignty and national dignity. How can they be expected to respect our military secrets?

Lately, President Carter and Republican presidential candidate Reagan in their election campaign make a vote-getting point out of how to handle the U.S. relations with China and Taiwan. In their campaign activities that are not without ill intentions, Americans have revealed the aforementioned information. News media of the United States and other countries published large portions of the top secret information contained in the analytical report on the present condition of the Chinese armed forces. Comrade Deng Xiaoping should have learned a lesson from this experience and should no longer admire and love his so-called American friends. Yet, it appears that Vice Chairman Deng does not want to heed the warning from this serious mistake. When our representatives negotiated with the U.S. military technical delegation headed by Under Secretary of Defense Perry, Comrade Deng Xiaoping insisted that our military representatives reveal our secret military information to the U.S. representatives although Comrade Zhang Aiping and other leaders had repeatedly warned against supplying our military secrets to the United States. Deng wanted to show sincere friendship to the United States.

Facts show that Vice Chairman Deng's policy of firmly developing Sino-American military cooperation at all costs is quite wrong. Do we have to present our military secrets on a silver platter to the United States just for friendship? Leaking military secrets to foreigners not only impairs our sovereignty and insults the dignity of the Chinese nation but causes very serious damage to our armed forces.

'RADIO BA YI' COMMENTS ON TRIAL OF 10 PRINCIPAL ACCUSED

OW070430 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 6 Oct 80

[Text] The "gang of four" were arrested on 6 October 1976, thus dealing a telling blow to their feudal, fascist dictatorship. The whole party, the whole army and the people throughout the country were elated and exultant. The people were full of hope. It was an unusual day in the history of our party.

Four years have elapsed since then, but many of the people's hopes have not been fulfilled. Following the death of Chairman Mao and the arrest of the "gang of four" according to law, there should have been a radical change in the life of the whole party, the entire army and people throughout the country. At that time, if the erroneous line had been immediately and completely cast aside and the correct line had been readopted, there should have been a basic turn for the better in the livelihood of the people and in the building of the party, the state and the army, and concrete achievements should have been made over the past 4 years.

It is too bad that such a change has not taken place. It can be said that much time has been wasted in many fields over the past 4 years, mainly because the pernicious influence of the erroneous line has not been eliminated. It is precisely because old ideas and the erroneous line have been clung to that policies and principles on how to solve the major problems facing the country have not yet been laid down. At the same time, the extremely acute problems left over from the past have not been thoroughly handled.

In handling problems left from the past, it is essential first to affirm Chairman Mao's mistakes and their nature and then, on this basis, to determine the mistakes of other leaders who implemented Chairman Mao's orders and instructions. This is probably the only feasible way of solving problems.

As everyone knows, Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao, high-ranking general officers of our army have been listed among the 10 principal accused, who will soon be tried by a special court as members of the notorious Lin Biao and Jiang Qing counterrevolutionary cliques. Some people say that the special court will be able to officially determine what the accused should be held responsible for during the 10 catastrophic years and to pass fair judgment on them. The issue is that the above-mentioned general officers and other leaders of our army in the past consistently and faithfully carried out the orders and instructions of Mao Zedong, chairman of the Military Commission of the party Central Committee. As a soldier, one obeys orders as his bound duty. It is, therefore, entirely proper for them to have obeyed the orders and instructions of the chairman of the party Central Committee Military Commission and the supreme commander in chief of the country. However, they are now accused of committing grave crimes.

People may ask: Since those who carried out wrong orders are to be severely punished and the one who issued wrong orders and instructions is exceptionally absolved from his criminal responsibility, how can such a trial be said to be fair and just?

In view of the above situation, we demand: First, what Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao did as soldiers by absolutely obeying Chairman Mao's orders and instructions during that period is irreproachable, so they should be dealt with differently from the case of the principal accused of the Lin Biao and Jiang Qing counterrevolutionary cliques. In trying and sentencing them, consideration should be given to the special characteristics of our army, the feudalist and patriarchal traditions of our party and army and the objective conditions prevailing at that time.

Second, the files of orders, instructions and documents issued by Chairman Mao himself or transmitted by Deputy Commander in Chief Lin should be attached to the file of the special case of Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao. These documents will undoubtedly help distinguish right from wrong so that these comrades can be impartially dealt with.

BRIEFS

PUBLICATION OF HUA SPEECH--Beijing, 22 Sep (XINHUA)--Hua Guofeng's speech at the third session of the Fifth NPC has been published in a single edition by the People's Publishing House for sale in Beijing and other parts of the country beginning 21 September. All documents of the NPC session will also be compiled and published. These two books will be published in Mongolian, Tibetan, Uygur, Kazak and Korean languages by the Nationalities Publishing House. [OW261007 Beijing XINHUA Domestic Service in Chinese 1311 GMT 22 Sep 80 OW]

LIU SHAOQI SPEECH--Beijing, 2 Oct (XINHUA)--Issue No 1, 1980, of the journal WEN XIAN [DOCUMENTS], edited and published by the Beijing Library, contains a "speech to the students of the first class of the Marxism-Leninism Institute" delivered by Comrade Liu Shaoqi on 14 December 1948. At that time Comrade Liu Shaoqi was the president of the Marxism-Leninism Institute, which was the precursor of the present senior party school of the CCP Central Committee. Along with this precious historical document, the journal publishes articles by Lin Hao, Fan Ruoyu and 10 others who previously studied in that class. The articles present their experience in studying Marxist-Leninist theory. They say that Comrade Liu Shaoqi's speech is still of importance today, as a guidance in carrying out the four modernizations. [OW030201 Beijing XINHUA Domestic Service in Chinese 0136 GMT 2 Oct 80]

GUIZHOU REPORT MEETING--The Guizhou Provincial Discipline Inspection Committee and provincial party committee held a report meeting on 13 September on studying the "guiding principles." The meeting introduced some advanced units and individuals who did well in implementing the "guiding principles." The meeting was presided over by member of the Standing Committee of the Guizhou provincial CCP and party committees secretary (Song Sugong), and deputy secretary of the provincial CCP committee and secretary of the Guizhou Provincial Discipline Inspection Committee Chen Xinggeng spoke at the meeting. The meeting demanded that all party organizations grasp the following: 1) To popularize the "guiding principles" among the people and work in accordance with the "guiding principles"; 2) to study the "guiding principles" in connection with local conditions and mobilize the people's activism to promote the four modernizations; 3) to make use of advanced models in educating the masses; and 4) to strengthen discipline inspection. [HK060714 Guiyang Guizhou Provincial Service in Mandarin 2315 GMT 13 Sep 80 HK]

HUBEI NEW WORK STYLE--The Yingshan County Revolutionary Committee in Hubei Province has implemented a new work style and overcome the phenomenon of replacing the government with the party. As a result, it solved many problems which required government solutions. In the past, the Yingshan County CCP Committee had to decide on all important and trivial matters. In order to overcome the phenomenon of replacing the government with the party and uphold the principle of collective leadership and division of labor, the Yingshan County Revolutionary Committee has established a collective office of chairmen of the county revolutionary committee. This collective office holds a meeting monthly to discuss great issues and designate subordinate organizations to implement the decisions. 'BA YI RADIO' COMMENTS ON PLA SPENDING REDUCTION, POSSIBLE PURGE

OW080136 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 7 Oct 80

[Text] The 13 percent reduction in military spending for 1980 has caused comment among military cadres. The primary views of the cadres of the Lanzhou PLA units, the Fuzhou PLA units, the naval air force and some military schools can be summarized as follows:

1. The reduction of military spending is designed to compensate for financial deficits caused by erroneous economic policies and by military actions against Vietnam.

2. The shift of stress in national construction has pushed defense construction down to third place in precedence. Therefore, military spending must be reduced.

3. In the past the "gang of four" and their backstage boss needed to increase military spending by a large amount when they spread such examples of war hysteria as "the Soviet revisionists are bent on subjugating our country" and "world war is unavoidable" in order to divert attention from chaos and feudal fascist atrocities at home. Since our slogans have changed now, we no longer need such high military expenditures.

4. The reduction of military spending is just a tactic. China's military spending is never limited to a military budget as its only source. Some machine building ministries and scientific research units directly serve the armed forces.

Besides the aforesaid four general views, many cadres of the Beijing PLA units, the Guangzhou PLA units and the navy hold: One important reason for the reduction of military spending is to provide an excuse for conducting a third purge of PLA cadres. The appeal for further reducing personnel and for using manpower and finances primarily for improving and manufacturing new weapons is designed to create an opportunity for further striking at and discharging those cadres who had indirect relations with Lin Biao, Huang Yongsheng, Wu Faxian, Li Zuopeng and Qiu Huizuo.

Some naval cadres even openly said: Someone in the Central Committee hates the PLA because he suffered heavy blows when the PLA participated in supporting the leftists during the Cultural Revolution. Since being put in charge of the State Council for the first time in 1974, he has successively purged seven groups of military cadres. He recently resigned from his State Council post while retaining his power in the party Central Committee in order to personally supervise the purge of military cadres.

In short, the reduction of military spending has caused an anxious state of mind among military cadres. The propaganda materials issued by the Propaganda Department of the CCP Central Committee and the General Political Department are poor in content and full of empty words and high-sounding political slogans. They are not convincing at all. This shows that our political work and propaganda work lag behind the current situation. The political and cultural level and the analytical ability of the PLA commanders and fighters are quite different from 20 years or even a dozen years ago. The use of old working methods and false propaganda cannot solve the ideological question of commanders and fighters.

'JIEFANGJUN BAO' REPORTS GUANGDONG DEPARTMENT COMMENDED

OW060248 Beijing Domestic Service in Mandarin 2230 GMT 5 Oct 80

[Text] According to a JIEFANGJUN BAO report, the cadres, fighters and staff members of the People's Armed Forces Department of Huidong County in Guangdong and their families have conscientiously adhered to the policies and regulations of the party and the government and have committed no law or discipline violations in the past 2 years. Because of this record, they have been commended by the Discipline Inspection Committee of the next higher organization.

Huidong County is situated near the South China Sea coast and adjoins Hong Kong. It is frequently visited by Overseas Chinese from Hong Kong and Macao, as well as by foreign guests in the past few years. Imported wristwatches, television sets, radio receiver-recorders and other high-grade commodities were often found on sale in the country and even in the area where the county People's Armed Forces Department is located.

To cope with this situation, the party committee of the department has constantly educated the cadres, fighters and staff members of the department and their families to carry forward our army's fine tradition of plain living and hard struggle and be models in adhering to government policies. The department party committee has announced explicit rules for them to follow.

The seven leaders of the county People's Armed Forces Department have conscientiously adhered to the policies and regulations of the party and the government. None of them has violated the law banning the purchase of television sets, radio receiver-recorders, wristwatches or other imported merchandise items. With their leaders as examples, the comrades of the county People's Armed Forces have conscientiously adhered to law and discipline.

BRIEFS

NAVY CADRE'S RESIGNATION REQUEST--Beijing, 19 Sep (XINHUA)--Recently Luo Rongjiang, 61-year-old deputy of the Fifth NPC, wrote a report to the PLA Navy party committee requesting that he be relieved of his post as deputy commandant of the Navy Submarine School and be replaced by a younger and more capable cadre. Luo Rongjiang called on veteran cadres to make room for talented younger cadres instead of picking on them and telling them they are unable to shoulder responsibilities. 'NANFANG RIBAO' AIRS PLANNED PARENTHOOD PROBLEMS

HK060147 Guangzhou Guangdong Provincial Service in Mandarin 2345 GMT
5 Oct 80

[Report on NANFANG RIBAO 6 October editorial: "There Should Be No Wavering in Ideology, No Reversals of Policy and No Relaxation in Work--Some Hopes Concerning the Province's Planned Parenthood Work"]

[Text] The editorial says: Guangdong has made progress in planned parenthood work this year and initially reversed the passive situation of continued rise in population growth in the previous 2 years. The birth rate is again tending to decline. However, it is estimated that the province's natural population growth rate this year will be about 14 per 1,000. Thus the province is still unable to meet the state target of reducing the figure to below 10 per 1,000. The percentage of couples having only one child is 12.7, far lower than the national average of 56. These figures prove that we must continue to make very great efforts in order to reduce the province's natural population growth rate to below 10 per 1,000 and control the province's population below 70 million before the end of the century.

The editorial says: In the light of the actual situation in the province, in carrying out planned parenthood work in future, we first hope that the leaders at all levels will continue to implement with unwavering ideology the planned parenthood targets set by the Central Committee and State Council. In particular, they must unwaveringly advocate that each couple should have only one child. At present, there are various reactions in society to the notion of having only one child. Some people hold that having only one child is too leftist a measure and the masses will not accept it. Others hold that it is the general trend of the times but does not conform to the common aspiration of the people, and so on and so forth. Unless these ideological problems are solved, they are bound to hinder the launching of planned parenthood work. We must help them to eliminate misunderstandings and worries, understand the situation, advance with firm step, unite as one and make common efforts to bring about a new situation in the province's planned parenthood work.

Secondly, we hope that the leaders at all levels will firmly carry out the existing principles, policies and regulations on planned parenthood. There should be no reversals of policy.

Next, we hope that the leaders at all levels will grasp this work still more tightly and avoid the slightest ideological tendency to relax.

At present, planned parenthood work is facing certain new situations and problems. For instance, some changes have occurred in the rural economic management system and some administrative and other units take full responsibility for their own expenditure, while the new marriage law has laid down new regulations with regard to the age of marriage, and so on and so forth. However, so long as we use our brains, we can devise specific measures and work methods suited to these new situations.

The editorial says in conclusion: The party and people sincerely hope that there will be no wavering in ideology, no reversals of policy and no relaxation in work in the province's planned parenthood work. So long as we can succeed in this, the province will be able to make still greater progress in planned parenthood work and make still greater contributions to building the four modernizations.

ACTIVITIES NOTED AT BEIJING NATIONAL MINORITIES ART FESTIVAL

Minority Artists Perform

OW070712 Beijing XINHUA in English 0700 GMT 7 Oct 80

[Text] Beijing, Oct 7 (XINHUA)--With more than 2,000 performers in Beijing for a festival of national minority art, theatre and culture experts in the capital are acquainting themselves with the artists and the cultural achievements of China's 55 national minorities.

The one-month festival, which is scheduled to close on October 20, is running simultaneous performances in four Beijing theatres each night.

The vice-president of the Chinese Dancers' Association, Jia Zuoguang, said today that the standard of performances by the singers, dancers and musicians "far exceeds" the presentations at the first national minority festival held in the early 1960's.

A teacher of dance for nearly 30 years, and an expert in minority dances, Jia Zuoguang commended the strongly "natural" flavor of the dances and songs now being presented in Beijing.

He marked particularly the vibrant performances of the Inner Mongolian "Wulanmuqi" (performers on horseback) who spend eight months a year among the herdsmen of their region; the ancient dances of the Zhuang people of south China who, with 12 million people, are the biggest of China's national minorities; the fishing dance of the Hezhe people of northeast China, only 800 strong and the smallest minority; and the music and dances of the Uygur people of northwest China and China's Korean community.

Jia Zuoguang also noted a highly developed artistry among the musicians of the Jinuo people who live in the bamboo groves of southwest China. The Jinuos are the latest to be officially recognized as a distinct nationality. Their music group performed on instruments all made of bamboo.

First Hui Opera Presented

OW070802 Beijing XINHUA in English 0732 GMT 7 Oct 80

[Text] Beijing, Oct 7 (XINHUA)--The first Hui opera was staged in Beijing this week to represent the Ningxia Hui Autonomous Region at the national minorities art festival.

"Mansur," based on a centuries-old legend of the Hui people, is about Mansur the brave shepherd who overcomes all dangers and tests to win the hand of a princess whom he has saved.

Twenty-eight Hui singers and dancers appeared in this opera developed from "Hua Er (Flower)," a form of folk singing popular among the Hui people which has a strict tonal pattern and rhyme patterns, and is rich in metaphor.

Gudratullah Ma Tengai, vice president of the China Islamic Association, who is a senior imam, acted as adviser to the opera.

Critics here acclaimed the presentation as "a remarkable advance in Hui musical art."

The opera was authored by 35-year-old Zhang Zongcan, a Beijing student who went to Ningxia at 20 in 1965 and has collected and studied the folk music of the local people.

Singing the role of the princess is 23-year-old Wang Cunqin of Hui nationality who started her career as an amateur and later joined a local art troupe.

When "Mansur" was given its premiere in Ningxia, it was warmly received by the Hui audience as "our own opera."

At a discussion to invite opinions in Yinchuan, capital of the autonomous region, "Mansur" won the approval of local Islamic leaders. "It doesn't jar with our religion," an imam said. "It's good that the life of the Hui nationality be presented in art and be introduced to the whole country. We approve of it," another imam said.

BRIEFS

ENCYCLOPEDIA PUBLICATION PLANS--Beijing, 29 Sep (XINHUA)--The first of the 80 volumes that will make up the "China Greater Encyclopedia"--a 10-year project undertaken by several publishing houses--will be printed by the end of this year, the publishers said today. The first volume, on astronomy, deals with the latest discoveries as well as China's long history of research in this field. More than 200 astronomers worked on the book for over 2 years. Volumes on archeology, law, history, literature, philosophy, religion, economics, military science, mathematics and geography are now being prepared. The complete encyclopedia will have 100,000 entries. [Text] [OW290251 Beijing XINHUA in English 0145 GMT 29 Sep 80 OW]

CHINA YEARBOOK--Beijing, 27 Sep (XINHUA)--"The 1980 Yearbook of the Greater Encyclopedia of China," China's first will be put on sale soon. The book covers international politics, military affairs, diplomacy, economics, science and technology, philosophy, literature and art, education, medicine and social life. It gives an account of the major events in China before May 1980. The 740-page book comes in a de luxe and a paperback edition and has 433 color and black-and-white pictures. Among the contributors to the book which has 1,700 entries are more than 800 specialists, scholars and public figures. The yearbook was edited and published by the Shanghai branch of the Greater Encyclopedia of China Publishing House. A new yearbook will be published each year in the future. [Text] [OW281653 Beijing XINHUA in English 0716 GMT 27 Sep 80 OW]

CONTRACEPTIVES SUPPLY--Beijing, 18 Sep (XINHUA)--China now produces 30 kinds of medicine and 14 kinds of appliances for contraceptive purposes and supplies them free of charge, according to today's "Health News." China started to supply contraceptives free of charge in 1974 to promote family planning. Over 50 factories scattered all over the country produce oral, injection and external use medicines or appliances. Interuterine rings, which are welcomed in the rural areas, are produced by most of these factories. [Text] [OW201135 Beijing XINHUA in English 0739 GMT 18 Sep 80 OW]

ANCIENT MINORITY LANGUAGES EXHIBIT--Beijing, 1 Oct (XINHUA)--An exhibition of ancient written languages of China's national minorities, the first of its kind since the founding of new China, opens to the public here today in the Nationalities Palace of Culture. On display are 16 ancient written languages, showing when and where they were used. The exhibits include orders by kings, sutras written on tree leaves, tablet inscriptions, hand scrolls, memorials to the throne, inscribed wooden and bamboo slips, official seals, ancient coins and mirrors, xylographic books and typed books. The ancient minority languages include: Tujue (Turk), Huigu (Ouigour), ancient Tibetan, ancient Mongolian, and Man (Manchu). The exhibition is jointly sponsored by the Nationalities Palace of Culture, the Cultural Department under the State Nationalities Affairs Commission and the China National Ancient Written Languages Research Society. [Beijing XINHUA in English 0149 GMT 1 Oct 80 OW]

'BEIJING RIBAO' SUBURBAN EDITION--Beijing, 3 Oct (XINHUA)--The Beijing daily paper BEIJING DAILY [BEIJING RIBAO] launched a suburban edition today to cater for rural readers on the outskirts of the Chinese capital. A successor to the BEIJING PEASANT PAPER published before the Cultural Revolution (1966-76), the 4-page paper said in its first editorial that it will publicize Marxism-Leninism and Mao Zedong Thought, the policies of the Chinese Communist Party and scientific and cultural knowledge. It said it also aims to give a voice to the suburban people. The suburban paper will be published every Tuesday and Friday. [Text] [OW051255 Beijing XINHUA in English 1227 GMT 3 Oct 80 OW]

HISTORICAL ATLAS--Beijing, 21 Sep (XINHUA)--An atlas of the general history of China is to be published here shortly by the Cartographic Publishing House. It is the first such atlas since the founding of the People's Republic in 1949. The atlas, a companion volume to the "General History of China" compiled by the Institute of History of the Chinese Academy of Social Sciences, covers several thousand years from primitive society to the Opium War of 1840. It bears an inscription by the late historian Guo Moruo, who oversaw the production of the "General History of China." Presented in two volumes, the atlas contains 113 maps, including the sites of primitive societies, political and administrative changes under various dynasties, distribution and migrations of Chinese nationalities, and ancient wars. Maps showing contacts with foreign countries in ancient times are also included. The atlas is compiled by the Institute of History, Fudan University, the People's Publishing House and the Cartographic Publishing House under the supervision of Yin Da, deputy director of the Institute of History. [Text] [Beijing XINHUA in English 0733 GMT 21 Sep 80 OW]

MIDDLE SCHOOL TEACHERS--Lhasa, 21 Sep (XINHUA)--More than 500 middle school teachers from different parts of China have come to Tibet, the "roof of the world," and have already started working in the local schools. This is a further step to speed up the development of education in this region. The teachers came from the provinces of Sichuan, Jiangsu, Henan, Hubei, Hunan, Shandong, Liaoning and the municipality of Shanghai, in accordance with a directive of the State Council. These provinces and Shanghai had dispatched three groups of middle school teachers with a total of 1,100 to Tibet in the past. The teachers formed the mainstay of the teaching staff in the local schools. This year, 45 teachers from Henan Province entered the Ngari area (?at) an altitude of 4,500 meters above sea level in northwestern Tibet where teachers from inland have never reached before. [Text] [Beijing XINHUA in English 1212 GMT 21 Sep 80 OW]

POSTGRADUATE STUDENT ENROLLMENT--Beijing, 26 Sep (XINHUA)--This year's postgraduate enrollment in China is 3,600. More than 90 percent are in 257 universities and colleges. The rest are in various research institutes under the Academy of Sciences, the Academy of Social Sciences and research institutes attached to government ministries or under provinces, municipalities and autonomous regions. Some new specialties have been set up this year in order to meet the needs of the country's four modernizations. The Institute of Technological Economics under the Academy of Social Sciences has set up new specialties in the economics of energy and the world economy. Postgraduate training was resumed in China in 1978 after a lapse of 12 years. China altogether enrolled 19,000 postgraduate students in 1978 and 1979. The postgraduates normally take 3-year courses. The drop in the number of postgraduates this year was due to the dwindling number of college graduates and lowering of college standards during the "Cultural Revolution." [Text] [Beijing XINHUA in English 1204 GMT 26 Sep 80 OW]

ANCIENT CHINESE SCHOLARS FORUMS--Beijing, 26 Sep (XINHUA)--Forums on two ancient Chinese scholars--Su Dongpo and Pu Songling—were held recently in their native counties. Su Dongpo, also called Su Shi, was one of eight noted scholars of the Tang and Song dynasties. He was a prolific writer of essays and poems, and accomplished in calligraphy, painting and music. More than 80 people from all parts of China met in Meishan County, Sichuan Province in mid September to discuss Su Dongpo's literary thinking and contributions to aesthetics and music. They also set up a society to study his works. A Qing dynasty writer, Pu Songling is known for his "Liao Zhai Zhi Yi" (Strange Stories From a Chinese Studio). It has been translated into 13 languages in the past 200 years. Some 70 people attended the forum on Pu Songling, held in Zibo County, Shandong Province also in mid September. [Text] [Beijing XINHUA in English 0700 GMT 26 Sep 80 OW]

ACADEMY MATRICULATION--Beijing, 23 Sep (XINHUA)--The Chinese Academy of Social Sciences and its branches and institutes in various provinces, municipalities and autonomous regions recently matriculated two research fellows, 39 associate research fellows, and 319 assistant researchers and research trainees through stringent examinations, examination of papers and interviews. Most of the matriculated research personnel, who were chosen from more than 4,300 candidates throughout the country, are middle-aged and young people. Among them 7.9 percent are students returned from abroad and graduate school students, over 84 percent are college graduates or college students, and some are self-made high school students. Many of the matriculated have already had their books and academic papers published. [Beijing XINHUA Domestic Service in Chinese 0818 GMT 25 Sep 80 OW]

LITERARY PERIODICAL—Beijing, 26 Sep (XINHUA)--A new literary monthly called XIAOSHUO XUANKAN (MAGAZINE OF SELECTED FICTION) has been recently published in Beijing. The new periodical is edited by the editorial department of RENMIN WENXUE (PEOPLE'S LITERATURE). The initial issue contains a preface written by Mao Dun. [Beijing XINHUA Domestic Service in Chinese 0115 GMT 26 Sep 80 OW]

MINORITY LIBRARY--Beijing, 27 Sep (XINHUA)--The Library of the Cultural Palace of Nationalities was recently opened to the public. Established in 1959, the library has a floor space of 2,485 square meters and a collection of 380,000 volumes. The books include those written in various minority and foreign languages. [Beijing XINHUA Domestic Service in Chinese 1211 GMT 27 Sep 80 OW]

SOONG CHING LING INSCRIPTION--Starting in its October issue, CHINA RECONSTRUCTS, a journal of the China Welfare Institute headed by Soong Ching Ling, will publish its new Chinese-language edition. Founded in 1952, the monthly is now available in English, French, German, Spanish, Portuguese and Arabic editions in 140 countries. The first issue of the Chinese-language edition, which will be published in unsimplified Chinese characters to suit the reading habits of readers residing abroad and in Taiwan, will carry the inscription of Soong Ching Ling, who underscores Overseas Chinese concern and support for the motherland's modernization program and reunification and hopes the new Chinese-language edition will promote understanding and an interflow of affection between the people on the mainland on the one hand and Overseas Chinese and compatriots in Taiwan, Hong Kong and Macao on the other hand, so that they may coordinate their efforts to build a prosperous, powerful and unified motherland. [Beijing Radio in Mandarin to Taiwan 0400 GMT 18 Sep 80 OW]

BEIJING HISTORY STUDY--Beijing, 30 Sep (XINHUA)--The first academic discussion meeting on Beijing's history, which was also a meeting for the formation of the Society for the Study of Beijing's History, concluded on 29 September after 3 days in session. The meeting was attended by more than 120 professional and amateur scholars of Beijing's history. It adopted a proposal calling for vigorously carrying out the work of studying and publishing Beijing's history. [Beijing XINHUA Domestic Service in Chinese 1420 GMT 30 Sep 80 OW]

BEIJING PUBLISHING HOUSE--Beijing, 3 Oct (XINHUA)--The Current Affairs Publishing House, a newly established publishing house in Beijing, has systematically begun publishing books concerning the international situation and the political, economic, military, cultural, educational, historical and geographical situation in various countries of the world as well as in China's Taiwan Province. Among books soon to be published are "The Shedding of Pak Chong-hui's Blood at Kungjong-tong--an Actual Account of South Korea's Chaotic Political Situation," "Selected Patriotic and Nostalgic Poems of Taiwan," "Our Motherland's Taiwan" and others. [Text] [Beijing XINHUA Domestic Service in Chinese 0119 GMT 3 Oct 80 OW]

BEIJING PHILOSOPHY SYMPOSIUM--Beijing, 22 Sep (XINHUA)--A symposium on the history of philosophy was held on 18 and 19 September in Beijing under the sponsorship of ZHONGGUO ZHEXIE (CHINESE PHILOSOPHY), WAIGUO ZHEXIE (FOREIGN PHILOSOPHY) and the editorial department of the "Philosophy" supplement of GUANGMING RIBAO. Attending the symposium were mostly graduate students majoring in philosophy history from various institutions of higher learning, including Beijing University, the graduate school of the Chinese Academy of Social Sciences, the Chinese People's University, Shandong University, Wuhan University, Zhongshan University and Xian Teachers University. They called for further efforts to study the history of philosophy, saying that creative study in this regard should be encouraged. According to opinions expressed at the symposium, although the study of philosophy history should be guided by Marxism, it should be based on the objective facts in the history of philosophy. Also, Chinese philosophical history, because of its peculiar social background, cannot be mechanically explained by the struggle between materialism and idealism. [Beijing XINHUA Domestic Service in Chinese 1135 GMT 22 Sep 80 OW]

GUANGZHOU EDUCATION WORK CONFERENCE--From 12 to 16 September, the Guangzhou municipal CCP and revolutionary committees held an education work conference to look into the problems of reforming the educational structure of the middle schools, adult education and popularization of primary education. The conference resolved to improve the backwardness of education and to strive to greatly develop the municipality's education cause in the 1980's. Ou Chu and Luo Peiyuan, leading comrades of the municipal CCP and revolutionary committees, attended. Luo Peiyuan also gave a report at the conference, calling on the municipality to actively reform, readjust and develop the education cause and train more qualified people for the four modernizations. He said that of the 81 middle schools in the urban areas of the municipality, 31 should remain as complete middle schools, 20 should be changed to junior middle schools and the other 30 should be gradually changed to middle vocational schools and technical schools or to middle schools with vocational courses. He also said that in 1981, the municipality will run 57 vocational courses and enroll 2,000 students. In 1981, every county and suburban area will run 2 to 4 agriculture, forestry and fishery schools. The municipal CCP committee has decided to set up a secondary education leadership group. Ou Chu, municipal CCP committee secretary, also spoke on 16 September. [Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 17 Sep 80 HK]

JIANGSU PLANNED PARENTHOOD--On 4 October the Jiangsu Provincial CCP Committee held a telephone conference, urging all party organizations to vigorously publicize and implement the guidelines contained in the letter from the CCP Central Committee [to] CCP and CYL members on population control. Attending the conference were responsible comrades from all prefectures, municipalities, counties and provincial-level departments concerned. Wang Haisu, member of the provincial CCP committee Standing Committee, addressed the conference. He said that the province's birthrate has steadily declined. From 1970 to 1979, there were 5 million fewer newborn babies than originally expected. As of the end of June 75 percent of the province's 1.6 million couples with one child promised not to have a second child. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 4 Oct 80 OW]

NEI MONGGOL RELIGIOUS FORUM--Forums of representatives of Buddhism, Taoism and Lamaism have been held recently in Hohhot Municipality, Nei Monggol Autonomous Region. Personages from religious circles discussed matters concerning religious activities and the resumption of boards of management of Buddhism, Taoism and Lamaism. Forum participants vowed that they would assist the party and government in implementing the party's policy on religion, carry out rational religious activities and contribute to the four modernizations. [Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 5 Oct 80 SK]

SHANGHAI MODERN DRAMA--Shanghai, 1 Oct (XINHUA)--A new modern drama, "Welcome You Back," is being shown in Shanghai. The drama depicts the return of former Kuomintang acting president Li Zongren to the motherland in 1965. In the drama's last scene, a huge picture showing Premier Zhou shaking hands with Li Zongren is projected in the background and the following remark of Premier Zhou is heard: "There have been two instances of cooperation in the history of the Kuomintang and the Chinese Communist Party. Why can't there be a third cooperation?" The drama is being staged by the Shanghai youth modern drama troupe. [0020159 Beijing XINHUA Domestic Service in Chinese 0111 GMT 1 Oct 80 OW]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

IRAN TO SEND DELEGATION TO PARLEY ON IRAN-IRAQ WAR

OW091244 Beijing XINHUA in English 1215 GMT 9 Oct 80

[Text] Tehran, 9 October (XINHUA)--Iran will send a 17-member delegation to participate in a UN parley on the conflict between Iran and Iraq, announced Iranian Deputy Foreign Minister Jamshid Haqgou here yesterday in an interview with KEYHAN.

Referring to the delegation's position, Haqgou reiterated that it was Iraq that started the war, and it will not end until Iraq withdraws its troops from Iranian territory. He complained that Iran finds itself isolated because of the absence of a coordinated foreign policy and its long non-participation in international politics.

Meanwhile, both countries announced plans to send delegations abroad to explain their respective positions on the conflict. Iranian Prime Minister Mohammad 'Ali Raja'i said last night that Iran will send a high-ranking delegation to some "revolutionary" countries. He did not name the countries.

A report from Baghdad said that five Iraqi envoys left Baghdad yesterday with messages from President Saddam Husayn to kings and presidents of 27 European, African and Asian countries. The messages dealt with the latest developments of the fighting with Iran and the dangers resulting from "the war on Iraq and the Arab nation," the report noted.

IRAQ SEEKS INDIA'S AID IN ENDING CONFLICT WITH IRAN

OW100822 Beijing XINHUA in English 0745 GMT 10 Oct 80

[Text] Beijing, 10 October (XINHUA)--Iraq has sought India's initiative in bringing to an end its conflict with Iran, according to a New Delhi report quoting "Times of India" today.

This was conveyed yesterday to Indian Prime Minister Mrs Indira Gandhi by Jasim Muhammad al-Khalaf, special envoy of President Saddam Husayn of Iraq, who had an hour-long meeting with her, the paper said.

Al-Khalaf, who handed over a message from the Iraqi president to Mrs Gandhi, told her that in view of India's close friendship with both Iran and Iraq, his country would welcome India taking an initiative in ending the fighting, the paper reported.

Mrs Gandhi responded by saying that India would be glad to be of any help. But she pointed out that any such offer would require agreement of both parties to the conflict.

Expressing concern and distress at the prolonged conflict, the prime minister hoped that it would not escalate and lead to involvement of other countries, especially the superpowers.

Mrs Gandhi reiterated India's hope that the conflict would be resolved peacefully at the earliest.

JAPAN'S PAPERS ON U.S., USSR ROLES IN IRAN-IRAQ WAR

OW081220 Beijing XINHUA in English 1206 GMT 8 Oct 80

[Text] Tokyo, 8 October (XINHUA)--Japanese papers fear that the Soviet Union and the U.S. might get involved in the war between Iraq and Iran and that this would prolong that war.

MAINICHI SHIMBUN says today: "The Soviet Union, which has concluded a friendship and cooperation treaty with Iraq, offers to provide Iran with arms assistance. This fact, coming as a great shock to the parties concerned in the Middle East, shows that the Soviet Middle East strategy is: 'Iran--the next target after Afghanistan.' To counter this, the United States has sent to Saudi Arabia early warning system aircraft and in the name of defending the Gulf, intends to reestablish its military footholds in the Persian Gulf region from which the U.S. became estranged." This would prolong the Iraq-Iran war.

NIHON KEIZAI SHIMBUN notes today: "Syrian President Assad and Jordan King Husayn will visit Moscow this week and in the coming week." It is likely that the Soviet Union "will sign a treaty of friendship and cooperation with Syria." "This is a new Soviet strategic plan in the Middle East," the paper points out.

ISLAMIC UN GROUP ON ISRAELI DELEGATION CREDENTIALS

OW090324 Beijing XINHUA in English 0226 GMT 9 Oct 80

[Text] United Nations, 8 October (XINHUA)--Forty member states of the Islamic Conference have formally expressed their "reservation" on the credentials of the Israeli delegation to the 35th session of the UN General Assembly.

A letter to this effect adopted at the meeting of the Islamic group held yesterday afternoon was handed over last night to Baron Rudigar von Wechmar, president of the current General Assembly, by Pakistani Ambassador Niaz A. Naik in his capacity as the chairman of the Islamic group at the UN.

The letter says, "The participation of the delegation of Israel in the work of the General Assembly in any form shall be without prejudice to the specific status of the holy city of Jerusalem and to any such measures as may be taken by the United Nations General Assembly or the Security Council towards seeking the implementation of their resolutions on the question of Palestine and Jerusalem."

Naik requested the assembly president to circulate the letter as an official document of the General Assembly under the agenda item "Report of the Credentials Committee."

He conveyed to the assembly president "our reservation on the credentials of the delegation of Israel to the 35th regular session of the General Assembly for it represents a government that has, in flagrant violation of international law and in total defiance of the relevant United Nations resolutions, particularly the Security Council resolutions 476 (1980) and 478 (1980), declared the holy city of Jerusalem as its capital."

Sources said that the letter marked the beginning of a process that could include a formal challenge to the credentials of the Israeli delegation and other actions against Zionist Israel.

CSO: 4020

ISRAEL'S ISOLATION AT UN VIEWED

OW101538 Beijing XINHUA in English 1520 GMT 10 Oct 80

[Text] United Nations, 9 October (XINHUA)--At a recent UN session, when the representative of Israel finished his speech and left the podium, no one came up to shake hands with him. This vividly shows how isolated Israel is today in the international community.

Israel's isolation stems from its policies of aggression and expansion. In the past year, the Middle East region witnessed a series of acts of aggression committed by Israel against Palestine and other Arab states. Israel repeatedly carried out barbaric aggression against southern Lebanon; it subjected the Palestinian people in the occupied Palestine land to cruel forms of oppression; it unilaterally changed the status of Eastern Jerusalem and illegally proclaimed the city its capital; and it persistently set up settlements in these Arab territories occupied by force.

To deal with the situation in the Middle East, the General Assembly has adopted dozens of resolutions and the Security Council has also adopted several resolutions. It is worth mentioning that within this year, 9 out of 18 debates conducted by the Security Council were devoted to the issue of the Middle East and Palestine, and on the same problem, the General Assembly convened an emergency special session.

However, all these efforts are futile due to Israel's intransigence. Foreign minister of Saudi Arabia Prince al-Faysal resentfully pointed out: "The Security Council has been rendered powerless and unable to adopt a resolution to deter Israel; and every resolution adopted by the General Assembly denouncing and warning Israel is ignored and goes unheeded by Israel."

The arrogance and intransigence of Israel were condemned or criticised by almost all the nations in the world.

Recently, the Islamic group of 40 countries, expressed to the assembly's president their reservations on the credentials of the Israeli representation in the United Nations, serving a serious warning to Israel.

Josip Vrhovec, federal secretary for foreign affairs of Yugoslavia, one of the founding members of the non-aligned movement, lashed at Israel for its persistent violation of the principles of the UN charter and the decisions of the United Nations "by its permanent aggression and usurpation of the rights of Arab peoples, by the annexation of Jerusalem, as well as by constant attacks on the independence of Lebanon."

Moustapha Niasse, foreign minister of Senegal, current chairman of the OAU, stressed that "Israel must understand that it cannot indefinitely deny on the pretext of preserving the security of the Zionist state the fact of Palestine, the Palestinians' right to self-determination, their right to existence as an independent state or, finally, their right of return to their homeland."

EEC representative Caston Thorn reiterated, among other things, that the Palestinian problem "is not a mere refugee problem" and the Palestinian people "must be enabled to exercise fully its right to self-determination." He accused Israel of "creating a serious obstacle to the peace process" by illegally pursuing settlement policy in the occupied Arab land and unilaterally changing the status of Jerusalem. He stressed that the Palestinian people and the PLO "should be associated" in the Middle East peace negotiations.

However, abetted and connived by the two superpowers, Israel's obstinacy remains unchanged. Israeli representative in his address to the General Assembly neither said a word about the Palestinian rights, nor mentioned the withdrawal from the occupied Arab territories. On the contrary, he slandered the PLO, the sole legal representative of the Palestinian people, as a "murder organization," and termed "self-determination" as "nothing more than a euphemism for the destruction of Israel." All of this once again shows that Israel is bent on pursuing its policy of aggression and expansion.

But, it can be said with certainty, the more intransigent Israel becomes, the more isolated it will be.

FORMER UK PRIME MINISTER CITED ON USSR THREAT

OW090738 Beijing XINHUA in English 0724 GMT 9 Oct 80

[Text] Brighton, 8 Oct (XINHUA)--"The security of everyone of us is threatened by the restless Soviet giant to the East. And the dangers of stumbling into a world war by miscalculation are closer than at any time since 1945," declared former British Prime Minister Edward Heath in a statement here today. The statement was released at a reception held by the Conservative Group for Europe. Heath is attending the Conservative Party's annual conference which began here yesterday.

In his statement, Heath pointed out: "Seldom in the history of Europe has the need for unity been so great. But seldom in the history of the community has the potential for progress in European unity also been so great. Many of its internal disputes have been solved. We have a growing convergence of views between the EEC countries on some of the great international problems of the day."

Commenting on the demand for Britain's withdrawal from the EEC, he indicated: "The British people must know that the community takes well over 40 percent of all British exports; that in 1979 our non-oil export to the EEC rose four times more than to the rest of the world; that 7 out of 10 of Britain's largest export markets are other members of the community; and that our trade performance with the EEC has consistently improved since we joined, and is now better than with the rest of the world as a whole."

"But we must not stop there," Heath stressed, "we must show that by taking a strong lead to create a united Europe, Britain can become once again the master of her destiny rather than the helpless servant of international events."

FRG'S BUNDESTAG ELECTIONS REVIEWED

OW091340 Beijing XINHUA in English 1219 GMT 9 Oct 80

[Text] Beijing, 9 October (XINHUA correspondents Hu Yongzhen, Du Yunxie and People's Daily correspondent Weng Zuyao)--The Social Democratic-Free Democratic coalition came out the winners in the just-concluded, once-in-four-year Bundestag (Federal Assembly) elections. The general view of the people on the elections was that there had not been any fundamental change in the balance of strength between different parties, but the increased votes for the Free Democratic Party turned out to be a surprise.

As correspondents invited to cover the general elections among 150 newsmen from 60 countries, we toured some polling stations. At a polling station where 650 voters were to cast their ballots, the responsible personnel told us that 81 percent of the voters had cast their ballots by 03:30 in the afternoon.

The balloting wound up by six in the afternoon, official election returns were announced at two o'clock the next morning: the Social Democrats gained 42.9 percent of the total votes, up 0.3 percent over the previous election; the Free Democrats mustered 10.6 percent of votes, showing a 2.7 percent increase, and the Christian Democratic-Christian Social Alliance obtained 44.5 percent of votes, down 4.1 percent.

The Social Democratic-Free Democratic coalition will continue to be in power. To this, even the opposition leader Franz Josef Strauss did not have any doubt when he was picked as candidate for the chancellorship in July last year. He indicated at the time that it was unlikely for the opposition to gain an absolute majority of votes in general elections, a view shared by public opinion in June and July this year.

However, the Free Democratic Party was viewed in the press as the biggest winner, gaining 10.6 percent of votes from only 7.9 percent in the previous electi-ns in 1976, the best result in the past 20 years which took everybody by surprise. In reply to our question, general secretary of the Free Democratic Party Verheugen said: "This is something unexpected even within the Free Democratic Party." In the past 2 years, the Free

Democratic Party has been in a difficult situation, losing three state elections on the eve of the general elections, and, on top of that, it again lost in the North Rhine-Westphalia state last May.

In regard to the Free Democratic Party's unexpected victory, commentaries by various papers here all inclined to see it as a case in which "the fisherman profits when the snipe and the clam grapple." Both in the initial stage of the election campaign between June and July and the last stage in mid and late September, the Social Democratic Party and the opposition party were locked in charges and counter-charges which made the voters sick. The Free Democratic Party acted differently from these two parties. It took great pains to explain that at stake in the elections was the question whether a three-party system or a bipartisan system should be observed in the Federal Assembly (Bundestag). While the campaign was going on, the party refrained from making accusations but dealt with practical problems. This was vividly demonstrated over the TV debate among the four parties on 2 October which was watched by 30 million viewers. During the debate which lasted for three and a half hours, Hans-Dietrich Genscher avoided getting involved in the mutual recrimination among the other three people but centered his talk on substantial issues. All press comments regarded Genscher's approach as the most successful.

The sharp increase of the votes for the Free Democratic Party was deeply rooted in the mentality of most voters who desire stability and fear chaos. In the crises-ridden 1980's, it is the hope of the majority of voters that there will not be any big changes in the domestic and foreign policies. Therefore, they have no desire to see the current ruling party replaced by the opposition party or the Social Democratic Party in the reins of government alone which would make the "left wing" forces within the Social Democratic Party free from the containing force of the Free Democratic Party. Commenting on this, a paper noted that the Free Democratic Party is an indispensable third force to play a coordinating role at the present stage. It is the status of a third force that has helped the party win more votes.

According to the agenda presented by Helmut Schmidt at a news conference on the eve of the election campaign a new government is to be formed a month or so after the general elections. It is predicted that the new government is not likely to make any change in its internal and external policies. Schmidt said later on that both domestic and foreign policies would be carried on uninterruptedly.

HELMUT SCHMIDT NOMINATED AS FRG'S CHANCELLOR

OW091346 Beijing XINHUA in English 1255 GMT 9 Oct 80

[Text] Beijing, 9 October (XINHUA)--Leaders of the Social Democratic Party and the Free Democratic Party, at their first meeting on 7 October after winning the Bundestag (Federal Assembly) elections on 5 October, agreed on broad guidelines for future government policies and endorsed the nomination of Helmut Schmidt as chancellor for another four-year term, according to reports from Bonn.

A statement issued after the meeting said that the two-party ruling alliance will take disarmament, detente and improvement of relations with East Germany as the cornerstone of their policies. The statement also put emphasis on the need to solve unemployment and other economic problems and curbing violence and terrorism.

The statement promised to continue the "clear and dependable foreign and security policies which had earned solid trust throughout the world" and the "policy of military balance, of arms limitation at the lowest possible level, of strengthening the alliance and the European common market, and of being a reliable partner."

The statement was viewed by observers as having put greater emphasis on relations with the Western alliance. This showed that the Free Democratic Party, which has won an unexpectedly sizable victory in the elections, is now exercising greater influence with its leader Hans-Dietrich Genscher hoping to play a greater role in the country's external policy, pressing ahead more forcefully with his own line.

The statement indicated that Genscher and Willy Brandt, leaders of the two parties, had submitted Schmidt to President Karl Carstens as head of the future government.

It is reported that the newly-elected Bundestag will meet on 4 November to elect the new chancellor.

PAKISTAN'S ZIAUL HAQ VISITS FRG'S SCHMIDT

OW100836 Beijing XINHUA in English 0820 GMT 10 Oct 80

[Text] Bonn, 9 October (XINHUA)--Pakistani President Ziaul Haq and West German Chancellor Helmut Schmidt agreed today that no third country should interfere in the Iraq-Iran conflict and that the two sides of the conflict should enter into negotiations as soon as possible to solve their dispute.

The Pakistani leader stopped over here for a one-day working visit after attending the UN General Assembly and visiting London and Vienna. He left here for home tonight.

A bulletin issued by the press and information office of the federal government said that after a deep-going exchange of views between Ziaul Haq and Schmidt and Foreign Minister Genscher, the two sides maintained that the free passage of the Hormuz Strait is of vital importance to the supply of oil to the world's economy. Meanwhile, the two sides also called for a political solution to the Afghan issue under the supervision of the United Nations, the key to its solution being the withdrawal of all Soviet troops, respect for the independence and non-alignment of Afghanistan and self-determination for its people.

At a news conference he gave today, the Pakistani leader sternly condemned the Soviet invasion of Afghanistan, saying that subjugation of the 15 million Afghan people by one superpower is something not to be tolerated. He also appealed to world conscience not to ignore the sufferings of Afghanistan under the occupation of the Soviet Union. "If today it is Afghanistan, tomorrow it may be Poland," he noted.

The Pakistani leader had talks with West German President Karl Carstens earlier today.

U.S. PAPERS ON SOVIET-SYRIAN TREATY

OW100252 Beijing XINHUA in English 0236 GMT 10 Oct 80

[Text] Washington, 9 October (XINHUA)--Major U.S. newspapers today termed the Soviet-Syrian cooperation treaty as a Soviet attempt to "reassert influence in the Middle East."

The 20-year treaty was signed in Moscow last night. It calls for continued "cooperation in the military field" between the two parties and asserts that they will "develop and broaden" their consultation "above all on the problem of the Middle East."

The new treaty with Syria, said an article in the NEW YORK TIMES today, "was regarded as a major advance for the Kremlin. In the short term, it enhances the Soviet political and military presence in the Middle East. In the longer view, it takes the Soviet Union a step further toward its goal of having a role in the area."

THE WASHINGTON POST called the treaty "a major attempt to reassert Soviet influence in the Middle East." "The Soviets appear to have decided to exploit current uncertainties in the Middle East to establish a solid footing in the region," said THE POST. The Syrians, it continued, "seem to have entered into a formal alliance with Moscow to protect their interests should the regional situation deteriorates farther."

The military and mutual security clauses of the pact, THE POST said, have "proven most potent in the volatile Middle East and Gulf region." The Soviets cited the "mutual security clause" in its treaty with Afghanistan when intervening there last December, it noted.

Commenting on the Soviet-Syrian treaty today, a State Department spokesman said the treaty, which seems to be built on a long-standing Soviet-Syrian relationship, "is not likely to have a dramatic impact on current events in the Iran-Iraq war" or have "a really dramatic impact on the general Middle East situation." But the spokesman noted that the Soviet Union has signed a number of such treaties with Third World states and that Egypt and Somalia have abrogated treaties of the same type.

CZECHOSLOVAK CP HOLDS 18TH PLENARY SESSION

OW101216 Beijing XINUUA in English 1208 GMT 10 Oct 80

[Text] Prague, 10 October (XINHUA)--The 18th plenary session of the 15th Central Committee of the Communist Party of Czechoslovakia was held here from 7 to 9 October to pave the way for the convening of the party's 16th congress and work out the country's 7th five-year plan.

The plenary session passed the report on the convocation of the 16th congress delivered by General Secretary Gustav Husak and decided that the 16th congress will be held on 6 April 1981.

The session also approved the report on the progress of the preparatory work and main points of the 7th five-year plan (1981-1985) which was given by Lubomir Strougal, member of the presidium of the party's Central Committee.

The session proposed to the Federal Assembly and the Central Committee of the National Front that general elections be conducted in June of 1981.

Strougal said in his report that some of the fixed tasks for the 6th five-year plan would not be met completely. The national income will show a rise of 20 percent as against the planned 27 to 29 percent, industrial production 25 percent as against the planned 32 to 34 percent, agricultural production 9 percent as against 14 to 15 percent and real per capita income by 10 percent as against 23 to 25 percent.

In the coming period of the 7th five-year plan, Strougal said, the country will meet with still tougher conditions at home and abroad, affecting the growth rate of the needed raw materials and energy sources.

FORMER POLISH RADIO, TV HEADS EXPELLED FROM PARTY

OW081850 Beijing XINHUA in English 1836 GMT 8 Oct 80

[Text] Warsaw, 8 October (XINHUA)--The ousted chairman of the Polish Radio and Television Committee Maciej Szczepanski and First Deputy Chairman Eugeniusz Patyk have been expelled from the party for abuse of power, embezzlement and corruption.

A decision to that effect was made on 6 October by the United Workers' Party Organization in the Polish Radio and Television Committee after investigations ascertained a host of facts about their violation of the law and discipline.

Earlier, at the suggestion of this party organization, the two men were relieved of their posts as member and alternate member of the Party Central Committee respectively.

A PAP report pointed out that M. Szczepanski and Eugeniusz Patyk had by their deeds "violated the basic principles governing life within the party, tarnished the honour of a communist and injured the prestige of the party." They had abused their powers, sought personal gains at public expense, behaved peremtorily in their work and muzzled criticism.

It was revealed that Szczepanski possessed seven private cars, a yacht, a 16-hectare pastureland and a luxurious villa in addition to three airplanes placed at his disposal. He had bought a house in Nairobi, capital of Kenya, and deposited 400,000 U.S. dollars in a foreign bank.

The supreme procuratorate recently decided to bring an action against the two men on the basis of people's reports supported by conclusive evidence.

SHENYANG COURT SENTENCES SYRIAN STUDENT

OW061412 Beijing XINHUA in English 1358 GMT 6 Oct 80

[Text] Shenyang, 6 October (XINHUA)--The Shenyang Intermediate People's Court today sentenced Syrian student Kamal Fadlah Nofal to 15 years imprisonment for causing the death of Congolese student Ondongo-Gambomy Marice as a result of a knife wound.

The trial was held before 800 people.

Kamal was accused of striking Ondongo-Gambomy in the upper abdomen with a knife during a fight that broke out on the early evening of 10 June this year among some foreign students attending the China Medical College here. Ondongo-Gambomy, who was promptly taken to the hospital for treatment, died at 4:25 pm the following day as a result of the knife wound in his liver.

The Shenyang City People's Procuratorate instituted legal proceedings against Kamal. The court heard the defence by lawyer Guo Zonghan who was provided by the Municipal Legal Aid Society.

Kamal, who delivered his defence in Chinese rather than in his own language, although the court offered to provide him with an official translator, acknowledged the facts and evidence presented by the prosecutor and testimony by witnesses. The court decision was that the defendant was guilty as charged and sentenced him under Article 134 of the Criminal Law of the People's Republic of China which reads: "Whoever intentionally causes injury to another shall be sentenced to...imprisonment for not less than 7 years, or to life imprisonment, if death ensues...."

According to law, the defendant may submit an appeal to a higher court within 10 days after receiving the written verdict. In a final statement to the court, Kamal declared that he accepted the verdict and would not appeal.

CHINESE, FRG SCIENTISTS COLLECT FOSSILS IN NEI MONGGOL

OW090218 Beijing XINHUA in English 0159 GMT 9 Oct 80

[Text] Hohhot, 9 Oct (XINHUA)--Many small mammal fossils including teeth, jaws and skeletons were collected by five West German and six Chinese paleontologists in a 12-day expedition in Huade County, Inner Mongolia. The activities concluded at the end of this September.

Scientists of the two countries are selecting, reconstructing and studying these fossils in Beijing. German Professor H. Tobien of Mainz University and Professor Zhou Mingzhen, Chinese paleontologist, told XINHUA that they had gone to observe in detail the strata of the fossil-yielding area at Tuchengzi, Guangweizi, Shisangudi and Erdengtu in Huade County in central-south Inner Mongolia. The fossils include three families of rodents, two of rabbits and three of insectivores, which are fairly rare. These animals lived in the late pliocene epoch approximately 5-6 million years ago. Scientists believe that the fossil area had a much warmer climate several million years ago than today. At that time there were many lakes where animals thrived.

Scientists taking part in this field investigation say that the new discoveries furnish data for studying the origin, development and evolution of the mammals in the late tertiary period in Asia and understanding the species, morphology and structure of animals of the pliocene epoch. They are also significant for studying the migration and exchange of prehistoric animals and the history of the separation and joining of the Eurasia. The scientists also discovered a number of fossils of carnivorous mammals, hoofed mammals with an even-toed foot and hoofed mammals with an odd-toed foot. Fossils of some amphibians, reptiles and birds were also found.

In the 1920's German Professor Max Schlosser studied in Germany fossils collected from this country. During his student days in Germany Yang Zhongjian worked under his guidance. Yang Zhongjian became a renowned paleontologist later and died early last year. This field investigation is the first between Chinese and German paleontologists in new China.

MINORITY SONG, DANCE TROUPE TO TOUR EUROPE

OW111432 Beijing XINHUA in English 1211 GMT 11 Oct 80

[Text] Beijing, 11 October (XINHUA)--A 32-member song and dance troupe representing nine of China's separate nationalities will start an eight-week tour of Yugoslavia, Malta and Romania next Monday.

This is the first such troupe to perform outside China since the "cultural revolution," although since 1952, when the China National Song and Dance Ensemble was formed, its artists have performed in a dozen countries in Europe, Asia and Latin America. The whole ensemble is composed of 280 artists of 30 nationalities.

The troupe leaving on Monday includes Mongolians, Hans, Uygurs, Huis, Bais, Koreans, Tais, Manchus and Tungs.

One of the highlights of their repertoire is a silk dance entitled "Rainbow," especially prepared "to show our best wishes for a bridge of friendship between Chinese and European peoples," according to their leader and art director, the famous Mongolian dancer, Baoyinbatu. The programme will also include pipe and flute music from China's minority nationalities.

Baoyinbatu, 51, who is also a National Committee member of the All-China Federation of Literary and Art Circles, said today: "We are not unfamiliar with the cultures of our host countries, but we look upon this visit as a good opportunity to understand more about European musical art."

Baoyinbatu's personal life is typical of some of China's best-known minority artists of the older generation. A child beggar who roved the Mongolian grasslands, Baoyinbatu joined the Chinese revolution at 16. Later, he graduated from the first class of research students at the Central Drama Institute, became the deputy director when China set up its first minority art troupe, the Inner Mongolia Song and Dance Ensemble, and matured into a leading figure in China's minority arts.

BRIEFS

JIANGXI ECONOMIC FRIENDSHIP DELEGATION--The Jiangxi provincial economic friendship delegation headed by Bai Dongcai, (Hu Ping) and (Wang Fuheng) departed Beijing on 11 September for official visits to West Germany and the United Kingdom. Wang Shixian and Xu Qin, Jiangxi vice provincial governors, Hu Benyao, deputy director of the West European Affairs Department of the Ministry of Foreign Affairs, and (Xiao Feng), deputy director of the State Aquatic Products Bureau saw them off at the airport. [Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 12 Sep 80 HK]

BEIJING JOINT VENTURE--The Beijing (Xunde) light manufacturing factory, the first joint venture of Chinese and foreign capital in the machine building industry in China, held an inaugural meeting on 14 September in Beijing. According to mutual agreement on Chinese and foreign joint ventures, the total investment of the (Xunde) Light Manufacturing Company Limited is to be U.S.$16 million and the period of cooperation would be 20 years but could be extended for a longer period. The company began operations in July 1980. [Beijing City Service in Mandarin 2300 GMT 15 Sep 80 HK]

BEIJING ENGLISH TRAINING CENTER--The graduate school of the Chinese Science, Technology University will run an English training center jointly with UCLA. The training center opened on 14 September. The training center is mainly for cadres in the sciences and technological fields. Professors from UCLA and Yan Jici, deputy director of the Chinese Science and Technology University, attended the opening ceremony. [Beijing City Service in Mandarin 2300 GMT 17 Sep 80 HK]

TIANJIN DELEGATION TO JAPAN--The academic delegation of Tianjin University left for Japan 7 October. The nine members, led by Zhao Jinsheng, will visit Kobe University, conduct academic exchanges and sign a memorandum on friendly cooperation and academic exchanges between Tianjin and Kobe universities. [SK091422 Tianjin City Service in Mandarin 0030 GMT 8 Oct 80 SK]

TIANJIN GERMAN MEDICAL EXHIBITION--The first exhibition of West German medical apparatus and instruments was held 8 October at the industrial exhibition hall in Tianjin Municipality. [Tianjin City Service in Mandarin 0030 GMT 9 Oct 80 SK]

KOREAN DELEGATION IN GUANGZHOU--Accompanied by Zhang Xiangshan, director of the Central Broadcasting Administration, the Korean broadcasting and television delegation, comprising six persons, arrived in Guangzhou from Shanghai by plane on 20 September. On the following day, Yang Kanghua, vice governor of Guangdong Province, met with and hosted a luncheon for the delegation. The delegation left for Beijing on the evening of 21 September. When the delegation arrived and left Guangzhou, Zhang Yueqiang, director of the provincial broadcasting bureau, welcomed them and saw them off at the airport. [HK091516 Guangzhou City Service in Cantonese 0430 GMT 22 Sep 80]

CHEN MUHUA MEETS OUTGOING ENVOYS--Beijing, 7 October (XINHUA)--Chinese Vice-Premier Chen Muhua this afternoon met with outgoing Turkish Ambassador to China Oktay Cankardes and Ganaian Ambassador to China Kofi Baah Aidoo. [Text] [OW071226 Beijing XINHUA in English 1219 GMT 7 Oct 80]

POSTPONEMENT OF OPEC SUMMIT--Beijing, 9 October (XINHUA)--With Iran and Iraq at war, the Organisation of Petroleum Exporting Countries (OPEC) yesterday postponed a summit meeting scheduled on 4 November in Baghdad, according to Western news agency reports. The Gulf News Agency reported that Iraq yesterday notified the OPEC Vienna headquarters of its agreement to postpone the meeting. The OPEC headquarters said that a preparatory meeting of oil ministers, set for 14 October, was also postponed. OPEC sources stated that Caracas, Venezuela, had been suggested as alternative site for the meeting, although no date has been set. [Text] [OW090752 Beijing XINHUA in English 0734 GMT 9 Oct 80]

SWEDISH HONORARY DEGREE--Stockholm, 2 Oct (XINHUA)--The Swedish Royal Institute of Technology today granted an honorary doctorate of technology to Guo Kexin, deputy head of the Shenyang branch of the Cinese Academy of Sciences and a research fellow of the Metal Research Institute of the academy. Meanwhile, honorary doctorates were also conferred on seven Swedish scientists and a West German scientist by the institute. A ceremony was held in the city hall here before more than 1,000 scientists and prominent figures. Chinese Ambassador Cao Keqiang attended the ceremony, which was followed by a banquet in honor of the recipients. Guo Kexin was also invited to be a foreign member of the Swedish Royal Academy of Engineering Science last January. [Text] [OW051345 Beijing XINHUA in English 1205 GMT 3 Oct 80]

PORTUGUESE ORCHESTRA PREMIERE--Beijing, 4 Oct (XINHUA)--The first Portuguese art group to visit China since the establishment of diplomatic relations with Portugal last year received a spirited welcome at their premiere here this evening. The group, led by Jose Blanco, comprises more than 40 musicians from the Gulbenkian orchestra. Under the baton of the celebrated 29-year-old conductor Arthur Howard Fagen, this evening the group presented Mozart's abertura "As Bodas de Figaro" (Marriage of Figaro), Beethoven's piano concerto No 1 in C major, with Jose Carlos Sequeira Costa as pianist, and Schubert's symphony No 5 in E flat major. During the intermission, Vice-Minister of Culture Zhou Erfu and Vice-Mayor of Beijing Bai Jiefu had a cordial meeting with Mr Blanco, the Portuguese ambassador, Mr Antonio Ressano Garcia and Mrs Garcia. At the same time China's leading conductor Li Delun and noted pianist Liu Shikun chatted with the visiting conductor, Mr Fagen and pianist, Mr Costa. The Portuguese musicians arrived in Beijing yesterday. [Beijing XINHUA in English 1641 GMT 4 Oct 80]

GRENADIANS PROTEST CUBAN PRESENCE--Gorgetown, 8 October (XINHUA)--A group of Grenadians have threatened "war" in Grenada for the continued presence of over 200 Cubans in the country, the GUYANA CHRONICLE reported today. In a despatch from St George's, capital of Grenada, the paper said Grenadian Prime Minister Bishop revealed in his weekend broadcast that a note left at the scene of a recent bomb explosion warned that unless all Cubans in Grenada were sent back within 3 days, there would be "war" there. A 250-man Cuban work force is reportedly helping the Grenada Government build a 50 million U.S. dollars international airport and another 17 Cubans are working in Grenada's health services under a bilateral programme. The Bishop government came into power last year after overthrowing the former government of Eric Gairy in a bloodless coup staged by the New Jewel Movement led by Bishop. The new government has maintained close relations with Cuba. [Text] [OW090754 Beijing XINHUA in English 0740 GMT 9 Oct 80]

FRENCH FOREIGN MINISTER CITED--Paris, 9 October (XINHUA)--French Foreign Minister Jean Francois-Poncet reiterated today that his government stands for a political solution to the Iraq-Iran conflict. According to a communique issued by the Foreign Affairs Commission of the National Assembly, the foreign minister said at a meeting of the commission that the French Government appreciated the attitude of restraint maintained continuously by other countries, especially the big powers, in preventing the conflict between Iraq and Iran from expanding. Turning to the issue of Afghanistan, he pointed out that the incident of Afghanistan has been all along exerting a grave effect on the international situation, adding that "there has not been any marked change in the degree of Soviet intervention and the expanding people's resistance it encounters." "There are no prospects of progress for the political solution of the (Afghan) crisis," "which remains deadlocked," he noted. [Text] [OW100728 Beijing XINHUA in English 0711 GMT 10 Oct 80]

SFRY CONCERNED OVER CONFLICT--Belgrade, 8 October (XINHUA)--The presidency of the republic today expressed concern over the continuation of the armed conflict between Iraq and Iran, according to TANJUG. At a session presided over by President of the Presidency Ovijetin Mijatovic, the presidency stressed in particular the necessity of ending the conflict which was inflicting human and material losses to both sides. It pointed out that the consequences of the conflict had an important bearing on peace and security in this sensitive region. The presidency considered it necessary to create conditions and an atmosphere for the solution of the conflict by peaceful means and negotiations on the basis of the principles of the UN charter, non-alignment, international law and justice. [Text] [OW092005 Beijing XINHUA in English 1937 GMT 9 Oct 80]

IRAN-IRAQ WAR VIEWED--Beijing, 9 October (XINHUA)--Iranian forces pushed back Iraqi troops 20 kilometers from Ahvaz, the capital of Iran's Khuzistan Province in yesterday's fighting, according to reports reaching here. UPI reported Iranian F-4 phantom jets struck Baghdad last night, setting huge fires in the north of the capital and plunging parts of the city into darkness. The Iranian PARS News Agency said that Iraqi forces rocketted and bombarded Dezful and Ahvaz yesterday. The Iraqi News Agency (INA) said that Iraqi air force yesterday destroyed the Iranian radar stations over the border in Lorestan Province, put a missile base in southern Iran out of action and destroyed 27 Iranian tanks and an oil storage tank. [Text] [OW091519 Beijing XINHUA in English 1506 GMT 9 Oct 80]

IRAQI FORCES LAUNCH MISSILES--Tehran, 9 October (XINHUA)--Iraqi forces launched from inside of Iraq four missiles to Dezful last night killing some 100 Iranian civilians, the joint staff of the Iranian armed forces announced earlier today. Iraqi artillery today continued to bombard Ahwaz, capital of Khuzestan Province and the Ahwaz railway station, causing heavy casualties. According to a communique of the joint staff of the Iranian armed forces, Iranian air-borne force destroyed 35 Iraqi tanks, 6 army vehicles and killed 103 Iraqi soldiers in Khuzestan Province on 5, 7 and 8 October. [Text] [OW100300 Beijing XINHUA in English 0251 GMT 10 Oct 80]

BLANKETS SENT TO AFGHAN REFUGEES--Beijing, 10 October (XINHUA)--The "Friends of Afghanistan Association," formed in New Dehli after the Soviet military intervention in Afghanistan, has decided to send one lakh blankets to the Afghan refugees in Pakistan, according to a report carried in an advanced issue of the Indian weekly magazine, "Organizer" dated 12 October. This decision was made following a visit to the Afghan refugee camps in Pakistan by a three-man delegation headed by Shri Ram Jethamalani, a member of the Indian parliament. The delegation noted after the visit that the Afghan refugees have no rugs, quilts or blankets with which to tide over the forthcoming severe winter. [Text] [OW100722 Beijing XINHUA in English 0706 GMT 10 Oct 80]

RADIO RIYADH ASKS FOR SETTLEMENT--Cairo, 7 October (XINHUA)--Radio Riyadh today expressed the hope that Iran and Iraq would respond positively to the international calls for a ceasefire and eliminate their differences without foreign intervention, according to a report of Qatar News Agency from Riyadh. The radio said that the forces hostile to the Arab nation are playing a dangerous role of igniting the conflict in the area and pushing it to destruction. It is the major powers and Israel which are getting benefits from the exhaustion of the two countries, it added. The radio warned Iran and Iraq against escalating the war. [Text] [OW080714 Beijing XINHUA in English 0700 GMT 8 Oct 80]

JORDAN CONTINUES TO SUPPORT IRAQ--Beijing, 8 October (XINHUA)--Jordanian Prime Minister Mudar Badran on 6 October placed all civilian transport vehicles under the government's command, apparently to make them available to ship supplies to Iraq, according to Western News Agency reports. The prime minister made this announcement less than 24 hours after King Husayn returned from a brief visit to Baghdad where he pledged full support for Iraq's war effort against Iran. The Kuwaiti newspaper AL-QABAS reported yesterday that Jordan had massed 40,000 troops with heavy tanks and ground-to-air hawk missiles on the Iraqi border in readiness to join the war against Iran if asked by Baghdad. The paper said that Jordan had recently allowed an unspecified number of Soviet ships to unload arms and ammunition for Iraq at the Jordanian port of Aqaba. [Text] [OW080738 Beijing XINHUA in English 0740 GMT 8 Oct 80]

IRAQ SEEKS CEASEFIRE--Baghdad, 10 October (XINHUA)--The Iraqi National Assembly appealed to parliaments of Arab and other countries to urge Iran to accept the offer of a ceasefire and recognize Iraq's rights in its territory and national waters, the Iraqi press reported today. In a message sent yesterday to these parliaments, the speaker of the Iraqi National Assembly, Na'aim Haddad, said that the Iranian rulers' refusal of ceasefire would escalate the conflict in the region. He stressed that Iraq is keen on maintaining world peace through a just settlement which safeguards its sovereignty and the security of its territory. [Text] [OW101220 Beijing XINHUA in English 1213 GMT 10 Oct 80]

GUANGDONG BANQUET FOR DANISH DELEGATION--At noon on 17 September, Vice Guangdong Provincial Governor Liang Weilin met with and hosted a banquet for the Danish delegation. Attending were provincial culture bureau director (Li Xueguang) and the Danish ambassador to China. The Danish delegation arrived in Guangzhou from Hangzhou by plane on the evening of 16 September. This morning, the delegation visited No 1 subordinate hospital of the Zhongshan Medical College. [Guangzhou City Service in Cantonese 0430 GMT 17 Sep 80 HK]

ROMANIAN EDITOR IN NANJING--(Ke-si-ma Ma-li-ya), chief editor of the Romanian PARTY WORK journal, visited Nanjing from 4 to 6 October. On the evening of 4 October, (Fan Fayuan), deputy director of the propaganda department of the Jiangsu Provincial Party Committee and editor in chief of the XINHUA RIBAO, gave a banquet in honor of (Ke-si-ma Ma-li-ya). [OW071131 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 6 Oct 80 OW]

CANADIAN DELEGATION IN HEILONGJIANG--A Canadian Government delegation from Alberta Province arrived in Harbin on 3 October by plane. The delegation is expected to hold talks on establishing a sistership between the two provinces and to make preparations for the signing of a sistership pact by Peter Louheed, premier of Alberta Province, next year. Wang Jun, deputy provincial governor and vice president of the Heilongjiang branch of the Chinese People's Association for Friendship With Foreign Countries, traveled to Beijing 1 October to welcome the delegation. Li Jianbai, president of the Heilongjiang branch of the Chinese People's Association for Friendship With Foreign Countries, greeted the delegation at Harbin airport. PRE-TRIAL OF LIN BIAO CLIQUE, 'GANG OF FOUR' DISCUSSED

HK080731 Hong Kong CHENG MING in Chinese No 36, 1 Oct 80 pp 28-29

[Article by Lin Nan: "A Record of the Pre-trial of the Lin Biao and the 'Gang of Four' Cliques"]

[Text] Early this summer Beijing held a pre-trial of the "gang of four" and the Lin Biao clique. Of course, this pre-trial was conducted in secret. However, some CCP cadres, including reporters of party newspapers and magazines, were allowed to attend the pre-trial as observers.

Jiang Qing was the most conspicuous personality in the pre-trial. She adopted an arrogant attitude of an "empress" and was extremely haughty. She demanded that the presiding judge return to her all the documents taken away from her so that she could use this as evidence to defend herself. While talking about the "Tiananmen Square Incident," Jiang Qing said: "I was not the chief instigator who suppressed this incident. You can ask the then minister of public security to prove this." The minister then was Hua Guofeng. During the pre-trial, Jiang Qing also used Mao Zedong as her umbrella. She repeatedly shouted: "When you want to beat a dog, you must be careful who its master is."

Zhang Chunqiao's attitude was also not good. However, he has acted differently from Jiang Qing who repeatedly screamed out. He just kept silent.

The attitude of Yao Wenyuan and Wang Hongwen was better. Both of them confessed some crimes. In the past, the names of the "gang of four" were arranged in the order of Wang, Zhang, Jiang and Yao. Since Huang Kecheng's speech on the handling of the cases of the Lin Biao clique and the "gang of four" at the central discipline inspection commission, the order of their names has been rearranged to: Jiang, Zhang, Yao and Wang. Besides these four persons, this counterrevolutionary gang also included Wang Li, Guan Feng and Qi Benyu.

Kang Sheng was regarded as a member of the Lin Biao counterrevolutionary clique. According to Huang Kecheng, the Lin Biao clique included Lin Biao, Kang Sheng, Chen Boda, Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Xie Fuzhi.

Huang Kecheng's speech was made on behalf of the central discipline inspection commission. This speech was said to have been conveyed to the lower levels as a document of the central authorities (No 17, 1980).

In the pre-trial held early this summer, members of the Lin Biao clique also appeared.

The "four great god protectors" (Huang Yongsheng, Wu Faxian, Li Zuopeng and Qiu Huizuo) no longer looked powerful. They all claimed ignorance of the "outline of project '571'"--Lin Biao's plot for a military coup d'etat.

However, some minor members of the Lin Biao clique admitted their knowledge of the "outline of project '571.'" These members belonged to Lin Biao's "flotilla."

This "flotilla" was composed primarily of young military officers such as Yu Xinye (deputy chief of the general office of staff headquarters of the air force), Zhou Yuchi (deputy director of the general office of staff headquarters of the air force) and Li Weixin (deputy chief of the secretariat of the political department of the 4th Air Force). As soon as Lin Biao's plot was aborted, Yu Xinye, Zhou Yuchi and Chen Liyun, another co-conspirator of Lin Biao, fled in two helicopters. However, they were forced to land and surrender near the border region. Yu Xinye and Zhou Yuchi shot the pilot to death and then committed suicide. Chen Liyun was shot and severely wounded becausehe resisted arrest. Li Weixin of the "flotilla" also attempted to flee. Since he was a coward, he did not have the courage to pull the trigger when he took up a pistol to shoot himself on the plane. He was finally caught when the plane landed and became the only survivor of the "flotilla."

The "outline of project '571'" was a conspiracy for a coup de 'etat. Li Weixin revealed how this plan was drawn up: Lin Liguo, Lin Biao, and Ye Qun went to Suzhou in February 1971. Lin Liguo then went to Hangzhou to join Yu Xinye. They then went to Shanghai on 18 March. That night, Lin Liguo spoke to me and Yu Xinye in his bedroom. He said the situation demanded that we draw up a plan for a coup d'etat. He also said that he was going to ask Zhou Yuchi who was then in Beijing to join the discussion in Shanghai. He asked Yu Xinye not to return to Beijing for the time being but to take charge of the matter. Lin Liguo added that he had told the "Viscount" (Ye Qun's code name) about what we discussed in Hangzhou and that Ye Qun suggested we pay attention to security and stay hidden in Shanghai. Zhou Yuchi arrived in Shanghai on 20 March. That night, Lin Liguo and and Zhou Yuchi had a secret meeting and then they summoned Yu Xinye. On the following day, the three of them held a discussion. Later, they summoned me. Lin Liguo said: "The power of various districts shows that the words of the leader (Lin Biao) are still effective. I have talked about this matter with the leader. He has asked me to 'draw up a plan.'"

This plan was the famous "Outline of Project '571.'" The full text contained nine parts. The first part was: "Since the 'second plenary session of the Ninth CCP Central Committee,' the political situation has been unstable.... The economy has remained stagnant...discontent has been growing. Some people are furious but dare not show their anger. Others even dare not be angry. The ruling clique is corrupt, muddleheaded, incapable and utterly isolated.... A political crisis is brewing.... China is undergoing a coup d'etat in a gradual and peaceful way. This form of coup d'etat is a usual method adopted by B52 (referring to Mao Zedong). Therefore, we must make an abrupt change by means of violence and revolution to stop this counterrevolutionary gradual change. If we cannot stop the peaceful change by the 'outline of project "571,"' their plot will succeed. How many people will be killed then? For how many years will the Chinese revolution be delayed? What attitude should our 'flotilla' adopt in the future political revolution. Once we become leaders in the revolution, we will be able to achieve political power in the future. History has entrusted to the flotilla the leadership of revolution. Comparing 'project "571"' to similar schemes in foreign countries we are better prepared and have more power. Thus, we stand a better chance of success. We are no weaker than the Soviets during the October revolution. Geographically, we have much more room to maneuver. The air force has great mobility. Comparatively speaking, the best way for carrying out 'project 571' is for the air force to seize state power. Military regions would only set up separatist regimes. There are two possibilities: seize the state or create a separatist rule." While talking about "strategic opportunity and methods," the plan read: "B52 is in our hands, the enemies' chief warships (the chief political leaders of the central authority) are in our hands. They have hurled themselves into the net. We can make use of a meeting of the higher levels and catch the whole lot in a dragnet. We can kill the lackeys first and present a 'fait accompli.' We can force B52 to submit and to abdicate. We can use special methods such as poisonous gas, bacteriological weapons, bombing, '543,' car accidents, assassination, kidnapping and urban guerrilla units."

Who had knowledge of this plan? Li Weixin said: "Lin Liguo said that knowledge of the 'outline of project "571"' and the training unit should be confined to the 'flotilla,' Jiang Tengjiao, Wang Weiguo and Chen Liyun only. The Shanghai group could be given some information.... I did not see the 'outline of project "571"' again after it was written. On 11 September 1971 (2 days before Lin Biao died in a plane crash--the writer), Yu Xinye boasted: Lin Liguo left behind the plan and a book on past armed uprisings compiled by Yu Xinye in the hands of "the chief," "the director" (Ye Qun) in Beidaihe.

It seems that the "four great god protectors" were really ignorant of the "outline of project '571.'" Whether they knew it or not will be found out in the formal trial in future.

'CHENG MING' ARTICLE ON BEIJING GOSSIP ABOUT ZHAO, YE

HK080847 Hong Kong CHENG MING in Chinese No 36, 1 Oct 80 pp 6-9

[Article by Lo Ping [5012 0393]: "The Whole City Is Talking About Ye and Zhao"]

[Excerpts] In Beijing over the last few days, this writer heard talk about Zhao Ziyang in particular. Some people questioned Zhao's ability. A friend of mine from Guangdong who was attending the NPC session told me: "When Zhao Ziyang was in Guangdong, he was just so so." He meant that Zhao's record there was not particularly impressive. Others believed that Zhao was relatively trustworthy. As far as I know, the "support Zhao faction" is in the "majority" among the people.

In the first place let me tell an amusing episode. Wu Chu-fan, a veteran in Hong Kong's film circles, told me 3 months ago that after meeting Tao Zhu and Zhao at a presentation of central-south China stage performances before the "Cultural Revolution" that from the angle of "fortune-telling," some day Zhao would become a premier. The facts have now proved that what he said was true (3 months ago Zhao became executive vice premier). At that time I was wondering whether "fortune-telling" was so effective. However, I said nothing about that because I thought it would be disrespectful to the fortune-tellers.

Seven Reasons Given by the 'Support Zhao Faction'

In determining Zhao's candidacy for the premiership, naturally the "support Zhao faction" does not follow a fortune-teller's point of view. The faction bases its assessment on the following factors:

1. Zhao Ziyang was very firm in opposing the "gang of four." When he was branded by them as Deng Xiaoping's man, he simply ignored their charges. Ostensibly complying but secretly disobeying, he "hit back at the right deviationist wind to reverse verdicts" which was then blowing. After the "gang of four" collapsed, he ordered the arrest of Zhang Xiting and his wife, the "gang of four's" pawns who were responsible for suppressing the masses in Sichuan.

2. Zhao was strongly against the viewpoint of the "whatever faction." Along with Hu Yaobang, Wan Li, Feng Wenping and so forth at the 3d plenary session of the 11th party Central Committee, he stopped the "leftist" whirlwind whipped up by the "whateverists" like Wang Dongxing and Ji Denggui and vigorously repelled it.

3. Zhao energetically implemented the line, guiding principles and policies laid down at the 3d, 4th and 5th plenary sessions of the 11th Central Committee. He also firmly upheld in Sichuan the spirit of the two documents on agriculture adopted by the third plenary session. In agricultural work, he advocated and carried out a liberal policy in Sichuan with the help of Li Ziyuan, former Standing Committee member of the Guangdong provincial party committee and director of its rural work department, whom Zhao brought to Sichuan from Guangdong. In Sichuan Li became provincial party committee secretary in charge of agriculture. As a result of the policy of encouraging the development of the privately owned economy alongside the collective economy, the economic prospects in Sichuan brightened.

4. Zhao is more or less practical-minded. At a national conference on farm machines he attended, some people were critical of the use of tractors in Sichuan in transporting goods. However, Zhao believed that it was more urgent for the peasants to use tractors to transport goods than using them for farming purposes (due to various causes, many peasants were reluctant to use tractors to plow fields). This shows that Zhao is a "pragmatist."

5. Zhao has courage. When the CCP Central Committee asked a number of ministries to selectively go ahead with expanding the decisionmaking power of enterprises, they failed to straighten out their thinking and were afraid of encountering difficulties. However, Zhao took the lead in drumming for this cause and did the job in a big way. Other industrial, agricultural and commercial affiliated operations in Sichuan also conducted experiments in select areas.

6. Zhao is fairly down-to-earth in his workstyle and is willing to conduct in-depth investigations and studies. A friend from Nei Monggol told me that although Zhao was Nei Monggol party secretary for a rather short period, he went to many places in that region. A deputy from Sichuan told everybody he met that Zhao had traveled all over Sichuan. He also urged people to read an article by Liu Binyan carried in the July issue of the Shanghai WEN HUI BAO supplement entitled "Calling All Career-minded People--Random Notes on a Trip to Sichuan." The article mentioned how Zhao's jeep "traveled to every part of the province, often stopping at the fields and at rural homes. As first secretary of the Sichuan provincial party committee, Comrade Zhao untiringly listened to the views, aspirations and suggestions of many peasants. Talking to peasants working in the fields and in their homes and pondering problems in his jeep no doubt centered on a subject of vital importance: how to

sum up lessons and find a way of developing agriculture (and maybe not only agriculture) that conforms to popular wishes and meets practical needs.

7. Zhao pays close attention to rectifying cadre workstyle. It is said that when Zhao's jeep stopped at the office of a certain county party committee during office hours, the party committee secretary and his colleagues were having a good time playing cards. The next day, all these people were dismissed from office. This story demonstrates how Zhao attached importance to observing party workstyle and strengthening party discipline and paying close attention to cadre workstyle.

Talk About Ye Staying on in His Job

People generally approve of the courage of the CCP Central Committee over the last 3 or 4 years in promoting reforms and doing away with outmoded systems. However, one view prevails that the CCP's handling of certain problems has not been sufficiently drastic and thorough. For example, on the question of fostering younger leaders, many people believe that aging and fragile leading cadres have not retired as early as possible.

Beijing residents talk a great deal about Ye Jianying. Marshal Ye has contributed significantly to the founding and consolidation of the country. His role in the campaign to overthrow the "gang of four" is also known to all. However, there have been various views in recent years on certain aspects of Marshal Ye. Since this is of little revelance to the main subject discussed in this article, it will be skipped. What should be noted is Beijing residents' views on 84-year-old Ye Jianying and why he still keeps the NPC chairmanship after five other NPC vice chairmen have resigned.

Opinions are widely divided. What follows is a record of the pros and cons taken down by this writer at a gathering.

A Sampling of Arguments

"Ye Jianying has tendered his resignation but it has not been accepted. Therefore, to say that he wishes to hold his job is unfounded."

"When did he tender his resignation and to whom? The NPC Standing Committee chairman is elected by the NPC (Chairman Ye was elected at the Fifth NPC). Has the current NPC session received Ye's resignation?"

"XINHUA News Agency has merely reported that the recent NPC session received letters from Nei Rongzhen, Liu Bocheng, Zhang Dingchen, Cai Chang and Zhou Jianren requesting their resignation as NPC vice chairmen. The texts of the five letters were also made public."

"Should we seriously ponder the five letters of resignation that have been published? Why have the letters of resignation of the five vice premiers not been published?"

"It is possible that the letters of resignation from five NPC vice chairmen and their publication aim at somebody and not just one person. Nevertheless, I believe the Sixth NPC will probably be convened next year. Will it not be much better for Marshal Ye to extend his chairmanship for 1 or 2 years until the 6th NPC when reelection will take place?"

"The problem lies not in that but in one's attitude toward the abolition of lifetime tenure for cadres. Such a feudal system must be brought to an end, and the sooner the better for the country. The older generation of revolutionaries should take the lead in the movement to eliminate the system of lifetime tenure. It is said that after the fifth plenary session of the party Central Committee decided to abolish lifetime tenure, Li Xiannian and Nei Rongzhen approached Marshal Ye in the hope that he would set an example. However, Ye did not utter a word and left angrily..."

"This is merely hearsay and not to be believed."

"After Ye left in anger, he made an inspection trip to various parts of the country abstaining from attending Central Committee meetings and the memorial meeting for Liu Shaoqi. Was he unhappy about these things?

"I believe we should look at the facts and not play guessing games."

"In short, those who want to keep power in their hands are emotionally opposed to the abolition of lifetime tenure. I heard that the venerable Ye proposed to build a railway in Guangdong linking Shaoguan with Meixian (Marshal Ye's birthplace). He wanted to have the proposed project given the green light without the prior approval of the central authorities..."

"This is also hearsay and should not be considered as the basis for discussing problems."

"A friend told me something reliable, saying that some people in the Central Committee do indeed hope that Marshal Ye will stay on as NPC chairman so that under his protection they will be able to keep their right to remain as senior officials."

"Has RENMIN RIBAO published this news or not?"

"Of course not."

"If it has not been published, then it is not reliable. I think we should be a little more scientific in discussing problems because the scientific approach in the first place gives consideration to the facts."

It was an inconclusive "discussion session." I found it very difficult to accurately determine who was right and who was wrong. I just hold that now is the time for the CCP to terminate lifetime tenure. This is in fact the general trend of events and accords with the will of the people. This trend is irresistible.

'HSIN WAN PAO' DEMANDS CHEN YONGGUI 'BE BROUGHT TO JUSTICE'

HK091108 Hong Kong HSIN WAN PAO in Chinese 7 Oct 80 p 4

["New Talk" column: "From Hu Yongnian to Chen Yonggui"]

[Excerpts] A principal criminal guilty of "beating, smashing and looting" during the "Cultural Revolution" has been sentenced to death in Shanghai. This seems to be the first time that fellows of this kind have been subjected to such punishment.

This man, named Hu Yongnian, was a former member of the Shanghai Revolutionary Committee and chairman of the Shanghai Physical Culture and Sports Committee. It was reported that "he actively participated in the criminal activities of Zhang Chunqiao, Yao Wenyuan, Wang Hongwen and other counterrevolutionaries in usurping party and government leadership in Shanghai Municipality." He was not called a member of the "gang of four." What was the reason?

This reminds us of an announcement made in an NPC decision to set up a special court to try the 10 principal criminals of the Lin Biao-Jiang Qing group: "Other criminals will be tried separately according to the differing circumstances, and proceedings will be instituted with the supreme people's court and the military court respectively." This case must fall within this category--to be "tried separately."

Hu Yongnian was tried by the Shanghai Municipal Intermediate People's Court. After the imposition of the death sentence, a 2-year reprieve was announced. This has made people wonder if leniency has been carried to excess. Those persecuted by him numbered nearly 1,000, 2 of whom died as a result. Many more principal criminals like him guilty of "beating, smashing and looting" can be found in the country. Perhaps, out of the desire not to execute too many people, "the death sentence" was subsequently "suspended."

Cases like this cannot be regarded as acts of factional revenge for the "Cultural Revolution." The actual crime involved should be noted and cannot go unpunished.

The trial of the Lin Biao-Jiang Qing cliques is a big step forward on the road to rule by law. The trial of people such as Hi Yongnian is only a relatively small step.

Chen Yonggui's son, Chen Mingzhu, usually known as "young master Chen," was also dismissed from his post. He is to be tried on such charges as raping a number of women, throwing his weight around, and doing evil. On the sheer strength of his father's influence, Chen Mingzhu was made a director of the propaganda department of the Xiyang County CCP Committee. What did he know about publicity? What propaganda was like under his control could be easily imagined. The mention of things like this really breaks one's heart!

What people are expectantly waiting for is the trial of Chen Mingzhu. What would be the charge against Chen Yonggui for aiding and abetting his son's wrongdoing? Also, when would Chen Yonggui be brought to justice for his own various evil deeds. After the collapse of the "gang of four," he was still able to continue doing evil and clung to office for a long time. Who was behind him? Should his backstage boss not be held responsible for shielding and conniving with him?

As far as Chen Yonggui's case is concerned, it now seems that things are slowly beginning to unfold. His lesser associates will be handled first and his turn will come later. May he get his just deserts soon!

'HSIN WAN PAO' ON JIANG'S 'UNOFFICIAL HISTORY,' UPCOMING TRIAL

HK071224 Hong Kong HSIN WAN PAO in Chinese 6 Oct 80 p 4

["New Talk" column: "Talking of Trying Jiang Qing From Writings on Her Story"]

[Text] Our newspaper today began publishing the "unofficial history of Jiang Qing" in installments. The author wrote from good information this narrative of events not recorded in history. The author took part in the organizational activities together with Jiang Qing during the Yanan era and also had quite a few contacts with her while living in Yanan. Although they were not together from morning to night, the author knew Jiang Qing well. Since the author is also a woman, she is very familiar with the trivial details of Jiang Qing's everyday life including her state of mind. Later in Beijing, the author also had opportunities to be in contact with Jiang Qing. This author not only has firsthand material but also observed the trivial details of everyday life. Judging from small matters concerning Jiang Qing's personal life, we can understand important matters.

Jiang Qing will be brought to trial together with Zhang Chunqiao, Yao Wenyuan, Wang Hongwen and Chen Boda. Since Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu and Jiang Tengjiao were armymen, they will be tired by the No 2 special court. Since the crimes committed by the Jiang Qing clique and the Lin Biao clique are intertwined, the two cliques will be prosecuted in one case. However, there will be two special courts to try the accused in the case. The No 2 court, which has Wu Xiuquan, a high-ranking military official, as its presiding judge, will try the armymen involved.

The 10 provincial defendants' crimes are piled mountain-high. The prosecution against the 10 principal defendants involves only their counterrevolutionary crimes which violated the criminal law and does not deal with their general errors in work. Errors can become crimes; crimes are also errors and are great and even unforgivable errors. However, when common errors are corrected, everything is fine. With regard to the people who made the extremely big errors such as the errors of endangering the nation's existence and causing the death of tens of thousands of people, it is imperative to denounce them publicly for their serious errors and to properly try and sentence them.

General errors and those of counterrevolutionary crimes are of different nature. The two must not be confused. With regard to the people who made general errors, we can leniently handle them in order to cure the sickness to save the patients. We should show no mercy to those people who committed counterrevolutionary crimes. If we do not inflict capital punishment on them, we will not be able to apologize to the whole world and pacify the people's wrath.

The trial of the 10 people is the first big case since Beijing's stress on rule by law. The trial can be regarded as a major step to strengthen the legal system.

Although the trial of the Lin Biao and Jiang Qing cliques will not be a trial of their "ultraleftist" line (although an erroneous line may bring about crimes, the line itself is not a crime), people further feel that this is saying good-bye to things "ultraleftist," is really seeking truth from facts and is not being contained by "ultraleftist" and ultrarightist lines.

YE JIANYING SPEECHES DISCUSSED AT HUBEI COMMITTEE MEETING

Shijiazhuang Hebei Provincial Service in Mandarin 0430 GMT 27 Sep 80

[Excerpts] The fourth meeting of the Fifth Hebei Provincial People's Congress Standing Committee which lasted 4 days satisfactorily fulfilled its tasks on schedule and concluded on 26 September. During the meeting, the committee members seriously studied and discussed the opening and closing speeches of Ye Jianying, chairman of the NPC Standing Committee, made at the third session of the Fifth NPC and the speech of Comrade Hua Guofeng, as well as the report of Comrade Peng Zhen and other relevant documents. Under the inspiration of the spirit of the third session of the Fifth NPC, all of them emancipated their minds and sought truth from facts. While affirming the achievements scored, they frankly made many criticisms and suggestions concerning political life in the province and the work style of the government.

The committee members expressed their concern over the incidents of rotting chestnuts in the Qinhuandao foreign trade warehouse and the damage done to Tangshan export pottery. At the same time, they severely criticized the bureaucratic work style of the provincial financial committee, which caused great losses to the state. The concern of the committee members clearly reflected their responsibilities to carry out the rights given to them by the people. The people's congress Standing Committee will inform the provincial government and departments concerned to strictly handle the incidents. The departments concerned should report the procedure and results of the investigation to the committee members and should address inquiries to the next people's congress Standing Committee meeting.

At the plenary meeting yesterday afternoon, they unanimously adopted a resolution on doing well in election work at county level and a decision to establish a Hebei provincial election committee. They approved election regulations for the people's congresses at county and commune levels in Hebei Province and a decision concerning prolonging the time limit of some criminal cases in 1980, and also approved appointments.

PARTY AND STATE

TENDENCY OF SOME CADRES TO ATTACK TALENTED PEOPLE SCORED

Beijing BEIJING RIBAO in Chinese 23 Jul 80 p 2

[Article by Si Quan [1835 3172] and Xiao Mei [2556 2734]: "Don't 'Cut Down' Middle-Age and Young Cadres Who 'Stand Out a Little'"]

[Text] Currently, some units are quickly promoting into leadership positions middle-age and young cadres who follow the socialist road and who possess specialized knowledge and abilities. Nevertheless, some comrades do not think the same way. A leader in one unit expressed his opinion pulbicly, saying: "Those who have specialized knowledge may not follow the socialist road!"

This comrade's emphasis on the socialist road is certainly correct. Politica considerations are necessary in selecting cadres. However, he does not seem to pay much attention to the importance of selecting leadership cadres with a relatively high level of professional competence and ability in building a socialist economy.

The party has once again made it clear to us that we must discover, train, and promote talented people. But some of our leadership cadres, using the pretext that "those people may not follow the socialist road," are not [attempting] to not discover, train, or promote talented people, or at least they are slow in doing so. Although there are not many people who openly express such an opinion, such people may not be few.

Why should some of our comrades think this way even now?

Some comrades do not look squarely at history and the present situation. We wrongly cut down some comrades in 1957. The fact is that many such comrades did follow the socialist road and had special skills. During the Cultural Revolution, intellectuals were branded as bourgeois elements, "old rotten eggs," though the reality was that they were part of the proletariat. The facts have shown us that among the various occupations and professions, there are not just a few but thousands and tens of thousands of middle-age and young cadres who follow the socialist road and are experts in their fields. Regrettably, some of our comrades overlook or refuse to recognize this fact, and they use the pretext that "those people may not follow the socialist road" to affect the coordination and execution of the party's policies.

Some leadership cadres have long neglected the need to learn specialized knowledge. They only know how to perform abstract leadership tasks but not specific revolutionary tasks. Owing to a lack of such knowledge, they often do not see eye to eye with comrades who have such knowledge. Also, since they have long been in leadership positions, they think that their viewpoints (however biased and erroneous) represent those of the party and socialism, while the viewpoints of comrades with specialized knowledge (no matter how relatively comprehensive and correct they may be) may not "follow the socialist road," even though the viewpoints are obviously not antiparty. These biases are deeply ingrained in those individuals. It is no wonder that they are surprised at the party's current policies.

There also are comrades who realize that middle-age and young cadres around them are indeed talented people, and they will "self-effacingly" say: "We are amateurs, aging and physically weak, and we are not as good as you." Yet when it comes to a critical moment, they consider their power and pride more important than the party's tasks. Though this behavior is found in individual cases, it has hindered the promotion of talented people.

As Lu Xun said: "Sometimes I think China is a nation that adores equity. He who makes his mark will invite attacks from various quarters." Of course, it is old China that Lu Xun was mocking. Currently, we do have a number of middle-age and young cadres who have made their mark, and we have to promote these people for the sake of the four modernizations. We wish leadership cadres at all levels would select and promote talented people but not cut them down.

NEI MONGGOL FORUM ON PROMOTING YOUNG, MIDDLE-AGED CADRES

SK091143 Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 8 Oct 80

[Excerpts] According to NEI MONGGOL RIBAO, the regional CCP committee's organizational department recently held a forum on selecting and promoting young and middle-aged cadres. Over 70 cadres from the organizational and personnel departments of the various leagues and municipalities, the various major mines and plants, higher educational institutions and regional-level organs attending the forum, after a 7-day session, reached following agreements:

1. The fundamental task for the new period is to steadfastly achieve the modernization of agriculture, industry, national defense and science and technology. Also, we should reform and perfect the socialist political system in step with the reformation of the socialist economic system. We must reform the cadre system and structure to suit this new task.

2. We must reform the cadre structure. We should select and promote a large number of cadres who adhere to party's line and are in the prime of life, and are professionally competent in order to speed up the formation of leading bodies composed of younger, more educated and professionally more competent cadres. Efforts should be made to intensify the professional training of cadres.

3. Veteran cadres should conscientiously enhance their sense of urgency and take the training and promotion of young successors as a major event bearing on the destiny of the party and the country.

4. Of late, some leading comrades in our region have voluntarily stepped aside in favor of competent and virtuous cadres. What they did is in the interest of the overall situation and reflects their sense of responsibility to the cause of the party. They deserve our respect.

Ting Mao, second secretary of the regional CCP committee, attended and spoke at the forum.

XINJIANG OFFICIAL STRESSES UNITY AT MEETING OF CADRES

OW100158 Urumqi Xinjiang Regional Service in Mandarin 1300 GMT 9 Oct 80

[Text] Conveying the guidelines of the third sesson of the Fifth NPC, Tomur Dawamat, secretary of the Xinjiang Autonomous Regional CCP Committee and chairman of the autonomous regional people's congress Standing Committee, said: Unity is the lifeline of the people of all nationalities in Xinjiang. It is where our common interests lie. It is the key to the defense of our frontier regions. At present, the first thing the party committees and the governments at all levels in Xinjiang should do is to mobilize the broad masses of cadres, PLA commanders and fighters and people to fully discuss the significance of unity among the people of all nationalities and to consolidate and enhance the political situation of stability and unity in Xinjiang.

On 8 October morning, the Standing Committee of the Xinjiang Autonomous Regional People's Congress held a cadre meeting in Urumqi to convey the guidelines of the third session of the Fifth NPC. Wang Zhenwen and Yi-er-ha-li, vice chairmen of the autonomous regional people's congress Standing Committee, presided over the meeting. Tomur Dawamat, secretary of the autonomous regional CCP committee and chairman of the autonomous regional people's congress Standing Committee, delivered a report on the NPC guidelines.

After giving a general account of the third session of the Fifth NPC and its principal guidelines, Tomur Dawamat said: In light of reality in Xinjiang, we must combine the implementation of the NPC guidelines with the implementation of directives issued by the party Central Committee concerning minority nationality affairs. The party Central Committee's directives are correct and conform to the actual situation in Xinjiang. Xinjiang has a population of many nationalities, a vast land and an abundance of natural resources. Moreover, it is situated on the forefront of opposing Soviet hegemonism. The people of all nationalities in Xinjiang have personal experience of the fact that unity is their lifeline, unity is where their common interests lie and unity is the key to the defense of the frontier regions and the key to building a prosperous and cultured Xinjiang. At present, the first thing the party committees and the governments at all levels in

Xinjiang should do is to mobilize the broad masses of cadres, PLA commanders and fighters and people to fully discuss the significance of unity among the people of all nationalities. The cadres, PLA men and people should seriously sum up the benefits that unity can give the people as well as the losses and calamities that disunity can cause. We should make joint efforts to uphold the great cause of unity. We should proceed from unity--our major principle--to solve our problems. All minor principles should be subordinated to the major one. The communists and the cadres at all levels must neither do nor say anything that harms unity. Whoever promotes unity should be commended. Whoever has done anything harmful to unity should voluntarily make self-criticism. We should sternly deal with the few persons who instigate dissension and undermine unity. We should isolate those few bad persons.

Comrade Tomur said: The unity among all nationalities and the unity between the armymen and the people in Xinjiang are basically good. This hard-earned unity has been tested over the past 30 years. It is achieved by the joint efforts of our veteran revolutionary fighters and comrades and the cadres and people of all nationalities under the guidance of the party's correct policies concerning nationalities. We must treasure this unity and protect it as we do our eyes. Not long ago, something harmful to unity among nationalities and harmful to unity between armymen and people happened and caused adverse effects. We should pay special attention to those events and guard against any recurrence. At present, we should particularly emphasize mutual respect, understanding and support between the cadres and the people of all nationalities. Cadres of Han nationality should respect the minority nationalities. The minority nationalities should respect and support the cadres and workers of Han Nationality. The people of all nationalities should work hard with one heart and one mind to build a socialist Xinjiang.

HENAN FORUM STRESSES IMPROVING PARTY DISCIPLINE

HK100418 Zhengzhou Henan Provincial Service in Mandarin 1130 GMT 9 Oct 80

[Excerpts] The preparatory group of the Henan Provincial CCP Committee's discipline inspection committee recently held a forum on discipline inspection work in all prefectures, municipalities and provincial fronts, which pointed out: to further implement in depth the guiding principles on inner-party political life, the leadership must take the lead, take action, eliminate feudal remnant influences, criticize bourgeois extreme individualism, get a good grasp of positive and negative typical examples, form systems and ceaselessly promote them.

The situation reported by the participants showed: although all places have scored certain successes in implementing the guiding principles, some units still lack sufficient understanding of the importance of implementing them and have failed to take specific measures to this effect, with the result that unhealthy work styles have not been properly curbed. Some leading cadres even ignore the guiding principles and continue to violate law and discipline. This situation shows that to continue to implement the guiding principles [word indistinct] depth and fully revive the party's fine traditions and work style constitute a long-term task for the whole party. We certainly cannot just grasp it for a time and then relax it.

In implementing the guiding principles, it is necessary to pay attention to eliminating feudal remnant influences, such as the system of lifetime tenure for cadres, the concept of the patriarchal clan system, "one person alone having the say," the patriarchal work style, personality cult, bureaucratism, factional activities, pursuit of special privileges, and so on. These are all feudal things or else bear a feudal tinge. For instance, some leading cadres violate the relations of equality between comrades in the party and want others to be absolutely obedient to them and even to become dependent on them. Some people pursue special privileges and make use of their political and economic powers and their powers outside the law and the system to illegally pursue private interests for themselves and their families and relatives. Some take the advantage of promoting middle-aged and young cadres to carry out factional activities. We must by no means treat lightly these unhealthy trends.

While eliminating feudal remnant influences, we must by no means relax or neglect criticism of the influences of extreme individualist thought such as the bourgeois idea of being totally intent on profit and benefitting oneself at the expense of others. The party organizations and discipline inspection departments must teach the party members and cadres to spontaneously resist the corruption of bourgeois thought.

In implementing the guiding principles, it is necessary to pay attention to waging struggle against bureaucratism on the economic front. Bureaucratism does extremely great harm to the building of the four modernizations. Shocking losses have been caused in some units in this respect. Such cases must be promptly investigated and handled with great fanfare.

WORKERS REMOVE NORTHEAST FORESTRY FARM LEADER FROM POST

OW141238 Beijing XINHUA in English 1229 GMT 14 Oct 80

[Text] Harbin, 14 October (XINHUA)--The leader of a Northeast China forestry farm has been removed from his post for misconduct by a decision of the workers with the approval of higher authorities.

The Workers Congress at the Fenggou Forestry Farm in Heilongjiang Province proposed the removal of Wei Quan, the farm director, after he falsified accounts to conceal the amount of timber the farm had produced in excess of its production plan and used it to make up for losses caused by mismanagement.

Wei Quan also violated financial discipline by authorizing the purchase of furniture while recording purchases of straw.

Fenggou Farm is under the Dafeng Forestry Bureau where the Workers Congress has just elected by secret ballot a bureau director for a term of 3 years. Elections were also carried out in 11 principal units under the bureau.

The workers have the right to propose the removal of leading cadres at any time when they prove unqualified.

The elections are part of China's current economic reform in which decision-making power of enterprises is being extended. This power will ultimately rest with the Workers Congress, and not just with the director or manager of an enterprise.

SHANGHAI STORE INTEGRATES IDEOLOGICAL WORK, PRODUCTION

Shanghai JIEFANG RIBAO in Chinese 26 Jul 80 p 1

[Article: "Make Political Thought Work Permeate Professional Work"]

[Text] As the party's tasks focus on the four modernizations, how do we handle our ideological work? The answer from the party branch at the Chunqiu Clothing Store is: Political thought work should be integrated with the practical tasks of production. They have outlined three concrete steps.

The busier the production, the more refined the ideological work should be. Located on Nanjing Road, the Chunqiu Clothing Store deals with thousands of customers every day. The workload is heavy, and business is brisk. As a result, some employees say: "We are busy all day and we are overworked. Why should we care about the quality of our service?" Some say: "Customers come to our store to make purchases. There is no point in raising the quality of our service if the quantity and quality of our clothing are not acceptable" At one point, employees had various viewpoints on the subject.

In April, the party branch convened a seminar on "What If I Were a Customer," dealing with this type of work attitude in the store. The discussion revolved around the subject of "treating other people as yourself." At the same time, they discussed the experience of three distinguished salespersons (including Ye Miaomiao [0673 8693 8693] and their efforts to "serve customers." In this way, the employees learned a good lesson and they all wanted to emulate the advanced workers.

As the enthusiasm of employees was heightened, the party branch raised the question of "how cadres can serve employees while the latter serve customers," demanding that all cadres look after employees. After talking with employees in the import department, the secretary of the party branch committee and the store manager realized the tasks of that deparmtnet and its current labor shortage. They immediately strengthened technical work in that department in order to accelerate the pace of work and tackle the difficulties in "apparel production." Two of the branch committee members who were trained as tailores succeeded in fixing the department's air conditioning. In making apparel from new products, the cadres met with the workers to oversee quality control, for the technical difficulties encountered were manifold, easily resulting in the production of low-quality products. As the cadres have cared for the workers, the two have become closer and their enthusiasm has heightened.

The reater the reputation, the deeper the ideological work should be. As the service attitude of the store has improved, many customers from outside the province as well as local customers have commended the staff for being "good advisors for customers."

The party branch considers that ideological work must be managed well in the midst of such applause and good reputation. A group of people from the party branch met with individual salespersons and advanced workers and visited them at their homes. The latter were encouraged to adopt a correct attitude toward reputation and to further develop their exemplary role. At the same time, they were also requested to actively develop ideological work and to integrate daily work with political ideology. Owing to the variety of products and fashions handled at the department for medium-length synthetic fiber jackets, and because most of its customers are young people, service is more hectic and the number of transactions fewer. Accordingly, the salespersons in the department felt very uncomfortable. Older department manager Gong [7895] made use of holidays and his own time to visit the workers, families and discuss with them ways to improve their service, resulting in significant success. Seeing that the manager was busy, young salesperson Hu [7579] at the jacket and shirt department volunteered to handle customers' letters, oversee the department's product line, and enthusiastically help out-of-town customers resolve their problems. In this way, new progress was made and the store received 618 encouraging letters from customers in May.

The larger the number of young people, the more flexible the ideological work should be. There are 26 young workers out of a total of 34 workers at the store. When they first started working at the store, some of these young workers held back popular products for their relatives and friends; others liked to do business in a big way; some others wanted to look fashionable and wear strange clothing; still others had their hearts elsewhere and could not concentrate on their work. They all disliked janitorial work. In view of the situation, the party branch has promoted a campaign since the beginning of this year to organize discussion groups in which retired salesperson and elderly tailors talk to the young workers about hard times in their past, and the young workers are encouraged to become "model workers on Nanjing Road." Through a variety of methods of ideological persuasion, the young workers have become convinced of the meaning and significance of being a service person in their profession, and they all want to do a good job.

In order to train young workers as professionals, the party branch has organized seminars and discussion sessions and invited skilled workers to relate their work experience. Through such discussions, the young workers have changed their apathetic attitude toward their job and realized the importance of learning and self-motivation.

The party branch has further organized the young workers to help one another to fully develop their political thinking, their daily life, and their professional goals. The new products department is generally busier, and work is harder, but the young salespersons Shao [6730], He [0149], and Wang [3769] emulate one another. They have developed a service style emphasizing quick deliveries (variety, demonstration, and turnover), precision (knowledge of customer taste and physical types), and clarity (measurements); this has gained good comments from customers.

BRIEFS

LIAONING NATIONALITIES DELEGATION--The Liaoning provincial nationalities work study tour delegation composed of responsible persons from the provincial CCP committee, the provincial people's government and from a number of departments, commissions, bureaus and offices, as well as cadres in charge of nationalities work from grassroots level units, left Shenyang by train 7 October. The delegation will go to Xinjiang Autonomous Region, Gansu and Shanxi provinces to learn from the experiences gained in the nationalities work so as to further improve our province's nationalities work. [Shenyang Liaoning Provincial Service in Mandarin 2200 GMT 7 Oct 80 SK]

HEILONGJIANG ISLAMIC CONGRESS--The second Heilongjiang provincial Islamic congress was held in Harbin Municipality 4-10 October with the participation of 36 Mullahs and 38 Muslim representatives throughout the province. At the congress, the second committee of the provincial Muslim association, 33 members of the committee and 13 permanent committee members were elected. (Zheng Luhui) was elected chairman of the committee. The congress urged the Islamic circle to further carry forward the patriotic spirit and make positive contributions to the grand cause of maintaining peace and unity throughout the motherland, promoting economic construction, returning Taiwan to the motherland and combating hegemonism in order to safeguard world peace. [SK130012 Harbin Heilongjiang Provincial Service in Mandarin 2200 GMT 10 Oct 80]

YUNNAN NATIONALITIES AFFAIRS COMMITTEE--The Yunnan Provincial Nationalities Affairs Committee held a tea party on 29 September to mark the national day. Responsible comrades of the Yunnan provincial committee, provincial people's congress Standing Committee, provincial people's government and the provincial CPPCC Sun Yuting, [name indistinct], Li Hecai, Yang Kecheng, Long Zehui, Ma Huiting attended the tea party. [Kunming Yunnan Provincial Service in Mandarin 1100 GMT 29 Sep 80 HK]

LIAONING TRADE--The 64 trade stations under the authority of county-level organs that have been restored and established in our province have been playing an increasingly important role in regulating the market. The total volume of business of our province's trade stations for the first 8 months of 1980 reached 190 million yuan. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 5 Oct 80 SK]

HUNAN PEOPLE'S CONGRESS SESSION--The fifth session of the Fifth Hunan Provincial People's Congress Standing Committee closed on 28 September. The session adopted a resolution that the third session of the Fifth Hunan Provincial People's Congress would be held in December in Changsha. Qi Shouliang, vice chairman of the Standing Committee of the Hunan Provincial People's Congress, gave the summation speech, saying that: We must prepare well for the third session of the Fifth Provincial People's Congress. Members of the Standing Committee of the provincial people's congress will carry out investigations throughout the province and people's deputies must gather people's opinions and air them at the coming session. [Changsha Hunan Provincial Service in Mandarin 1100 GMT 29 Sep 80 HK]

GUIZHOU PEOPLE'S GOVERNMENT MEETING--The Guizhou provincial people's government held a work conference from 14 to 20 September in Guiyang on commune and brigade enterprises. The meeting pointed out: Guizhou Province must act in light of local conditions and proceed from these to develop commune and brigade enterprises. We must develop items which need less investment and bring better economic results. Commune and brigade enterprises must improve management and strive to speed up production. Leaders must respect the self-management rights of commune and brigade enterprises, and allow them to retain their profits and products produced in excess of the state's quota for private business. Thus, the communes and brigades will be enriched. [Guiyang Guizhou Provincial Service in Mandarin 2315 GMT 24 Sep 80 HK]

GUANGZHOU PROPAGANDA WORK CONFERENCE--The Guangzhou Municipal CCP Committee recently held a conference on propaganda work. (Wang Sangping), municipal CCP committee Standing Committee member and propaganda department director, gave a speech on strengthening ideological and political work. Ou Chu, municipal CCP committee secretary, also spoke at the conference. [HK081046 Guangzhou City Service in Cantonese 0430 GMT 18 Sep 80 HK]

HAINAN CCP COMMITTEE MEETING--The Hainan CCP committee recently held a meeting of Han district county CCP committee secretaries to study and discuss the State Council's decision and the Guangdong Provincial CCP Committee's instructions. The meeting formulated measures to promote production and speed up the building of Hainan. The participants of the meeting held: we must work in accordance with the State Council's decision and the Guangdong Provincial CCP Committee's instructions to speed up the production of agriculture, forestry, animal husbandry, sideline production and fishery and enrich all communes and brigades. We must first grasp management of tropical crops which occupy an area of over 1 million mu, and develop sugarcane production. We must also increase the per unit area yield of grain. We must respect the self-management rights of production teams and allow them to participate in joint ventures with other units. The Hainan regional CCP committee demands that leaders concerned do their best in settling disputes and consolidate the political situation of stability and unity in order to speed up the building of Hainan. It is also necessary to pay attention to minority nationalities affairs and respect their self-management rights. [Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 18 Sep 80 HK]

HAINAN ISLAND TOURS--The united front work department of the Hainan Li-Miao Autonomous Prefectural CCP Committee recently organized non-party personages into a visiting group, which visited various places on Hainan Island. The group consisted of 32 people including non-party intellectuals and professional backbone elements of science, technology, education, public health and agriculture departments of all counties in the autonomous prefecture. The united front work department invited them to a forum in the Haikou overseas Chinese building. Luo Tian, Liang Cheng, (Zhao Guangju), (Chen Yuan) and (Huang Dafang), leading party and government comrades of the Hainan administrative region, and responsible comrades of the culture office, education office, civil affairs committee, science committee, regional women's federation and the united front work department of the Haikou Municipal CCP Committee warmly received them and participated in the forum with them. Luo Tian encouraged them to unite the people of all nationalities, work at their own posts and contribute toward exploiting Hainan and building Hainan Li-Miao Autonomous Prefecture into a prosperous and rich autonomous prefecture. [Haikou Hainan Island Service in Mandarin 0330 GMT 18 Sep 80 HK]

HAINAN VISITING GROUP--The Hainan minority nationality national day visiting group left for Guangzhou on 20 September by plane. The visiting group was organized by the Guangdong provincial nationality affairs committee. The group consisted of 19 people and is headed by (Hu Guoshan), vice chairman of the united front department of the Hainan Li-Miao Autonomous Prefectural CCP Committee. Before departure, the visiting group was greeted by Zhao Guangju, member of the Hainan regional CCP committee, and other responsible comrades. [Haikou Hainan Island Service in Mandarin 0330 GMT 21 Sep 80 HK]

HEBEI AUTONOMOUS COUNTY ANNIVERSARY--Mengcun Hui Autonomous County in Hebei Province held its 25th establishment anniversary on 10 September. The NPC Nationality Affairs Committee, the State Nationality Affairs Committee, the Hebei Provincial CCP Committee, the Hebei Provincial People's Congress Standing Committee and the Hebei Provincial People's Government sent congratulatory cables on 9 September. In short, the congratulatory cables said: Mengcun Hui Autonomous County has done well in socialist building over the past 25 years under the leadership of Hebei provincial authorities. Its future tasks are to work harder in readjusting the national economy, speed up production, improve the scientific and technological levels and improve the living standard of the people. The cables also praised the Mengcun Hui Autonomous County for eliminating discrimination and misunderstanding between Han and Hui nationalities and for having done a good job in eliminating remnant poison of the ultraleftist line pushed by Lin Biao and the "gang of four." [Shijiangzhuang Hebei Provincial Service in Mandarin 0430 GMT 9 Sep 80 HK]

GANSU DONGXIANG COUNTY CELEBRATION--Some 3,000 people of various nationalities in Dongxiang Autonomous County held a rally 1 October to mark the 30th founding anniversary of the county. Wu Zhiguo, deputy leader of the Gansu provincial delegation, and (Yan Yun), deputy leader of the Linxia Hui autonomous prefectural delegation, read contratulatory messages from the nationalities committee of the NPC and the state nationalities affairs commission and from the provincial and the Linxia prefectural party and government organs. (Ma Jingfu), secretary of the Dongxiang Autonomous County, addressed the rally. (Ma Ying), representative of the NPC nationalities committee and the state nationalities affairs commission, and (Yang Dexiang), leader of the Gansu provincial delegation and deputy governor of the Gansu provincial people's government, also spoke at the rally. [Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 2 Oct 80 SK]

GANSU REPORT MEETING--The Gansu Provincial People's Government and the Standing Committee of the provincial People's Congress held a joint meeting at the provincial People's Government auditorium to relay the guidelines of the Third Session of the Fifth National People's Congress on 23 September. Attending the meeting were some 1,200 cadres of provincial level organs. Wang Shitai, chairman of the provincial people's congress Standing Committee, chaired the meeting. Feng Jixin, provincial governor, made a report relaying the NPC session guidelines and calling on all provincial organ cadres to follow them accordingly. [Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 24 Sep 80 SK]

ANHUI CRIME FIGHTING--Hefei, 8 Oct (XINHUA)--People in Anhui Province assist the public security department in stopping crimes. Statistics show that in the first half of 1980, the people of Hefei, Bengbu, Anqing, Wuhu, Huainan, Huaibei, Tongling and Maanshan municipalities seized more than 700 criminals and turned them over to public security organs. More than 800 criminals surrendered themselves to the public security authorities during the period. [OW090521 Beijing XINHUA Domestic Service in Chinese 0256 GMT 8 Oct 80 OW]

CHANGZHOU MUNICIPAL PARTY CONGRESS--The Changzhou municipal CCP committee held its 5th congress from 22-27 September. The congress listened to and examined work reports made by the 4th Changzhou Municipal CCP Committee and the municipal party committee's discipline inspection committee. It elected the 5th Changzhou Municipal CCP Committee and the delegates to provincial party congress. A total of 590 delegates attended the municipal party congress. On 29 September, the 5th Changzhou Municipal CCP Committee held its 1st plenary session and elected its Standing Committee and its discipline inspection committee. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 8 Oct 80 OW]

LIAONING DELEGATION VISITS XINJIANG--A provincial nationalities work study tour group from Liaoning arrived in Urumqi 8 October on a visit to Xinjiang. The group is led by Zhang Yan, vice chairman of the

Liaoning Provincial CPPCC Committee and director of the united front work department of the Liaoning Provincial CCP Committee. The group was warmly welcomed by Tian Zhong, vice chairman of the Xinjiang Autonomous Regional People's Government, (Sai-bo-an-fu), vice chairman of the autonomous regional CPPCC committee, and responsible persons of departments concerned. The 42-member group is composed of responsible comrades of various provincial departments concerned, the principal responsible comrades of Fuxin Mongol Autonomous County and Harqin Zuoyi Mongol Autonomous County and representatives of some minority nationalities. They are of Manchu, Mongolian, Korean, Hui, Sibo and Han nationalities. They will visit factories, rural and pastoral areas in Ili, Shihezi, Turpan and Urumqi and exchange experiences in regional national autonomy with the departments concerned in Xinjiang. The arrival of the Liaoning visiting group will further strengthen the friendship between Xinjiang and fraternal provinces and regions and promote unity among all nationalities. [Text] [OW090200 Urumqi Xinjiang Regional Service in Mandarin 1300 GMT 8 Oct 80]

BEIJING RURAL WORK CONFERENCE--The Beijing Municipal CCP Committee held a meeting on rural work, stressing the need to enrich rural areas as soon as possible. At this meeting, the Beijing Municipal CCP Committee aimed at eliminating the remnant poison of the ultraleftist line and correcting the wrong concept that richness means capitalism. The meeting pointed out that it is necessary to bring the superiority of the municipality into play in order to enrich the people, and implement the party's policy on agriculture. The meeting stressed the following tasks: 1) to develop the responsibility system of production in close connection with the principle of remuneration according to labor; 2) to assist the poor production teams to become rich; 3) to experiment with the production of grain and oil by contract; 4) to respect the self-management right of production teams; and 5) to help the communes and brigades develop sideline production. The meeting also discussed how to fight drought and promote current production tasks. [HK091442 Beijing City Service in Mandarin 2300 GMT 15 Sep 80 HK]

LIAONING TRIAL--The Huanren county people's procuratorate began proceedings against (Cui Longxin), a public security policeman, on charges of torturing suspects to gain confessions. In handling a larceny case last November, the policeman ruthlessly beat a suspect. He sent for the suspect's wife and tied her up to gain a confession. She was detained for 24 hours and had a miscarriage after she was released. The county people's court sentenced (Cui Longxin) to 1 year on probation. [SK061133 Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 4 Oct 80 SK]

BEIJING RADIO PRAISED--This station has recently received numerous letters from Comrade Cui Yueli, vice minister of public health, expressing concern and encouragement for certain propaganda contents of the city news and the programs for the rural outskirts. He also put forward specific proposals on improving certain items of work in the city. Comrade Cui Yueli is extremely concerned for this station's news broadcasts reported that the municipal motor horn plant had started to manufacture a low-toned horn. Comrade Cui Yueli immediately wrote to the station proposing that this horn first be popularized in the city so as to reduce noise pollution. He also proposed that factories, offices, schools, parks and other units not use high-toned horns. In its program for the rural outskirts on 1 September, this station broadcast an article entitled "Socialism Precisely Means Allowing People To Get Rich." Comrade Cui Yueli wrote to the station after listening to this. His letter said: I thought this broadcast was very good. I hope that you can broadcast more correct explanations of socialism in light of the specific situation of all aspects. In another letter on the same day, Comrade Cui Yueli suggested reducing the homework burden of secondary and primary schools to insure their all-round development morally, academically and physically. The station received two more letters from Comrade Cui Yueli in mid-September. The letters put forward suggestions on tree-planting, population and other questions in Beijing. MILITARY AND PUBLIC SECURITY

DISCUSSION ON FORMER DEPUTY COMMANDER ZHOU CHANGSHENG

HK130748 Hangzhou ZHEJIANG RIBAO in Chinese 21 Sep 80 p 1

[Report by Chen Guanbai [8115 0385 2672] and Jiang Ping [3068 0988]: "What Is the General Thinking About?--Interviewing Zhou Changsheng, Veteran Red Army Fighter and Former Deputy Commander of Zhejiang Provincial Military District"]

[Text] The recently concluded third session of the Fifth NPC solemnly raised the question of having young, educated and professional people as cadres. While our party is busy selecting large numbers of cadres who are in the prime of life, what is in the minds of the old comrades?

To find out, we visited Comrade Zhou Changsheng, former deputy commander of Zhejiang Provincial Military District, in a small quiet building--a sanatorium for retired cadres in the provincial military district.

Upon seeing us, Zhou Changsheng said happily: "I have been participating in the revolution for over 50 years. This is the first time I have heard about old comrades of the party Central Committee offering their own jobs to others. This is unusual. The reform of the Chinese cadre system has gotten off to a good start." He laughed with the dignified air of a general.

He made special mention of Nie Rongzhen, vice chairman of the National Defense Council, and his letter of resignation. As a political commissar of the former First Red Army Corps, Marshal Nie had all along remembered that he had under him model company commander Zhou Changsheng who had fought bravely. After liberation, every time he came to Hangzhou he sent for Zhou Changsheng, asking about his work and health and showing concern for him in every way. Not long ago, Zhou Changsheng saw Marshal Nie on television. He was so weak that he had to be helped up by two people to greet "the little woman from Japan." He could not help feeling concerned about the old commander's health. He even wanted to phone him out of concern. At the recent NPC session, he read Marshal Nie's letter of resignation and was moved to tears. He thought that though in poor health, the old commander never forgot that we must have successors to the party's cause. His resignation was another example to us. We will soon be in our seventies or eighties. If we still do not give up our jobs in favor of the young and "get hospitalized while listed as active members of the command headquarters," how can the four modernizations be achieved? Thinking along these lines really makes me feel that my retirement has been worthwhile.

As a general, Zhou Changsheng had been through thick and thin. In 1929, he joined the revolution in the Soviet area of Jiangxi. He devoted the best part of his life to a military career. He said with feeling: everyone was young once. When we started leading troops as "commanders," we were just young fellows of less than 20. When we had become cadres at the division and army corps levels, we were only in our thirties, with "a vast number of troops and horses" under our command. In the period of war, great attention was paid to promoting young cadres. When I was first a battalion commander, regiment commander Yang Dezhi taught me how to exercise command and deploy troops. It might be recalled that in the Sandingbao battle of north Shaanxi I was left as the only chief of staff with the commander of our regiment wounded and the political commissar killed. It was a critical situation with the enemy forces pressing in on us. Su Hua,a division political commissar, resolutely ordered me to take over as commander of the regiment. He also sent over a division chief of staff with several combat directives for me. Thus, I was in command. I fought a good battle. Now, there are many young and capable cadres in our army, to say nothing of those who distinguished themselves in the years of revolutionary war with their "three-eight style" and "Jiefang style," after the founding of the state. Many people acquired very rich experiences in the struggle to resist U.S. aggression and aid Korea. Many also distinguished themselves in the self-defensive counterattack against Vietnam. This required us old comrades to help the party organizations in choosing the right people for promotion. It would not do for us just to make the choice. We must give up our posts in favor of the relatively young comrades and take a backseat. Only in this way can work be done in a lively manner.

At this time, I cut in, saying that some old comrades are now worried about acting as advisers and about retirement. Zhou Changsheng said that we must take the whole situation into consideration. To insure the continuous stability of party leadership, weak and old comrades must gradually leave the scene. They must not take remuneration seriously and be loath to part with a telephone, a car, or a Western-style house. Communist party members cannot seek all these things. So many fellow fighters have not survived to enjoy life--those who died on the grasslands, on snowbound mountains, in rivers, and in enemy gunfire too soon to see the realization of socialism. We cannot forget them.

Early autumn sunshine was streaming into the sitting room. With a wave of his hand, the general said that we might as well take a look at the courtyard. Pointing to rows of trees and flowers lit up by the autumn sun, he said crisply that it was actually not bad to live a retired life. We can have access to certain documents and read books and newspapers. We can take time out to grow vegetables or flowers. After a while, we might spend a few days in the hospital for an inspection of "the old machine," or a physical checkup. It was quite a peaceful and leisurely life. But I was not living in idleness. Whenever free, I thought of my war life. I wrote memoirs and analyzed guerrilla warfare. So saying, he let someone in his family show me a book entitled "A Military Career," which carried memoirs written by him and other old comrades. Leafing through the pages, he said that this might be considered a legacy! Thanks to such a retired life, I had felt much better physically and mentally. Some comrades said jokingly that if we had not retired, we might have already been Marx in the other world. So saying, the general laughed again.

In a building surrounded by quiet fields in the suburbs of Hangzhou, the heartbeat of the general still follows the pulse of the times....

THREE CONVICTED FOR GUN THEFTS

HK101236 Hainan HAINAN RIBAO in Chinese 18 Sep 80 p 1

[Report by Xing Baohuan [6717 0202 3562]: "Hainan Intermediate People's Court Publicly Tries Criminals Who Stole and Sold State-owned Guns"]

[Text] The intermediate people's court of the Hainan Administrative District recently conducted an open trial of three criminals who stole and sold guns owned by the state. Chief offender Tan Taiguo was sentenced to 15 years' imprisonment with his political rights deprived for 3 years. Accomplice Li Youjia was sentenced to 7 years' imprisonment with his political rights deprived for 2 years. Chen Yanghong was sentenced to 2 years' imprisonment for the sale of the stolen guns.

Defendant Tan Taiguo was formerly a police guard of the Dan County branch of the Chinese People's Bank. (A police guard is charged with the safekeeping of police guard guns.) In May last year, when Tan escorted the bank's money to the Sandu commune, he plotted with Li Youjia to steal and sell the guns. Li arranged for Chen Yanghong to see Tan Taiguo and inspect the guns at the bank. When everything was arranged, Tan Taiguo stole one "3-8-type" rifle, one "7-9-type" rifle and one Mauser gun and 40 rounds of ammunition from the bank. Under the cover of night, Chen Yanghong and Chen so-and-so took them away in a walking tractor. These were sold to the No 2 and No 3 production teams of the Sandu brigade of the Sandu commune to be used for factional fighting. A total amount of 2,000 yuan was obtained. Tan Taiguo got 1,800 yuan and Li Youjia and Chen Yanghong each received 100 yuan. In mid-July, Tan and Li met at the Nadai town and made secret plans. Tan again stole from the bank two "50-type" submachine guns and one "3-8-type" rifle. Li arranged with Chen so-and-so to sell them to the Xincun production team of the Jiuzhou brigade of the Sandu commune for factional fighting purposes. These brought 2,500 yuan in total. Tan got 2,200 yuan while Li had 180 yuan and Chen so-and-so 120 yuan.

The criminal activities of Tan Taiguo and the others were first reported by the masses and action was taken by the Dan County Public Security Bureau. Proceedings against them were instituted by the Hainan branch of the Guangdong Provincial People's Procuratorate. The case was tried by the intermediate people's court of Hainan District. It was held that as a police guard of a state bank, Tan Taiguo who took advantage of his position to twice steal state-owned guns and sell them, pocketing a total of 4,000 yuan from the proceeds, was guilty of taking public property and jeopardizing public security. The means he had used were despicable and the case was of a serious nature. Defendant Li Youjia who acted in collusion with Tan Taiguo and plotted with him the stealing and sale of the guns was a chief conspirator. This constituted the crime of stealing and selling guns. Defendant Chen Yanghong who participated in the activities of stealing and selling guns was found guilty. In accordance with Articles No 112 and No 52 in the "Criminal Code of the People's Republic of China," the court passed specified prison sentences on Tan Taiguo, Li Youjia and Chen Yanghong respectively.

BRIEFS

HUBEI MILITIA BUILDING MEETING--From 21 to 26 September, the Hubei Provincial Military District held an on-the-spot meeting in Wuhan Municipality to sum up and popularize the experiences of Hanyang District in strengthening building of its militia antiaircraft regiment. The meeting called on all units to look into the new situation, solve new problems, build militia antiaircraft units well and embark in and defend the four modernizations. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 27 Sep 80 HK]

BEIJING POLICE ACTIVITIES--Beijing, 8 Oct (XINHUA)--In handling theft cases, the Beijing Municipal Public Security Bureau is making every effort to recover the stolen goods and return them to their owners. In the first 9 months of 1980, the bureau recovered stolen articles worth more than 20,000 yuan and returned them to their owners. The articles included television sets, recorders, cameras, watches and bicycles. [Beijing XINHUA Domestic Service in Chinese 0251 GMT 8 Oct 80 OW]

SHANGHAI OFFICIAL ATTENDS PERFORMANCE--The performance by the Song and Dance Ensemble of the PLA General Political Department has aroused strong feelings in Shanghai. The audience and the professional literary and art workers have warmly praised the show, saying it has inspired them and given them an impetus. Chen Guodong, first secretary of the Shanghai Municipal CCP Committee, talked to the players after seeing the performance. He said: "Your show is just like a pleasant and strong east wind, which is beneficial to Shanghai." The comrades of the Shanghai Municipal CYL Committee said: The players are all young and have made outstanding achievements in art through their long and hard training. This indicates that a great creative force exists among these young people and has enlightened local young people. The performance has moved local literary and art workers. After seeing the performance, they took the initiative in locating the gap between them and the players, pledging to learn from them and catch up with them. To meet audience demand, the ensemble will perform again at the municipal great hall on 14 and 16 October and at the Cultural Square on 18 and 19 October. HEILONGJIANG ISSUES CIRCULAR ON FAMILY PLANNING

SK120718 Harbin Heilongjiang Provincial Service in Mandarin 2200 GMT 11 Oct 80

[Excerpts] The 12 October HEILONGJIANG RIBAO frontpages the circular issued by the Heilongjiang Provincial CCP Committee on studying and responding to the open letter of the CCP Central Committee to all party and CYL members on controlling China's population growth.

In the circular, the Heilongjiang Provincial CCP Committee urges the party and CYL members and cadres at all levels to resolutely respond to the call issued by the CCP Central Committee and take the lead in conducting family planning work and registration of one-child families to make positive contributions in controlling population growth. In order to better implement the demands set forth by the open letter, the provincial CCP committee calls on the party and CYL members and cadres at all levels to set themselves as examples in the work and grasp well the following tasks:

1. Every party and CYL member and cadre at all levels throughout the province should earnestly do a good job in studying and discussing the open letter and understanding its importance.

2. Every party and CYL member and cadre at all levels throughout the province should not only set himself as an example among the masses in enacting family planning work but also should actively do a good job in conducting ideological work among his relatives and neighbors.

3. The party and CYL members and cadres at all levels throughout the province should sincerely implement the state's policy on family planning.

4. Party and CYL committees at all levels should attach great importance to family planning work. The implementation of the open letter of the CCP Central Committee should be regarded as an important matter and should be grasped successfully.

The circular notes: trade unions, women's federations, scientific and technological associations and various mass organizations should organize the broad masses of young and women staff members and workers to hold discussions on this issue so as to expedite family planning work. Efforts should be made to check family planning work frequently so as to discover problems and quickly solve them. It is also necessary to constantly sum up experiences obtained in this regard to improve the work immediately and to exercise stronger leadership over the work. A good job should be done in guaranteeing that the call issued by the CCP Central Committee and the State Council on registrations of one-child families is heeded in order to promote the progress of the four socialist modernizations.

ZHEJIANG ISSUES CIRCULAR ON PLANNED PARENTHOOD

OW101923 Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT
10 Oct 80

[Excerpts] According to a station report, the Zhejiang Provincial CCP Committee issued a circular on 10 October on how to conscientiously study and implement the open letter issued by the CCP Central Committee, urging all party and youth league members to control population growth.

The circular said: The CCP Central Committee has issued an open letter to all party and youth league members on the control of population growth in China. This is an important call from the CCP Central Committee while it is making a new long march towards the four modernizations. This is also a major event in promoting the four modernizations. The circular is of great significance in giving full play to the vanguard and exemplary role of the party and youth league members, in strengthening political and ideological work, in implementing various policies and regulations, in controlling population growth in a planned way, and in quickening the pace to drive off poverty and backwardness in China.

The circular pointed out: In order to do a still better job in studying and implementing this open letter, we must carry out the following tasks:

The party committees, government organs and mass organizations of workers, youth and women throughout the province must organize all party and youth league members, particularly cadres at all levels, to study the open letter, conduct discussions in close connection with the actual situation, fully understand the guidelines laid down by the open letter and further raise their awareness. In the course of studying the letter, we must eliminate our feudal thinking, get rid of our muddled and erroneous ideas. We must realize that to encourage one couple, one child and strive to limit China's population to a maximum of 1.2 billion by the end of this century is essential to realizing the four modernizations.

All party and youth league members, particularly cadres at all levels, must play their exemplary role well, while deepening their understanding of the open letter. The young comrades should actively take measures themselves for family planning while the old comrades should educate and encourage their daughters and sons to take steps for planned parenthood.

The propaganda media--including newspapers, radio and television stations, movie theaters and literary and art circles in various localities--must get mobilized immediately to enthusiastically propagate the open letter issued by the CCP Central Committee so that members of every household know the letter well.

The party and government organs at all levels must further strengthen their leadership and continue to carry out their work well for planned parenthood. They must conscientiously sum up their experience, conduct thorough investigation and study, and promptly analyze the new situation and the new problems in the planned parenthood work. They must adopt effective measures to strictly control population growth.

Medical and public health departments must improve their birth control techniques and carry out their work well in taking care of woman and children. They must produce more high-quality birth control drugs and devices to satisfy the people's needs.

HEILONGJIANG HOLDS TELEPHONE CONFERENCE ON FAMILY PLANNING

SK091122 Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 8 Oct 80

[Excerpts] According to our sources, on the afternoon of 8 October, the Heilongjiang Provincial CCP Committee held a provincial telephone conference to draw up concrete plans for further implementing the spirit of the open letter of the CCP Central Committee to all party and CYL members on the question of controlling China's population growth. At the conference, Li Jianbai, secretary of the provincial CCP committee, delivered a speech in which he reviewed the province's actual situation and elaborated on the importance of controlling population growth.

He said: The population in our province has increased rapidly since the founding of the PRC. During the past 30 years, the population of the province has increased to 21.25 million. According to statistics, the number of unmarried youths below the age of 23 is 16.4 million. Within the coming 20 years, the annual average number of youths of marriageable age will be 740,000. This figure indicates the urgent need to control population growth.

He pointed out: Family planning work in our province has scored great achievements under the leadership of the CCP Central Committee and the State Council. During the 16 years between 1963 and 1979, Heilongjiang Province reduced the number of its births by 1,181,000. Under the most excellent situation prevailing in family planning this year, it is estimated that the provincial population growth rate will be 0.9 percent lower than that at the end of 1980.

After hailing the achievements scored by our province in family planning work, Secretary Li Jianbai also pointed out the existing problems in this area.

At the conference, the Heilongjiang Provincial CCP Committee put forward the following goals:

1. Party committees at all levels should earnestly do a good job in grasping the work of studying and implementing the spirit of the open letter of the CCP Central Committee to all party and CYL members on the question of controlling China's population growth.

2. It is necessary to extensively and deeply disseminate information on the open letter and vigorously stimulate social attitude in favor of registering to be one-child families. Efforts should be made to widely and deeply ingrain this attitude.

3. Specific localities and units should carry out investigations on their own family planning work. They should do a good job in fulfilling the 1981 plan for family planning work.

4. It is necessary to earnestly act according to the policy on family planning and successfully implement the provincial temporary regulations on birth control.

At this telephone conference, responsible comrades from the Heilongjiang Provincial CYL Committee and the Heilongjiang Provincial Women's Federation delivered speeches in which they called on all CYL members and the broad masses of women throughout the province to resolutely respond to the call issued by the CCP Central Committee and the CYL central authorities and to do a good job in implementing and disseminating information on the spirit of the open letter in line with the goals set forth by the provincial CCP committee. They urged all CYL men and women to make contributions to accelerating the pace in achieving the four modernizations.

OFFICIAL DISCUSSES CHILD CARE

OW101515 Beijing XINHUA in English 1500 GMT 10 Oct 80

[Text] Beijing, 10 October (XINHUA)--Beijing opened a child care research center today as part of its efforts to expand child care service in the city.

With a staff including eight paediatricians, the center will specialize in the health and education of children 3 years and under, as well as in pre- and post-natal services.

Wang Liying, secretary-general of the center, said that this is an important step toward better child care.

She said Beijing has made much progress in maternal and child care since it established a child hygiene network in 1973, covering all city districts and suburban counties, but much remained to be done.

When a child is born, health workers from the network will call at the home twice or three times within the first month of delivery and regular home-calls are made until the child reaches seven. Regular innoculation and vaccination are also done free.

However, she said, child health care centers are understaffed and the staff poorly paid, and the service is far from adequate for a city the size of Beijing.

Wang Liying said that although children in Beijing are generally growing taller, their general health is not satisfactory.

A survey of 4,553 seven-year-olds in four city districts and one suburban county last year showed that more than half the children had dental cares and there were some cases of tracheitis, epilepsy and congenital malformation. A considerable proportion of the children were suffering from anemia.

Wang Liying said these problems are largely caused by insufficient knowledge of child care, nutrition and hygiene. Most children are cared for at home and many parents feed the children what they like so that the children form bad eating habits, she said. Even in nurseries and kindergartens, not enough attention is paid to nutrition.

She said that a shortage of beds in obstetrics hospitals also affected the child care service. In the whole city there were only about 1,000 beds and doctors were too busy coping with routine delivery to teach lying-in women hygiene and child-feeding.

Wang Liying said the city health authorities are now trying to solve these problems and is training health care workers and will increase the number of hospital beds for obstetric cases.

The city has issued 100,000 pamphlets on hygiene and infant and child care to young mothers and the health care research center plans to use radio and film and slide shows to spread information.

PEOPLE WARNED OF GOLD, SILVER SPECULATORS

Tianjin TIANJIN RIBAO in Chinese 9 Jul 80 p 2

[Article by Jiang Baolin [1203 0202 2651] and Liu Fengyi [0491 7364 0308], Bureau of Industry and Commerce in Ninghe County: "Speculators Make Huge Profits in Gold and Silver; Be Careful of Authenticity and Watch Out for Hoaxes"]

[Text] Recently, some speculators, taking advantage of the higher prices paid by the government for gold and silver, while most of the broad masses were unfamiliar with the change, acquired gold and silver for less than half of the government price in rural communes and made a huge profit or colluded with smugglers for profitmaking. Over the past month or so, the Bureau of Industry and Commerce in Ninghe County discovered three cases of gold and silver speculation. A profiteer made eight speculative purchases of gold and silver during the past two months and made an illegal profit of several hundred yuan. For example, for a gold ring which can be sold for more than 40 yuan in a bank, he paid only 18 yuan; for silver yuan, for which the state is paying 5 yuan apiece, he paid 2.5 yuan. Another speculator acquired 302 silver yuan and 8 gold rings at one time in the vicinity of Biaokou and Huaiding in Ninghe County. Their trick was to undervalue the authentic and high-quality pieces (such as to claim a low degree of purity in gold and silver). Ignorant of the distinction and of the official price, the masses were taken advantage of by the swindlers. According to the investigation, in Biaokou, Huaiding, and Renfeng alone quite a few people sold gold and silver to speculators and suffered from the deception.

Many people still own gold and silver jewelry, such as earrings, rings, bracelets, silver pendants, and silver dollars or ingots of gold and silver. They should exchange those objects for cash at the bank, lest they fall victim to swindlers' deceitful words. At present, the government's posted price is 13 yuan for each gram of gold, .20 yuan for each gram of silver, and 5 5 yuan for a silver yuan. The procedure is simple: no questions are asked about origin, and cash is paid on the spot. We suggest that the banking department engage in extensive propaganda, organize purchasing teams in rural areas, and leave speculators no chance to take advantage.

GUANGDONG CRACKS DOWN ON SMUGGLERS, PROFITEERS

Guangzhou NANFANG RIBAO in Chinese 25 Jul 80 p 1

[Article: "Provincial Party Committee and Provincial People's Government Jointly Issue Directive; Determine To Crack Down on Smugglers and Those Engaged in Speculation and Profiteering"]

[Text] Recently the Guangdong Provincial Party Committee and the Guangdong people's government jointly issued "Directives Regarding the Determination To Crack Down on Smuggling, Speculation, and Profiteering Activities." The party committee and government at every level are required to be fully aware of the serious condition and consequences of smuggling, speculation, and profiteering activities. They should strengthen coastal and market control and crack down on the smuggling and blackmarketing of imported merchandise, treating these all-time important tasks which should be dealt with seriously in order resolutely to halt these evil tendencies.

The joint directives issued by the provincial party committee and the provincial people's government point out: At present, criminals and speculators in China, in collusion with underworld forces and unscrupulous merchants in Hong Kong and Macao, engage in rampant smuggling activities through various means and channels. According to statistics, cases involving smuggling and speculation discovered in 1979 in our province numbered more than 9,000, which is a fourfold increase over 1978. This year the situation is getting more serious; there were over 4,000 smuggling cases discovered in the first quarter--more than double the number of cases discovered in the same period last year--and the net worth of smuggled items has also increased substantially. Many of the smuggling cases involve not only various districts in our province but also more than 20 provinces, municipalities, and districts in the whole country. Gold and silver jewelry, precious medicinal herbs, and cultural relics of our country flow out in large quantity, while imported merchandise is bought and sold in the black market or even peddled along the street. This kind of situation is causing great harm to the economic interests of the state, disturbing the control of foreign trade and foreign exchange, disrupting marketing and finance, corrupting the ranks of cadres, staff and workers and the organic functioning of the party, endangering the peace and order of society, and seriously affecting normal production, work, and life, as well as the construction of the four modernizations.

In view of the above situation, the provincial party committee and provincial people's government have promulgated the following directives:

1. Educate broad party members and cadres under the new circumstances to be alert to the corrosive effects of capitalist thinking, to perpetuate a hardy spirit of struggle, to take the lead in law-abiding activities, and to resolutely wage war against criminal activities. Demand that party commissioners at every level and government officials be fully aware of the close connection between cracking down on smuggling and speculation on the one hand and rectifying party discipline on the other. Party members and leading cadres must set a good example themselves and from now on must take the lead in observing rules and regulations. Strengthen political thought education among cadres, staff and workers; grasp the learning of daily discipline in the party; rectify the party's workstyle; and conscientiously abide by the laws. Do not buy smuggled goods, but actively struggle against smuggling, speculating, and profiteering activities.

2. Deliver a severe blow to smuggling, speculating, and profiteering criminals, especially in the coastal areas, along the border, and at locations where smuggling and illegal deals frequently take place. Party committees of municipalities and countries as well as the government should organize their forces to help with the task. It is necessary to organize customs, industrial and commercial control, public security, and judicial departments to help each other in cracking down on important criminal cases, to seize a number of typical cases and publicly mete out justice. Disciplined inspection committees at every level must strengthen review, handle important cases timely, tighten party discipline, and engage in discipline education within the party. A blow must be dealt to those who enter China to engage in criminal activities under the cover of overseas, Hong Kong, or Macao Chinese.

3. Reinforce control of export products and strictly prohibit profiteering. The "Notice Concerning the Strengthening of Import and Export Products Control" and the "Supplementary Notice" issued by the provincial revolutionary committee last year must be carefully implemented. The purchase and distribution of imported products are handled by state-run overseas Chinese merchandise supply companies, which are found in various places in the province. No other unit or individual is allowed to take part in the transaction. Chinese-born foreign nationals, overseas Chinese, Hong Kong and Macao Chinese, and their families should all go to designated stores if they need to sell surplus imported goods. They are not allowed to peddle on the street or trade in the black market. Units in the province or people coming to our province to purchase imported products must go to the state-run import products store. Financial, banking, and fiscal departments must tighten supervision over financial matters and be vigilant in inspecting and accounting. Industrial and commercial control departments must adjust and strengthen market control.

4. Manage the use and recall of "foreign exchange vouchers" strictly.

5. Step up the investigation and arrest of smugglers and establish an efficient squad. Customs, public security, border defense, industrial and commercial management departments must cooperate with each other to reinforce sea patrol and inspection as well as to develop the struggle against smuggling.

6. Engage in extensive propaganda work, mobilize the masses, raise their consciousness of law and discipline, make them abide conscientiously by state policies and regulations, and participate actively in struggles against smuggling, tax evasion, speculation, and profiteering. Those units and individuals that uncover or inform on illicit actions should be commended and given cash awards.

TWO BOOKS BY PRC'S LATE LEADING MOVIE STAR PUBLISHED

OW100322 Beijing XINHUA in English 0230 GMT 10 Cct 80

[Text] Beijing, 10 October (XINHUA)--Two books by China's leading film star, Zhao Dan, have been published.

In one of the books, "Creation of Screen Images," he analyses the great impact of China's stage traditions on cinema, what the film industry can learn from live theatre and what influences it should resist.

Zhao Dan stresses a realist approach to cinematic creation and the book has already been acclaimed as for its relevance to efforts by Chinese film-makers to shake off the influence of the "cultural revolution," which was characterized by stereotyped, exaggerated acting.

"Creation of Screen Images," published by the Cinema Publishing House in Beijing, tells the story of his career from a street corner speaker agitating for patriotic action to stage performer and film star.

In "Door to Hell," published by the Shanghai Wenyi Publishing House, Zhao Dan recalls the important stages of his life, his contact with the late Premier Zhou Enlai, his struggles against the gang of four who seized political power for a time in the 1960's and 70's, and his involvement with other artists. The title is a poignant reference to the need for courage in artistic exploration.

Zhao Dan's career was closely linked to China's revolutionary causes. The drama group he organized when he was a 16-year-old student at Shanghai Fine Arts Academy joined the communist-led league of dramatists in the early 1930's. Later he joined a theatrical troupe that performed in factories, schools and on street corners exhorting people to resist the Japanese invasion.

In 1938, when he went to Xinjiang, Northwest China, to help train dramatists there, he was imprisoned for 5 years by the local warlord. In the "cultural revolution" of 1966-76, Zhao Dan served another 5 years in jail on false charges of being a "counterrevolutionary."

There were many artistic highlights in his life, including those performances which won him international status.

He first drew attention in 1937 in the roles of a young newspaper proofreader in "Crossroads" and a trumpet player in "Street Angel." Among his other notable successes were roles in "Crows and Sparrows" (1949), "Li Shizhen" (1956), "Lin Zexu" (1958), "Nie Er" (1959), and "Red Crag" (1964).

REAPPRAISING LITERATURE, ART POLICY ADVOCATED

HK110555 Hong Kong WEN WEI PO in Chinese 7 Oct 80 p 3

[Article by Lin Wei [2651 3837]: "'Governing by Doing Nothing' Goes Against the Will of the People in Literature and Art"]

[Text] Views urging "governing by doing nothing" expressed in literature and art appear to have increased.

What is called "governing by doing nothing" refers to the method of governing enforced by Xiao He and Cao San in the early years of the Western Han period. According to "laws on punishment of the book of Han," "when prime ministers Xiao He and Cao San governed the country by doing nothing, they complied with the wishes of the people and did nothing to interfere with their aspirations. As a result, the people were provided with sufficient food and clothing and punishment was used sparingly."

The phrase "complying with the wishes of the people without interfering with their aspirations" in fact embodies the spirit of "governing by doing nothing." A modern interpretation of this would be "to comply with the wishes of the people without interfering with them." Advocating "governing by doing nothing" in literature and art aims in particular at the prevailing bureaucratic practices.

Since the "gang of four" was smashed, central departments overseeing literature and art have naturally summed up the lessons drawn from the past 20 years or so. They have repeatedly stressed the importance of the "double hundred" policy and upheld the principle of "three don'ts," reaffirmed that writers and artists are free to create and to criticize works of literature and art and guaranteed their right to compete and contend freely. This spirit was exemplified at the Fourth Congress of Writers and Artists, at which Deng Xiaoping announced that party leadership in literature and art would be based on "noninterference."

However, just as the line of the 3d plenary session of the 11th party congress has been infringed upon, the party's literature and art policy has not been implemented in some areas. Some reader-approved works have been condemned as bad works while some films approved by the audience have been banned. On the other hand, the publication and circulation of works and periodicals which contain defects have also been banned. In some cases, even departments which are not in charge of literature and art publications have interfered with such endeavors. For example, the party branch secretary of a production brigade has rudely canceled a writer's food ration, while the responsible person of a housing management bureau has unreasonably banned the display of a cartoon.

In view of the serious development of arbitrary interference, writers have proposed "governing by doing nothing." They have proposed that laws be enacted to insure the implementation of the "double hundred" policy.

The "double hundred" policy has been in force for many years and it has been written into the constitution. Therefore, very few people have openly opposed its implementation. However, it is because those who oversee literature and art are afraid of the appearance of controversial or "extremist" works among their subordinates that they often use their power to ban their publication. Since some cadres overseeing literature and art confuse "Lei Feng Pagoda" with "Learning From Lei Feng," their ability to distinguish fragrant flowers from poisonous weeds is clearly open to question. Moreover, it is both unfair and improper for one person to determine what should be read by thousands of people and what should not be seen by them.

What is called "governing by doing nothing" means refraining from imposing arbitrary interference on literature and art. Writers themselves should decide what to write about and how to write it. If there are problems in this respect, they can be referred to the writers. With regard to how to revise the works and whether they should be revised, this is up to the writers. This method of leadership in the field of literature and art was proposed by Chen Yi in 1962, but it has never been carried out.

Following major reversals in literature and art policy over the past 27 years and minor reversals in the recent 4 years, there is indeed a need to reexamine the method of overseeing literature and art.

BEIJING LINGUISTICS ASSOCIATION HOLDS FORUM ON POLITE SPEECH

HK091122 Beijing City Service in Mandarin 2300 GMT 25 Sep 80

[Text] In order to keep our language pure and wholesome and to strengthen education and propaganda on polite speech, the Beijing Municipal Linguistics Association held a lively forum on polite speech yesterday morning. About 50 people attended the forum. They included Mr Ye Shengtao, an emminent linguistics expert; (Zhou Zhumuo), (Jiang Xijin), (Yu Min), (Hu Lin Yang) and other professors; (Li Lin), deputy director of the Institute of Social Science; Hou Baolin, a performer of comic dialogue; (Zhang Binggui), a national model worker department store salesman; and (Xia Qing), an announcer of the Central People's Broadcasting Station. (Zhang Zhigong), president of the Beijing Municipal Linguistics Association, chaired the forum.

Language, which reflects socialist interpersonal relationships, has severely deteriorated during the 10 years of turmoil. Foul language has spread unchecked, thus adversely affecting the social atmosphere and stability and unity. This is not a minor matter. Rather, it deserves the attention of the whole society. To achieve the four modernizations and build a highly civilized capital, it is imperative that we strengthen education and propaganda work and vigorously advocate polite speech. In his speech, Ye Shengtao pointed out that we should be sincere in our hearts and our actions. He said: Only when we genuinely respect others can we show our politeness in our words and actions. Hou Baolin and (Zhang Binggui) talked about their many years' experience in applying the art of speech in performing comic dialogue and in being a salesman, respectively. (He Qizhi), a postgraduate in the Institute of International Affairs, spoke in accordance with the new situation characterized by daily increasing contacts between China and other countries. He stressed the international significance of strengthening polite speech. During the forum, many people pointed out that the problem of politeness was a social one. They suggested that we first of all eliminate the pernicious influence of the ultraleftist line, foster interpersonal relationships of unity, friendship and mutual respect and create a new social atmosphere of politeness and civility. Participants in the forum called on schools, families and society to strengthen education on polite speech. They added that films, radio and television programs and other art and literary departments should pay attention to propaganda work on polite speech and make contributions toward keeping our language pure and wholesome.

'RENMIN RIBAO' COMMENTATOR'S ARTICLE ON EDUCATIONAL FUNDS

HK140957 Beijing RENMIN RIBAO in Chinese 9 Oct 80 p 3

[Commentator's article: "Squeeze Out More Money for Developing Education"]

[Text] The key to the four modernizations lies in science and technology and the foundation for training people is education. This truth is recognized by more and more people after several years' efforts. As the economic system changes, many localities and departments have realized deeply the significance of developing education and training people. This year, in addition to some increases in educational funds decided by the State Council, Jiangsu, Shanghai and some other provinces and municipalities also have spared some local funds for educational purposes. However, there are still some comrades who believe that science and education are dispensable and who even divert educational funds for other purposes at will. Xingtai Prefecture, Hebei, is an example.

For quite some time, some people considered educational undertakings as a consumption item that had no connection with production. When they thought of developing production, they considered building factories, buying machines, constructing irrigation works and other material things. They seldom considered, or simply did not consider, the question of training people. They were generous, spending thousands upon thousands of yuan to buy machines but were too stingy to spend needed sums on education. Whenever possible, they would divert educational funds for other purposes, alleging that this was to "insure production at the expense of education" and thinking that this was right and proper.

Can production really be insured at the expense of education? No. Facts have shown that modern production is based on advanced science and technology. The current economic competition is actually a competition of science and technology and intelligence. Whether or not we can train large numbers of people to become well versed in science and technology is a decisive factor in the development of a modern economy. Therefore, an educational undertaking to train such persons is by no means a matter of consumption having nothing to do with production. It is indeed an investment in developing intellectual resources that are indispensable to production development. Enterprise owners in developed countries understand this better than some of our comrades who claim to be Marxists. Some of our comrades have still not yet freed themselves from the small-production mentality and the left-deviationist thinking. They always belittle the role of scientific and cultural knowledge as well as that of intellectuals and refuse to recognize the extremely important role of education and science in the socialist modernization drive. Due to neglect of education, there is now a shortage of specialists and the scientific and cultural level of our urban and rural workers is too low. We have already suffered too much. In our production work, quite often things are stupidly messed up or recklessly meddled with in total disregard of science. Many enterprises are plagued by mismanagement and many pieces of advanced equipment lie idle because nobody knows how to use them. The waste is shocking. If we can only conscientiously sum up our experience in this respect, we will be able to see that the "sacrifice of education" cannot "insure production." On the contrary, that would be unfavorable to production either from the long term or the immediate point of view.

Some comrades stress that we have to divert educational funds for other purposes because we have many things to do but have insufficient funds. This view is wrong. At present, our country has financial problems and educational funds cannot be increased greatly or immediately. People have to understand this. However, insufficient funds should not be an excuse for diverting educational funds for other purposes any longer. Over many years too much of the funds earmarked for education has been diverted for other purposes, investment in education is too little and we owe too much to education. We should not make any new debts before we have repaid the old ones. Not only should we stop using educational funds for other purposes but we should also squeeze as much money as possible from other sources for educational purposes so that there can be a rational ratio between investment in education and that in other fields. At the same time, as we take note of the fact while it is true that funds are insufficient, it is also true that waste has been great, particularly in economic construction. When people are wasting thousands upon thousands of yuan, why can they not save some money to be used to develop education?

ARTICLE DISCUSSES EDUCATION IN ATHEISM

Beijing GUANGMING RIBAO in Chinese 25 Aug 80 p 3

[Article by Lei Zhenchang [7191 6966 7049]: "Strengthen the Education of Young People and Children in Atheism"]

[Text] Since the destruction of the "gang of four," many young people and children feel greatly confused over various real problems, such as worries about the future, promotions in school and employment problems, and find they cannot think these problems through. A number of faith workers have taken advantage of the internal contradictions and indecision of these young people and children to raise the banner of "freedom of religious belief" and re-engage in their former professions, thus stirring up the dregs of such feudal beliefs as praying to gods, manifesting spirits, fortune telling, graph readings, shamanism and magic potions. There have already been repeated instances where belief in these unorthodox things has brought serious harm to young people and children. How can such conditions not elicit the concern of comrades enganged in the education of young people and children?

Education in atheism must be given its rightful place.

The so-called education in atheism is the application of dialectical materialism and historical materialism to analyze the basis for the birth of theism and religion and the rules of their origin, development and disappearance, to point out their areas of influence in social life, and to propagandize the attitudes and policies of the proletarian political party towards religion.

Of course, this is only the most basic material of education in atheism. Actually, education in atheism is rather far-reaching, for example, general education in science, technology and the history of social development, and, especially, in the birth of the cosmos, the evolution of the earth and heavenly bodies, the origin of man, social change, scientific inventions and the realization of ideals. All such things related to education in the natural and social sciences should be considered a part of the broad definition of education in atheism. In short, a simple disbelief in gods and ghosts is not the mark of an aware atheist, as a thoroughgoing atheist is one who has a correct world view, has clear goals to struggle for, does not believe in any savior of the world, and does not dream of a world to come. Therefore, the education of young people and children in atheism ought to be the undying responsibility of all atheist educational workers as well as all workers in the natural and social sciences and in education.

What is the correct way to educate young people and children in atheism?

1. Correctly propagandize the party's policy on freedom of religious belief. It must be made clear to young people and children that we do not approve of the idealist world view held by religion. However, religion does have a basis in both society and in knowledge and the withering away of religion involves a long historical process. Religion will finally die away only after the destruction of the extant social basis on which it relies. Therefore, the question of religious belief is primarily a question of ideological realization, so the use of administrative injunctions to handle religious beliefs does not address the problem. Because of this, the proletarian party implemented the policy of freedom of religious belief. Although believers and non-believers have different world views, this does not prevent both sides from sharing common economic interests and common political interests, whichis to say, to be of the same heart and mind in the construction of a powerful, modernized socialist nation with a high degree of democracy and culture. Therefore, we should not be satirical or prejudiced toward religious believers, but rather should unite in solidifying and developing a peaceful and united political situation.

2. We must clearly explain to young people and children that China has freedom of religious belief, but that feudal superstition is prohibited. Religion is faith, a social awareness which has timeless, mass, international, national and complex features. Yet, feudal superstitions such as physiognomy, divination, graph analysis, fortune telling, prayer to genies and manifestation of the gods do not fall within the scope of religious beliefs. Those faith workers are always practicing their superstitious activities not only to make money but sometimes also endangering lives. Because of such things, in the interests of protecting the people the state must use

legal restraints against the danger created by these superstitious activities. Therefore, we must educate our young people and children not to be duped by these feudal, superstitious activities.

3. We must inculcate young people and children with a revolutionary outlook on life. The philosophical life view of feudalism or of the bourgeoisie frequently corrupts the ideology of young people and children, causing some of them to lack correct views on the future of the nation or on individual "fate," some even seeking help from physiognomy or divination. We should realistically explain to them the disasters the nation has suffered in the past, simultaneously point out in a patient and friendly manner the glories of the future, making them understand the close relationship between their own "fate" and that of their homeland and that only by contributing their part to national prosperity does life have any value.

4. We must clearly explain the differences between myth and superstition. Myth is the product of early mankind, and the imaginings of man's "immature social conditions." At that time, mankind was as yet unable to control the natural and social forces in real life, and so spread the wings of the imagination and produced a number of beautiful myths. Therefore, they have positive and progressive significance. Marx and Engels had favorable criticism of ancient Greek myths, praising them for their "eternal beauty." The storehouse of Chinese myths is also very attractive, for example, "the Ban Gu creation myth," Nu E patches the heavens," "Chang E escapes to the moon, "the Cowherd and the Weaver Girl," and "Sun Wukong rampages through the Palace of Heaven." These are entirely different from the weak-willed, god-fearing feudal superstitions which make people bow down before the spirits.

5. Most important of all is following party leadership in striving to elevate the level of science and technology in the whole populace, especially the young people and children, strive to develop the social production forces and quickly implement the four modernizations. Lenin himself said, "Poverty and ignorance are the deepest roots of religious bias and we should struggle against these sources of harm." (LIENING XUANJI [SELECTED WORKS OF LENIN] Vol 2, p 379) We are now involved in the mighty process of building the four modernizations, which also is a struggle against these "sources of harm." This is the path to a basic solution of the problem. At present, the basic task of the party is to make a wholehearted, concentrated effort to accomplish the four modernizations, and all of our efforts must be subordinated to accomplishing this great historical task of the Chinese people, and education in atheism is but an appendage to this work.

IN-SERVICE TRAINING OF TECHNICIANS MUST BE PROMOTED

Shanghai JIEFANG RIBAO in Chinese 18 Aug 80 p 4

[XINHUA dispatch from Beijing, 17 August: "Take the Training of On-the-Job Scientific and Technological Personnel as a Basic Task"]

[Text] The training of on-the-job scientific and technological personnel will be the regular and basic work of all specialized societies, associations, and research centers of natural sciences. This is the call put forward by the Second Session of the Second Standing Committee of the China Scientific and Technical Association, held today.

The session passed a "Proposal to actively carry out the work of vocational training of on-the-job scientific and technological personnel," stating that in training and building a scientific and technological contingent, we must persist in the policy of simultaneously carrying out school education and on-the-job training. In other words, while the education departments are striving to train a scientific and technological reserve force, we must earnestly and continuously raise the standards of our present in-service scientific and technological workers. This "proposal" goes on to point out: Today, when modern sciences are changing with each passing day, in order to meet the requirements of the four modernizations not only junior scientific and technological workers but also middle-age key members of the scientific and technological contingent, and even senior technical experts with special qualifications, all have an urgent desire for further learning. Therefore, various societies, associations, and research centers under the China Scientific and Technical Association should be dutybound to take practical and effective measures, to grasp firmly and well the work of the vocational training of on-the-job scientific and technical personnel, and to get good results.

This "proposal" of the China Scientific and Technical Association states: Our policy for training on-the-job scientific and technical personnel should combine long-term and short-term training, with the latter as the main project; should combine full-time study and spare-time study, with the latter as the main project; should combine single-subject study and systematic study, with the former as the main project; and should combine advanced study and popular study, with the former as the main project. The training may be carried out in the following four ways: 1. short-term training on a specific topic; 2. advanced study on a single subject; 3. forums on specific topics; 4. systematic vocational training. In addition, technical personnel may be trained by means of television and correspondence.

The "proposal" put forward by this session of the standing committee of the China Scientific and Technical Association states emphatically: In running schools of advanced technical study and various short-term training courses, the China Scientific and Technical Association and its subordinate bodies must set strict standards, pay attention to quality, and strive for practical results. We must gradually build a stable contingent of teachers with definite qualifications, doing either full-time or part-time work but mainly part-time work, and must establish a necessary system of education and the sequence of teaching.

FIRST GROUP OF NEW STUDENTS FOR SHANGHAI SCHOOLS OF HIGHER LEARNING

Shanghai JIEFANG RIBAO in Chinese 18 Aug 80 p 1

[Article: "Shanghai Enrolls First Group of 5,814 Students in 64 Schools of Higher Learning"]

[Text] Today Shanghai announced the enrollment of the first group of new students for 64 schools of higher learning.

These 64 schools that are recruiting students from Shanghai Municipality include the country's key schools of higher learning, key military academies, and the first group of schools of enrollment appointed by the Ministry of Education, as well as Shanghai Teachers College. This year a total of 5,814 students are enrolled by these schools of higher learning--including 1,049 students, 8 above quota, by schools outside Shanghai, and 4,765 students, 210 above quota, by schools in Shanghai. Most of these enrolled students scored more than 400 marks. The 33 students enrolled by the China University of Science and Technology scored an average 450 marks. The 15 students enrolled by the China Capital Medical University scored an average 449 marks. The average score of the students enrolled by Qinghua University and Beijing University was more than 440 and 430 marks, respectively. All those enrolled by Shanghai Jiaotong University and Fudan University scored, on average, more than 440 marks. Those enrolled by the East China Teachers University scored an average of nearly 420 marks. In line with the spirit of the National Conference of Teachers Colleges and the Conference of Schools of Higher Learning on Enrollment Work, the first group of students enrolled this year by Shanghai Teachers College scored more than 390 marks in science and about 340 marks in liberal arts. Xue Leiping [5641 7191 1627], of the East China Teachers University Second Attached Middle School, scored the highest marks in science in the enrollment examination in Shanghai; Zhou Songlin [0719 2646 2651], of Zhang Yang Middle School in Huangpu Ward, scored the highest marks in liberal arts; and Li Wenying [2621 2429 5391], of the Shanghai Foreign Language College Attached Foreign Language School, scored the highest marks in foreign languages. They will attend, respectively, the departments of physics and of Chinese at Fudan University and the department of English at the Shanghai Foreign Language College.

In the work of allocating students to be enrolled, this year we used electronic computers in a simulated test to guide our estimate. Before the allocation, we analyzed data on the number of candidates from each school, the candidates' preferred subjects, and the marks scored by them in the examination, we made a tentative list, and we got a fairly good idea of what we should do. Meanwhile, according to our progress in the work of enrollment, we constantly carried out the allocation in a rational way so that the work of enrollment as a whole was speedy and accurate. Although the original estimated was that it would take 1 week, at present we have basically completed the work in only 4 days. In enrollment work, we also carefully made overall plans and took all factors into consideration to meet the requirements of key schools of higher learning and schools in other places, and completely fulfilled the recruitment plan. A deputy secretary of the Qinghua University Party Committee, who paid a special visit to Shanghai to find out the recruitment situation, was pleased with the 45 new students enrolled in his university. He said that his university was prepared to increase the number of students to be recruited next year in Shanghai.

Today, the work of recruiting the second group of students for other schools of higher learning will begin.

SOCIOLOGICAL, EDUCATION AND CULTURE

SHANGHAI TAKES STEPS TO IMPROVE SECONDARY EDUCATION

Beijing GUANGMING RIBAO in Chinese 28 Aug 80 p 1

[Article by reporter Zhang Yifu [1728 6318 1788]: "Shanghai Adopts Three Measures To Reform Secondary Education"]

[Text] Shanghai Municipality has adopted three measures to reform secondary education: it has opened more than 40 vocational courses, prolonged the period of schooling to 3 years in half of the municipality's senior middle schools, and converted some complete middle schools into junior middle schools.

Last year, 10 middle schools in Shanghai opened 10 specialized secondary courses, and this year a number of middle schools again offered more than 40 vocational courses. These two courses recruited a total of more than 2,000 students for the summer term. The subjects of vocational study include documents, accounting, clothing, printing, photography, semiconductor equipment, electrial apparatus repair, and arts and crafts. These courses have been warmly received by the broad students and their parents. A large number of well-qualified candidates applied for the entrance examination and were admitted. The period of schooling for the vocational course is 3 to 4 years. The courses are operated in [one of] two ways: either by the schools on behalf of various municipal specialized companies, factories, and research institutes; or jointly by the ward education bureaus and ward finance and trade offices. It is planned to gradually expand the operation of vocational courses by conducting tests at selected points.

The second thing Shanghai has done to reform secondary education has been to prolong the period of schooling. To improve the quality of education, lighten the students' burden, and help them to develop morally, intellectually, and physically, half of the senior middle schools in the municipality have started to change their educational system from 2 years to 3 years. To avoid any interruption in the source of candidates to be recruited by the institutes of higher education in 1982, this year the other half of the senior middle schools will not prolong their educational system for the time being, but will start to do so in the autumn semester next year. About half of some 80,000 students attending the first-year classes of senior middle schools in the municipality have been enrolled this summer by senior middle schools of the 3-year system. Under the prolonged schooling system, the senior middle schools will add such subjects as biology and geography to their curricula, and they will also set up elective courses for students in the second and third years of senior middle schools, with a view to enlarging their scope of knowledge and giving them vocational and technological education.

The third thing Shanghai has done has been to reform the layout of secondary education. During the 10-year turmoil, all middle schools in Shanghai were blindly converted to senior middle schools. These schools were operated under very poor conditions, and the overall arrangement was not rational. To insure the practical quality of education and to rationalize the layout of complete middle schools and junior middle schools, the concerned departments of the municipality, while carrying out readjustment, abolition, and amalgamation of schools, have reorganized the 441 complete middle schools in urban areas into 290 complete middle schools and 150 junior middle schools, and they have also made corresponding readjustments in school buildings and teaching staff.

COMMENTS ON PERSONNEL TRAINING AT INSTITUTIONS OF HIGHER LEARNING

Beijing GUANGMING RIBAO in Chinese 13 Aug 80 p 2

[Report by Yang Deguang [2799 1795 1684]: "Opinions of Responsible Comrades of Some Factories and Research Institutes in Shanghai on How Institutions of Higher Learning Should Train Qualified Personnel"]

[Text] Very recently, the personnel science study group of the higher education study association in Shanghai Municipality invited responsible comrades of some factories, research institutes and units of the like to a forum on problems such as the training of qualified personnel at institutions of higher learning, where they thoroughly aired their views and especially offered five concrete comments.

1. The university student recruitment approach at present remains to be improved. Some comrades were of the opinion that certain practices in the present uniform student recruitment system are not beneficial to the selection of talents. Director Chen Jiayi [7115 0502 6146] of the youth science and technology station of Shanghai Municipality said: "We have quite a few very talented science and technology enthusiasts at the youth science and technology station, but they often cannot go to a university to study. One student who has been working on ship models won first prize at a national ship models contest, his workmanship level was equivalent to that of a class 6 worker; he finished the study of subjects up to the sophomore year in the shipbuilding department of a university on his own, however, because he did not get enough overall points in an examination for graduate studies, he was not accepted." Participating comrades made three proposals: (1) from now on, student recruitment at various schools should, as is done at institutions of physical education and arts, test not only the candidates' knowledge but also their talents; (2) in the case of superior students or students especially talented in certain fields, they should be selected and sent directly to the university for advanced studies in the corresponding fields; and (3) as exemplified by the University of Communications in Shanghai, a university should set up direct links with supporting middle schools, a university should assist supporting middle and elementary shools to develop scientific and technical activities and improve the quality of teaching, and a university may also go to such supporting middle schools to select budding talents in the field directly.

2. The arrangement of specialties at universities should not be too minute. Along with the development of modern science and technology, there are now an increasing number of new subjects and new specialties. According to incomplete statistics, there are more than 2,000 specialties in the world today, and in the future more new specialties are still liable to come into being. Therefore, the establishment of specialties at institutions of higher learning should not be too limited; efforts should be made to strengthen the student's basic theoretical studies, to provide cross-subject and cross-specialty courses, and thereby broaden the range of his knowledge. Participants were of the opinion that this should be pursued in three aspects: one is to gradually eliminate present specialty arrangements and, instead, recruit students according to individual departments and individual subjects. At present, most schools recruit students according to existing specialties; efforts should be made to encourage students to take up a second specialty. The second is to carry out a credit system, increase selective courses, provide the students with "compound vitamins," so as to raise more "generalists." The third is to renovate teaching materials, raise the level of teachers. Teaching materials for a specialty should be able to reflect the newest level of domestic and foreign scientific and technological development in the field, or a special chair should be established in order to make up any deficiency thereof. University teachers should perceive regularly the actual situations of production and scientific research at factories and research institutes in order to give the students practical knowledge. Technical personnel at factories and research institutes may also be invited to give lectures at a university, in order to make up certain deficiencies of its teachers.

3. Institutions of higher learning should pay attention to training talents of overall development. In the training of talents at several institutions, the point of emphasis is often placed on the impartation of knowledge and not on the fostering of special abilities; this is the greatest weakness of higher education at present. Modern science and technology are developing in the comprehensive and marginal directions; even if we are just working on a medium or small-scale project of scientific research, we would still need to develop coordination and cooperation. Therefore, scientific and technological personnel must not only have a strong capability to engage in autonomous study, to think, and to create, but also have a certain capability to organize. Institutions of higher learning should stress the comprehensive training of students. Wang Jiangang [3769 0256 0474] of research institute No. 711 said that there were two core technical cadres at their institute but neither was any all-superior student from a university; one was conductor of the symphonic orchestra at Qinghua University, and one was leader of the basketball team at the University of Communications; because they were trained in universities, their ability to organize was very strong. We welcome student cadres with a medium or superior level of academic achievement the most, he said, because they are equipped with the ability to work independently and to work hard without complaint. Therefore, the key point in education at higher institutions should be to foster talents. How to foster talents? Participants suggested the following: (1) In the case of university students,

we must not pamper them; we must simplify and streamline their study programs and schedules and let them pursue their own studies and examine their own problems; we must pose some difficulties for the students to solve by themselves, and not lead them to a pursuit of mere high marks. (2) Universities should offer a management specialty as an avenue for training cadres. Apart from this, they should also offer management courses in the various departments to acquaint university students with some management knowledge. (3) Increase experiment courses and courses in production practice; in the case of students in the school of arts, increase courses in social investigation, and organize upper class students to develop scientific research, so as to foster the students' ability to initiate their own operations.

4. It is necessary to raise the foreign language level and literary level of university students. Comrades from the 10-odd units participating in the forum discussion all reflected that the foreign language level and literary level of a considerable part of university graduates are usually very low. A certain industrial company has 580 technical personnel, but those who can read foreign language materials make up only about 30 percent. A certain research institute has more than 120 foreign language magazines available, but only half of them have ever been perused by anyone, and of all the institute's medium-level technical personnel those who are capable of reading foreign language materials make up only 10 percent. Many factories and research institutes must handle assignments such as study tours abroad and participation in international conferences each year. Due to a general lack of people versed in foreign languages, such assignments are necessarily forced upon a few individuals. There are some engineers whose professional level happens to be very high; because of their needs while on assignments abroad, they are forced to stay away from production for a year just to study foreign languages, and hence to miss their work. Everyone was of the consistent opinion that the foreign language level of university graduates of the early 1950's was relatively higher, and the main reason in this regard was that their foreign language foundation in middle schools was quite solid and foreign language teaching materials were used in some university courses. Because the foreign language foundation of these comrades was solid, they were therefore also able to absorb in time the newest scientific and technological knowledge from abroad, to make fast progress, and to achieve great results; most of them became thus principal core cadres in science and technology of their own units. Participants all suggested that students must grasp well the study of foreign languages in their elementary and middle school days; in view of the fact that the foreign language level of middle school graduates at present is not very high, a period in their university days may be set aside for them to concentrate on the making up of such foreign language deficiency. The foreign language editions of some teaching materials may be selected for them, and teachers may give lectures in such foreign languages.

Participants in the forum also made the appeal that higher institutions must raise the students' literary level. They gave many examples to point out that not a few university graduates with a definite professional level could not even write a decent general report, a program of design, or a technical appraisal. For example, a certain unit test-produced a new product and wished to write a colloquial report comprehensible to people outside of the field; several university graduates were asked in succession to write it, but none of those written was able to make a clear presentation. Participants thus suggested that the universities should therefore pay special attention to the literary marks achieved at the time of student recruitment: those whose literary level is too low should not be accepted. Besides, universities should also provide literary courses.

5. It is necessary to change the way university students are assigned in order to encourage the competition for talents. Many comrades pointed out that our university students assignment approach has really a great many faults and has already resulted in a serious waste of talents. The municipal bureau of metallurgial works has altogether 5,800 technical personnel of whom the work arrangements of only a half are relatively appropriate, whereas the other half of them are used outside the fields of their study and hence have not been able to give full scope to their roles. The main reason giving rise to such a situation is that cadres in its personnel department do not know anything about technology. The miniature ball-bearing plant, again, has 61 university graduates among whom quite a few are from specialties such as biology, nuclear physics, microwave, etc. However, since their employment turns out not to be relevant to their specialties, they have been forced to change their professions; this not only resulted in a waste of talents but also created many ideological problems. Deputy director of parts plant No. 5 Jiang Fuzhang [5592 1318 4545] reported: "Our plant has 1,354 staff and workers, of whom 102 are university graduates and these make up only 7 percent and not many of them have become core cadres. This is because when they were assigned to us they were not assigned according to our needs; we had no room to choose, and some could not be given any pertinent jobs after they were sent to us." Participants thus offered three concrete opinions on the university graduates assignment approach: (1) Gradually carry out a recruitment-through-invitation system, so that when various units need certain personnel, they can go to the schools to select and invite them directly; this way, those selected would be suitable and relevant. (2) Practise an advance assignment system, a probation system, so that after university graduates arrive at the employing units, they are put through a year of observation period, at the end of which suitable ones are retained and unsuitable ones are dismissed. (3) Practise a selective assignment system to make it possible for especially outstanding students to select their own working units; wages and salaries in such cases may be set higher. Students whose academic achievements are inadequate or whose conduct leaves much to be desired should not be assigned jobs but should be given only living expenses, so that they can study more by themselves at home and wait for opportunities to be recruited through invitation. The several measures mentioned above

are good for breaking down the present practices of egalitarianism and doing everything in the students' behalf, and good for promoting the students' own ambition for advancement and promoting competition for talents. Today, some people start to have "ready settlement" ideas as soon as they enter a university; because they are uniformly assigned by the state anyway and their wages and salaries are also the same, they hardly need to strive for advancement. This is not good for the development of talents. We should adopt measures, as a matter of policy, to encourage competition for talents.

TRAINING OF TECHNICAL PERSONNEL OF ZANG NATIONALITY

Beijing GUANGMING RIBAO in Chinese 14 Aug 80 p 1

[Letter from a staff reporter: "The Training of Scientific and Technical Personnel of Zang Nationality Is Extremely Urgent"]

[Text] To the Editorial Board: Recently, Chairman Li Xiaoxing [2621 4562 2502] of the Xizang Autonomous Regional Scientific Commission told your reporter: Xizang's scientific research work and the large amount of technical work in its construction eventually have to be carried out by relying on scientific and technical personnel of Zang nationality. Therefore, the training of a large number of such personnel is extremely urgent at present!

He pointed out: This autonomous region's present backbone of scientific and technical contingents consists mainly of cadres who came there last year on a 3-year rotation; only a very few of them are of the Zang nationality. Of some 200 staff members and workers in the system of the Regional Scientific Commission, the number of scientific personnel who are Zang nationals is even less significant. Those Han nationality technical cadres on a 3-year rotation will leave after 1 or 2 years. After their departure, personnel of Zang nationality will not be able to take over the work. Most of the scientific research projects now in progress will have to stop.

According to information, in the past whoever talked about training Zang nationality cadres had in mind only the thought of training party and administrative cadres, and very seldom that of training technical cadres. Those young people of Zang nationality or of other minority nationalities in Xizang who were sent to the interior to study also generally studied politics and the Han language, and very few studied specialized subjects and technology. Even those few who acquired vocational and technical knowledge would in most cases change their line and become party or administrative cadres after their return to Xizang. For instance, since 1970 the Autonomous Regional Department of Communications has successively sent three groups of young Zang nationals to the communications school in Nei Monggol Autonomous Region to study highway construction engineering. However, on their return to Xizang, almost all of them have been appointed party or administrative cadres.

Li Xiaoxing said: At present, it is not difficult in Xizang to find a number of fine county party committee secretaries who are of Zang nationality; however, it is not so easy to find efficient technicians who are Zang nationals. Evidently, this cannot meet the needs of building a wealthy and enlightened new Xizang. We must carry out the training of technical personnel of Zang nationality as a task of great urgency, and strive to train a number of such personnel in the next 3 to 5 years. For this purpose, he put forward the following four suggestions:

First, it is suggested that in the name of the State Scientific and Technological Commission, we ask some research institutes of the Chinese Academy of Sciences and the scientific research units of some provinces and municipalities to train technical personnel for Xizang Autonomous Region purposefully and in a planned way, and according to the needs of Xizang's scientific research work.

Secondly, we ask the Ministry of Education to instruct certain science and engineering colleges in the interior to open "Xizang classes" in certain vocational studies according to the needs of Xizang Autonomous Region. In recruiting students for these classes, we should proceed from the actual conditions of education in Xizang and relax the requirements for candidates, such as lowering the grading [standards] and having no restrictions on age.

Thirdly, we should call together all Zang technical personnel now scattered over various places in Xizang, ask Han nationality technical personnel "to teach, help, and guide" them, and strive to train them to be key technical cadres in 1 or 2 years.

Fourthly, we hope that, in line with the Party Central Committee's spirit of carrying out the structural reform of cadre ranks, the Regional Party Committee will pick out a large number of young Zang party and administrative cadres with a certain degree of education, send them to the interior to study, and train them to be technical cadres.

RELATIONSHIP AMONG MINORITY NATIONALITIES IN CHINA

Beijing GUANGMING RIBAO in Chinese 15 Aug 80 p 3

[Article: "The Relationship Among All Nationalities of Our Country Should Be a Relationship Among Working People"]

[Text] In Xizang Autonomous Region, some social science workers recently held a forum on theoretical problems concerning nationalities and pointed out: Today, when all nationalities of our country have carried out socialist reform, the relationship among all nationalities is entirely a relationship among working people. It is wrong to continue invariably to use the so-called argument that "the essence of the nationality problem is a class problem."

At the forum, deputy leader Peng Zhe [1756 0772] of the preparatory group of the Xizang Autonomous Regional Academy of Social Sciences and deputy chief Bao Yin [1405 7299] of the propaganda department of the Regional Party Committee said: The nationality problem is a problem left over by history. As long as there are still nationalities, there must be a nationality problem. The essence of the nationality problem changes with the development of the history of society and with the transformation of the social system.

Those comrades who spoke at the forum expressed the following views: In the old society, which was dominated by the exploiting classes and based on private ownership, it might be said that the essence of the nationality problem was a class problem, because at that time both the minority and majority nationalities were the same: the membership of both consisted of people of two sectors, namely the ruler or oppressor and the ruled or oppressed. The contradiction between them was an antagonistic contradiction. The essence of national oppression was class oppression. Frequently, the ruling class of the majority nationality and the ruling class of the minority nationalities joined hands and together oppressed the broad working people. However, even in the old society based on private ownership, the nationality problem was not totally synonymous with the class problem, because among the nationalities, in addition to the class problem, there were also problems regarding differences in economy, culture, customs, and habits.

The comrades pointed out emphatically in their speeches: Since all nationalities in our country have carried out their socialist reform, the relationship among the nationalities has entered a new stage, undergone a fundamental transformation, and changed from a class relationship to a relationship among working people. The reasons are: Firstly, the founding of the socialist system means that the ruling class which oppressed and exploited the people has been toppled, political equality among the nationalities has been realized, the problems between the oppressor and the oppressed and between the exploiter and the exploited no longer exist; and with this fundamental transformation, the essence of the class problem has also changed. Secondly, after the completion of socialist reform, private ownership has been eliminated. In spite of the fact that inequalities have not been entirely eliminated among all nationalities, oppression and exploitation have been eliminated among the nationalities. Thirdly, the minority nationalities are no longer ideologically discriminated against, and their customs and habits are protected and respected by law. With the energetic support and special care of the state, any actual inequalities in economy and culture among the nationalities will gradually be resolved. From the point of view of these three aspects, it is entirely correct to say that at present the relationship among the nationalities is always a relationship among working people.

Those comrades who attended the meeting pointed out: In a certain period of the past, the argument that "the essence of the nationality problem is a class problem" had a very profound influence, and it became an important ideological root and a theoretical basis for a series of ultraleft methods for handling nationality problems. By lumping together the nationality problem and the class problem, it led to the negation of the existence of the nationality problem, to national nihilism, and to the expansion of the class struggle. This wrong theory led to wrong practices. Consequently, Xizang's policies in such fields as religion, the united front, nationality, and cadres were seriously undermined. During the "Great Cultural Revolution," patriotic democratic persons were labeled monsters and freaks, those cadres who did well in implementing the nationality policy were persecuted mercilessly, and those minority national cadres who expressed some differences of opinion were accused of showing their national feelings as a manifestation of class struggle, etc. Therefore it is very important to clarify the theoretical problem of the nationalities.

During the discussion at the forum, all comrades agreed unanimously that, inasmuch as the relationship among all nationalities of our country today is always a relationship among working people, it then becomes the basic task of the party in the minority nationality regions to energetically develop the economy, culture, science, and technology of these regions, improve the standard of material life and raise the cultural and scientific level of the broad masses of people, and gradually eliminate the actual historic inequalities among all nationalities.

SOCIOLOGICAL, EDUCATION AND CULTURE

BRIEFS

NORTHEAST HEALTH WORKERS TRAINING--The public health departments of Heilongjiang, Jilin and Liaoning provinces have conducted on-the-job training for their workers and staff. More than 72,000 health and technical personnel have been trained in the past 3 years, or about one-fifth of the total number of health and technical personnel. The training plays an important role in raising the quality of medical treatment and the standard of management. [Beijing Domestic Service in Mandarin 0900 GMT 9 Oct 80 OW]

SICHUAN WORKERS EDUCATION--Chengdu, 8 Oct (XINHUA)--As of now, 80 percent of the more than 630 factories and enterprises in Chongqing Municipality, Sichuan, have sponsored workers schools and special training classes with a total enrollment of nearly 300,000. These facilities are mainly designed to promote the cultural and technical level of workers 35 years or younger. There has been a tremendous change in the production of enterprises which have successfully carried out educational programs for their workers. [Beijing XINHUA Domestic Service in Chinese 0148 GMT 8 Oct 80 OW]

PEASANTS MOVE TO TOWNS--Comrades (Wang Jichao) and (Tu Pusheng) of the propaganda department of the Huanggang Prefectural CCP Committee have written to Hubei Radio suggesting that peasants should not be blindly encouraged to flock into the towns to pursue sideline occupations. The letter says: The leading comrades in some places are blindly encouraging the peasants to flock into the towns to carry out sideline occupations, causing certain bad effects. The cadres of a production team on (Hepu) commune in Huanggang County encouraged all the peasants to go to the town to make money, and stipulated that each person should hand over 1.5 yuan to the team a day for workpoints and keep any surplus themselves. After entering the town, the peasants went around everywhere looking for relatives and acquaintances so as to find ways of making money. As a result, many peasants were still unable to make a cent. Some calamity-hit communes and brigades in Qichun County encouraged the peasants to blindly flock into the towns. Far from being able to make money, the peasants had to ask the production teams to send them money for the journey home. According to statistics, 8,000 peasants have recently blindly flocked into Huangzhou. Due to the fact that there were already a number of unemployed people in the town, with the temporary increase of such a large number of people looking for a living, disputes have occurred through competing for livelihood. Even more serious, most of those peasants who have entered the towns are strong and sturdy, while those remaining on the production teams are only auxiliary laborers. This is very unfavorable for the current work of self-salvation in fighting natural disasters, reviving production as fast as possible and sowing the crops in good time. [Text] [HK110614 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 10 Oct 80]

SHANDONG WORKERS SCHOOLS--The Shandong Provincial People's Government recently approved the establishment of 13 institutions of higher education. These institutions are spare-time schools for staff and workers and are run by plants, oilfields and coal mining administrations. The schools maintain a 3- to 4-year course of study. Applicants should be high school graduates who have work experience. They should voluntarily apply for the entrance examination with the approval of the leaders at the units where they are working. [SK130014 Jinan Shandong Provincial Service in Mandarin 2300 GMT 10 Oct 80 SK]

FUJIAN PLANNED PARENTHOOD WORK--The Fujian provincial leading group on planned parenthood work held a forum on 28 September. The forum discussed how to implement the open letter of the CCP Central Committee on the importance of reducing the population growth rate. The forum was presided by Zhang Gexin, vice Fujian governor and head of the Fujian provincial leading group on planned parenthood work. Other responsible comrades also attended the forum. All participants of the progress of the four modernizations and the far-reaching interests of the state and the people. [sentence as printed] All party and CYL members throughout the province must take the lead in having only one child. [Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 29 Sep 80 HK]

GUANGDONG PLANNED PARENTHOOD--The Guangdong Provincial CCP Committee and the provincial people's government held a meeting on planned parenthood work on 20 September. Meng Xiande, member of the Standing Committee of the provincial CCP committee, vice provincial governor and head of the provincial planned parenthood work group attended the meeting and spoke. He said: Guangdong Province has been doing well in planned parenthood work. However, it is still far behind the demands required by the state. Therefore, we must still discourage couples from having a second or third child. From January to August 1980, the number of childbirths decreased by 43,000 over the same period last year. The percentage of married couples bearing only one child to over 80 percent, and to lower the natural birthrate to 8 per 1,000 and limit the total population to 60.1 million by 1985, maintain the natural birthrate of 8 per 1,000 and limit the total population to 62.8 million by 1990 and lower the natural birthrate to 3 per 1,000 and limit the total population to 70 million by 2000. The task this year is to lower the natural birthrate to 12 per 1,000. All departments concerned must strengthen leadership over this. We must encourage late marriages and persuade the couples to bear children at a later age in order to control population growth. [Summary] [HK081138 Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 20 Sep 80]

GUANGZHOU MID-AUTUMN FESTIVAL SOIREE--On the evening of 21 September, some 80 Taiwan compatriots and returned overseas Chinese happily gathered on the roof of the Guangzhou Municipal Federation of Trade Unions [building] to celebrate the mid-autumn festival. Xiao Ming, deputy secretary of the municipal CCP committee, also attended. The soiree was jointly sponsored by the municipal overseas Chinese office, the municipal federation of overseas Chinese, the municipal CYL committee and the municipal youth federation. [Guangzhou City Service in Cantonese 0430 GMT 22 Sep 80 HK]

GUIZHOU GRADUATES TO XIZANG--Guizhou's 11 university graduates started their journey to Xizang on 6 September. The majority of these 11 graduates were CYL members and they volunteered to go and assist in the building of Xizang. They held that they had been cultivated by the party and people and they were willing to devote their youth for them in return. On the morning of 6 September, the Guizhou provincial education office held a farewell tea party for them. Wang Chaowen, secretary of the Guizhou Provincial CCP Committee; Wang Bingjun, vice provincial governor, and Sun Hanzhang, director of the provincial education office, attended the tea party and gave them encouragement. [HK100948 Guiyang GUIZHOU RIBAO in Chinese 7 Sep 80 p 1 HK]

GUIZHOU EDUCATION MEETING--The Guizhou provincial meeting of representatives of advanced collectives and workers on the education front opened on 23 September. Some 600 people from around the province attended the meeting. Responsible comrades from the Guizhou Provincial CCP Committee, provincial people's congress Standing Committee, provincial people's government, provincial CPPCC and provincial military district Su Gang, Wang Chaowen, Miao Chunting, Li Tinggui, Chen Xinggeng, Song Shugong, Li Zhiqi, Xu Yijiang, Dai Xiaodong, Zhang Liang, Geng Wanqing, Meng Ziming, Shen Yunpu, Ran Yannong and others attended the opening ceremony. Su Gang presided over the opening ceremony and Vice Governor Li Tinggui gave the opening address. Miao Chunting, deputy secretary of the Guizhou Provincial CCP Committee, delivered the work report, saying: We must rely on teachers to improve education in the province and party organizations concerned must strengthen leadership over education work. We must show concern for and respect teachers since they shoulder great responsibilities in educating the young masters. [Guiyang GUIZHOU RIBAO in Chinese 24 Sep 80 p 1 HK]

QINGHAI TIBETAN BOOKS--Xining, 6 Oct (XINHUA)--The printing house of Taer Temple in Qinghai Province has begun to republish Buddhist liberature as well as books on ancient Tibetan language and Tibetan medicine. Taer Temple is an ancient Tibetan cultural center in northwest China. Its publishing house keeps some 20,000 pieces of printing plates of various Tibetan classics. [Beijing XINHUA Domestic Service in Chinese 0114 GMT 6 Oct 80 OW]

REVISED LANGUAGE DICTIONARY--Beijing, 5 Oct (XINHUA)--The second volume of the revised CIYUAN [Chinese language dictionary], published by the commercial press, has come off the press recently. The total publication is 700,000 copies. The third and fourth volumes are still being compiled. [Beijing XINHUA Domestic Service in Chinese 0824 GMT 5 Oct 80 OW]

NEW LEXICA PUBLICATION--Beijing, 8 Oct (XINHUA)--The Shangwu Publishing House has published a number of new lexica. XIANDAI HANYU XIAO CIDIAN [compact dictionary of modern Chinese language] contains more than 30,000 entries and is intended for use by primary schoolteachers and readers with junior middle education background. XIANDAI HANYU BABAI CI [800 words in modern Chinese language] deals mainly with function words and provides detailed explanations of the meaning and use of each word. YINGYU SUOLUEYU CIDIAN [abbreviated words in English] and JIANMING E HAN CIDIAN [simple Russian-Chinese]dictionaries printed by the publishing house. [Beijing XINHUA Domestic Service in Chinese 0116 GMT 8 Oct 80 OW]

LU XUN LETTER PRESERVATION--Guangzhou, 9 Oct (XINHUA)--A letter written by the great Chinese writer Lu Xun in January 1935 has been presented to the Lu Xun research group in Guangdong. The letter was written to Zhang Ying, the arts teacher who sent one of his woodcuts to Lu Xun, who was an ardent promoter of graphic arts. The letter was preserved by Zhang Ying's son. [Text] [Beijing XINHUA in English 0252 GMT 9 Oct 80 OW]

CHINA LIBRARY SOCIETY MEETING--The China Library Society opened its 1980 annual meeting in Hangzhou, capital of Zhejiang Province, on 4 October. Present at the opening ceremony were more than 130 librarians, experts, members of the society's board of directors and essay writers from all parts of the country. Also present were leading comrades of the Zhejiang Provincial CCP Committee and responsible persons of departments concerned. The meeting will review the work of the society in the past year and more as well as its work plan for 1981-1982. More than 120 academic papers on library work were submitted at the meeting. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 4 Oct 80 OW]

SICHUAN LITERATURE, ART MEETING--The first congress of Chengdu municipal literary and art workers opened on 23 September. This congress discussed and implemented the spirit of the Fourth National Congress of Literary and Art Circles and elected the first committee of the Chengdu municipal federation of literary and art workers. (Yang Yixi), first secretary of the Chengdu Municipal CCP Committee, (Mi Jianshu), second secretary and mayor, (Xiong Youzhong), secretary of the Chengdu Municipal CCP Committee, and other responsible comrades attended the opening ceremony. (He Jingzhi), deputy director of the propaganda department of the CPPCC, also attended the congress. (Yang Yixi) spoke at the meeting urging Sichuan's literary and art workers to understand the situation better and serve the people and the four modernizations. [Chengdu Sichuan Provincial Service in Mandarin 2300 GMT 23 Sep 80 HK]

JIANGXI GERMAN CLASSES--In order to help the cadres learn foreign languages, the State Economic Committee recently commissioned the Jiangxi Provincial Economic Committee to conduct German classes in Nanchang starting from 15 September. Liang Kaixuan, vice governor of Jiangxi Province and chairman of the Jiangxi Provincial Economic Committee, attended the first class. The State Economic Committee has also commissioned the Hubei and Guangdong provincial economic committees to conduct French and English lessons. The cadres who attend the training classes must possess ability to learn languages and professional skills. This German training class will last for 10 months. [Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 17 Sep 80 HK]

LIAONING NEW UNIVERSITIES--With the approval of the Liaoning Provincial People's Government, five new institutions of higher learning have been established in Liaoning Province. They are: the Shenyang branch of Liaoning University; the Luda branch of Dalian Engineering College, which offers a preliminary course; the Benxi Junior University; Fuxin branch of Fuxin Mining Institute and the Shenyang branch of Dongbei Engineering College. A total of 1,020 freshmen enrolled this year. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 8 Oct 80 SK]

NINGXIA PREHISTORICAL QUAKE SITE--Yinchuan, 4 Oct (XINHUA)--Recently a group of seismogeologists conducted studies at a prehistorical earthquake site in Zhongning County, Ningxia Hui Autonomous Region. The site was discovered in 1978 when a water conservancy project was being constructed in the area. Since then the State Seismological Bureau has sent several groups of specialists to make on-the-spot surveys. Several other old quake sites have also been discovered in the vicinity. These old quake sites have provided scientific data showing the stratigraphic and geomorphological changes during the past 500,000 years caused by strong earth tremors. [OW051241 Beijing XINHUA Domestic Service in Chinese 0144 GMT 4 Oct 80 OW]

NINGXIA LITERARY COLLECTION--Yinchuan, 3 Oct (XINHUA)--"Selected Literary Works of the Hui Nationality of China" has been published by the Ningxia People's Publishing House. The collection consists of five volumes covering essays and stories, modern poems, ancient poems, motion pictures and dramas, and folklore. Additional works by writers and authors of the Hui Nationality will be published in the future. [Beijing XINHUA Domestic Service in Chinese 0113 GMT 3 Oct 80 OW]

FUJIAN FORUM ON EDUCATION--Fujian Province recently held a forum on reforming the structure of secondary school education. Over the past year, over 12 counties and municipalities and 18 secondary schools throughout the province have conducted various vocational and agricultural training. The participants of the forum held that it is necessary to stress both regular and vocational education in order to meet the demands of the four modernizations. Secondary school education is of great importance and is directly related to all trades and professions. Therefore, the Fujian Provincial CCP Committee and provincial people's government must strengthen leadership over this area. The forum finally urged all places to set up more vocational schools or training classes. [Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 18 Sep 80 HK]

HUBEI NEWSPAPER WORK FORUM--The Hubei provincial forum on prefectural and county newspaper work closed on 17 September in Xiangyang. The forum was sponsored by the propaganda department of the Hubei Provincial CCP Committee. Responsible persons from eight prefectures and four counties attended the forum. All participants of the forum held: newspapers in the prefectures and counties must serve the basic level, the peasants and the four modernizations. It is necessary to promote economic propaganda. Economic propaganda must uphold the principle of seeking truth from facts and must be beneficial to speeding up production. Responsible comrades from the news bureau of the central propaganda department and propaganda department of the Hubei Provincial CCP Committee attended the forum. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 20 Sep 80 HK]

SHANDONG CADRE SCHOOL--The Shandong provincial scientific and technological cadre school opened 7 October in Jinan Municipality. The first batch of students were chairmen and vice chairmen of prefectural, municipal and county scientific and technological commissions, and section chiefs, deputy section chiefs, group leaders and responsible persons from the provincial scientific and technological commission, the provincial scientific association, the provincial metrological bureau and the provincial academy of sciences. Professors and experts at Shandung University, Shandong Engineering School and Provincial Agricultural Institute were invited to give lectures on the history of natural sciences, the development of modern science and technology, China's principles and policies in scientific and technological work and techno-economics. [SK091419 Jinan Shandong Provincial Service in Mandarin 2300 GMT 8 Oct 80 SK]

XINJIANG HISTORY PUBLICATION--Urumqi, 3 Oct (XINHUA)--Volumes one and two of China's first "Concise History of Xinjiang," came off the press on the eve of National Day. Published in Urumqi by the Xinjiang People's Publishing House, it is edited by the Nationalities Institute of the Xinjiang Academy of Social Sciences. The book traces Xinjiang's history through the primitive, slave and feudal societies and records the political, economic, military and cultural development in the various stages. The first two volumes start with the primitive society and end with 1919 May 4 movement. The third and fourth volumes are being written. [Text] [Beijing XINHUA in English 0252 GMT 3 Oct 80]

SHAANXI ARCHEOLOGY JOURNAL--Xi An, 13 Oct (XINHUA)--The first issue of the quarterly "Archeology and Cultural Relics" edited by the Archeological Institute of Shaanxi Province carried more than 20 articles and 14 pages of illustrations. Research results on a human skull unearthed in Dali county, Shaanxi Province, in March 1978 are presented in an article by Wu Xinzhi and You Yuzhu of the Institute of Vertebrate Paleonology and Paleoanthropogy, Chinese Academy of Sciences. The authors believe that Dali man, who lived between 100,000 and 200,000 years ago, is an important link between the Beijing man and early Homo sapiens. Shaanxi Province is one of the places where ancient Chinese culture started. Xian, capital of the province, was the capital of 11 dynasties. [Beijing XINHUA in English 1205 GMT 13 Oct 80]

EDUCATION FOR GANSU MINORITY--The people's government of Linxia Huizu Zizhizhou, Gansu Province, has recently decided that, beginning with the 1980 autumn semester, all minority nationality students in primary and secondary schools will be exempted from having to pay tuition and book fees, and the supply of ration grain will be restored to all students of rural senior middle schools in the autonomous prefecture; the state will supply processed grain according to the standard. This decision was made by the Linxia Huizu Zizhizhou People's Government, in line with the spirit of the CCP Central Committee's notification on the transmission of the "Summary of the Forum on Xizang Work." The decision also puts forward suggestions for improvement in such problems as doing a good job of the layout of schools, using funds for educational purposes, and helping teachers return to their jobs. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'BA YI RADIO' RAPS PRC FOR FOLLOWING PRO-U.S. POLICY

OW151425 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 14 Oct 80

[Text] Since the convocation of the third NPC session many deputies have raised the problem of Sino-U.S. relations and pointed out the harm caused by the pro-U.S. policy. Their views however have never been made public. This is wrong.

If a policy is erroneous, it should be discussed and adjusted no matter who decided on it. Otherwise, how can we eliminate the evil consequence of practicing "rule by the voice of one single person" and implement the principle of "everyone is equal before the law and justice"?

Recently we have theoretically put pressure on the United States and taken other measures to denounce U.S. presidential candidate Reagan's call for establishing official relations with Taiwan and criticize U.S. Senator Goldwater's assertions that "China needs the United States in the same way as the United States needs China," "the United States should not worry that carrying out the two-China policy will hurt its relations with China," "it is essential to understand China's [words indistinct] on this issue" and his other wildly arrogant remarks.

Furthermore, during his visit to the United States Comrade Deng Xiaoping held secret talks with Carter, Brzezinski and other U.S. Government leaders. As the presidential candidate of the U.S. Democratic Party, Carter [words indistinct] worried about lowering Vice Chairman Deng's prestige and encouraged him to [words indistinct]. Such a way of thinking and acting is very childish and also [words indistinct].

Today, many policies of the U.S. ruling as well as opposition parties and the call for establishing official relations with Taiwan are based on the so-called "Act on U.S.-Taiwan Relations." During his U.S. visit, Vice Chairman Deng reached an agreement with Carter on this act. The act clearly stipulates: "The United States reserves the right to continue to intervene in issues on Taiwan." In other words, China must tolerate the existence of two Chinas and refrain from opposing the

United States in continuing relations with Taiwan. It should be pointed out that in the past 31 years since its founding the PRC has never committed such a diplomatic blunder.

Both Reagan and Carter, the presidential candidates of the U.S. Republican and Democratic parties respectively, are loyal jackals of the U.S. monopoly capitalists and serve the U.S. imperialist policy of aggression. The strategies and tactics of "offensive strategy," "surprise attack" and "seizing the initiative by striking first" mapped out by Carter after taking office are aimed at none other but the two socialist powers, China and the Soviet Union.

According to a recent news report, President Carter's decree No 59 on the new nuclear strategy says: "If necessary, nuclear weapons will be used to destroy 100 targets in China, including army, naval and air force bases, big industrial centers, principal cities and scientific research centers." At the (?Zhengzhou) conference of the Science Commission there were persons who defended the U.S. policy, saying the so-called U.S. nuclear strike plan against China will be carried out only if China uses its forces to liberate Taiwan or in the peculiar case when the U.S. interest is seriously harmed. Such a remark is absurd, because 1) whether Taiwan will be liberated or not is China's domestic affair and has nothing to do with the United States; and 2) internationally, China and the United States are big powers on an equal footing. How can the United States decide whether nuclear weapons should be used against China in accordance with its judgment on China's utilization value and on the effect on U.S. interest?

AFGHAN FREEDOM FIGHTERS LAUNCH ATTACKS

Rebels Infiltrate Talekan

OW101706 Beijing XINHUA in English 1652 GMT 10 Oct 80

[Text] Islamabad, October 9 (XINHUA)--Afghan freedom-fighters infiltrated into Talekan, capital of Afghanistan's Takhar Province bordering the Soviet Union on the evening of October 3rd and laid mines on roads in the city, which destroyed 6 Russian tanks, a spokesman of Hezb-i-Islami of Afghanistan disclosed in Peshawar this afternoon.

Freedom-fighters also launched a surprise attack on the Russian forces stationed five kilometres away from the provincial capital on the same evening. The fighting lasted about one and a half hours. As a result, four Russian tanks were destroyed and some enemies killed and wounded, the spokesman added.

One day before, freedom-fighters exploded the natural gas pipeline in Bolykhomri District, Baghlan Province, north of Kabul, which leads to the Soviet Union, he said.

Five important Babrak officials and one Russian officer were captured by freedom-fighters in Qoarabagh District, Kabul Province, a week ago and at the same time one Russian plane was downed in Charasiab District, 10 kilometres south of Kabul, in the same province.

According to the Islamic Alliance for Liberation of Afghanistan in Peshawar this afternoon, freedom-fighters blasted Mazar-i-Sharif, capital of Balkh Province bordering the Soviet Union. Upon learning of explosives being transported from the Soviet Union to the province, freedom-fighters went to the place in disguise on one evening 20 days ago. After killing the guards they took some of the explosives away and exploded the rest.

The same source said a fierce fighting between freedom-fighters and Russians took place in Takhar Province on September 15 which lasted 15 days. In this conflict 70 Russian troops were reportedly killed and a large quantity of arms and ammunition captured by freedom-fighters. Freedom-fighters also attacked the Russians' military storage, killing its guards and burning the storage full of ammunition. It said freedom-fighters got full control of half of Talekan in Takhar Province for some time.

Russian Convoys Attacked

OW121238 Beijing XINHUA in English 1228 GMT 12 Oct 80

[Text] Islamabad, October 12 (XINHUA)--Afghan freedom fighters attacked Russian convoys on the way to Jaghatu District in Ghazni Province south-west of Kabul on October 9, inflicting heavy casualties on the enemy, according to reports received here today.

The Russians poured in a large number of troops and tanks to attack Jaghatu District in an attempt to reestablish a government control there, for the district was liberated last year by Afghan freedom fighters.

The sub-governor, his brother and the commander appointed to run a government in Jaghatu were all killed. The rest of the Russian forces fled to Ghazni City from Jaghatu and thus the Babrak Karmel regime failed in establishing a government in the district.

The same source said 25 Afghan Government troops carrying their weapons have recently joined freedom fighters in Nader Shah District in Paktia Province. They said they had planned two months before but they could not find the opportunity to flee from the garrison because they were under much look and control of Russians. They said that all Afghan soldiers were in favour of Muslim brothers. As soon as they found a chance they would flee and join the freedom fighters.

Quoting Radio Kabul, APP said last night that Afghan youth evading conscription into the army will be punished under a new law if they do not turn up by November 7.

Thousands of Afghan youths have reportedly fled the country and thousands others have moved from Soviet-controlled cities to guerilla strongholds. Government soldiers have been raiding homes in Kabul and some other cities at night in search of young men to enlist in the army.

BANGLADESH, GUINEA URGE END TO IRAN-IRAQ CONFLICT

OW150122 Beijing XINHUA in English 0109 GMT 15 Oct 80

[Text] Dacca, October 14 (XINHUA)--Bangladesh and Guinea "expressed grave concern and anxiety over the deteriorating Iraq-Iran relations and urged the two fraternal Islamic nations for an immediate cessation of hostilities and an amicable solution of their disputes."

This is contained in a joint communique issued here this morning at the end of the visit to Bangladesh by Ahmed Sekou Toure, president of the Revolutionary People's Republic of Guinea.

The communique said the two sides condemned "the Zionist aggression against the Arab people and its occupation of the Arab land." They reiterated their conviction that "a just and permanent solution of the Middle East problems can only be achieved on the basis of a complete withdrawal of the occupation forces from all the occupied Arab territories and the return of the holy city of Jerusalem to its original status."

The two countries also expressed their "grave concern over the present worsening situation in Afghanistan and emphasized the need for a complete withdrawal of foreign troops from the soil of Afghanistan."

They also stressed their common stand of supporting the people of various countries in their struggle against imperialism, colonialism, neo-colonialism, racial discrimination and apartheid.

Sekou Toure and his party arrived here on October 12 and left here for Pakistan this morning.

GUINEA'S TOURE VISITS AFGHAN REFUGEE CAMPS

OW150230 Beijing XINHUA in English 0218 GMT 15 Oct 80

[Text] Islamabad, October 14 (XINHUA)--President Ahmed Sekou Toure of Guinea said today the Afghan people are fighting for the just cause of their freedom and sovereignty and expressed confidence they would emerge triumphant in the struggle.

He said those who trample the principles of justice and resort to oppression against others are indulging in satanic acts and have no right to speak of the principles of justice.

The Guinean president visited Afghan refugee camps near Peshawar this morning after his arrival in Islamabad on a three-day state visit to Pakistan. He has already visited Korea and Bangladesh.

Addressing the Afghan refugees he said all freedom-loving nations of the world and Muslim countries fully support their struggle for freedom. He declared, "As a member of the Islamic Conference Standing Committee on Afghanistan, my country will continue to strive for the restoration of their rights." The Guinean president also appreciated the humanitarian assistance being provided by Pakistan to Afghan refugees.

President Ziaul Haq of Pakistan expressed grave concern over the Iran-Iraq conflict at a banquet in honour of the Guinean president this evening. He said he was in touch with the leaders of the two countries and hoped that a way out would be found to bring about peace between them. President Toure said Islamic nations should find a solution and bring about peace between the brotherly countries of Iran and Iraq.

'AFP' REVIEWS ASIAN REACTION TO UNGA VOTE ON KAMPUCHEA

OW150849 Hong Kong AFP in English 0655 GMT 15 Oct 80

[Text] Hong Kong, Oct 15 (AFP)--The ousted Khmer Rouge regime, buoyed by the United Nations decision to continue recognizing its delegation as Cambodia's legal representative, today called on the Vietnamese people to topple their leaders.

The five-nation Association of Southeast Asian Nations (ASEAN) meanwhile hailed Monday's U.N. vote as a "victory" for its diplomacy and vindication of its relentless condemnation of the Vietnamese occupation of Cambodia.

Indonesia, Malaysia, the Philippines, Singapore and Thailand particularly welcomed the net gain of three votes--provided by Bahrain, Kuwait and Qatar (these three Gulf states had abstained last year)--in support of continued Khmer Rouge seating in the world body.

The five ASEAN members had feared some erosion of support in the face of what they said was a campaign orchestrated by Hanoi and Moscow in favor of the Vietnamese-propped Phnom Penh regime.

The Phnom Penh regime for its part issued a statement rejecting the U.N. vote as an "unjust and unreasonable decision."

In Hanoi, the Vietnamese Communist Party organ also condemned the decision and accused the United States and China of manipulating the United Nations.

In its first reaction to the vote, the regime of former (Khmer Rouge) Premier Pol Pot said the decision was a "bitter defeat for the Vietnamese aggressors, their Soviet boss and their expansionist accomplices."

The Khmer Rouge radio, broadcasting from southern China, said that once the ruling "clique" in Hanoi had been toppled, the Vietnamese and Cambodian people would be able to live peacefully "side by side."

China, the main backer of the Khmer Rouge regime ousted by Vietnamese troops in early 1979, said the U.N. vote was "an act which has promoted international justice."

The Chinese Communist Party organ, the PEOPLE'S DAILY, also hailed the U.N. vote as "a move of major significance in asserting the role of the United Nations in upholding world peace."

In Bangkok, Thai Foreign Minister Marshal Sitthi Sawetsila said that in his stand on Cambodia, his government wanted above all to defend the "principle" that it is impossible to recognize a regime installed by foreign troops.

"We are not fighting for the Khmer Rouge leadership group," he noted.

In Kuala Lumpur, the Malaysian Foreign Ministry described the U.N. vote as "most gratifying" but expressed disappointment over Australia's decision to withdraw recognition of the Khmer Rouge regime.

"Australia cannot prolong its recognition of such a loathsome regime as that of Pol Pot," Australian Foreign Minister Andrew Peacock announced soon after the Australian U.N. delegation voted with ASEAN to keep Democratic Kampuchea in the Cambodian seat.

Indonesian Foreign Minister Mochtar Kusumaatmaja, speaking during a stopover in Singapore on his way back from the U.N. General Assembly in New York, said the assembly vote would strengthen the ASEAN stand in trying to find a settlement in Cambodia.

"Vietnam holds the view that the problem is already over whereas the facts show that it is not," he added.

The Singaporean Government also welcomed the vote but deplored that Burma did not back the ASEAN stand at the U.N. as expected.

Burma's delegate was listed as "absent" during the vote. "They (the Burmese) may have had their own reasons for not doing so," a Singaporean Foreign Ministry spokesman said.

Commenting on Australia's decision to derecognize the Khmer Rouge government, the STRAIT TIMES of Singapore said it "only confirms ASEAN fears that the longer the world body drags its feet in finding a political solution to Kampuchea, the greater the obstacles that will be put in the way of peace in Southeast Asia."

In Manila, Philippines Foreign Minister [title as received] Jose Ingles also welcomed the U.N. vote as a success for ASEAN diplomacy.

He said the decision virtually assures approval of an ASEAN draft resolution on Cambodia--due to be debated at the U.N. today--calling for the withdrawal of foreign troops, respect of the Cambodian people's right to self-determination and the holding of an international conference on the issue next year.

The U.N. vote was also seen in ASEAN capitals as a diplomatic setback for India, which earlier this year became the first major noncommunist country to recognize the Phnom Penh regime led by Heng Samrin.

'XINHUA' QUOTES 'VODK' ON GUERRILLA RAIDS, VICTORIES

OW121210 Beijing XINHUA in English 1202 GMT 12 Oct 80

[Text] Beijing, October 12 (XINHUA)--Kampuchean guerrillas continue their attacks on Vietnamese invaders in various parts of Kampuchea, Radio Democratic Kampuchea reported today.

On October 1, the guerrillas, in coordination with the masses and puppet guards with national consciousness destroyed three sections of railway, west of Toteng Thngay station near Pursat City, cutting off the railway communications of the Vietnamese troops. On the following day, the guerrillas laid landmines and ambushed a Vietnamese company which was sent to rebuild the railway, forcing the enemy to retreat to their strongholds, leaving behind 19 killed or wounded.

In the Preah Vihear Province, guerrillas attacked on the night of October 2 Vietnamese strongholds in Sralau Village of Sangkom Thmei District, killing 15 Vietnamese troops, destroying three military barracks and capturing a quantity of weapons and ammunition.

In Kompong Som area, the guerrillas assaulted Vietnamese vessels and their strongholds on Thmei Island and other places on October 1 and 2, putting 83 enemy men out of action.

In Battambang Province, the guerrillas attacked Vietnamese strongholds in Samlot, Pailin and Monkol Borei districts from October 1 to 6, annihilating 170 Vietnamese soldiers. From September 20 to 27, guerrillas raided Vietnamese strongholds in Thmar Puok and Sisophon districts, wiping out a number of enemies.

In Oddor Meanchey Province, 200 Vietnamese troops fell into guerrillas' ambush on their way from Samrong to Khbal Sar Village on September 25. 20 Vietnamese soldiers were wiped out.

CSO: 4020

'XINHUA': POLISH LEADERS VIEW ECONOMIC ILLS

OW101711 Beijing XINHUA in English 1659 GMT 10 Oct 80

[Text] Warsaw, October 9 (XINHUA)--The workers' strikes have inflicted on the country a loss of 50,000 million zloties (one U.S. dollar equals 3.1 Polish zloties), announced Henryk Kisiel, vice-chairman of the Council of Ministers and chairman of the Planning Commission, yesterday.

Speaking at the third session of the Eighth National Assembly, he said the economic situation at home is very grave at present: "Goods and services are becoming ever more deficient," huge foreign debts are bringing "more and more troubles" and "the rhythm of production is descending" due to the disproportionate development in the whole national economy.

He said that labour productivity dropped by nine per cent last August as compared with the same period of last year, and by six per cent last September.

Under such unfavourable conditions, he pointed out, the national economic plan for 1981 can only be on a low standard. The national income is expected to rise by merely 1 to 1.5 per cent. Investments in capital construction will be curtailed by 100,000 million zloties and effort will be made to cut down the foreign trade deficit by some 700 million U.S. dollars.

The primary social target for the 1981 plan is to maintain the current living standards, he stressed.

Minister of Finance Marian Krzak said in his report to the meeting that this year's national income will be less than that of last year while spendings are expected to exceed the plan by a big margin. He told the assembly that the budgetary deficit in 1981 is estimated to reach 24,000 million zloties.

Jozef Pinkowski, chairman of the Council of Ministers, spoke about the 1981 national economic plan and budget. He said that in order to meet the basic requirements of the society, relevant changes must be made either in the national economic structure or in the structure of production. First of all, the government will use money and production potential to turn out more commodities for markets, and effective measures will be adopted so that markets are no longer ravaged.

He called on the people to work harder and the departments concerned to organize the economy in a more rational way with a view to improving the economic situation in 1981. He promised to give special attention to agriculture, food production and housing in 1981 and the following years.

INTERNATIONAL AFFAIRS

'XINHUA' CITES NEW ZEALAND GENERAL ON SOVIET NAVAL BUILDUP

OW131518 Beijing XINHUA in English 1500 GMT 13 Oct 80

[Text] Wellington, October 13 (XINHUA)--The "massive and threatening" naval build-up by the Soviet Union in the Pacific could be viewed only with grave concern, said a high-ranking New Zealand officer, THE DOMINION reported here today.

Speaking at a conference of the Navy League in Nelson on Saturday, the chief of New Zealand Naval Staff, Rear Admiral K. M. Saul, said that there was no doubt that the Soviet Union intended to use its navy forces to project Soviet power and influence throughout the world. There had been a "massive and threatening" naval build-up by the Russians in the Pacific. He added that the Soviet fleet in the Pacific contained more than 100 submarines, almost 80 major surface ships, many modern missile armed ships, amphibious warfare ships, 50 minesweepers and 45 coastal sweepers. In addition to the naval ships, Admiral Saul went on to say, there were more than 150 merchant ships and fishing boats in the region which could quickly be converted to a naval role.

Admiral Saul saw the true intention of the Soviet Union in what a Russian military leader said about the role of its navy. He noted that Soviet naval Commander-in-Chief Admiral Gorshkov had said, "Naval forces can be used in peacetime to put pressure on our enemies...the flag of the Soviet Navy now flies over the oceans of the world."

"Because this gravely concerns New Zealand, a remote trading nation, we must play our part in maintaining a balance of power by supporting our Western allies," the New Zealand chief of naval staff stressed.

CSO: 4020

THAI PRESS ON CONTINUED SEATING OF DEMOCRATIC KAMPUCHEA IN UNITED NATIONS

OW151304 Beijing XINHUA in English 1254 GMT 15 Oct 80

[Text] Bangkok, October 15 (XINHUA)--The continued seating of Democratic Kampuchea in the United Nations at its 35th General Assembly Session is a telling blow to Viet Nam and the Soviet Union and proves that the combined opposition to the Vietnamese aggression against Kampuchea has grown stronger than before, several Thai papers note in their editorials or commentary today.

The NATION REVIEW says that "Continuing to seat the representative of Democratic Kampuchea will mean that the will to drive the Vietnamese out of Kampuchea will have added impetus."

The editorial of TONG HUA YID PAO says that the result of the vote on the seat of Democratic Kampuchea is another brilliant victory for the ASEAN countries. It also expresses the will of the world people against the Vietnamese invasion of Kampuchea.

The editorial goes on to say that retaining the seat of Democratic Kampuchea at the U.N. does not mean the settlement of the Kampuchean problem. The ASEAN and all other peace-loving countries should work harder to mobilize all the international forces to support Democratic Kampuchea's struggle against Vietnamese aggression and prevent Hanoi from spreading the flames of war to other countries.

SING SIAN YIT PAO says in a commentary that the victory achieved by the ASEAN countries on the Kampuchean issue testifies to the correctness of the ASEAN foreign policy which is an important factor in maintaining peace and stability in Southeast Asia.

BRIEFS

SOVIET CASUALTIES IN AFGHANISTAN--Islamabad, October 10 (XINHUA)--The Soviet occupation troops in Afghanistan suffered heavy losses in their recent attack in Mazar Valley of Kunnar Province, according to today's newspaper reports quoting a press release of the Islamic Party of Afghanistan. In this encounter, large numbers of Soviet troops were killed, one jet was shot down and twenty-nine tanks were destroyed. Reports from Alishang District of Langhman said that in a conflict between the Mujahideen and the Russians a few days ago, 18 Soviet tanks were destroyed and many Soviet soldiers killed. Due to heavy bombardments, 20 Mujahideen were killed. In another encounter in the same area, 14 Soviet soldiers were killed and two tanks destroyed. [Text] [OW101540 Beijing XINHUA in English 1531 GMT 10 Oct 80]

EGYPT EXPELS SOVIET JOURNALISTS--Cairo, October 11 (XINHUA)--The Interior Ministry of Egypt has expelled two Soviet journalists after the security authorities proved their guilt, the local paper AKHBAR AL-YAWM reported today. They are Vladimir Shellepin and Andrey Stepanov, journalists of the Arab version of the Soviet NEW TIMES magazine published in this country. They were charged with engaging in secret activities, spreading rumours and provoking disturbance. AKHBAR AL-YAWM disclosed that Egyptian security personnel had searched the headquarters of the magazine and found evidences proving their guilt. They ordered the closure of the magazine and demanded that the two journalists leave the country within hours. They left Egypt three days ago. The paper said that the NEW TIMES was closed down because it reprinted information and critical articles published in a bulletin which is for circulation among the members of the opposition National Progressive Unionist Party. It was also sold at newsstands with the aim of provoking public sentiments, said the paper. [Text] [OW111242 Beijing XINHUA in English 1224 GMT 11 Oct 80]

RED CROSS SOCIETY MESSAGE--Beijing, October 11 (XINHUA)--The Chinese Red Cross Society in a message to the Algerian Red Crescent today expressed deep sympathy with the victims of the strong earthquake in al-Asnam, Algeria. On behalf of its membership, the society voiced the hope that the afflicted people would soon be able to "rebuild their homeland and return to normal life." [Text] [OW111340 Beijing XINHUA in English 1300 GMT 11 Oct 80]

LEBANESE DENOUNCE ISRAELI INVASION--Beirut, October 10 (XINHUA)--Salim al-Huss, prime minister of the Lebanese caretaker cabinet, in a speech here today denounced Israel for invading Lebanese territory recently. Al-Huss pointed out that at a time when the U.N. Security Council stressed Lebanon's right to territorial integrity within the boundaries recognized internationally, Israel expanded its territory by setting up more settlements within Lebanon. This is a gross challenge to the resolutions of the U.N. and international community. He said that it is unjust for Israel, which is a member of the United Nations, to have persistently defied the resolutions of international organizations. He said that the Lebanese people will spare no effort to defeat the Israeli expansionist plot. [Text] [OW111326 Beijing XINHUA in English 1245 GMT 11 Oct 80]

BURMESE SPORTS DELEGATION--Beijing, 8 Oct (XINHUA)--A Burmese sports delegation led by Col Kyaw Sein Tun, general director of the sports and physical education department of the Ministry of Health, left here today for Shanghai. On the invitation of the Physical Culture and Sports Commission of China, the Burmese visitors surveyed regular and sparetime physical education in Kunming and Beijing. They were guests of honor on October 5 at a reception given by Lu Jindong, vice-minister in charge of the State Physical Culture and Sports Commission. In later discussions with the Chinese side, they exchanged information and ideas of further cooperation. The Burmese delegation will tour east China's lake city of Hangzhou and Guangzhou before going home. [Text] [OW111219 Beijing XINHUA in English 0753 GMT 1 Oct 80 OW]

TOKYO COMPUTER CONGRESS--Tokyo, 9 Oct (XINHUA)--The Eighth World Computer Congress was held here between October 6 and 9 to forecast the development of computers in the 1980s. A Chinese delegation, headed by Guo Pingxin, deputy director of the State General Administration of Computer Industry, and Xia Peisu, professor of the Institute of Computing Technology of the Chinese Academy of Sciences, attended the congress. This was the first time China was represented at such a congress. Professors Xu Jiafu, Zhong Cuihao and Yang Fuqing delivered at a group section a joint academic report which drew immense attention from the participants. The congress, or the International Federation for Information Processing Congress 80, is financed by the UN Educational, Scientific and Cultural Organization and headquartered in Geneva. It is held once every three years. Up to January 1 of this year, it had had 39 member states. The People's Republic of China officially joined the organization in 1979. The present meeting will be resumed from October 14 to 17 in Melbourne, Australia. [Text] [OW111219 Beijing XINHUA in English 1930 GMT 9 Oct 80 OW]

JAPANESE CALLIGRAPHERS DELEGATION--Beijing, 7 Oct (XINHUA)--At a gathering today, 17 noted Chinese and Japanese calligraphers demonstrated flowing strokes in various styles with writing brushes before a group of cameramen. The Japanese guests are members of a visiting calligraphers delegation led by Shunkei Iijima, director-general of the All-Japan

Calligraphers Association and director-general of the Japanese Calligraphic Art Institute. Among the Chinese calligraphers was Zhao Puchu who is also a poet. He composed a short poem on the spot and inscribed it on a long scroll. This is the sixth time that a Japanese calligraphers delegation has come to China since exchanges between Chinese and Japanese calligraphers began in the 50s. [Text] [OW111219 Beijing XINHUA in English 1528 GMT 7 Oct 80 OW]

INTERNATIONAL NEUROBIOLOGY MEETING--Shanghai, 8 Oct (XINHUA)--A 10-day international workshop on neurobiology has opened here. It is the first international meeting on neurobiology in China sponsored by the Chinese Academy of Sciences in collaboration with the International Brain Research Organisation (IBRO), UNESCO and the American National Institute of Health. More than 70 neurobiologists from Algeria, Britain, China, France, India, Japan, Thailand, West Germany, the United States and Hong Kong are taking part. Speaking at the opening session were Feng Depei, deputy director of the Shanghai branch of the Chinese Academy of Sciences and director of the Shanghai Institute of Physiology; neurophysiologist Zhang Xiangtong, on behalf of the workshop's organization committee; and Professor C. N. Woolsey, organizer of the IBRO-UNESCO workshops on brain research for the Western Hemisphere and East Asia. [Beijing XINHUA in English 1212 GMT 8 Oct 80 OW]

BELGRADE PHOTO EXHIBIT--Belgrade, 9 Oct (XINHUA)--A Chinese photographic arts exhibition, the first held in Yugoslavia, was opened here this evening. Over 100 noted Yugoslav personages from various circles and amateur photographers attended the opening ceremony of the exhibition in rain. Zoran Rubinjo, chairman of the Yugoslav Photographers Union, was present. Cultural counsellor of the Chinese Embassy here Lu Changxu was also present. There are 120 photographs on display at the exhibition which reflect the zeal shown by the Chinese people of various nationalities in the socialist modernization of their country, and the magnificent sights of the beautiful mountains and rivers of China. The exhibition will close on October 19. [Text] [Beijing XINHUA in English 0703 GMT 10 Oct 80 OW]

CHILE-CHINA CULTURAL INSTITUTE--Santiago, 8 Oct (XINHUA)--The Chile-China Cultural Institute began a week's activities today in celebration of the 31st anniversary of the founding of the People's Republic of China. During the week, lectures will be given on various aspects of life in China including the state of Chinese poems and paintings. At the inaugural ceremony, chairman of the sponsor institute Juan Martinez expressed admiration for the achievements of the Chinese people and wished them prosperity and happiness with the progress of the four modernizations. Chinese Ambassador Hu Chengfang was among those present at the inauguration which was held in the University of Chile. [Text] [Beijing XINHUA in English 1627 GMT 9 Oct 80 OW]

ENVOY IN ZAMBIA--Lusaka, 9 Oct (XINHUA)--Zambian President Kenneth David Kaunda met the Chinese ambassador, Ge Buhai, in the State House here yesterday afternoon. They had a friendly talk on Southern Africa, Afghanistan and Kampuchea. [Text] [Beijing XINHUA in English 0113 GMT 11 Oct 80 OW]

JAPANESE POLL ON DEFENSE ISSUE--Tokyo, October 10 (XINHUA)--A recent public opinion poll showed a change in the country's public opinion on the defence issue over the past ten months following the Soviet invasion of Afghanistan. MAINICHI SHIMBUN's four-day survey in late September, the result of which was published today, indicated that the number of advocates of Japan's demilitarization and neutrality has now decreased significantly. On the question of whether Japan would be attacked by the enemy: 7 per cent of those polled said yes, 51 per cent said probable and 32 per cent said no. Asked what Japan should do if attacked: 21 per cent advocated resistance or death, 49 per cent favoured resistance as far as possible and 21 for non-resistance. On the defence issue: 19 per cent favoured measures to increase the defence capability, 25 per cent favoured a slight increase, 40 per cent for the status quo, 8 per cent for a cut and only 5 per cent for elimination of defence forces. JAPANESE PREMIER ON SOVIET THREAT--Tokyo, October 11 (XINHUA)--The Soviet Union's increased military build-up in the Far East and on the four Japanese northern islands "has posed a potential threat to Japan and caused great anxiety among the Japanese nationals," declared Japanese Prime Minister Zenko Suzuki this morning. He was replying to a question raised at a meeting of the budget committee of the House of Representatives. He referred to the effect the Soviet potential threat may have on the Japanese defence strategy. He said: "In face of the present situation in the Middle East, the United States has deployed its mobile fleet in the Indian Ocean. But, whenever the occasion arises, the U.S. explicitly states its presence in the Western Pacific. Japan likewise declares in explicit terms that it will fully honour its commitment in defence of the country under the Japan-U.S. security treaty." He added: "Determined to safeguard its peace and security by its own efforts, Japan will make every possible effort to defend itself in line with the defence program." [Text] [OW111330 Beijing XINHUA in English 1228 GMT 11 Oct 80]

JAPANESE DEFENSE PLEDGE REAFFIRMED--Tokyo, October 13 (XINHUA)--Japanese Prime Minister Zenko Suzuki reaffirmed here today his country's dedication to defense only, saying that Japan will not be a military power or arm itself with nuclear weapons or threaten its neighbours. Answering questions at the House of Councillors budget committee meeting, Suzuki stressed the need for the West to make a bigger defense effort. "To maintain a relative military equilibrium with the continuing Soviet military buildup could curb the possibility of war and serve world stability," he said. He went on to say that the massing of Soviet forces in the Far East, reinforcements to the (Japan's) four northern islands and the Soviet military intervention in Afghanistan in particular have had a heavy impact on global military balance between the United States and the Soviet Union as well as on detente." TRUDEAU PRAISES PRC ACROBATS--Ottawa, October 10 (XINHUA)--"Your performance has given us another important aspect of China," said Canadian Prime Minister Trudeau after seeing the premiere of the Guangdong acrobatic troupe of China at the National Art Centre here this evening. The excellent performance of Chinese acrobats was warmly acclaimed by a full-house audience of 2,300. The troupe arrived in Canada on September 2. Since then it has given 33 performances to a total of 100,000 spectators in Victoria, Vancouver, Calgary, Regina, Winnipeg, Thunder Bay, Toronto and Hamilton. It will go to Montreal, Halifax, Quebec and other cities before leaving for New York on November 2. [Text] [OW111332 Beijing XINHUA in English 1231 GMT 11 Oct 80]

POLISH LEADER KANIA MEETS PEOPLE--Warsaw, October 13 (XINHUA)--The first secretary of the Polish United Workers' Party, Stanislaw Kania, recently had a flurry of meetings with representatives of all walks of life in the country, reported the Polish Telegraph Agency today. Kania met representatives of the Socialist Youth Union today and had a "frank discussion" with them for several hours. The representatives spoke about their "feelings, opinions and views" on the major events that had happened in the country in the past few months. Kania expressed the party's readiness to listen to their opinions with patience. This was Kania's second meeting with the youth representatives in the past two weeks. Kania met all members of the presidium of the Szczecin United Workers' Committee in Szczecin on October 10. They exchanged views frankly on the work and activity of the independent "solidarity" trade union. They also discussed the economic situation in the country and the conditions required for socialist reforms. This was the first time that the head of the party met the independent trade union leaders. Kania had a talk with representatives of scenario writers on October 11. U.S. OFFICIAL ON SEA POLICY-- Hong Kong, October 12 (XINHUA)--The U.S. has the ability and will to protect its interests in Southeast Asia, said U.S. Deputy Ambassador to Singapore Smith on October 10, according to a press report from Singapore. Smith said that the commercial trade volume between the U.S. and the Association of Southeast Asian Nations had increased to 16.8 billion U.S. dollars last year as against 1.6 billion in 1965. It means that the ASEAN has become the fourth largest trade partner of the U.S., he added. Referring to the new rise of trade between the U.S. and the ASEAN this year he said that the commercial trade has turned out to be a major part of the U.S. interests in Southeast Asia. It has encouraged the U.S. to take active measures in politics and security in Southeast Asia, he stated. He added that the U.S.

will retain its military strength in Southeast Asia to protect its interests. [Text] [OW120826 Beijing XINHUA in English 0819 GMT 12 Oct 80]

ROMANIAN PRESIDENT AT ARMY CONFERENCE--Bucharest, October 11 (XINHUA)--"We should never forget that so long as there exist imperialism and major international contradictions, there is the danger of aggression and war," "therefore our army should stand ready at any time to beat back resolutely any attempt to impair in one way or other the revolutionary gains, the socialist construction and the country's sovereignty and independence," said Ceausescu yesterday. Speaking at a conference attended by Romanian army cadres, he said: "We should always bear in mind that the army is the people's armed forces. The people have entrusted to the army a lofty and glorious task today as in the past. It should always respond to the call of the party and government, carry out its obligations and fight against any attempt that infringes upon the people's interests, the socialist cause and the independence and sovereignty of Romania." The army, he stressed, should make special efforts to raise its combat capabilities and political quality. Military training should be carried out in the light of the specific geography and climate of Romania so that the army can fight a war in any place in case of a national defensive war. MOZAMBIQUE-USSR ECONOMIC RELATIONS--Maputo, October 12 (XINHUA)--The Soviet Union will take part in Mozambique's cotton growing programme and in establishing a tractor assembly line according to a protocol on industrial and agricultural cooperation between the two countries signed here on October 10. Trade volume between the two countries increased to 33.2 million U.S. dollars in 1979 from 8.2 million U.S. dollars in 1977. Mozambique's relations with the Council for Mutual Economic Assistance (CMEA) have also developed. A CMEA delegation visited Mozambique in late September to discuss the granting of financial aid for its economic construction. Before this, a Mozambican delegation attended the 34th CMEA session in Prague to look into the possibility of Mozambique's membership in CMEA. ACROBATS IN CANBERRA--Canberra, October 14 (XINHUA)--Sir Zelman Cowen, governor-general of Australia and Lady Cowen watched the premiere given here by the Nanjing acrobatic troupe of China yesterday evening. The 1,300-seat Canberra Theatre was almost full last night. When the performance was over, Sir Cowen and Lady Cowen accompanied by Lin Ping, Chinese ambassador to Australia, went to the backstage to congratulate the acrobats on their success. The troupe arrived here on October 12 from Sydney where they stayed for two weeks and gave many performances. [OW151003 Beijing XINHUA in English 0224 GMT 15 Oct 80 OW]

PANDAS TO FRG--Beijing, October 15 (XINHUA)--A pair of giant pandas is to be sent to the people of the FRG as a gift from the Chinese people early next month. This was decided last October when former Chinese Premier Hua Guofeng visited the FRG. Since the founding of new China in 1949, China has given giant pandas as a state gift to Britain, the DPRK, France, Japan, Mexico, Spain, the Soviet Union and the United States. [OW151003 Beijing XINHUA in English 0738 GMT 15 Oct 80 OW]

PIANO CONTEST IN WARSAW--Warsaw, October 14 (XINHUA)--Chinese pianist from China's Taiwan Province Chen Hongkuan entered the third round of the International Chopin Piano Contest, the tenth of its kind, here today along with 14 pianists from other countries after the second round of contest last night. The list of second round winners announced at noon today included three from the Soviet Union, two from the United States, two from France, and one each from Poland, China, Romania, Yugoslavia, Japan, West Germany, Canada and Vietnam. 42 pianists took part in the second round contest from October 9 to 13. The third round contest will begin on October 15 and 16. [Text] [OW151003 Beijing XINHUA in English 0117 GMT 15 Oct 80 OW]

TOURIST CENTER NEAR MACAO--Guangzhou, October 15 (XINHUA)--China is opening a new tourist center--the seaside Shijingshan resort five kilometers away from Macao--in Zhuhai City of Guangdong Province of South China for Overseas Chinese and foreign tourists. Among the scenic spots and places of historical interest in and around Zhuhai is the former residence of Dr. Sun Yat-sen. The center is jointly developed by the Zhuhai City Tourist Corporation and the Zhuhai Tourist Development Corporation Ltd. in Macao. [Text] [OW151003 Beijing XINHUA in English 0742 GMT 15 Oct 80 OW]

LIAO CHENGZHI, JAPANESE GROUP--Beijing, 7 Oct (XINHUA)--Liao Chengzhi, vice chairman of the NPC Standing Committee, hosted a breakfast meeting at the Beijing Restaurant on 7 October in honor of the Japan-China friendship delegation from Shimonoseki City, Japan, headed by Mayor Yoshiji Muneda. They had a sincere and cordial conversation. [Beijing XINHUA Domestic Service in Chinese 0337 GMT 7 Oct 80 OW]

OVERSEAS CHINESE TOURISTS--A seven-member Overseas Chinese tourist group from Aichi Prefecture, Japan, is visiting Jiangsu Province at the invitation of the Jiangsu Provincial Overseas Chinese Federation. The group arrived in Nanjing from Wuxi on 6 October. Governor Hui Yuyu met with and feted the visitors on 7 October; Chu Jiang, chairman of the Nanjing Municipal Revolutionary Committee, feted them on 8 October. The visitors were also honored at a tea party given by the Overseas Chinese federations of Jiangsu Province and Nanjing Municipality on 7 October morning. During their stay in Nanjing, the Overseas Chinese visitors visited various historical and scenic spots. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 8 Oct 80 OW]

STRUGGLE AGAINST 'LEFTISTS' CHALLENGERS OF PRESENT AUTHORITY EMPHASIZED

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 3, 20 Jun 80 pp 67-71

[Article by Lei Yun [7191 0061] of the Zhejiang Provincial CCP Committee's Propaganda Department: "The Sources and Conditions of the Chronic Disease of 'Left' Deviation"]

[Text] Although 3 years or more have passed since the downfall of the "gang of four," our party and people are still suffering in varying degrees from the "left" deviationist trend of thought just as they did during the late 1950's and the Great Cultural Revolution. Even today, this trend of thought still tampers with every move we make in the direction of implementing the ideological and political line of the Third Plenary Session of the 11th Party Central Committee, which represents the basic interests of the entire party and the people throughout the country. Efforts still have to be made to overcome this trend of thought if we want to carry out our work in accordance with this line. Otherwise, we cannot move a single step forward. Today, the "left" deviationist trend of thought is a major ideological obstacle to the thorough implementation of the party's ideological and political line aimed at bringing about stability and unity in society and rallying the entire party and the people throughout the country behind a common endeavor to accomplish the four modernizations.

The "left" deviationist trend of thought is a diehard trend of thought. Since the downfall of the "gang of four" and especially since the Third Plenary Session of the 11th Party Central Committee, it has continued to assert itself despite our persistent efforts to expose and criticize it. It seems that it has truly become a chronic disease that cannot be easily eradicated. Why has it become a chronic disease to begin with? What is its root cause and what are the conditions that make it rampant? An analysis of these questions is undoubtedly significant in that it will help us to further understand the true nature of this trend of thought and its damage to us, to repudiate and eliminate the pernicious influence of the ultraleft line of Lin Biao and the "gang of four," to restore order, to set the record straight and to bring the four modernizations program to a successful conclusion.

1

Any social trend of thought or political tendency has its origin. It is man's social being that determines his thinking. This is a basic principle of Marxism with which we are familiar. We must first analyze the root cause of the "left" deviationist trend of thought in the light of the social conditions. In his work "'Left-Wing' Communism, an Infantile Disorder," Lenin discussed the problem of the "left" deviation and said: The Marxist theory holds, and Europe's experience in revolution and revolutionary movements confirms, that when they are on the verge of bankruptcy, the small proprietors are apt to shift their economic position to the extreme form of revolution. This analysis also fits well the current reality in our country. After analyzing the three mistakes committed by the "leftists" within the party during the period between the failure of the First Great Revolution and the Zunyi meeting and their damage to the party, the "Revolution Concerning Several Historical Problems" adopted by the Seventh Plenary Session of the Sixth Party Central Committee pointed out: These mistakes committed by the "leftists" originated from our society. The fact showed that China was a country dominated by the petty bourgeoisie. Under such circumstances, our party could not avoid being surrounded by petty-bourgeois elements who accounted for a large percentage of its members. Furthermore, under China's economic conditions, even party members who were workers were also more or less influenced by the bourgeois ideologies. This was why the bourgeois ideologies could make themselves felt within the party frequently. The petty-bourgeois way of thinking was a subjective, unilateral, unrealistic, speculative and reckless way of thinking in observing problems. Politically, petty-bourgeois elements who had joined the party always hoped that the revolution could succeed immediately. Later, they lost patience when the revolution did not turn out in a way they had expected. Obsessed with the "left" leaning revolutionary terms and slogans, they often acted recklessly or took a closed-door attitude toward everything. Once this petty-bourgeois tendency made itself felt within the party, it formed a "left" deviationist line, leading people to come up with some wrong ideas on many basic issues. After nationwide liberation and the completion of the land reform, small-scale production still dominated our economy and small-scale producers still formed the basis of our society. After the socialist transformation of agriculture and handicraft industry was completed, most of the small-scale producers still clung to their old way of thinking although their economic status had undergone radical changes; the petty-bourgeois force of habit and ideology still made their influence widely felt in our society and never stopped asserting themselves in our party. They made their appearance in the form of the "left" tendency in our party. Under the influence of this tendency, the workers on all fronts became arrogant, capricious, impatient, illusory, inordinately fanatic, hyperbolic, reckless, and rash whenever they achieved some progress or victories in production and other fields of work. In his article entitled "Combat Bourgeois Ideas in the Party," published in 1953, Comrade Mao Zedong reaffirmed the Marxist thesis that "the left opportunist mistakes are a reflection of petty-bourgeois fanaticism in the party." This thesis proved correct when the "left" opportunist mistakes were committed again during the struggle against the rightists, the Great Leap Forward, and the campaign against the right deviationist tendency that took place in 1957, 1958, and 1959 respectively, and when the "left" deviationist trend of thought surged ahead on the cultural, educational, press and publication fronts during the Great Cultural Revolution. When the erroneous "left" leaning trend prevailed over the party during the Great Cultural Revolution, Lin Biao and the "gang of four" immediately jumped at the opportunity to concoct a counterrevolutionary ultraleft line to serve their counterrevolutionary purpose and policy, which subsequently disrupted the life of the party and country for 10 years. The pernicious influence of that counterrevolutionary "left" line remains deep in some people's hearts even to date. A considerable number of comrades within our party who have exposed themselves to the "left" deviationist trend of thought for over 10 years now have lost their ability to objectively analyze and resist that ultraleft line, or to distinguish truth from fallacy. The influence of the "left" deviationist trend of thought left over from history and from the Great Cultural Revolution remains so far-reaching that many comrades still dare not break the shackles of that ultraleft line for fear of hitting a mine. At this great moment of eliminating chaos and restoring order, they have shown no determination to break with that ultraleft line. In other words, they are still committed to uphold that ultraleft line concocted by Lin Biao and the "gang of four" as an "orthodox" revolutionary legacy.

The fact that the "left" deviationist trend of thought remains deep-rooted in our society reminds us that the influence of the force of small-scale producers and the petty-bourgeois ideology over our society should not be underestimated. Lessons drawn from the previous political movements, especially the Great Cultural Revolution, teach the communists that they should still seriously consider it necessary to constantly remold their world outlook.

II

The root of the "left" deviation as a chronic disease in real life can be traced far back in history.

When such political movements as the struggle against the rightists, the Great Leap Forward, and the campaign against the right deviation were launched in the 1950's, many people often feared being regarded as rightists on the assumption that being on the right is a matter of one's political stand while being on the "left" is only a question of method. They also saw some party members or cadres receive protection when they committed serious "left" deviationist mistakes and others punished when they professed to be on the "right." Consequently, the idea that the "left" is better than the "right," and being on the "left" is preferable to being on the right suddenly became very popular with a considerable number of comrades inside and outside the party and was even praised as "revolutionary philosophy."

Although we suffered setbacks in these movements, we still failed to draw lessons from them and failed to correct these mistakes immediately. On the contrary, we convinced the people that revisionism had become rampant everywhere, capitalism was about to be restored, and the entire party and state were in danger of changing color if the influence of the right trend of thought were allowed to go unchecked on the ideological and all other fronts. This assessment of the situation from the "left" angle directly resulted in a decision to launch the Great Cultural Revolution, which brought an unprecedented disaster and caused unprecedented damage to the party and country. Demagogic speakers were praised as the most revolutionary and firmest "leftists," while a large number of old party members and old cadres who persisted in seeking truth from facts and in upholding the truth were falsely accused of being "old rightists" and "revisionists" and were later thrown out of their office. As a result, the then prevalent idea that "being on the 'left' is better than being on the right" and "being on the 'left' is preferable to being on the right" gained further strength and was subsequently transformed into a "left" deviationist trend of thought "drowning" out all other voices of the party and society.

This fact shows that the erroneous "left" deviationist trend of thought did not begin with the Great Cultural Revolution but was a factor that led to the launching of this revolution. Actually, this trend of thought originated from history with its formation dating back to the late 1950's. It flourished and reached the peak of its influence during the Great Cultural Revolution.

During the past 20 years, the erroneous "left" deviationist trend of thought has led the people to treat the right deviation as something extremely dreadful. In the final analysis, the so-called "being on the right" means seeking truth from facts and daring to tell the truth. Although theoretically no one can deny that both "leftists" and rightists are equally inimical to the revolution, the idea that "'left' is better than right" is wrong. Experience tells people that being on the "left" is a way to protect oneself, and being on the right is bound to court self-destruction. In other words, being on the "left" gives the people a sense of security and being on the "right" a sense of tragedy. At that time, many people who were on the "left" benefited greatly from that political stand while others who were on the right suffered miserably. Furthermore, persons who were neutral also watched the "leftists" prosper and the "rightists" go down to defeat. This fact prompted the general public to acclaim the idea which considers being on the "left" better than being on the right as "objective truth." Today, this extremely abnormal mentality remains far from being eliminated. Why are a considerable number of comrades today still fearful and apprehensive being regarded as rightists. Why do those well-educated comrades still stubbornly cling to the "two whatever" doctrine, knowingly disregarding the central authorities' Marxism-oriented policy to eliminate chaos and restore order? These two questions can be answered by a study of the aforementioned abnormal mentality.

The history of the growth of the "left" deviationist trend of thought reminds us of how important and how valuable are the communists' revolutionary firmness and Marxist principles! If we cannot stick to this point, we are apt to slide down the road toward the ultraleft side. The historical facts have repeatedly taught us that without firmly upholding the Marxist principles, few can resist the temptation to become "leftists" or sycophants who can benefit greatly from following the wind, swimming with the tide and echoing the voices of their masters.

III

The "left" deviationist trend of thought stems from a specific theory. Without realizing this, no one can explain why the "left" deviationist mistakes were repeatedly committed over the past 20 years, why even today it still can frequently assert itself, and why we still find it difficult to win the struggle against it. For a long time, a theory of class struggle has been developing in our country. This theory holds that the socialist society is an independent form of society in which antagonistic classes exist; throughout the historical period of socialism, there are always class struggle and the danger of capitalist restoration; with the socialist cause developing in depth, we will face increasing opposition from various antagonistic forces, and the class struggle will become sharper with each passing day; for this reason, we must always persist in taking class struggle as the key link in all fields of work.

Under the guidance of the aforementioned theory of class struggle, the people became so overly cautious that they always feared being accused of violating the theory of the dying out of class struggle. Consequently, they were too preoccupied with criticism and struggle to be able to realistically assess the class situation and class struggle. This being the case, a so-called "theory" of struggle against right deviation came into being: "During the socialist period, the principal danger comes mainly from the right direction or originates from the right opportunism which denies the existence of class struggle. For this reason, our task is to combat only right rather than "left" deviations. Only proponents of the theory of the dying out of class struggle and revisionism, and opponents of Mao Zedong Thought will consider it necessary to carry out the two-line struggle--struggle against both rightists and 'leftists.'"

The preposterous nature of this "theory" is clear to all. Comrade Mao Zedong once said: "In combating the 'left' and right deviations within the party, we must decide on our policy according to specific circumstances." ("Selected Works of Mao Zedong" vol 4, p 1163) How can anyone be so sure that during the socialist period there is no "left" but right deviation and there is no need to combat "left" but right deviation? This subjective, arbitrary and metaphysical "theory" has proven untenable through practice. Nevertheless, it is unfortunate to note that it is this theory that has hamstrung our party's actions and policies for so many years; during the struggle against rightists, we have never dared to utter a single word about it although it led us to commit so many "left" deviationist mistakes over the past 20 years and although we were well aware of the damage it did to our country. An ancient proverb says: Is there anyone in the world who climbs a tree to angle for fish? In the past, we repeatedly mistook the "left" ideas for right ones, and then subjected them to criticism on the ground that they remained far from being on the "left." The result was the emergence of an ultraleft trend of thought. This occurred not only during the struggle against the rightists and the Great Cultural Revolution but also when the essence of the line of Lin Biao and the "gang of four" was being evaluated and criticized. For example, for a certain period, some comrades still considered Lin Biao and the "gang of four" ultraleftists although they were actually ultraleftists in every sense. Their true nature as ultraleftists was revealed only after the nationwide discussion on the criterion of truth was conducted in the wake of the Third Plenary Session of the 11th Party Central Committee. Our inability to recognize the nature of the ultraleft line stems from our fear of being regarded as rightists and from our promotion of the non-Marxist theory of class struggle and the theory of struggle against right deviation.

The fact that the "left" deviationist trend of thought has its theoretical basis tells us that we must attach great importance to education in Marxist theory and make great efforts to improve our knowledge of Marxist theory. Only in this way can we distinguish genuine from sham Marxism. It is also absolutely necessary to educate all party cadres and non-party cadres in the basic theories of Marxism and to acquaint some comrades with rudimentary knowledge of Marxism. Without being armed with knowledge in basic theory and without making efforts to eliminate chaos and restore order on the theoretical front, we can neither truly distinguish the correct ideas from the "left" and right tendencies nor effectively eradicate the "left" deviation as a chronic disease.

IV

The influence of the "left" deviationist trend of thought over our party and society remains considerably great. This is why it still can frequently step forward to challenge us. This situation has something to do with the following two objective conditions that exist in our society today:

First, the remnant organizational and ideological influence of the "gang of four" that remains to be eliminated still forms the social basis for the current "left" deviationist trend of thought.

True, as a result of the massive "exposure, criticism and investigation" movement, the "gang of four" has been destroyed along with its counterrevolutionary factional system; their ultraleft line that brought disaster to our country and woe to the people has been thoroughly discredited. But it seems too naive to think that the struggle has come to an end. We must realize that the remnant influence and diehard factional elements of the "gang of four" and others who followed in its footsteps in committing crimes are still not reconciled to their defeats. They are now earnestly looking for opportunities to stage a comeback. These remnants of the "gang of four" can be divided into four groups. Included in the first group are elements who hate the "exposure, criticism and investigation" movement and are unwilling to sincerely plead guilty to what they have done; some of them even have recanted their guilt confessions of crimes by asking their respective party organizations to hold "new hearings" on their cases. Also in this group are people who have formed a clandestine alliance and have been active in trying to appeal their cases and to level counter-charges against the party organizations and the masses. They have angrily heaped abuses on their accusers, openly declaring: "We are looking forward to another showdown 10 years from now." In the second group are people who bitterly hate the Party Central Committee's line and policies. For example, they viciously called the nationwide discussion on the criterion of truth "an opportunity for people to pick up knives to slash the banner" while slanderously describing the policies of the Third Plenary Session of the 11th Party Central Committee as "a full-scale restoration of the old order." In the third group are persons who avariciously and exultingly gloat over difficulties we face on the road ahead. While anxiously awaiting our failure, they also earnestly hope that our country will be torn by another disorder so that they can prove that the Party Central Committee's present political line is not workable, and therefore should be replaced by their ultraleft line. Bearing this perspective in mind, they often gloat over social disorders deliberately created by hoodlums while acting behind the scenes to encourage them to spread the flame and expand the catastrophe. Some even have jumped out from behind the scenes to promote factionalism and anarchism and to replay their former "rebellious" games. The fourth group includes promoters of the long bankrupt ultraleft fallacies, who have vehemently criticized the work performed by people on the political and legal affairs, economic, educational, journalistic, literature and art and film-production fronts. They have also confused right with wrong and black with white by calling our revolutionary determination to eliminate chaos and restore order an attempt to "revive revisionism." We would be surprised if the remnants and followers of the "gang of four" do not step forward to assert themselves when opportunities present themselves. The reason is that according to the objective laws governing the social life, no reactionary force has ever retreated from the stage of history of their own free will. To them, the downfall of the "gang of four," the elimination of chaos and restoration of order mean a loss of their paradise. We would also be surprised if they openly declare that they have given up their attempts to regain their lost paradise. Nevertheless, we regret that some comrades within the party who are deeply influenced by the "gang of four" have taken no steps to counter the attacks mounted by the followers of the ultraleft trend of thought. Some of these comrades even have gone so far as to pinpoint the party's present political line and the nationwide discussion on the criterion of truth as the cause of disorder. Some comrades reproachfully asked our newspapers and journals this question: Where are you trying to lead the people? They sometimes turned their faces toward the heaven and bemoaned: If we allow the emancipation of the mind to go on any longer, our country will be in danger and our party will be finished. Worse is that even today the Party Central Committee's line, principles and policies are still bitterly resented and resolutely opposed by some persons.

These facts confirm a judgment contained in Comrade Deng Xiaoping's recent report "On the Current Situation and Our Tasks" saying: "The remnant organizational and ideological influence of the 'gang of four' still exists. We should not underestimate the capacity of the remnants of the 'gang of four.' Otherwise, we will commit mistakes." For this reason, we must vigilantly guard against these remnants, be fully aware of their potential danger, and promptly expose their conspiracy, and continue to criticize the ultraleft line until its pernicious influence is eliminated.

Second, the right trend of thought and the bourgeois laissez-faire tendency have played a role in bringing about the "left" deviationist trend of thought.

Although the "left" and right trends of thought are seemingly opposed to each other, they actually complement each other. This point has been repeatedly confirmed by the developments since the Third Plenary Session of the 11th Party Central Committee.

This point was first confirmed around the 1979 spring festival, or at a time when we were advancing along the course charted by the Third Plenary Session of the 11th Party Central Committee and when a lively political life began to take shape. At that time, a handful of bad elements in society tried to negate the four basic principles from their right deviationist point of view. Subsequently, they whipped up a bourgeois laissez-faire wind under the pretext of emancipating the mind and carrying forward democracy in an attempt to undermine the implementation of the line of the Third Plenary Session of the 11th Party Central Committee. Nevertheless, it was clear that their unrealistic way of thinking and their actions to mess everything up had nothing in common with our cherished principles of emancipating our minds and carrying forward democracy. But the remnants of the "gang of four" pointed the finger of blame for this mistake at the Third Plenary Session of the 11th Party Central Committee. Picking up the slogan "hold high Chairman Mao's banner" to serve their selfish interest and using that banner as a tiger-skin to cover themselves to intimidate others, they jumped at the opportunity to mount attacks, thus whipping up an ultraleft storm. At that time, some comrades within the party known for their ossified and semi-ossified ideas coincided the attacks with a denunciation of the principle for emancipation of the mind, related theoretical forums, news media propaganda work and many current policies carried out by the central authorities. They also criticized the four basic principles as four sticks. Suddenly, various ultraleft fallacies filled the air, making the so-called "absolute truth" seemingly popular again. The newly rising movement for the emancipation of the mind would have been shortlived had the central authorities not acted promptly on this problem by making an extra effort to educate the people throughout the country in the four basic principles and by providing additional forums on practice being the sole criterion for testing truth.

The point was confirmed again in late 1979, or at a time when we emphasized the need to continue the vigorous criticism of the ultraleft line, the emancipation of the mind and the implementation of policies. Aware of this development, a number of so-called "dissidents" and "democrats" considered it a golden opportunity to practice anarchism and extreme individualism and to oppose the communist party leadership and the socialist system. When this tendency or trend of thought was strongly opposed and criticized by the entire party and the people throughout the country, the remnants of the "gang of four" jumped out again from the left to whip up another storm by viciously attacking and uncompromisingly opposing the Party Central Committee's Marxist ideological and political line. Their aim was to turn back the clock and to block progress in the four modernizations.

The aforementioned review and analysis have led us to conclude that the "left" and right trends of thought often complement each other. For example, the right trend of thought often gains strength when the "left" trend of thought is being criticized for causing damage to the party and country. Likewise, the "left" trend of thought would mount attacks on the right trend of thought whenever the latter becomes too influential. It can be said that the two are actually playing the same tune on different instruments, with the same aim of opposing the party's Marxist line and the four basic principles. This harsh reality reminds us of the need to thoroughly criticize the ultraleft trend of thought and eradicate the "left" deviation as a chronic disease. Meanwhile, we must also oppose and expose the right trend of thought. Practical experience teaches us that we should not underestimate the detrimental effect the right trend of thought may have on our society because it often serves as an assistant to the "left" trend of thought. In view of this, we must struggle against all forms of the right trend of thought and regard this as a necessary step in thoroughly criticizing and discrediting the ultraleft trend of thought and in eradicating the "left" deviation as a chronic disease.

Experience tells us that the "left" deviationist trend of thought originates from a specific theory; its development is a long history. In competition with the right deviationist trend of thought for influence, it has taken deep root in society and has won a large following. This is why it has been able to grow into a chronic disease and to make its influence felt in the party and society. For this reason, we cannot treat it lightly. Its detrimental effect on the cause of the party is far reaching. This is a painful historical lesson we should never forget. Although we can let bygones be bygones, we should avoid making the same mistakes in the future. To prevent the repetition of similar mistakes, an important task we now face is to conscientiously draw a lesson from history, to deeply understand the root cause of this "left" trend of thought and the conditions that engender it. Only in this way can we use the right medicine to eradicate this chronic disease as the greatest ideological obstacle to the development of the socialist modernizations.

JIANGSU PAPER ON SENIORITY AS OBSTACLE TO PROMOTING CADRES

OW141428 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 13 Oct 80

[Report on XINHUA RIBAO contributing commentator's article: "Get Rid of the Outworn Concept of Seniority"]

[Excerpts] The article says: The outworn concept of seniority is still a major ideological obstacle in the present work of selecting and promoting outstanding middle-aged and young cadres. Is it necessary to take seniority into account when selecting and promoting cadres? Of course. The point is, seniority should not be elevated to the absolute. In terms of dialectical materialism, a person's knowledge and talents are gradually accrued through social practice. It is all right to give appropriate consideration to seniority when evaluating, selecting and promoting cadres. But seniority does not represent knowledge or talent. It is not the scientific approach of dialectical materialism if we do not specifically analyze the cadres' knowledge, talents, diligence and skills and if we regard seniority as the sole criterion for selecting and promoting cadres.

How could one acquire experience in leadership work, if one does not go up the stairs step by step. This question has been raised by some cadres who still cling to the outworn idea of the "flight of steps" and who equate seniority with practical experience. To them, cadres should be promoted step by step lest they should not gain practical experience. In fact, the so-called "flight of steps" is only a figurative expression of the tempering and training the cadres undergo when they are growing.

At present, the relatively young backbone cadres on all fronts are about 30 to 40 years old. If they were to be promoted step by step to leading posts at county and department levels, it would take at least 20 years, that is, if everything goes smoothly. By that time, their practical experience might be quite rich, but they may be unable to do what they wish because of declining health. How can they be expected to change the aging phenomenon in the leading bodies? We should adhere to the principle of seeking truth from facts, do away with the outworn "flight of steps" and create a new one suited to the new situation and tasks.

In other words, we should act according to the party Central Committee's three criteria for selecting and promoting outstanding middle-aged and young cadres at the present stage and boldly break the rules for selecting and promoting cadres.

What if less senior cadres are promoted and prove to be unconvincing? This involves the relationship between seniority and prestige. A leading cadre's prestige is formed naturally in practice and is kept in the people's minds. He who upholds principles, fosters close ties with the masses, demonstrates high efficiency in his work, handles matters with originality, dares to think, speak out and take on responsibility will improve his prestige naturally. He will be convincing even if he is less senior.

In the final analysis, when selecting, promoting and assigning posts to cadres, it is necessary to keep to the correct criteria and avoid laying too much stress on seniority. The correct approach should be, focus mainly on the cadres' political integrity and talents and give due consideration to seniority. Outstanding talented people who are recommended by the masses, who prove to truly uphold the four basic principles after the party organization's evaluation, who are equipped with professional knowledge and skills and who are in the prime of life should be boldly selected, promoted and assigned against conventional practice to posts where they can best display their talents even if they are less senior.

'RADIO BA YI'DENOUNCES DENG XIAOPING FOR UNDERMINING HUA

OW140301 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 13 Oct 80

[Text] Everyone must absolutely observe party discipline and the "Guiding Principles for Inner-Party Political Life." As Chairman Hua has said: There must not be any special citizens in our party and our country. It is impermissible for some persons to place themselves above party discipline and state law and not to be bound by the restrictions of the 'Guiding Principles for Inner-Party Political Life.'

However, a certain member of the party Central Committee, considering himself to be a special citizen and failing to observe party discipline, has taken the lead in violating the principle that the minority is subordinate to the majority and that the entire party is subordinate to the Central Committee.

Although Comrade Hua Guofeng assumed the chairmanship of the party Central Committee on the strength of Mao Zedong's note "With you in charge, I'm at ease," later both a plenary session of the party Central Committee and a national party congress confirmed his position as leader. This means that all party members, especially leading members of the party Central Committee, should defend Chairman Hua's prestige. Overtly and covertly undermining Comrade Hua Guofeng's authority as the leader and spreading such words as "Comrade Hua Guofeng is inadequate for his important leading post since he lacks both ability and political integrity" can only seriously affect the unity of the party Central Committee and cause ideological confusion among large numbers of party, government and army cadres.

People may ask: At a meeting of the party Central Committee Political Bureau before the opening of the third session of the Fifth NPC, why did Vice Chairman Deng rudely interrupt Chairman Hua's speech? Vice Chairman Deng said: Now that the Dazhai model has been discarded, why should we still keep a vice premier from Dazhai? At that time, some comrades said: If Chen Yonggui is dismissed from office, cadres at lower levels may consider this to be a move directed against Comrade Hua Guofeng. However, Comrade Deng Xiaoping said in reply: Since you worry that Comrade Hua Guofeng's prestige may be affected, then let Chen Yonggui hand in his resignation.

It should be pointed out that precisely because Comrade Deng Xiaoping despises Chairman Hua and treats the latter without proper respect, some members of the party Central Committee dare to openly discuss the relations between Chairman Hua and the "gang of four" and even more overstatements on the basis of false material. Also because of Comrade Deng Xiaoping's attitude, many deputies attending the third session of the Fifth NPC openly demanded that the chief culprit who had been in charge of the Dazhai Production Brigade and had forcibly popularized its experience for many years be sternly punished. This implies that the last two conferences on learning from Dazhai in agriculture presided over by Chairman Hua himself were wrong. They also demanded that Chairman Hua bear main responsibility for sentencing more than 2,100 people to reform through labor on the charge of sabotaging the movement to learn from Dazhai in agriculture since he served as minister of public security.

Even more seriously wrong is that not long ago, in talking with the Italian president about lifelong office tenure for leading cadres in our country, a certain person casually said: Although I am over 80, there is still a chance for me to see our party's [word indistinct]. Needless to say, this was deliberately aimed at undermining Chairman Hua's international prestige.

Vice Chairman Deng said more than once: The four modernizations will be out of the question without unity and stability. Then he himself should set an example in this regard. As the old Chinese saying goes: "When a prince's personal conduct is correct, his government is effective without the issuing of orders. If his personal conduct is incorrect, he may issue orders, but they will not be followed."

It is hoped that certain leading comrades of the party Central Committee will suit their actions to their words and take the lead in observing party discipline and the "Guiding Principles for Inner-Party Political Life."

REFORM, REFORMISM CALLED TWO DIAMETRICALLY OPPOSED CONCEPTS

Shanghai GUANGMING RIBAO in Chinese 26 Aug 80 p 4

[Article by Deng Guangming [6772 1684 6900] and Zhang Xiqing [1728 1585 3237]: "On the Difference between Reform, Improvement and Reformism"]

[Text] For a long time past Chinese historians have heatedly debated the nature of historical events such as the Reform Movement of 1898. Most recently quite a number of worthwhile ideas have been expressed on this question in various periodicals and publications, which is every interesting. In these discussions some comrades have expressed the opinion that historical events like the Reform Movement of 1898 had been "political movements of reformism." Other comrades believe that we must neither call them "reformism" nor "improvement" but rather "reforms." Still other comrades believe they should be referred to as "renovations," "changes of political institutions," etc. Opinions have differed and no consensus could be achieved. The reason for this disagreement is on the one hand a difference in the study of the actual events, such as the Reform Movement of 1898, themselves. Another important reason is also the insufficient insight into the deeper meaning of such concepts as "reform," "improvement" and "reformism." Admittedly, we do not start out in our studies of history with concepts and definitions, but rather with historical facts. However, in order to avoid confusion in logic, it is without doubt extremely important to clarify the exact scientific meaning of such concepts as reform, improvement and reformism, when approaching the study of historical events similar to the Reform Movement of 1898, such as the rebellion of the Qingli era of the Song dynasty, the reforms of Wang Anshi and other such events.

"Reform" and "Improvement" Are Completely Synonymous

Some comrades therefore assume that since historical events like the Reform Movement of 1898 can neither be called reformism, nor improvement, they should only be called reforms. They probably feel that "reform" sounds somewhat better than "improvement" since the word has a more revolutionary component in the characters with which it is written, but actually both terms are synonymous. In English, French, German and

Russian, improvement and reform of a society, generally speaking, mean the same, are even one and the same word, and natural improvement has the same meaning as amelioration. In the same manner, the term improvement of society in Chinese means the same as reform of society, and natural improvement the same as amelioration. From the standpoint of linguistics, social improvement and social reform are the same concept and have the same meaning.

Examining the Chinese editions of Lenin's Collected Works, we find that although Lenin always used the same word, reform, whenever there is reference to improvements, in the Chinese texts of Lenin's Collected Works and Lenin's Selected Works this term is translated sometimes as "improvement" and sometimes as "reform." For instance, in the Chinese version of Lenin's Collected Works, Vol 17, p 97, we read "reform and revolution are undoubtedly two diametrically opposed concepts." In the Chinese version of Lenin's Selected Works, Vol 4, p 580, we read: "only Marxism precisely and accurately defines the relationship between improvement and revolution." The "reform" in the first quotation and the "improvement" of the latter quotation are one and the same word, reform, in the Russian original. It would therefore have been quite in order to translate the term in Chinese consistently as "improvement" or consistently as "reform."

From everything said in the above it is clear that the term "improvement" and the term "reform" as used in the social sciences are completely synonymous, i.e. without any difference between them. If some insist on making a wide distinction between the two terms, and insist that historical events like the Reform Movement of 1898 must not be called "improvement" but rather "reform," that will serve no other purpose than to create confusion. If that is so, are we then to use in Chinese either only "improvement" or only "reform" and not both of them? That too is an absolutely unnecessary concern, all that needs to be clearly stated is that the two terms are synonymous. As to the opinion of some comrades that historical events, such as the Reform Movement of 1898, must not be called "improvement," but rather "innovations" or "changes in the political institutions," that, we are afraid, is even less appropriate. The term "innovation" means abolishing the old institutions and instituting a new governmental system. "Innovation" and "change of the political institutions" may be considered synonymous, but they cannot possibly explain the character of historical events. For instance, to say that the Reform Movement of 1898 was a "change of institutions" what question does that answer? It is nothing but a redundant replacement of one term by another. To analyze the nature of historical events as the Reform Movement of 1898, it is, in our opinion, necessary to clearly determine whether it is a "revolution" or an "improvement" (i.e. a "reform"), or whether it is an expression of "reformism." Only this will be helpful for a penetrating study of the problem.

"Reform" Must Never Be Confused with "Reformism"

Reform and improvement are synonymous, but improvement and reformism are two diametrically opposed concepts.

Improvement is used as an antonym of revolution. Lenin pointed out what the actual meaning of revolution is, from the Marxist point of view. "It is the use of force to smash an obsolete political superstructure, i.e. to smash that superstructure which is bound to collapse within a certain period of time due to its inconsistency with new production relations. (Lenin's Selected Works, Vol 1, p 616) "Revolution is a most fundamental and most radical transformation of the old things where care is taken to do the least possible damage." (Lenin's Selected Works, Vol 4, p 575) This makes it clear that revolution is the violent action of one class aiming at overthrowing the rule of another class. Improvement is the action of the ruling class, trying all the time to maintain its rule by making small and trifling concessions to those under its rule. "Acts of improvement are usually undertaken slowly, cautiously and gradually." (Lenin's Selected Works, Vol 4, p 576) Stalin has said that "due to pressure from below, pressure from the masses, the bourgeoisie might at times effect certain improvements, but will still preserve the foundations of the prevailing socio-economic system. On these occasions they will have concluded that whatever concessions they will grant, must have become necessary to perserve the rule of their own class. This is the true nature of improvements. Revolution on the other hand is the transfer of political power from one class to another class. Not every kind of improvement can therefore be called revolution." (Stalin's Selected Works, Vol 2, p 366) No further explanation is needed. Our revolutionary teachers have made the meaning of improvement absolutely clear.

Reformism is a term used as antonym to Marxism. It has a particular class essence and a time-related element. It was born toward the latter part of the 19th century under the conditions of flourishing capitalism and the rapid development of the labor movement. It is a reactionary ideology which capitalism introduced to counter the socialist revolution. As Lenin has expressed it in his article "Reformism in the Russian Social Democratic Movement": "Socialism (note: this refers to the ideological system of scientific socialism which is equivalent with Marxism) has grown up; it has by now insured its right of existence in the entire civilized world. It is at present fighting to gain political power. Capitalism on the other hand is more and more falling into decay. Realizing its inescapable destruction, capitalism stubbornly tries to delay its utter destruction by superficial and hypocritical concessions, hoping in this way to maintain its political power in the changing conditions." (Lenin's Selected Works, Vol 2, p 403) The capitalism of those days "did not oppose socialism with liberalism but rather used reformism to oppose the socialist revolution." Their slogan was: "Let us counter revolution with improvements, let us institute innovations to the dying system, to counter those who want to overthrow the capitalist regime by revolution, so that the working class will become divided and weakened and capitalist political power maintained." (Ibid.) This slogan clearly indicates the class essence of reformism. Due to the influences of capitalist ideologies, reformism, this revisionist school of thought, is also continuously infiltrating the workers movement. In his article "Marxism and Reformism" Lenin said: in the workers movement "reformism in actual fact is a rejection of Marxism, a replacement of Marxism by capitalist 'social policies.'" (Lenin's Collected Works, Vol 19, p 375) Reformism does its utmost to divide and deceive the workers. It tries to bribe the workers with petty favors and to keep them from fighting for the overthrow of the capitalist rule. The followers of reformism propound the preachings of that arch-revisionist Bernstein who proclaimed: "The final purpose is insignificant, the movement is all," thus expressing as his idea that improvement is all that matters and that the final purpose of it all can be ignored. Early in the 20th century, the Russian liquidationist school of thought among the liberal capitalists and in the social democratic party is in fact a faction of this kind of reformism. We therefore see that we must under no circumstances lump together various types of improvements as constituting reformism. Besides, improvement and reformism are of radically different character. Although improvement stands in opposition to revolution, there is no deep insurmountable gap between the two, and under certain conditions, one can change into the other. When discussing the relationship of improvement to revolution, Lenin pointed out: "Prior to the proletarian victory, improvement was a by-product of the revolutionary class struggle. If victory was achieved in a certain country through an extremely intense struggle and the country's strength remains too exhausted to carry out further revolutionary measures to complete the planned transformations, then improvement (still as a by-product in the international sphere) could provide a necessary and reasonable breathing space." (Lenin's Selected Works, Vol 4, p 581) Lenin furthermore said: "The concept of reform is undoubtedly something antithetical to revolution. Anyone who forgets the existence of this antithesis, forgets to draw a dividing line between the two concepts and will consistently commit grave errors in deciding historical questions. However, this antithesis is not absolute and the dividing line is not a rigid one but a flexible one, that can be moved and changed, and one should master the skill to determine the dividing line in the particular circumstances of the case." (Lenin's Collected Works, Vol 17, pp 97-98) Improvement and revolution can change from one to the other because both are forms of human social advance. Although the advance by improvement is spotty, cautious and gradual, it still certainly is advance and not retrogression. It is progress and as such deserving of our approval. Improvement does not exclude revolution. Prior to victory in the revolution, improvement is frequently a step toward revolution or a harbinger of the coming revolution. After victorious conclusion of the revolution, improvement often provides a kind of breathing space which has become necessary and is reasonable. Reformism on the other hand is right from the start created as an antithesis to

Marxism and is used by the bourgeoisie to usurp the place of the socialist revolution. Lenin pointed out: "Reformism is a fraud of the bourgeoisie inflicted on the workers." "Reformism, even if it is a completely sincere reformist ideology, will actually become a bourgeois tool to corrupt and weaken the workers." (Lenin's Collected Works, Vol 19, p 372) Reformism "admits nothing beyond improvements and negates revolution," (Lenin's Selected Works, Vol 2, p 406), "it uses improvement to oppose revolution," it has no progressive meaning at all, it is completely reactionary. Reformism is a stumbling block for the revolution. The proletarian revolution can gain victory only if it can vanquish bourgeois influences and trends such as reformism.

Just because there are these essential differences between improvement and reformism, Marxism has a completely different attitude toward each of them. Marxism stands for revolution, but does not in one sweep, oppose all improvement. Marxism believes that when the conditions for revolution have not yet matured, one should as far as possible strive for and benefit from improvement and consider it a preparation for revolution. When the revolution will have reached its climax, the struggle for improvement must, without the slightest hesitation and without losing any time, be turned into revolution to overthrow the reactionary bourgeois regime and to gain victory for the socialist revolution. The Russian Marxists acted in this way. Prior to the victory of the proletarian revolution, "the Marxists worked untiringly, be it in the field of propaganda, agitation or economic mass movements, but never missed an opportunity for improvement or to utilize improvement. At the same time they not only did not negate, but actually supported and took note of any method that went beyond the scope of reformism." (Lenin's Collected Works, Vol 19, pp 374-375) We should particularly note that following their seizure of power, the Russian proletariat used improvement to develop their economy and to construct socialism. The famous "New Economic Policy" is a clear proof of it. Marxism has always severely criticized reformism. Lenin and the Russian Marxists have conducted a protracted and unswervingly determined struggle against reformism. Improvement and reformism are two different things that must not be confused. This is very similar to the fact that experiences and empiricism are two things that must not be confused. Experience by itself is nothing bad. "Knowledge starts with experience." (Mao Zedong's Selected Works, one-volume edition, p 279) "All genuine knowledge is born from direct experience." (Ibid., p 276) The more experience, the better! However, empiricism is harmful. Its mistake is that it is satisfied with the narrow emotional experiences of the individual, that it rejects to raise these experiences into a theory, but rather erroneously takes sectional experiences as universal truth and that it disdains the guiding function of revolutionary theory. The "gang of four" purposely mixed up the two concepts. They raised a terrific hue and cry about "Oppose empiricism." They also proclaimed such a senseless principle as: the more experiences, the more reactionary, and used this as pretext to attack the broad masses of old cadres who constitute a rich hoard of experiences. What they played around with in the field of logic was a cunning scheme to stealthily interchange concepts. In the same way we must not confuse improvement and reformism. By accusing all improvement to be reformism, we negate the struggle of the proletariat to strive for and utilize improvement, and negate also the progressive nature of the historical movement for improvement. This ultraleftist viewpoint is obviously harmful to the revolution.

From the above it is not difficult to see that improvement and reformism are two different, diametrically opposed concepts. If some people lump them together, the result is not only extremely absurd in theory but also extremely harmful in practice.

A clarification of the scientific meaning of reform, improvement and reformism will reveal for everyone to see that it would be inappropriate in a study of the Reform Movement of 1898, the Reforms of Wang Anshi, and similar historical events, to call them "reformist movements." Although the Reform Movement of 1898 did not advocate the overthrow of the feudal landlord class of the Manchu dynasty, it represented bourgeois demands with the bourgeois intention to develop capitalism and finally to transform the feudal society into a capitalist society through political and economic improvements from above to below. This is going beyond the sphere of reformism. Furthermore there are distinct differences to reformism with regard to historical conditions, the class essence, etc. The Reform Movement of 1898 must therefore be called a bourgeois improvement movement.

The differences between the Wang Anshi reforms and reformism are even more evident considering the special time-related element and the class essence. The Chinese feudal society in the Northern Song era had only just arrived at its final stage. The buds of capitalism had not yet appeared, neither had new productive forces and class power appeared. As a consequence, a socialist revolution that would smash the feudal economic structure, did not occur, and could not have occurred, neither had there been, or could there have been a systematic doctrine or theory of socialist revolution. Under these historical conditions, a reformist trend of thought could not have emerged. In those days Wang Anshi represented the innovative forces of the landlord class carrying out measures for systematic improvements, adjusting within the feudal productive forces certain segments which were unsuitable for a development of the productive force. He also mitigated social and class contradictions in order to being prosperity to the country, build up its military power and consolidate the rule of the Northern Song dynasty. These are actions filled with progressive meaningfulness and certainly deserving of our approval. We see from all this that there is not the slightest connection between Wang Anshi's changes in the political institutions and reformism, but that his reforms must rather be called an improvement movement by the landlord class. Some comrades admit the progressive meaningfulness of the measures of improvement carried out by Wang Anshi, but in the end still conclude: "In the historical perspective of the class struggle and considering the antithetical positions of revolution and improvement, the road taken by Wang Anshi was reformist. The reforms of those days had a reformist character. That is beyond doubt." It is our opinion, reviewing the situation from the viewpoint of historical class struggle and considering the relationship of revolution and improvement, that we are compelled to state that Wang Anshi's change of political institutions is a by-product of the revolutionary class struggle of the landlord class and that it has the characteristics of improvements. This then is what is beyond doubt. Those comrades who conclude that Wang Anshi's change of political institutions "had a reformist character" obviously overlook the difference that exists between improvements and reformism, and also do not correctly comprehend the scientific meaning of improvement and reformism.

THESIS THAT LITERATURE, ART ARE SUBORDINATE TO POLITICS CALLED UNSCIENTIFIC

Beijing WENYI YANJIU [LITERATURE AND ART STUDIES] in Chinese No 3
25 Jun 80 pp 24-28

[Article by Cao Tinghua [2580 1694 5478]: "'The Thesis That Literature and Art Are Subordinate to Politics' Is Unscientific"]

[Text] "Literature and art are subordinate to politics" is a universally current thesis expressing the relationship between literature and art, and politics. For many years, this thesis has been offered as a fundamental principle for engaging in literary and artistic creative work, criticism, research and directing literary and artistic work. However, judging from actual practice this principle does not fully represent or fully explain the rich and complex phenomenon of literature and art, is not in accord with mankind's practice of literature and art, and does not contribute to the flourishing and development of socialist literary and artistic enterprise. Theoretically, it has the obvious flaw of not being in accord with the basic viewpoints of Marxist materialist dialectic. For this reason, we must inquire into this thesis afresh.

First of all, from the point of view of the nature of literature and art, "literature and art are subordinate to politics" is brought up in connection with literature and art, and politics, both constituting part of the social superstructure. However, it just happens that this thesis with respect to a whole series of questions relating to the relative independence of consciousness and existence, the superstructure and the economic base, and all ideologies, is not always consistent with the Marxist theory of knowledge.

The "politics" in "literature and art are subordinate to politics" includes the ideological "political consciousness," i.e., although "political concepts," "political ideals," "political aspirations," etc include political institutions appropriate to those definite political concepts, nevertheless what needs to be made clear first is, within the framework of their both being part of "consciousness," whether or not there is a relationship of one being subordinate to the other.

What does "subordinate" mean? According to the explanation of the "Modern Chinese Dictionary" it means "yielding to; subsidiary," and the sentence used to illustrate it is precisely "Literature and art are subordinate to politics." According to this one can see that literature and art merely comply with or are auxiliary to politics. And a relationship of complying with and being subsidiary to implies that the one thing contains the other within itself, that one is derived from the other. Does not "literature and art are subordinate to politics" then imply that literature and art are contained within politics or are derived from politics? Does it not then imply that literature and art are not at all the flowers and fruits of the evergreen tree of life, but only an auxiliary part, or a single branch or leaf of the great economic tree? If that is the case, then literature and art have gone from being secondary to existence to being secondary to politics, from being decided by existence to being decided by politics, from having one source to having two sources, while essentially politics has become the source of art.

Secondly, what we should get a clear idea of is whether or not "Literature and art are subordinate to politics" is in accord with Marxist theory regarding the relationship between the superstructure and the economic base, and whether or not it is in accord with the viewpoint of classical Marxist authors that the superstructure and all kinds of ideologies have a relatively independent nature.

Marxist classical authors, in discussing the relationship between the superstructure (including the various ideologies) and the economic base, all unanimously emphasize the decisive effect of the economic base on the superstructure. The former is primary, the latter is secondary; the former is the cause, the latter is the result; the latter is derived from the former, complies with the former and is subordinate to the former. Marx pointed out: "These relationships to production, taken together, constitute the economic structure of society; that is, there is a legal and political superstructure erected on top, and at the same time there is a definite social ideology and a realistic basis appropriate to it. The style of production for the material life conditions the entire course of the social life, the political life and the cultural life."[1] Engels pointed out: "The development of politics, and that of law, philosophy, religion, literature, art, etc are all based on the economic development."[2] Stalin said: "The various (forms of) social thought, theory, concepts and political institutions of the various periods in the history of society...cannot be explained in terms of the 'inherent qualities' and 'attributes' of the thought, the theory, the concepts and the political institutions themselves, but should be explained in terms of the various conditions of the social and material life of those periods in the development of society."[3] Marxist historical materialist viewpoints clearly indicate: social ideologies, as well as political institutions appropriate to certain (definite political) concepts, in the final analysis are conditioned and determined by the economic base, and all together are subordinate to the "form of production of the material life." Literature and art are one of the ideologies of the superstructure, and in the final analysis naturally are also conditioned and determined by the economic base, and are subordinate to the definite economic base. Even though "politics is the concentrated manifestation of economics," nevertheless in the end it cannot replace the decisive and conditioning effect of the economic base on literature and art and other ideologies. To take the relationship between literature and art and politics and make a rule out of it to the effect that "literature and art are subordinate to politics" is actually to have departed from the "various conditions of the social and material life of various periods in the development of society," and to use the "inherent properties" and "attributes" or [the terms] "political" and "facilities" themselves to explain the nature of literature and art, and hence to have considered one part of the superstructure to be a premise for the existence of another part, and to take [the relationship of] literature and art and politics, which are originally common results of the material productive base, and wrongly inferred that politics is the cause of literature and art, and art and literature are the result of politics.

To repeat, Marxist classical authors in emphasizing the final decisive effect of the economic base on the superstructure, including the ideologies, did not consider them merely to be the passive products of the economic base, and also did not bring up the thesis that other ideologies within the domain of the superstructure are subordinate to politics, but on the contrary over and again clearly elucidated their relative independence and mutual influence as well as their dynamic reaction to the economic base.

Even though the relative independence of the various kinds of ideologies has many ways of manifesting itself, two points are most fundamental. The first is that it [literature and art] can independently depict the life of society, and reflect changes in the condition of the economic base, providing some truths in its content; the second is that it particularly portrays lifestyles, and the development of lifestyles has an independent historical process. Literature and art, as one of the independent ideologies, possesses these fundamental attributes.

As early as in the introduction to his "Critique of Political Economics" Marx clearly brought up art as an ideology reflecting the life of society, and affirmed its independent nature. He said: "Following changes in the economic base, the entire vast superstructure, sooner or later, changes. In investigating these changes, it is necessary to distinguish constantly between the following two situations: one is material changes occurring in the economic conditions of production, changes that can be demonstrated with the precision of natural science; the other is those legal, political, religious, artistic, in short, ideological forms that people use in order to be aware of this contradiction (indicating the relationship with the productive force and production--author) and to strive to overcome it." There are two points worthy of attention here: one is the various situations of the changes in the entire vast superstructure being either "sooner or later." As long as changes in literature and art are not generally at the same pace and in the same rhythm as political changes, then literature and art are independent, and do not have the subordinate relationship to politics of shadow following form. But changes in literature and art certainly do not occur or fulfill themselves at the same time as political changes; this is a historical fact that everyone knows. The second is that Marx tells us extremely clearly that literature and art are a form of ideology which is able, like law, politics, religion, philosophy, etc independently "to be aware of this conflict and make a great effort to overcome it," without the attached conditions of being subordinate to politics or having politics as a premise. In sum, judging from Marx and Engels, literature and art are a kind of aesthetic movement, an artistic way of handling the world, that has the particular function of both portraying and influencing the life of society. It was for this very reason that Marx and Engels highly valued the artistic achievements of the excellent, propertied-class realistic critical authors Thackeray, Dickens, and Balzac, and scorned those professional propertied-class politicians, political commentators, historians, statisticians, etc. Marx said: "The amount of political and social truth revealed to the world by a number of outstanding novelists in present-day England in their brilliant, vividly-described books is more than that revealed by all the professional politicians, political commentators and moralists put together."[4] Engels in mentioning Balzac's "Human Tragicomedy" also said something similar.

Of course, the fact that literature and art are relatively independent does not imply that they can separate themselves from politics. Marxist classical authors over and again emphasized that aside from the economic base being the final, decisive factor in [the formation of] literature and art, they also particularly pointed out that politics, which "deflects light from" and is the "outer garb" of economics, has a vast and direct influence on other ideologies, including literature and art. And they pointed out that the "greater part" of the economic base's effect on them is manifested politically. However, this after all cannot be understood as literature and art yielding to or being auxiliary to politics, and it cannot be understood that literature and art are merely the "projection" of politics reflecting economics or the accessory of politics being the (outer) garb of economics. Looking at it from the Marxist point of view writers and artists are people with a definite world view, and literary and artistic creation generally is purposeful. In portraying life, literature and art generally want to represent the politics, morality, sentiments and tendency of thinking of a definite class; if it does not propagandize progressive things, then it will propagandize backward, even reactionary things. However, its premise is not politics or ideology, but actual existence; its style is not the style of politics or ideology in general, but is an aesthetic form possessing an independent path of development. That is to say, literature and art [may] represent a definite political viewpoint, but they are not the products of that viewpoint. In content it is like this; in form, it is especially like this.

Marxist classicial authors fully affirm the independence of the development of ideological (including literary and artistic) forms. Engels, in his letter to (Mylin) said: "In the very beginning we placed emphasis on political, legal rights, and other ideological concepts discovered out of basic economic facts, as well as the actions conditioned by these concepts, and at the time we should have acted this way. However, during the time we acted in this way, we neglected form for the sake of content, i.e., by what manner and method are these concepts produced."[5] Following close upon this, he incisively points out: "The thinkers of history... in every department of science there is a definite body of material, and this body of material was independently [separately] formed from the thoughts of people of previous generations and, moreover, has gone through its own independent path of development in the minds of these people of successive generations."[6] This tells us perfectly clearly, that every department of science, even though they are also conditioned by the economic base, nevertheless all have their own objective rules for arising and developing, and these rules are independently formed and developed, not to be diverted by people's wishes and naturally also not depending on political consciousness. There are connections between them, but it is not the relationship of one being subordinate to another. The outstanding early Soviet literary and artistic theoretician Lunacharsky, based on Marxist viewpoints and practice in the development of literature and art, accurately pointed out: "What the theory of reflection is interested in, and saying that it [literature and art] is the product of an author, is not as good as saying that it is the representation of changes in society; and saying that it is [a case of] an author's subjective dependency and his connections with a certain social environment, is not as good as saying that it is the objective representation of this or that historical situation."[7] For this reason, "Art not only has the ability to show a direction to people, but moreover has the ability to create something,"[8] "an author's service to society naturally absolutely cannot end merely in politics; in political [conditions] that are really able to produce excellent results, it [literature and art] still germinates underground; and in times when the content of political theory flowering and luxuriating above ground is terribly lacking, then it is even moreso the case."[9]

2.

The thesis that "literature and art are subordinate to politics" generally rests on the following several propositions: One is to say that literature and art have a class nature; second, is to say that literature and art must serve politics; third, is to say that literature and art are a kind of higher ideology, that must go through the medium of politics before they can influence the economic base. Are these premises sufficient to expound and prove the proposition that "literature and art are subordinate to politics?" They are not.

It is correct to say that "literature and art have a class nature." In class society, the people forming the center of the [world] described by literature and art, as well as the authors describing this center, are both active within a definite class position. Because of this, regardless of whether it is the content of objective social life or is from the point of view of the one making the description himself, either case will cause the [essentially] ideological literature and art to acquire, either clearly or obscurely, either strongly or weakly, a class character. However, a class nature is an objective attribute of people (who are a combination of society's existence and society's relationships) during a definite historical stage; every ideology seeks to express itself; politics is like this; literature and art are also like this, directly determined by the attributes of this objective existence. For this reason, it is not possible to use the class nature of literature and art to expound and prove that "literature and art are subordinate to politics."

It is also correct that "literature and art must serve politics." Because politics is not only the concentrated manifestation of economics, intensely representing the advantages and aspirations of the various classes but, moreover, it is also relatively independent, a kind of "historical factor" forming the main content of the social life; it must both influence and be influenced by the surrounding environment, including the essentially ideological literature and art. Comrade Mao Zedong said: "A definite culture [a culture constituting an ideology) is the reflection of the politics and economics of a definite society, and also has a great influence and effect on the politics and economics of that society."[10] This tells us clearly that literature and art's serving of politics is the dynamic reflection and dynamic reaction of literature and art on politics; this is a great function of the essentially ideological literature and art. However, this function should not be understood as something subordinate to political concepts, but as literature and art portraying the character of the social life. This is because, first of all, literature and art use the whole of the social life as the object for representation. The people it describes are not like the people [described] in morals, ethics, political science, and physiology, which only investigate man from a certain aspect, but are the sum of all attributes--physiological, psychological and social; [they] are the sum total of all social relationships. But politics is only an important part of the content of the social life and not the entire content; political activity is only a part of the complex activity of men and not the whole thing. For this reason, whatever literature and art represents of the vast content of life, though it serves politics, it does not only serve politics. As one can see, to take the notion that literature and art serve politics and end up with "literature and art are subordinate to politics" not only does not accurately express the nature of literature and art but, moreover, is too categorical regarding the function of literature and art. Secondly, if we understand literature and art's service to politics in terms of their being "subordinate to politics," then the literary and artistic works of past times, regardless of what politics they are the products of and are subordinate to, are naturally all fundamentally distinct from a proletarian politics. Since they are not produ-ts subordinate to a proletarian politics, naturally they cannot serve a proletarian politics. In this way, how can there be any "using the ancient to serve the modern," or "using foreign things to serve China," or how can we understand the eternal charm of Greek art, or the artistic power that the works of Tolstoy, Cao Xueqin [author of the "Dream of the Red Chamber," etc still have today? Could it be that the reason these works are still today able to serve the interests of proletarian politics is because their authors were early believers of proletarian politics? Obviously, we cannot say so.

Literature and art are a kind of higher ideology, that must go through the medium of politics before they can have an influence on the economic base--this theory in itself is very problematical. Almost all of the "General Introduction to Literature"-type books that expound the "literature and art are subordinate to politics" notion delight in talking about it and causing it to become an accepted notion everywhere using the concept as if it were a kind of "reinforcing bars" material. On what basis is it claimed that "literature and art are a higher ideology?" Engels made mention of a "higher ideology" in two places, but in both it indicated religion and philosophy, without any reference at all to literature and art. In his book "Ludwig Feverbach and the Conclusions of the Classical German Philosophers," Engels affirms: "By 'higher' is meant an ideology further removed from the material economic base, that has taken on a philosophical and religious form. Here, the concept's connection with the material conditions of its own existence is more and more confused, more and more muddled by a number of intervening links." In his "Letter to K. Smith," Engels also said: "As for those higher domains of thought floating up in space, i.e., religion, philosophy, etc, etc." How can we, from the "etc" in the phrase "philosophy, religion, etc, etc" infer that art and literature are also ideologies "floating higher up in space?" Are the connections of philosophy, religion, and literature and art with the economic base all equally distant, all equally vague? This is not in accord with the practice of literature and art, and is also not in accord with the Marxist understanding of literature and art.

Looking at it from the point of view of the origins of literature and art, Marxism considers that the production of literature and art is inseparably connected with people's social and productive lives, and arise directly from the labor of human society. The earliest poems and songs were merely work-songs of the "Heave ho; heave ho!" type, and dance and painting were merely a reproduction of the working life of primitive man, or a "tool"used to transmit the experience of life and production, directly influencing people's material productive life. One can see that literature and art, compared with religion and philosophy, are not higher but still closer to the material economic base, are not floating in space but are rooted in actual soil.

Judging from the content of the social life portrayed by literature and art, it concretely, using typical images, recreates society's struggle for production, the class struggle, and the practical activity of scientific experiment, focusing on actual people; for that reason, literature and art not only can directly serve the struggle for production and scientific experiment, they can directly influence "man," this most positive factor in the productive force and, hence, produce an effect directly on the economic base. For this reason, people call the actual life reflected in literature and art the "second Nature." Can this be on the same plane with the abstractions of philosophy, and religion's many types of "God" that are so far removed from the material basis of production?

Judging from the forms in which literature and art portray reality, images are the particular style of literature and art. Not only are the people described concretely depicted, all of a person's activity, including the activity of material production, is also concretely depicted; that is to say, the entire content of the social life made up of the economic base and the superstructure can all be concretely portrayed by means of images presented through literature, drama, television, fine arts, music, etc. As for the many practical aesthetic forms that appear more directly in material products, and are directly combined with material production, can you say they are far removed from the physical economic base? The art of architecture is like this; the art of gardening is like this; industrial arts and crafts are even more like this. Our country's famous handicraft products are both physical products for practical use and cultural products that provide people with artistic enjoyment; for this reason, if there were no art, then there could not be this kind of product. On this point, how can we then discuss literature and art at the same time as philosophy, which uses the methods of general concepts and logic to portray the world, and religion, which adopts the illusion of a superhuman force to give an upside-down representation of reality?

In sum, we consider that the notion of considering literature and art to be "forms of ideology" far removed from the material economic base like philosophy and religion is worthy of further study. Actually, Engels in speaking of Balzac said that the things he had learned from the "Human Tragicomedy" "even with respect to economic details (such as the reallotment of fixed and unfixed property after the revolution), were even more than all the things I have learned from all the professional historians, economists and statisticians of the time."[12] How, then, can literature and art be far removed from the material economic base, and floating in space? Can it be said that literature and art, which serve as a "textbook of life," tend to be far removed from the material economic base that people rely on for existence, and float in space? Since the proposition that "literature and art are a higher ideology" is only intended as a natural way of speaking, in that case the concept that they go through the medium of politics to react on the economic base becomes imprecise, and hence loses validity as a premise for the notion that "literature and art are subordinate to politics."

Putting all the above together, one can see that this thesis that "literature and art are subordinate to politics" is unscientific.

Can an unscientific thesis regarding literature and art be advantageous for directing people's practice of literature and art? "Practice is the only standard for examining truth." The result of the "examination" of practice proves that not only do literature and art that are subordinate to a reactionary politics leave behind only undisguised reactionary concepts and nothing of any artistic value; even literature and art that are subordinate to a revolutionary politics might possibly have accurate political concepts but be lacking in artistic force. This is because "literature and art are subordinate to politics" violates the principle that literature and art must be based on life and practice. This rule applies to everyone without exception.

Practice proves that "literature and art are subordinate to politics" is not a correct principle. Fundamentally, literature and art can only be subordinate to the social life, and to the great mass of the people; to depart from the social life and the mass of people and speak merely of literature and art being subordinate to politics is to have only politics and not any literature or art. Comrade Deng Xiaoping in his congratulatory speech at the fourth literary and artistic congress said: "The Party does not issue orders regarding the leadership of literary and artistic work and does not require literature and art to be subordinate to temporary, concrete, direct political service, but to help, based on the special characteristics and rules of development of literature and art, those engaged in literary and artistic work to obtain the proper conditions to enable the enterprise of literature and art to flourish continuously." He also said: "Our literature and art are subordinate to the people," "the people are the mother of those engaged in literary and artistic work. The artistic [creative] lives of all those engaged in progressive literary and artistic work are in their flesh and blood relationship with the people." Because of this, those engaged in literary and artistic work should from beginning to end unstintingly face the masses, in order to guarantee the continuous development and flourishing of socialist literature and art.

STRICT CONTROL OF POPULATION GROWTH URGED

Beijing GUANGMING RIBAO in Chinese 25 Aug 80 p 1

[Article by Lin Yushu [2651 3768 2885]: "We Must Strictly Control the Increase of Population"]

[Text] "The rate of population increase must be strictly controlled. It will be very difficult for us to realize the four modernizations if this problem is not solved." This is the outcry of Song Jian [1345 0256], a renowned scientist of China on the theory of control, when he received a reporter. Song said that, during the 1950's, China's renowned economist, Mr Ma Yin-chu [7456 1377 0443] presented his theories of and recommendations on population control. For no reason whatsoever, he suffered criticism. From then on, there was not only a lack of control over the rate of population increase, but, on the contrary, a one-sided emphasis on the viewpoint that, among all things in this world, man was the most precious. It rejected all the scientific theories and concepts that population growth had to be controlled. This historical error produced a very great obstacle to the work of controlling population growth after the 1960's. In the history of China, the birth rate during these 10 chaotic years reached an unprecedented peak. The population increased rapidly. According to our statistics, the annual birth rate from 1962 to 1973 successively exceeded the highest record in history. Between 1962 and 1974, there was a cumulative addition of 340 million new children to the nation. In 1974, our population already exceeded 900 million. We thus encourage each couple to have no more than one child so that the rate of population increase might be reduced in the quickest possible way, and in the coming several decades, the total population would not increase by leaps and bounds. We must continue taking correct and forceful measures to control the rate of population growth. This is an urgent matter with which we are confronted. As Song Jian pointed out, the inertia of the process of population increase is very great. Even though from now on each couple will produce no more than one child, our population increase will not be stopped until after a quarter of a century. By the end of this century, we should have had 100 million more people. And, from that time onward, if we wish to reduce the population figure to 700 million as we had had before the

Cultural Revolution, we shall have to wait for 75 years. If, from now on, only half of our women each gives birth to one child and each of the other half produces 2 children, then our population will continue to increase for 45 years. Not until after it has gained 200 million more people will it then come to a stop.

If we fail to begin to control the population growth rate right now, what situation will we face in the near future? Song Jian has informed us of an appalling figure: "If we maintain the average birth rate of 1975, the population of our country will reach 1.4 billion by 2000 AD and will become 4.2 billion a century later." It will then almost equal today's world population. Of our country's land which is 9.6 million square kilometers in size, covered by deserts, mountains and plateaus, only about half of it is suitable for habitation. On the average, in today's China, each person can only have about 1 1/2 mu of land for cultivation. If the rate of procreation of an average Chinese woman continues to be the same as it is now, then 3 or 4 generations later, in the whole of China, each of our descendants will have only 0.5 to 0.7 mu of land for cultivation. It will be extremely difficult to carry out the four modernizations on a piece of land as narrow as this. Besides, a series of problems will accompany the increase of population such as the worsening of the system of ecology, the increase of the rate of consumption of natural resources, the difficulty in getting employment, etc. All are important issues which can be solved only gradually with our great effort at present and in the coming several decades.

Song Jian has made a further analysis in regard to the relationship between the balance of the system of ecology and increase of population. He said, "The system of ecology in the realm of nature is the fountainhead, if not the cradle, of the beginning and development of mankind. What we eat and wear and the oxygen in the air which we breathe has been supplied to us through the ecological system. The higher the standard of living and the larger the population, the greater will be the demand of mankind on the ecological system. However, the supplying capacity of the ecological system is limited. Therefore maintaining the balance of the ecological system has become a fundamental condition under which our descendants can expect to live a happy life. The only way to greatly raise the living standard and, at the same time, maintain an assured balance in the ecological system is to control the rate of population growth and to have the size of the population gradually stabilized at a proper level."

Song Jian thinks that it is important to publicize to the broad masses the importance of "controlling the increase of population" and let the people know the significance of population control. Only by so doing can we carry out the policy of population control overall. Particularly in the broad rural areas, we must promote our propaganda education among the masses most energetically in order to eradicate the thought of feudalism and the idea of "ennobling man and belittling woman." We must enable each couple to self-consciously make arrangements for their family life in accordance with the need of having only one child. We must calmly deal with the particular troubles that come up in particular areas. To control the rate of population growth is a highly significant matter which is not only connected with the basic interests of our descendants in the coming generations but also related to whether or not the four modernizations can be realized. We should not take any simple measure to compel people to do things by order, nor should be let nature take its own course or let well enough alone. If we fail to have a tight grip on the task of population control now, we shall be cursed and spat at by our descendants in the future.

Finally, Song pointed out that, since China's population is 23.3 percent of the world's population, the control of the growth of her population will naturally arouse the close attention of the peoples of the globe. We should make a contribution in this respect for the sake of all mankind.

IMPORTANCE OF LEARNING MINORITY LANGUAGE OUTLINED

Beijing MINZU TUANJIE [NATIONALITY UNITY] in Chinese No 8,15 May 80 p 19

[Article: "An Important and Far-Reaching Measure for Minority Nationalities in Xizang"]

[Text] In order to carry out the party's policy on minority nationalities, protect their equal rights, strengthen national unity, make its work more efficient and unite the masses, the Party Committee of Xizang Autonomous Region had recently issued a communication to party committees in all localities, cities and districts and to party units of all organizations that were under its direct control, requesting Han cadres and workers who worked in Tibet to study Tibet's written and spoken language. The communication requested all party organizations to immediately make the task of organizing Han cadres and workers to study the Tibetan language on an important part of reeducation in policy toward nationalities to make plans and arrangements and to carry them out thoroughly right away. It asked all leading cadres who were under 50 years of age to practice what they preach, to lead others in study and practice and to set a good example for the masses through their actions; and it asked all party members to act as models. It asked to use the study of the Tibetan language as a measure to evaluate and promote cadres and workers. The communication requested all party organizations to earnestly undertake ideological mobilization and to strengthen their leadership. It did not ask for unified study method; what it stressed was results. It asked that, within 3 years, a substantial number of comrades have a rough grasp of Tibetan and are to communicate directly with Tibetan comrades in speaking and some cadres have a rough grasp of the Tibetan written language and can read Tibetan newspapers and documents. In order to implement the above requests on schedule, the Party Committee of the autonomous region had undertaken corresponding measures.

This communication issued by the Party Committee of Xizang Autonomous Region is a very important step towards carrying out reeducation in nationalities' policy and implementing of our party's nationalities' policy; it has a very far-reaching significance.

To treat correctly the problem of all national languages is a very important part of our party's "all nationalities are equal" policy. In minority nationality regions, our party's requests are: Han cadres should study local languages and minority cadres should study Chinese. For Han comrades who work in minority nationality regions, it is very important that they learn the local languages, because this is an important prerequisite for maintaining close links with local people, correctly publicizing and carrying out party policies, effectively accomplishing their jobs and serving local people better. Chairman Mao, Premier Zhou and other leading comrades in the Central Committee had given many instructions on this issue in the past. Since Liberation, leading comrades of the party and government in minority nationality regions followed the Central Committee's and Chairman Mao's instructions, organized the vast cadres and workers in minority regions to persist in studying local national languages, and cultivated a group of professional translators. Some even published newspapers and books and began radio broadcasts in local languages. All important documents and propaganda materials of leading organizations used both Chinese and local languages. With the development of education, a rank of minority national language teachers was established; some party and government cadres, particularly the Han cadres who worked in grass-root level, had learned, to different extents, the local languages. All the above achievements played a positive role in promoting national unity, socialist revolution and socialist constructions.

But Lin Biao and "Gang of Four" madly promoted the policy of discrimination against minority nationalities. They smeared the minority national languages as "backward," "useless" and "barbarous," and their destruction of the minority national culture has had serious consequences. At present, in minority nationality regions, there is a serious shortage of professional people who know both Chinese and local national languages well; most Han cadres and workers do not know any local language at all. The actual situation in the studying of language is that most minority cadres do very well in studying Chinese but most Han cadres do not do well in studying local languages; many cadres who work in these regions still cannot speak the local language after being there for many years. This situation has seriously affected not only their work but also their relations with other nationalities; and it has become one of the serious obstacles of four modernizations. We must pay close attention to this problem and try to rectify it.

We hope party and government organizations of all levels in the regions of minority nationalities, particularly Han cadres who have the primary leading responsibility, pay attention to this problem and adopt some positive and effective measures, (including an evaluation system) thoroughly carry on the work of the study of national languages by Han cadres and workers, persevere in it and uphold it to the end.

ADJUSTMENTS MADE IN HIGHER INSTITUTES ENROLLMENT REGULATIONS

Beijing MINZU TUANJIE [NATIONALITY UNITY] in Chinese No 6, 15 Jun 80 p 11

[Article: "1980 Regulations on Enrollment in Institutes of Higher Learning Affecting Minority Nationality Student"]

[Text] According to the Ministry of Education's regulations and its policy of selecting the best, the state has been giving necessary care to minority nationality students for the past 3 years. But there is still a clear gap between them and Han examination candidates. Take 1979 as an example: in that year, the percentage of minority freshmen was lower than their percentage in the whole population; this shows that even though many measures had been taken, among them the lowering of the minimum enrollment scores for the minority nationality students, many of them still could not meet the enrollment requirements. In that year, few minority freshmen were from pastoral and mountainous regions, most came from cities inhabited by several nationalities; most were in general schools, few in key schools; and most were in social sciences, few in natural sciences and engineering departments.

On the basis of the conclusion made from the past 3 years' experience and with the approval of the State Council, the Ministry of Education, in its "1980 Regulations on Enrollment in Institutes of Higher Learning," has made some adjustments to its regulations for the past few years and has adopted some new measures. The main ones are:

1. For schools and departments in the autonomous regions that teach in local national languages, the autonomous regions themselves will set examination questions, and administer the examinations and enrollment.

2. Some of the nation's key schools of high learning will give special classes to minority nationality students this year; minimum acceptance scores will be lowered as appropriate for them; and enrollment will mainly be for examination candidates from border, mountainous and pastoral regions where minority nationalities live together.

3. Students who graduate from minority nationality high schools that teach in their own national languages and who take examinations to

enroll in schools that teach in Chinese, can translate answers in their own languages to examination questions given in the subjects of politics, history, geography, mathmatics, physics and chemistry. In the past 2 years, examination questions on language for schools that teach in Chinese were also translated and answered in national languages, but some problems were encountered: every national language has different rules, therefore, some examination questions could not be translated, (such as in the case of classical literature). Some answers that were answered in national languages were evaluated by the same unified standard used in the Chinese language test, which was unscientific. And those who were enrolled in Chinese language schools, because of their low language ability, were unable to attend lectures or study. Therefore, after discussion by the National Student Enrollment Committee, the Ministry of Education stipulated: Examination questions on language will not be translated any more, they must be answered in Chinese. But taking into consideration the fact that minority nationalities' schools' level of Chinese language teaching was generally lower than Han high schools, it was also stipulated: For graduates from nationalities' high schools that teach in local national languages and who are taking examination for Chinese-speaking schools or departments of higher education, the language examination will be given separately by the Ministry of Education, and its standard will be lower than those of Han students.

4. For minority nationality students from border, mountainous and pastoral regions where minority nationalities live together, the minimum enrollment scores can be lowered appropriately.

5. Minority nationality students who live scattered in cities, when all conditions are equal, will be given priority over Han students in enrollment.

CONFERENCE ON TEACHER EDUCATION HELD IN ANHUI

OW150315 Hefei Anhui Provincial Service in Mandarin 1100 GMT 14 Oct 80

[Excerpts] Teacher education is the machine tool of education as a whole. Only with trained teachers can competent people be turned out. We must therefore give high priority to teacher education and take effective measures and make vigorous efforts to train large numbers of fine teachers.

This was the pledge made by comrades attending a recent provincial conference on teacher education after studying and discussing the instruction on teacher education issued by a leading comrade of the party Central Committee Secretariat.

The conference was convened by the provincial education department and attended by nearly 200 people, including responsible persons of the education bureaus in various prefectural administrative offices, municipalities, counties, factories and mines as well as responsible persons of secondary normal schools, schools for training kindergarten teachers, teachers' colleges and colleges for teachers' advanced studies.

Relayed at the conference were the guidelines laid down by the National Conference on Teacher Education and the instructions on teacher education issued by a leading comrade of the party Central Committee Secretariat.

In the instructions, the leading comrade of the party Central Committee Secretariat pointed out: We rely mainly on two things to realize the four modernizations: 1) We must have a correct line; and 2) we must have large numbers of competent people engaged in construction. To discover and train competent people, we must do a good job in running education, especially teacher education.

Many principals of normal schools said: In his speech, the leading comrade of the party Central Committee Secretariat placed earnest hopes on those engaged in teacher education. It has enabled us to greatly enhance our understanding of the status and role of teacher education and to greatly strengthen our confidence in running teacher education well.

Conference participants held that all the prevailing ideas of looking down on teacher education are wrong. They also called on propaganda departments to give wide publicity to the great significance of teacher education in order to raise its status.

During the conference, Lan Ganting, deputy secretary of the provincial party committee, and Wei Xinyi, vice governor of the provincial people's government, held a discussion meeting with some of the conference participants and listened to the latter's opinions on how to run teacher education well.

In his speech at the discussion meeting, Comrade Lan Ganting pointed out: Normal schools and teachers' colleges are bases for training competent people. When we do a good job in teacher education, we can also do a good job in education as a whole. There are now many unqualified school teachers. This problem has cropped up mainly because we failed to make vigorous efforts to run teacher education and to give priority to it in the past. At present, vigorous efforts should be made to publicize the significance of respecting teachers and loving students, raising the teachers' social status and having respect for their hard work.

Comrade Wei Xinyi attended the provincial conference on teacher education from beginning to end.

BRIEFS

FAMILY PLANNING DRIVE--Beijing, 11 Oct (XINHUA)--On 11 October, the All-China Women's Federation issued a circular on family planning to women's federations at various levels. It requires woman cadres to lead the masses of women in enthusiastically responding to the party Central Committee and the State Council's call advocating that a couple should have only one child. Moreover, it stresses that the masses of women are free to choose their favorite contraceptive measures and that no orders requiring compulsory contraception should be issued. [Beijing XINHUA Domestic Service in Chinese 1638 GMT 11 Oct 80 OW]

FOREIGN LITERARY WORKS' TRANSLATIONS--Shanghai, 14 Oct (XINHUA)--One hundred thousand copies of Chinese translations of "Bel-ami" by Guy de Maupassant and "Pride and Prejudice" by Jane Austen sold out in a few days after their publication in Shanghai recently. The two books were translated and issued by Shanghai Translation Publishing House. Tolstoy, Stendhal, Byron, Sheeley, Dickens and Thomas Mann are on the list of future publications. The publishing house also intends to edit selections and collections of well-known foreign literary works, for example, it is planning to put out a series on foreign literary works of the 20th century. The publishing house is also taking part in the translation of another series on well-known foreign literary works proposed in the early 60's by Zhou Yang, well-known Chinese literary figure. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

KHORRAMSHAHR STREET FIGHTING CITED

OW170846 Beijing XINHUA in English 0820 GMT 17 Oct 80

[Text] Tehran, October 17 (XINHUA)--Violent street fighting between Iraqi forces and Iranian defenders has been going on in Iran's southeastern port city Khorramshahr since last night, according to Radio Tehran this morning.

An earlier report of the radio said that "hand-to-hand combats are occurring...house to house" last night in several Khorramshahr neighborhoods and "the defenders, who succeeded in retaking certain positions from the enemy, have made an urgent appeal to the Iranian population for aid and reinforcements as soon as possible."

In Abadan, the radio reported yesterday, Iranian army, supported by air force, waged a counterattack around the city, and forced Iraqi troops to retreat 10 kms to a point 20 kms from the city.

During the fight, the city's defenders backed by fighter planes seized four Iraqi ground-to-ground missiles, destroyed several tanks and killed or captured a number of Iraqi soldiers.

Abadan townspeople were preparing for street fighting, Radio Tehran said, Abadan's women had built barricades blocking the city's entrances as the population resisted alongside the military forces. The city "will become a hell for the Iraqi infidels" if they should enter, the radio said.

The radio also quoted a report of PARS, official Iranian news agency, as saying that at noon yesterday, Iraqi aircraft bombed Kermanshah, capital of Kermanshahan Province. A clinic, two schools and a mosque were hit.

BRIEFS

TEHRAN, BAGHDAD BOMBED--Baghdad, October 16 (XINHUA)--Iraqi fighter-bombers pounded Tehran today and set fire to oil storage tanks there, said a military communique issued by the Iraqi Armed Forces High Command this evening. Iranian jets struck today at Baghdad, the southern port of Basra, the Kurdish populated town of Sulaymaniyah in the north and other places of Iraq, the communique added. Correspondents of the Iraqi News Agency reported from the front that Iraqi forces have occupied Abadan radio station in the northeastern suburbs of the city. Iraqi warplanes had blown up all the six oil pipelines carrying fuel to Tehran. Communications between Abadan and other parts of Iran, particularly with the capital, have been cut. Fighting along all other border areas is still going on. [Text] [OW170912 Beijing XINHUA in English 0905 GMT 17 Oct 80]

PARTY AND STATE

SIGNIFICANCE OF TOP LEADERSHIP SHUFFLES ANALYZED

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1 Sep 80 pp 5-8

[Article by Luo Bing [5012 0393]: "China's Outlook as Seen from the National People's Congress"]

[Text] During the day it is sometimes sunny and sometimes cloudy; at night it is sometimes moonlit and sometimes gloomy. This is typical of Beijing's weather in late August. Isn't the political climate just as unpredictable? From 23 to 25 August, the representatives of the National People's Congress and the members of the Chinese People's Political Consultative Conference will be reporting to the meeting in Beijing from all over the country. When their scheduled or chartered flights gradually land at Beijing Airport, will they be touched by the changing scene? Will this question mark emerge from deep down in their hearts?

"Strange Tales From Overseas"

Perhaps "visitors" from Heilongjiang, Fujian, or Tibet will not be so "sentimental." But it won't be surprising if a representative from Hong Kong is deep in thought and raises such a question. Why? Because recently there have been too many "strange tales from overseas":

"Deng Xiaoping will be the National Chairman"; A revolt occurred in the Nanjing Military Region"; "Xu Shiyou is organizing an anti-Deng coalition"; "Deng Xiaoping has been arrested in Beijing. . ."

When these tales reached Beijing, I learned from "informed" sources that strange tales from overseas were strange tales, after all, and that there was no truth to them. Nonetheless, why suddenly have there been so many rumors spread overseas? Would these rumors sell overseas?

In the unusually busy VIP reception room at Beijing Airport, I met a friend from Hong Kong. When we talked about those rumors from overseas, he said that most people in Hong Kong considered them rumors rather than facts. Those rumors, however, have become the hottest August conversational topics in Hong Kong. This situation reflected the people's concern about China's politics. Perhaps some people's hearts were indeed covered by shadows.

The motives of the rumormongers may not be the same. But all the rumors have a common theme--namely, they are unfavorable to Deng Xiaoping. Some people are trying to spread an atmosphere of Chinese political instability before the opening of the Third Session of the Fifth National People's Congress.

Hu Yaobang's Speech

Why in recent years has the spearhead of overseas rumors been pointing toward Deng Xiaoping? Why did those people detest Deng so much? Many of the young friends I met in Beijing were critical of Deng's abolishing the wall posters. Yet many others lauded Deng for his work in the past three to four years: from the overturning of numerous unjust cases, to the de-deifying of Mao Zedong; from his struggle against forces within the party that dedraggled the "four modernizations," to his opposition to blind faith in, and worship of, an individual; from the stimulation of the nation's economy, to the partial liberation of political life. They considered Deng gutsy, courageous, methodical, and competent--a rare politician and pragmatist. According to a recent speech by Hu Yaobang, the top lieutenant under Deng, the current situation in China is quite good and China's future is quite attractive.

Hu's speech was delivered at the CCP National Propaganda Work Conference on 14 July in Beijing. Originally the conference was to be presided over by CCP Propaganda Department Secretary Wang Renzhong, but Wang was absent due to illness. In his stead, Lu Dingyi and Zhou Yangxian addressed the conference, and Hu also talked about eight problems. This speech by Hu, even when passed down the ranks, was not allowed to be recorded or taped. Thus the speech I heard from some friends is at best the basic idea of its basic content.

Founding, Construction, and Development of the Nation

In his speech, Hu recounted the three periods in the course of the 59 years of the CCP and the nation:

1. 1921-1949, i.e., from the founding of the CCP to the founding of the People's Republic of China, may be called the Founding Period. These 28 years witnessed countless ups and downs, and the road was tortuous, he said.

2. 1949-1976, i.e., from the liberation of mainland China to the death of Mao Zedong, may be called the Construction Period. The greatest turmoil during these 26 years was the 10 years of calamities of the Cultural Revolution.

3. After 1977, the period may be called the Development Period. Hu believed that great changes have occurred in these three years, and he cited the liberalizing of thought, the pragmatic approach, and the adjustment of the economy as evidence. He said that since 1979, people who had experienced great setbacks and difficulties have regained their confidence in the future. Hu believed that the nation's future is very promising and that people under the age of 65 may all see a bright tomorrow.

Calming Down "Three Great Stormy Waves"

Hu said that three great stormy waves have been calmed since last year: first, the Xidan Democracy Wall Affair; second, the leftist upsurge (in reference to the Fanshi [0416 2508, "Everything-Is"] Faction); and third, the security of society--robbery, illegal emigration, burglary, murder, etc. These three tasks were accomplished without resorting to methods of political movement. Rather, the methods used were to strengthen the party's leadership and upgrade ideological work, including the implementation of policies and other political and economic measures.

Beyond and Within Expectation

The secretary general remarked that the original plan for 1980 was to increase industrial output by 6 percent and aim for an increase of 8 percent, but a 13 percent increase is now in sight. This might be deemed either beyond expectations or within expectations. Why is it within expectations? It is because the Fifth Plenary Session of the 11th CCP Central Committee readjusted the plan and implemented policies conducive to economic development. The appearance of the countryside is rapidly changing. He gave one particular example: in suburban Shanghai, the average yearly per capita income for a couple of production teams has already reached 1,000 U.S. dollars. Hu said that, nationwide, there are 1,000 brigades whose average yearly per capita income has exceeded 300 yen. He was against the use of a "wealth contest" as a means of promoting production in rural areas. He considered this in essence a method of using the techniques of mass movement and politics to handle the economy. Hu reaffirmed the positive effect of individual farming, saying that one should not equate individual farming with capitalism. Under the present conditions of low productivity, certain types of work must be carried out by the individual. In the past, collective labor was uniformly adopted for farming, but in practice it always turned into collective loitering. Individual farming must be differentiated from the initiative of capitalism.

Persons Under 65 May See

In criticizing the communications equipment of XINHUA NEWS AGENCY as being far behind the times, the secretary general mentioned that the problem of modernizing the people's life is one of electrification. Hu said that he had asked the Ministry of Water Conservation and Electric Power to make an estimate on how many watts of electricity the state must supply in order to realize the electrification of the people's life. A life with a television set, a refrigerator, an electric fan, and a telephone might be achieved step by step in 10 years, starting from the large and medium-size cities and then to the villages. He also said that a mere 1 percent increase in energy source would increase production by 3-5 percent.

At the Propaganda Work Conference, Hu strongly emphasized speaking the truth and was very much against false, big, and empty talk. But can Hu's prophecy that the country's future is full of hope and that people under the age of 65 may all see a glorious prospect ahead be realized?

The "Big News" at the National People's Congress

At the present time in Beijing, as elsewhere in the country, many people no longer believe any CCP leader's words about how wonderful, how bright, and how glorious the country's future will be. Everyone shares a common "wait and see" attitude. See what? See the facts. The common people are realists; they are no longer idealists. For this reason, the public's feeling toward this National People's Congress is sort of like "watching a parade."

Will the National People's Congress produce any bombshells? There is not going to be any sudden, great news. But the organizational adjustments and personnel shuffling at the State Council must be considered big news.

Three Meanings of Personnel Shuffling

The recent personnel shuffling at the State Council is quite significant.

First of all, the central government has become more youthful. Several aged vice premiers have been ousted from the State Council and replaced by younger and more energetic successors. The average age at the premier level has been reduced. Of course, the rejuvenization is rather limited. The Central Secretariat established by the Fifth Plenary Session of the 11th CCP Central Committee was considered a young unit, but Chen Yun was not satisfied, saying that the average age was still rather old. Chen proposed that the Central Secretariat also adopt its own "four modernizations," i.e., (1) rejuvenization, (2) intellectualization, (3) specilization, and (4) systemization. Conceivably the revamped State Council should also adopt these "four modernizations."

Secondly, the central government is setting examples for the whole nation in conscientiously renewing the leadership and ranks of the cadres. At present, the State Council has a big responsibility and a long journey ahead of it, and it indeed needs "strong men" who can diligently carry out the party's line and who have better ability to serve at the premier and minister levels. Some point out that Zhao Ziyang, while good at handling the economy, is inexperienced in foreign affairs. True, Zhao does have some good qualifications and some shortcomings. But in all of China, how many persons possess the all-around ability of Zhou Enlai? Zhao is faithful to the line of the Third Plenary Session of the 11th CCP Central Committee, and he is courageous, authoritative, and daring; he must be deemed a rare talent. Wan Li is a man of similar talent. Both should assume more important posts, and they are likely to improve government efficiency rapidly through practical action. The recent personnel shuffling is, in reality, an experiment in abolishing the life-term system. Those who have good character, ability, and health should rise to the top; those who are old and not-so-qualified should step down. Every agency and every department should observe the fundamental principle that those who mismanage should resign. Now that the State Council has set the example, the magnitude of its influence is beyond estimation.

Furthermore, resistance to implementing the party's line may be lessened. In the past few years, certain top officials at the State Council controlled the economy, but their minds were rather stiff. They were not extreme leftists, nor did they belong in the "gang of four." But ideologically they were contaminated by factionalism and were leaning toward Wang [Tongxing]. Emotionally they resisted every thought-liberalizing and format-breaking plan, policy, or approach. Thus they either proceeded halfheartedly or resisted the party's line. Equally bad is the fact that they clung to factionalism and reinforced each other. In so doing, they become obstacles to the execution of the line laid out in the Third, Fourth, and Fifth Plenary Sessions of the 11th Party Central Committee. Now, with the resignation of some top officials from the State Council and the adjustments in some departments, this obstacle has suffered a great setback and has been greatly weakened. This situation may be beneficial to future work in economy. Some say that it may be advantageous to retain some opposition within the government. At this moment, it appears exactly so.

Judging from the changes, the leadership at the State Council has been strengthened and its overall capacity enlarged. This is a guarantee for new developments in the nation's political and economical life. That is to say, the outlook of the country will be better than in the past.

Many Unresolved Problems

Of course, the problems are not that simple.

For example, in carrying out the election, certain districts and units did quite well; the flavor of democracy was quite rich. No longer is it unusual to see talented persons receive recognition and college graduates rise to leading posts. However, in many districts and units, election remains a put-on, a window dressing. The gate to democracy is not yet wide open. This is a fact of political life.

To cite another example, resistance to reviving the economy is still formidable. Some cadres consider the present economic policy something smacking of "capitalism" and "revisionism" and resist its implementation. Many farmers are afraid that the policy concerning privately owned land and livestock may change. Farmers in the mountainous areas of Guangdong felt more secure only after the government issued certificates for the private lots. In many enterprises, all sorts of problems arose from adjusting salaries and giving bonuses. Some enterprises reported temporary phenomena of loitering and strikes. In certain units, suicides and murders occurred because of quarrels over distribution. This is a fact of economic life.

To cite yet another example, the arena of literature and arts is sometimes "open" and sometimes "restricted." Some of the conditions of "restriction" stem from the authorities' ideas, and some are due to disturbances among the underlings upon hearing words from higher-ups. What crime did Liu Binyen [0491 6333 7159] commit in writing "Between Man and Monster"? But his situation became awkward after some criticism from higher-ups. His request to attend proper literary activities abroad on invitation was not approved, after a long delay. The movie "Tonight the Stars Shine" by Bai Hua [4101 2901] was acclaimed by many, yet it was attacked by some VIP, who mockingly said, "Tonight the stars don't shine." The imposition of "restrictions" in the arena of literature and arts today, however, is no longer possible. Many authors and editors are quite courageous, unafraid of the chilly winds, and bold enough to counter the current. The situation in the arena of literature and arts is a reflection of the stormy political life.

Resistance to Retirement of Old Cadres

In conclusion, I must mention some discouraging events. At present, the CCP is trying to process the mass retirement of old cadres from the party, the government, and the armed services, and at the same time to promote large-scale employment of intellectuals and middle-age and young cadres. This is a great event that has strategic significance. But the task met a great deal of resistance, and its progress has been slower than anticipated. Why has there been such great resistance? Simply put, many old cadres want to keep their positions in order to preserve their power. Their attitude is "I have seniority. I am staying put. What can you do to me?" In China, power means everything.

Many cadres have become intoxicated with power because of conveniences such as being able to go through the backdoor to get things done, buy expensive goods, purchase imported electrical appliances, and place their children in ideal positions... Old guys who hang on to their high posts, however, are not popular. There was an article that appeared in the 14 August GUANGZHOU RIBAO entitled "The Senile Churchill." It vividly depicted the senility of former British Prime Minister Churchill at the advanced age of 80. Isn't this an article that was hinting obliquely at someone?

A Tale About Ye Jianying's Eldest Son

With the opening of the Third National People's Congress, Chairman Ye Jianying is again as busy as can be. People expect someone like Marshal Ye, who has rendered outstanding service to the country but is now old and in poor health, to set an example for the elimination of the life-term system and the promotion of up-and-coming young talent. Rumors about Marshal Ye abound in Beijing; most of them concern "power." "A rumor ends with a wise man," but rumors are passed around particularly among the wise men (the intellects). I heard an unconfirmed but rather shocking tale from a friend who came to Beijing from Guangdong: the eldest son of Marshal Ye, Ye Xuanping [5509 6693 1627], may become mayor of Guangzhou Municipality; Yang Shangkun [2799 1424 2492] and Xi Zhongxun [5045 0112 0534] are to be transferred to the central government. The latter possibility has been tossed around before. The first part of the tale, I believe, is unfounded. Ye Xuanping's current position is deputy governor of Guangdong Province (to date, few overseas know that Marshal Ye's son is deputy governor of Guangdong Province). He was trained as a technologist and is said to be quite capable. But if he should become mayor, would he win the support of the people? It doesn't seem easy. Rumor also has it that the first secretary of Yuexiu District in Guangzhou, u Senglin [4281 2773 2651], a 1951 graduate of Qinghua University, may be promoted to secretary of the Guangzhou Municipal Committee. Although these are just rumors, it suffices to say that "an empty hole invites the wind." At least, they reflect how people view Marshal Ye.

The Key Is Reform

I am convinced that the minds of certain top party officials are filled with feudalistic thinking. They take advantage of their privileges, seizing every opportunity in every possible way. I also believe that the best decision for Marshal Ye to make would be to retire with honor and set an example for the turnover of leadership. This should win the hearts of the people. There is hope for the country, and there are many problems confronting the country. These are the characteristics of the current domestic situation. How to solve these problems? The key, I am afraid, is in rectifying the workstyle of the party. To rectify incorrect workstyle, all unreasonable systems must be reformed. It is a big job, but it is a task that true revolutionaries and politicians must not avoid.

PARTY CADRES MUST REMEMBER THEY SERVE THE PEOPLE

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1 Sep 80 p 4

[Editorial: "Keep the Welfare of the People in Mind!"

[Text] Recently the Shanghai Municipal Party Committee's party school gave a "test" to a class of students who were office chiefs and above. The first question was: What is the purpose of socialist production? All kinds of strange answers were given by the students:

"Production for the sake of revolution."

"Production for the sake of strengthening the proletarian dictatorship."

"Production for the sake of improving the rate of production."

Numerous fancy words were used, except that the term "people" was forgotten. No one seemed to know that the purpose of socialist production is to improve the well-being of the people.

This is not an isolated phenomenon. In the past 30 years, we have heard enough of cliches like revolution and strengthening the proletarian dictatorship, etc. Has any top Chinese Communist official ever declared that the purpose of socialist production is to improve the well-being of the people?

The fact is that within the Chinese Communist Party there are countless "revolutionaries" who never look at the people or think about the people. These revolutionaries come in two types.

The first type of revolutionary does not consider people as human beings. A typical example is the petroleum czar (a VIP in the petroleum kingdom) who was responsible for the sinking of the offshore oil rig, Bohai II. They did not care about the lives of the ship crew; they forced Bohai II to proceed with the wrong kind of work at the wrong time and in the wrong palce. As a result, the ship sank 72 crew members died, and the country lost 37 million dollars.. Regarding this matter, the cadre in charge at the Ministry of Petroleum Industry even made self-mocking remarks. Said he, "Struggle necessitates sacrifice." "Pay your tuition while you learn!" How lighthearted. And how glorifying! Minister of Petroleum Industry Song Ming also tried to cover up. These bureaucrats share a distinctive style--treating the people as weeds and ants, but never as human beings. The great revolution that took place 30 years ago converted many from devils into humans, yet in the past 30 years these top bureaucrats among the bureaucrats have turned humans into devils! They do not resemble a human, let alone a communist!

The other type of revolutionary is slightly better. He treats the people like humans--but as his servants. One hundred years ago, Marx and Engels were already uneasy about the cadres in socialist countries turning from servants of society into maters of society. It seems their worries were well-founded. Among the ranks of the Chinese Communist cadres, the secondary bureaucrats, the privileged members, the party bosses, and the prodigals are the so-called masters of society, in the words of Marx and Engels. They strip the people of their civil rights at will and infringe upon the people's interests. Some of them behave better, vowing that they would rather be selling yams at home than not governing the people properly. But doesn't the concept of "governing the people" also have the positions of master and servant reversed? This type of person would be more suitable as an uncorrupt, benevolent overlord in a feudal system, but certainly not as a qualified communist cadre in a socialist country!

Why does the CCP have a large number of unqualified members? The cause is complex. One of the facotrs is the feudalist mentality, especially the messianic mentality which for 30 years has plagued the party like a cancer.

For decades many Communist Party members have been singing the line from the "Internationale," "There has never been a so-called messiah." But they also have proclaimed: "The Communist Party liberated the whole nation." Isn't this a manifestation of the messianic mentality? Mao Zedong willingly accepted the plaque of "Great Savior of the People" presented to him by the masses and enjoyed listening to "The East Is Red" extolling him as the "Great Savior of the People." This is a typical example. If one proclaims oneself the savior, there is no need to take the people seriously. The feudal emperors clad in yellow robes controlled the life and death of their subjects. The subject must die on the emperor's order. The socialist saviors who wear the bright red gowns have the same prerogative. The people must die on the masters' order. Didn't the grand tradedy of Bohai II take place under the blind command of the petroleum czar?

Feudalist socialism is in fact antisocialism, being primarily antipeople. It is time that the CCP, deeply plagued by feudalist socialism, pay attention to this cancerous disease! Unless the disease is eradicated, the party's worksyle will not be rectified and the "four modernizations" will not be realized. We hope that true revolutionaries, on the one hand, will strengthen ideological education within the party and open fire on extreme leftism, feudalist socialism, the messiah mentality, bureaucratism, the special-privilege mentality, the class concept, and the life-term system. We also hope that, on the other hand, the CCP will get on with the big operation--purge party members who do not act like human beings, dismiss unqualified members who cannot be reformed, and conscientiously rectify the party's workstyle. Meanwhile, the party should work hard with the people to eliminate unreasonable political systems and revive the people's democratic life. Only by so doing will the task of the party be accomplished and the country have a promising future.

The Third Session of the Fifth National People's Congress is now in progress. We do not want to say much more. We would jsut like to remind the ruling party:

From now on, keep the welfare of the people in mind!

DENG XIAOPING, ZHAO ZIYANG APPRAISED BY SICHUAN PEOPLE

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1 Sep 80 pp 10-11

[Article by Lingwen [0109 2429]: "The Sichuan People's View about Deng Xiaoping and Zhao Ziyang"]

[Text] The Three Ups and Three Downs of Deng Xiaoping's Inscription

The Sichuan people are straightforward and open; this was my first impression upon entering this province.

How can we prove this? Perhaps some would say that it is easy to sense but difficult to tell.

Perhaps one episode can be given as an example.

In Chongqing, I became acquainted with a new friend; he cordially kept me company everywhere I went. When we passed by the gate of an institution, he suddenly halted and said, with his finger pointing: "Look!"

What he pointed at was a signboard, on which was an inscription by Deng Xiaoping.

I said: "This is Deng Xiaoping's inscription, what's so special about that?"

"This signboard was inscribed before the Cultural Revolution," he guffawed heartily: "Soon after the Cultural Revolution began, it was chipped off. When Deng Xiaoping returned to office in 1973, it was painted on again. When Deng was subject to criticism in 1976, the signboard disappeared once more. During these past 2 years, it came out once more. You see, a signboard by itself is very simple, but in this case it has had such a complicated experience."

"Will it be taken down again?" I jokingly asked.

"Unlikely, definitely unlikely!" he seriously replied.

Not Sold on the Eight-Grade Wage System

Deng Xiaoping is a native of Sichuan. In the early post-liberation period, he was stationed in Chongqing to preside over operations in the southwestern region; it is understandable that the Chongqing people are especially fond of him. But it is probably not enough to interpret the episode this way; it is probable that the policies Deng Xiaoping has carried out and insisted upon are of great influence to Sichuan either in the past or at present.

It was said that not long ago Deng Xiaoping came to Sichuan on an inspection tour; this was probably a need on his part to keep in touch with the basic level and to understand relevant conditions just prior to the convening of the National People's Congress. The Chongqing people revealed that Deng Xiaoping had had this to say: "As a matter of my own personal opinion, I don't quite agree with the eight-grade wage system."

The eight-grade wage system came into existence with the founding of the state; it seems likely that this was also copied from the Soviet Union. When a worker first enters a factory, he is given the first grade; from then on he is appraised every few years and promoted to a higher grade, until he reaches the eighth grade. Workers at every given grade generally earn the same salary, with only slight variations according to conditions in different regions.

Except in the case of transfer, a worker's station is fixed, and his wage is also fixed according to his grade. Workers of greater ability but lower grade receive less pay than those of less ability but higher grade. The wage of a worker whose appraisal is not good enough to earn him promotion to a higher grade remains the same in 10 or in 8 years. "Whether he works hard or not, it is the same!" "If you work, it is 36 yuan; if you don't work, it is 36 yuan too!" This is why there were such sayings.

Recently, reward money has been added; those who do well can earn a bit more income. But this reward money system is still not perfect; there are often controversies at the time of appraisal, or everybody would be given a reward, whose meaning is therefore not very great. Besides, the reward cannot exceed a certain proportion in relation to the basic wage; thus this has left the eight-grade wage system intact.

What did Deng Xiaoping mean by what he had to say? Very likely, it was his opinion that this unreasonable system should no longer be allowed to constrain the workers' enthusiasm. If these eight grades are removed and a worker is allowed to receive his wage according to the quality of his work by the geniune application of the principle of more work more pay, a fundamental change may well take place in the situation.

In a capitalist society such as Hong Kong, a worker has no iron rice bowl in the first place and is not given an inflexibly fixed wage in the second place; if he does not do well, he is liable to be "fired"; if his working hours fall short, his work time is reduced; if he does more work, his wage is also increased correspondingly. Hence, a worker usually "puts his life on the line" in fulfilling his task. If such a system is placed in the socialist society, will it have no consequence? No, I believe the consequence is going to be very great.

In the interior, the eight-grade wage system has always been looked upon as something "holy and inviolable" or "prescribed by imperial authority"; who would have dared to doubt it, let alone to revise it? But it was Deng Xiaoping who dared to have something to say and who dared to express a different opinion. This is why Deng Xiaoping is Deng Xiaoping. This is the Deng Xiaoping who is so especially fondly regarded in the eyes of the Sichuan people.

Not long ago, there was a rumor that China was prepared to allow the dismissal of workers (naturally on sufficient grounds), and also to let workers move freely in search of the factories they may choose, and the factories also recruit their workers freely. This may be said, in essence, to be a change that really "gives heaven and earth a shock and makes both ghosts and gods cry" (in the case of some people who have become ghosts or gods, if they cannot think this through, they are really likely to cry with a running nose, on earth or in heaven), and it must of course be based on the removal of the eight-grade wage system, or otherwise it would be completely useless.

However, it is not unlikely that dogmatists, "whateverists," and people whose remnant poison from the extreme-"left" line is not yet cleansed would create great obstacles for this kind of new policy. It is hoped that, whether or not this can be realized, the session of the National People's Congress this time is going to give some indications.

Goods Abundant and Prices Reasonable in the Chongqing Market

The Sichuan people exhibit a special self-pride; this is not only because, as a basin, the place which has always been called "the heavenly kingdom of abundance" has been able to feed 970 million population, the equivalent to a medium country, but also because in the past 2 years Sichuan has become outstanding in all aspects among the country's provinces, municipalities and regions. Foremost, naturally, was the fact that "a place suffering foodgrain shortage" had become "a place enjoying a surplus of foodgrain," and this solution of the food problem alone was hardly anything simple. Next, the supply of auxiliary foodstuffs and daily amenities has been really unprecedentedly abundant. In Chongqing, I went to a market to take a look; there were rich supplies of meats and vegetables and the prices were low; long beans (in pods) cost only 5 fen a big pile which weighed probably more than 1 kilogram. This serves as a catalyst for all the rest. In the market there were also finely drawn advertisements; although what these advertisements propagaged was vegetables, and how much effect they had was questionable, the atmosphere, nevertheless, was new. The absence of shortage in auxiliary foodstuffs had a great deal to do with the fact that they were allowed, after purchase by the state, to be freely supplied to the market. In the vicinity of the market, there were also not a few individuals spreading their supplies for sale; and there were also plenty of light eats stalls.

Generally speaking, the market was very lively.

Results of Birth Control Work in Sichuan Very Great

When speaking of developing new resources, attention must be paid also to the control of consumption. Another thing on which the Sichuan people pride themselves is that, last year, their population growth rate was reduced to 0.2 percent, and in the context of the whole country their control of the population growth rate was thus most successful. As I understood from Chengdu and Chongqing, people generally set up plans to have only one child, and they were commended by the state.

"Do people actually subscribe to this?" I asked a friend.

"They do. Too big a population really won't do!"

"How about the countryside?"

This friend hesitated a bit, and then said: "They do there, too; of course, it is necessary to grasp propaganda and education well and carry out the pertinent policies and measures."

It is really quite a problem whether or not people in the countryside can think through the question of birth control. In other provinces, these kinds of stories were heard: women with several children already would go to the homes of relatives elsewhere and give birth to their additional children there in order to avoid supervision by local authorities; there were also zealous youths forcibly dragging "illegal" expectant mothers to the hospitals and imposing artificial abortions on them. Here is a contradiction: birth control is necessary, but many people still cannot accept it. When a married couple wishes to have a child, an application must be submitted in advance, and its approval secured, before "realization"; this is surely something not very easy to comply with. Therefore, there have been many laughable things which one hears but cannot laugh at. Wherein lies the key? It lies still in that people's feudal thinking has been deeprooted, and it is not easy to try to really solve the matter from the point of view of such thinking. But, in the case of the Sichuan people, this problem does not seem to exert such great pressure; hence it was possible for them to achieve better results. This probably has a great deal to do with the endeavors put forth by leaders and cadres.

Zhao Ziyang--the Sichuan People's Pride

More than once I have heard this kind of criticism: China's common people are too well behaved. So long as their life happens to be bearable, they readily feel satisfied; officials need only pay some attention to reasoning and look after realities to win their equally ready gratitude and submission; these are the characteristics of China's common people. There is also another point: so long as there is a geniune turn for the better in various aspects, they are liable to quickly forget the hardships they suffered in the past--or at least no longer mind them. The fact that people in not a few places still have complaints is merely because there has really been no genuine turn for the better. In Sichuan, people seldom talk now about the fact that only a few years ago there were still people starving to death, but that their life today is really not very bad--but, in reality, if measured with the yardstick of a modern advanced society, it is still very far from being adequate. Yet the Sichuan people have been full of praise everywhere. If they are asked:

"Why has the change in Sichuan happened so rapidly?"

The answer consists of only a name: "Zhao Ziyang!"

A period has already elapsed since Zhao Ziyang left Sichuan and moved to the central headquarters. The Sichuan Provincial Party Committee's first secretary today is Tan Qilong [6223 0796 7893], former first secretary of the Qinghai Provincial Party Committee; Sichuan's provincial governor is Lu Dadong [7627 1129 2639], former first secretary of the Chongqing Municipal Party Committee. But people very seldom mention these two gentlemen; if they mention anyone, it is always Zhao Ziyang, as though he were still stationed there in Sichuan.

Perhaps this is one more pride: Zhao Ziyang is soon to advance from vice premier to premier. "Why! He is transferred up there from our Sichuan!"

The time Zhao Ziyang spent in Guangdong has been far longer, and he was stationed also in Inner Mongolia. But it is obvious that people of Guangdong and Inner Mongolia simply do not have such sentiments for him.

The fact that Zhao Ziyang's economic policies achieved great results in Sichuan was of course an important reason; but if Lin Biao, the "gang of four" and their ilk had not caused such great damage, and if it were not for the new political climate that emerged after the overthrow of the "gang of four," it would not have been so easy for Zhao Ziyang to become so "pampered." Is this not what Meng Ke said about "a hungry man being easily satisfied with any food, and a thirsty man being easily satisfied with any drink"?

It may be mentioned in passing that, in places other than Sichuan, people are not necessarily so warmly attracted to the prospect of Zhao Ziyang's being in the process of become the premier. Generally speaking, they are far more calm and objective politically. No one is saying that Zhao Ziyang cannot handle the office of the premier; but neither do they give clear indications as to whether he is "the best candidate" for the job. Why? There is probably also a pertinent saying in this case: "After one has experienced the ocean, it is very hard for one to think much of ordinary water." With his incomparable talent, Zhou Enlai served 27 years as the nation's premier; in the face of his august stature, it is very hard to be a successor, indeed. Not only Zhao Ziyang, but whoever serves now as premier except Deng Xiaoping himself would face the same difficulty.

But, once Zhao Ziyang proves able, after he "organizes the Cabinet," to lead the people of the whole country in a down-to-earth way and, just like what he did in Sichuan during the past 2 years, more speedily and more satisfactorily reverse the present situation in which people still have many dissatisfactions, it would then be unquestionable that he would win the kind of high reputation and support that he did in Sichuan.

PARTY AND STATE

BE CAREFUL TO CHOOSE GOOD PERSONS WHEN SELECTING CADRES

Nanjing XINHUA RIBAO in Chinese 18 Jul 80 p 2

[Article by Shen Qian [3947 0469]: "Using the Deception of Zou Ji [6760 1803] as a Starting Point for Discussion"]

[Text] To change the cadre organizations by selecting and promoting excellent middle-age and young cadres to leading posts is a matter of immediate concern. Exactly for this reason, there have recently been in many places mny new instances of giving way to good persons, recommending good persons, and nominating good persons. This is certainly commendable. I believe, however, that leading comrades have to pay attention to one more thing, and that is to distinguish between good and bad persons and thoroughly know everyone we have appointed. There have been many cases in history in which one who flattered was trusted and one who was upright and firm was denoted in rank.

This reminds me of the story of the deception of Zou Ji. Anyone who has read "Zhanquoce" ["Strategies of the Warring Kingdoms"] knows that Zou Ji, the prime minister of Emperor Wei of the Chi Dynasty, was very smart. He was able to avoid being hoodwinked by his wife and concubines or by his friends: he was able to get rid of the entanglements of "being favorable to me," "being afraid of me," and "requesting me to do something"; and, by seeking truth from facts, he was able to admit that he was not as good as Minister Xu. From this, he also got the inspiration to satirize Emperor Wei of Chi's habit of taking advice, as the emperor would ask his ministers and people "to personally investigate the wrongdoings of me, your unworthy emperor". Under the historical conditions of the time, this was really hard to come by.

But even a shart Zou Ji was on occasion hoodwinked. At that time, the Chi Dynasty was making great efforts to build a strong country. Zou Ji had investigated the good and bad among the city magistrates. All the officials in the court unanimously praised the official in Ayi as good, and all of them criticized and censured the official in Jimo as bad. Zou Ji thought he had the consensus and made a briefing to Emperor Wei. The emperor did not heed him unquestioningly, but secretly dispatched somebody to conduct an investigation on the spot, and thus learned the actual conditions about how these two cities were governed. Then he called these two officials to the court. He earnestly consoled the official in Jimo who had been slandered. He praised the fact that, under his rule, and the countryside were open and broad, the people were rich and prosperous, and public business was just and fair. Only because he devoted himself to governing the city and did not like to curry favor, he was discredited. The emperor also said: "How good a magistrate you are!" Such talk stunned the court officials and rendered them speechless. Emperor Wei then turned to the official in Ayi: "In your city, the countryside is overgrown with underbrush, and people are suffering from cold and hunger. You only know how to bribe my entourage with valuable money to obtain a good reputation for cheating. You are the worst person I know." Then he asked his bodyguards to carry in a cauldron and had the corrupt official and swindler put inside and "boiled" to death. This story told people that in selecting and promoting talent, to distinguish the good from the bad is not a very simple matter.

For a period of time there has been much discussion about the selection and promotion of talent, revealing both concern and worry. The concern is whether it is possible to select and promote good and able persons of real talent and real learning. The worry is whether it is possible to have bad persons who flatter and cater deceive us by assuming a similar appearance. Such a state of mind is understandable, because persons like the official in Ayi have still not completely disappeared, and there still exist persons, like those around Emperor Wei of Chi, who hoodwink those above and bully those below and are corrupt in politics, and persons like Zou Ji who do things in broad strokes and are easily hoodwinked. What worries people most is that some leading persons themselves have a bad style and are fond of boasting but do not like to be criticized. They are fond of being given a fanfare and being carried in a sedan chair by somebody, and being served with particular attention by those who curry favor; what they most of all do not like is to have somebody give straight advice and a different opinion. This means that people of the serious, gentlemanly type will step back upon a glance, and those who flatter will take advantage of any opportunity. I myself have had the occasion to contact leading comrades at the basic level, and have often found that there exist around them persons who flatter and cater and do not skirk hardships to serve under someone. They are extremely "considerate" of their superiors, and the superiors are also very close to them. Although we cannot state that they are all bad, it is certain that there are not many who are wise, able, and upright in character. If they are relied on as the eyes and ears, it is very easy for one to fall into their traps. Is it true that such things occasionally happen in real life? Those who have real talent and real learning, work intensely and earnestly, and despise boasting and flattering are criticized, boycotted, and overshadowed or forgotten, while those who have no real talent but are able to boast and flatter and do not do anything meaningful but are able to be hypocritical win gracious looks, are promoted, and have the "politician's spell of good fortune." Certainly, the causes that make these things happen are not simple. There are also other causes such as prejudice against intellectuals, the evil effects of the theory that only class origin should be taken into account, the tradition of making assignments on the basis of seniority, the concept of being close to old colleagues, old subordinates, old friends from the same county or province but distance to others, etc. But, as in the case of flattering, all these have something to do with the old vine of feudalistic ideology. As long as feudalistic ideology still has suitable soil in the ranks of our cadres, it is necessary to pose the problem of being careful to distinguish the good from the bad.

Let us refer back to the story of the deception of Zou Ji. It shows that to really understand a person, it is necessary to work hard to investigate. Even "public clamor" is not necessarily reliable, and especially a certain individual's "seeing what others cannot see" is not to be believed blindly. The only method is to go deeply to the masses to understand. We will avoid being hoodwinked only if we get hold of first-hand materials. Certainly this is more difficult than listening to a general briefing, but without doing this it is impossible to accurately evaluate the good and the bad. Not long ago, public security and agriculture and forestry departments and such places as Changzhou city have adopted measures of walking the masses' path to select and promote many reserve cadres, and there are many units and regions doing the same. Conditions today are much better than in ancient times, and therefore we not only can prevent things similar to the deception of Zou Ji from happening, but we are certain that we can do better than Bo Le [a famous trainer of horses in Chinese history] in appointing good and able persons to office and tapping talent.

COMMENTS MADE FOLLOWING TRIP TO BEIJING

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1 Sep 80 pp 14-15

[Article by Hai Ke [3189 1356]: "My Observations in my Tour to Beijing"]

[Text] Lifting the Curtain over the Nude Picture and the Rest

The August number of ZHENGMING reported that the "nude picture" at the Beijing airport continued to be covered by a cloth curtain, and it also had a photograph taken on 21 July as proof. When this writer went to and departed from Beijing in early August, he dined twice at the "Foreign Guests Restaurant" on the second floor of Beijing airport, and on both occasions he had the chance to see this nude picture, which was described as the cause for "upheavals." There was no doubt that a cloth curtain was hung over the nude picture; but this curtain was parted on either side, with only small portions of the picture covered, while the bulk of it was still visible. Inside the restaurant, there were both Chinese and foreign tourists dining; but few paid any special attention to it. This experience made me realize that it was indeed a fact that some wanted to have the picture covered by a cloth curtain, but by August the incident had already become insignificant; although the cloth curtain was not taken down, it no longer played any significant role.

I wonder if this actually reflected a special situation in the interior at this time; that is, on a considerable number of questions, many different opinions were expressed as a rule. Contention, of course, was natural. But when such opinions were expressed by some powerful figures, what was to be done? Ordinarily, no matter how high the positions of these figures might be, so long as theirs were only opinions of individuals or a small minority, they need not to be carried out. However, for a long time the authoritative nature of the "will of the superior" or "directive from the leaders" had become habitually recognized, so that there would seem to be something inappropriate if such opinions were ignored; but, on the other hand, there would seem to be hardly any reason to call a Politburo meeting or something of the sort to conduct any discussion or study, whether a big or a small matter was involved. As a result, what happened was the adoption of a tentative measure to comply with the opinions expressed, after which there would be some play with formalism, so that, with due passage of time, the old practice could still be restored if feasible. At any rate, the masses usually would have no particular opinions, and those great personalities who did express an opinion might not come to look at it again; or even if they knew what was to happen, it would be inconvenient for them to pursue the matter since it had already been faced. Thus, "upheavals" could very well end up in a scene of peace and calm.

The above is, of course, this writer's speculation, and I have no sure proof to back it up. But, in the absence of such a process, it would be very hard to understand why such a "strange practice" of hanging up a cloth curtain but not actually covering the picture should have been undertaken. Being viewed as a "strange practice" suggests, of course, that it was not normal. This writer went before the picture to look at it again and again, but failed to discern why the few "nude figures" depicted there, which happen to be far from realistic because of their stylized postures, should have become "intolerable" in the eyes of certain people to begin with. There are only two possibilities that this was a case of a little man substituting his own thinking for that of a gentleman. One is that his (their) mind happened to be too dirty, so that evil thoughts would rise even in the face of some artistic forms and he (they) took for granted that others would have the same thoughts. The other is that the remnant poison of feudalism has been too profound, so that he (they) was (were) led to take the admonition "Don't look except in accordance with propriety" as a Marxist prohibition and thus prefer to become "a defender (defenders) of the orthodoxy."

It cannot be denied that the tumult or "warning" effect aroused in the literary circles by this "covering the nude picture up" incident reminds one of the title of a novel by Ba Jin [1572 6855], "The Autumn in the Spring." But, even if there was such a situation, it must have already become "the tapering end of the course of what started out as a powerful arrow." It would be no harm for us to believe that through the clarification of the ideology, strengthening of the legal system, and readjustment of personnel in this forthcoming session of the National People's Congress similar "strange practices" will be less and less, and things in various aspects will further move into a normal course.

Questions in Which the Beijing People Are Most Interested

Feudal remnant poison was the issue that most attracted the attention of the Beijing people during this period.

In some temples in the interior, I unexpectedly discovered a state of "busy burning of incense and candles"; really, there were not a few of those who came forward to burn incense and candles and present sacrifices. Newspapers published a series of examples whereby some scoundrels made away with property and committed sex offenses by taking advantage of victims' supersititous conceptions; they made it hard for people to believe that these things were taking place in the land of socialism. Beijing is a place of extraordinary order; walking through its big streets and small lanes, who can fail to perceive what is behind them? On the surface, at least, such things are, after all, hardly in evidence.

Of course, understanding feudal remnant poison merely in terms of superstition would be a rather superficial view. Some places are by no means anxious to deal with the phenomena of superstition that still exist today; it is possible that, on the one hand, it is recognized that a question in ideology cannot be solved by coercive means and, on the other hand, it is also recognized that things more serious than the superstitious belief in ghosts and deities still exist, and if urgent disposal is called for, it should have to do first with those things and not superstition.

Those who travel to Beijing usually go to the Badaling section of the Great Wall, and on their way back make a stop at the Ding Tomb among the Thirteen Tombs of the Ming Period; at this point, it is an avoidable practice for them to descend into the "underground palace" to take a look. From this tomb chamber which Emperor Zhu Jijun [2612 5042 6874] of the reign of Wanli had himself painstakingly planned in his lifetime and the large number of buried items displayed on its two sides, which may be called priceless treasures, it can be seen that an outstanding characteristic of people of the feudal period was to do their best in their lifetime in preparing affairs after their death. This is the concrete example of the idea that power, position, wealth, reputation, etc, must all be inherited forever by their posterity. As early as in the spring and autumn and the Warring States periods, there was already a vehement debate between the Confucian advocacy for "liberal funerals" and the Maoist advacacy for "frugal funerals"; the upshot was that the Confucianists, who represented the main current of ideas in the feudal period, occupied the controlling position, and the two ideas of "eternal occupancy" and "permanent succession to power and status" became thus regarded as principles of heaven and earth.

Hence, people paid attention to the special phenomenon of "life tenure enjoyed by cadres." What is most interesting is that you may well search all the documents since the founding of the state, but you can never find any "regulation" that prescribes that cadres may hold a "life tenure"; yet, as a whole, generally and stubbornly, it does exist. In the early post-liberation period, there was a view that "it is very hard to serve as an official under the Communist Party," because one had to suffer hardship first and enjoy pleasure later and must also accept supervision by the masses. But the view today is that "it is very easy to serve as an official under the Communist Party," because so long as one avoids committing any serious political error (such as becoming a devoted partisan of the "gang of four"), then even if one becomes old, weak and incompetent, exhausted, bad in working style and corrupt in lifestyle...the office can still be held unshakable as iron. As a result, in the present case, when one dies as an official, people can even make a fuss about the pomp and circumstance of his funeral (called "memorial ceremony" in the interior) to see if his cremation can be sent to Babaoshan. An additional point is that, before its "entry into Babaoshan," arrangements must be made first to have his children well placed, e.g., admission to universities, study abroad, good jobs at some relevant departments. Only after all of these are satisfactorily arranged through meticulous labor would his soul rest in peace.

In spirit, what difference in principle is there between this and Zhu Yijun's planning for the "Ding tomb" mausoleum? The only difference is evidently that between a big and a small official or, as the traditional saying goes, between a big and a small witch.

Today, the Beijing people are taking note of the pending appeal of the "life tenure enjoyed by cadres" with great interest. Its greatest effect is to prevent the leading strata from becoming senile so as to allow relatively young and able cadres to accept relevant tests and succeed to their posts in time. They talk about the way Vice Premier Deng Xiaoping, Li Xiannian, Wang Zhen and others are prepared to resign from their government posts, and hope that this would lead to new changes in the political situation and bring about the eventual elimination of the feudal style of "eternal occupancy" in positions of power and authority.

It was during this period that Beijing made it a point to emphatically propagate the exemplary conduct on the part of the family of Wang Jianan [3769 1696 1344], member of the Chinese Communist Party's Central Committee and adviser to its Central Military Commission, in requesting at the time of his death that they be allowed not to send notices to relatives and friends, not to hold any "farewell ceremony" or memorial service, and not to have his cremation sent to Babaoshan. In the wake of this, the Chinese Communist Party's Central Committee sent out circulars on the strict control and reduction of celebrations, on the hanging of portraits of Mao Zedong and other leaders and their inscriptions, etc. In addition, a point was made to expose the impudent conduct on the part of certain high-ranking cadres in covering up the evil doings and illegal activities of their children. All measures of this kind can evidently be related to a serious attempt to gradually eliminate the feudal remnant poison.

Only today do people begin to feel that "anti-feudalist" operations are an urgent task, since feudalism is a serious stumbling block to the four modernizations; it is a formidable undertaking to seriously have feudalism uprooted.

If Liu Shaoqi Shook Chen Yongguei's Hand

The formidable nature of this undertaking is reflected in many aspects; it is very difficult, for instance, to rectify certain views long established in people's understanding.

In respect to the gradual negation of the "learn from Dazhai" movement, the Bijing people have expressed not a few opinions, because Dazhai was a red banner personally raised by Mao Zedong during his lifetime, and it was still holy and inviolable up to 1977. "Let the whole country learn from Dazhai" as a slogan was like the curse of a tightening hoop which, when cited, made everybody's head ache and from which no one could escape. About Chen Yongguei [7115 3057 6311], this "former responsible person of the Xiyang County Party Committee" and present member of the Politburo of the Chinese Communist Party's Central Committee and vice premier of the State Council, the fact is that because on the one hand he was a red-hot personality personally promoted by "The Chairman" and, on the other hand, he has even up to this day always been seen in his "theatrical attire," with a white turban on his head and a Chinese-style jacket around his torso in the fashion of "an old peasant," and ordinarily he also does not behave like "weaving girl" Wu Gueixian [0702 2710 6343] in putting on an air as leader and boasting freely, so the Beijing people's impression of him is still not very bad. But today, his "disguise" has come to be unclothed layer after layer: this "old peasant," after all, has not been very simple. People cannot but murmur: what is really the matter?

There is also a contrast in this regard. In the many public arenas in Beijing, pictures on Liu Shaoqi's life story are generally on exhibit; this is a necessary measure for the restoration of Liu Shaoqi's reputation. I noticed one particular photograph: Liu Shaoqi shaking the hand of Shi Chuanxiang [2514 0278 4385], labor model at the time. Shi Chuanxiang was a worker handling nightsoil in Beijing; because he did his job well, he was elected a labor model and given attention by Liu Shaoqi. But after Liu Shaoqi was overthrown, because he was "Liu Shaoqi's man," he was accused of being "a nightsoil hegemon" and cruel criticisms and struggles were carried out against him until he was persecuted to death. Along with the rectification of Liu Shaoqi's case today, Shi Chuanxiang's becomes, of course, also rectified.

Chen Yongguei, on the surface, does not have anything to do with Shi Chuanxiang. What I mean to say is that both of them were labor models, and genuinely so. Yet how different their fortunes have eventually turned out to be! If Mao Zedong had picked Shi Chuanxiang and Liu Shaoqi had therefore shaken Chen Yongguei's hand in particular, the fortunes of these two men would have been exchanged. But the story of the old man of the castle is still remembered by everyone: the loss and regaining of his horse and their being a misfortune or a blessing are really nothing one can foretell. Shi Chuanxiang died a very sad death; but today his glory is restored; Chen Yongguei was promoted straight up, with the posture of a "teacher of ten thousand people," yet no one knows to what depth he is going to slip downward. In terms of feelings, can he be better situated than Shi Chuanxiang? It is hard to say.

Here we are talking about the problems of only one or two persons; but there is general confusion in people's thinking. How difficult is it to distinguish between right and wrong, merit and crime, glory and shame! What is believable? What is unbelievable? Today, many facts are no doubt displayed to guide people so that they can achieve a penetrating understanding of "the red banner of Dazhai"; but did they not display even more facts in the past? If those facts of the past were not true, can those of the present be true?

It is necessary to explain here: among the Beijing people I have contacted, none showed any good feelings toward the "learn from Dazhai" movement, nor would anyone likely "protect" Chen Yongguei. The only thing is that, even if this "old peasant" is stripped down to his true form or takes the responsibility of all his crimes and wrongs, can people's feeling about right and wrong be genuinely and quickly rectified as a result?

For this reason, it was no wonder that when Beijing disposed of cases of this type, it was firm but very cautious. In this respect, people are expecting still more from the present National People's Congress and the 12th National Congress of the Chinese Communist Party which, according to current information, is to take place at the end of this year.

PARTY AND STATE

CASE OF INTELLECTUAL'S DEPARTURE FOR U.S. REVIEWED

Symposium Held

Shanghai WEN HUI BAO in Chinese 30 Aug 80 p 1

[News report, "Symposium Held By Authorities Concerned To Implement Policy Governing Intellectuals In Light of the Department of Refrigeration Specialist Chen Tingxiang [7115 1694 7534] to the U.S."]

[Text] What lesson can we learn from the case of refrigeration specialist Chen Tingxiang, who left the country because we could not bring our policy to fruition? The municipality's Office of Scientific and Technological Cadres yesterday invited comrades from various related departments to discuss the matter.

Several comrades observed that Chen Tingxiang's inability to serve the fatherland reflects the as-yet ineffective implementation of our policy by a number of departments and units. Through this typical case, the press appealed to the leading departments concerned to pay attention and publicized the importance of correctly implementing the party's policy toward intellectuals. All of this has helped to dismiss the traditional prejudices against intellectuals which are still harbored by certain people and to raise the public consciousness in implementing the party's policy, so that such cases will not recur. One of the comrades in the department concerned said that he had met Chen Tingxiang several times and believed him to be a patriotic, enterprising specialist. However, Chen Tingxiang was once arrested by mistake, and thereafter he not only was not rehabilitated, but he was not reinstated to his original post by the department concerned. On the basis of unsubstantiated documents, some units refused to make a thorough investigation, with the result that his work assignment could not be resolved for a long time. This was indeed a penetrating lesson. The comrades of the municipality's Economic Committee, Textile Bureau, Engineering and Electrical First Bureau recently held a symposium and expressed their belief that there is a lot of work to be done to implement the party's policy toward intellectuals. A certain technician in a factory of the Textile Bureau had made positive contributions regarding technical reform and technological improvement, but he subsequently lost his activism because the factory leadership ignored him during promotion and work assessment time. Many technicians are available in several big factories of the Engineering and Electrical First and Second Bureaus, yet the factories' leaderships prefer to let them stay idle, rather than send them over to other units where technical personnel are urgently needed. This is a waste of human resources and their talent.

Many comrades mentioned bureaucraticism, procrastination, and low efficiency as the biggest enemies of the "four modernizations" construction. At present there is a sense of lack of urgency for cultivating and utilizing talents, in some cadre and organizational departments; instead, they are satisfied with the red tape system. This must be urgently rectified. The comrades at the municipality's Commercial Second Bureau said that although their office is close to those of the Scientific Committee and the Financial and Organization Commission, they still resort to correspondence back and forth, as if they were playing soccer. Sometimes it takes six or seven months to transfer a person from one post to another. All this reflects the prevalence of bureaucratic inefficiency. The comrades at the financial and other departments opined that cadres and organizational departments must struggle against bureaucraticism, always think of the intellectuals in every way, and enthusiastically exert their utmost efforts to do what can and should be done. Moreover, they should draw a lesson from the case of Chen Tingxiang's departure from our country and completely review the situation in order to bring to fruition the system's policy governing intellectuals.

Official Self-Criticism

Shanghai WEN HU BAO in Chinese 30 Aug 80 p 1

[News report, "Commercial Second Bureau Reviews Case of Chen Tingxiang To Improve Policy-Consciousness"]

[Text] The municipality's Commercial Second Bureau yesterday conducted a written review of the case involving the vague implementation of its policy toward intellectuals and its improper handling of the work of refrigeration specialist Chen Tingxiang, in an effort to seriously learn a lesson from it.

On the morning of 28 August, after reading press reports concerning the department of refrigeration specialist Chen Tingxiang and his family to the United States, the Commercial Second Bureau party committee immediately held a meeting to discuss the matter. In the afternoon it summoned the related personnel in the bureau and company for a symposium. The participants all agreed that the newspaper criticism had enabled them to see the seriousness of the problem and to draw the following lessons:

Firstly, we do not understand well enough the important functions of intellectuals in the "four modernizations" construction, nor do we pay due attention to the implementation of the party's policy toward intellectuals, and we still lag far behind the line and policies formulated by the Party Central Committee and the requirements of the "four modernizations." As for the organizational line, our incorrect disposition to "respect industry and agriculture but despise intellectuals" has not been earnestly rectified.

Secondly, our bureaucratic style is serious. Last December, after the municipality's Scientific Commission instructed our bureau to arrange Chen Tingxiang's work, we neglected to supervise and investigate, failed to earnestly help solve the difficulties encountered by the work departments, delayed Chen Tingxiang's work assignment by seven months and finally shelved the whole thing simply because we lacked one signature on the document. Our low efficiency rate and inadequate sense of responsibility have had a serious effect.

Thirdly, our group discipline is weak. We do not firmly or seriously carry out the decisions of our superiors. We do not educate or curb those people who resort to departmentalism, and we forget the party's organizational principles and excellent traditions.

In its written review the Commercial Second Bureau's party committee drew inferences from this case and put forth a preliminary plan on how to improve its work:

1. Starting with the party committee of the bureau, we must organize the responsible persons in the departments concerned and the various levels of party organizations within the bureau's system to earnestly learn the party's organizational line, and particularly the party's policy toward the intellectuals and united front policy; furthermore, we must earnestly review the utilization of various categories of the intellectuals within the bureau's system, particularly their prevailing problems, and make the necessary improvements. At the same time, we must hold a symposium meeting of various categories of intellectuals and listen to their opinions, with a view to further arousing their activisim.

2. We must combine our study of the State Council's decision on its strict handling of the sinking of the "Bohai No 2" with the communication of the central Commission for Inspection of Discipline concerning the struggle against bureaucraticism, and effectively improve our work style. We must build up and strengthen our system of work responsibility correspondingly, enhance our work efficiency, and firmly struggle against the bureaucratic style.

3. We must combine our study of the party's constitutional amendment draft with study of the "guiding principles," strengthen our party character and tighten the party's organizational discipline.

COMMENTS ON OWNERSHIP SYSTEM, SOCIALIST SOCIETY

Various Socialist Ownership Systems

Shanghai WEN HUI BAO in Chinese 29 Aug 80 p 3

[Article: "Yu Guangyuan: 'It Is Improper To Use the Formula "Big in Size and Collective in Nature" as a Yardstick for Appraising Ownership System'"]

[Text] In a recent speech, Yu Guangyuan [0060 0342 6678] said that to simply use the formula "big in size and collective in nature" as a yardstick to appraise socialist ownership systems was one of the basic reasons that mistakes were often made in the past in the policy concerning ownership systems.

In a given period, a socialist nation can have several different socialist ownership systems at the same time. That three socialist economis--the socialist state ownership economy, the socialist labor masses collective ownership economy, and the socialist guided economy--can exist at the same time is the production relationship most suitable to the status of development of productive forces in our nation's present historic period. And these three socialist economies have shown their superiority to any other status of productive forces.

This point of view prevails among some cadres: The socialist state ownership is unconditionally superior to the socialist collective ownership system; within the scope of socialist collective ownership, the commune's first-level accounting is unconditionally superior to the first-level accounting of a brigade, and the latter is unconditionally superior to the first-level accounting of a production team; within the scope of the collective ownership system of the first-level accounting of a production team, adopting the wage system is unconditionally superior to adopting the workpoint system. In addition to the yardstick of which one can best promote the development of productive forces, they have still another yardstick. This is the formula "big in size and collective in nature"; that is, the "bigger" the scope of ownership the better, and the more "collective" the better.

The formula "big in size and collective in nature" not only cannot be used as a yardstick to appraise the ownership system, but whether this formula can simply be used to evaluate the development of systems of ownership also deserves to be studied. While it is not necessary for socialist economic organizations themselves to develop from small to big, a "big" ownership system is not necessarily more "advanced." Meanwhile, what is a "collective"? In the sequence stated above, a "collective means an extension of an ownership system and indicates only the scope of economic organization. It is not concerned with which social economy will put the laborer in a better position to take charge and make decisions. The "collective" concerpt has not been developed from the aspect of its contents. Therefore, it is often found to be one-sided to have an ownership system viewed from the concept of "big in size and collective in nature."

Socialist Society in Infancy

Shanghai WHEN HUI BAO in Chinese 29 Aug 80 p 3

[Article: "Liu Mingfu: 'Our Socialist Society Is Still in Its Infancy'"]

[Text] In a speech, Liu Mingfu [0491 2494 1133] said we should admit that our socialist society is still in its infancy. As we are in the infancy of socialist society, we should not plan things according to such a socialist economic form as though we had gained political power on the basis of a very high level of development of productive forces, as was predicted by Marx and Engels. We have to make a strict distinction about this point. Now, what sort of development process should our socialist society have? Can it be, in general, divided into primary, intermediate, and advanced stages?

The organizational forms, management systems, principles and policies, and guidance methods suitable for the advanced stage are not necessarily suitable for the primary stage; by the same token, the organizational forms, management systems, principles and policies, and working methods suitable for the primary stage are not necessarily suitable for the intermediate or advanced stage. Changes are necessary. Therefore, it should be noted that the production relationship must be compatible with the level of development of the productive forces, and the superstructure must be compatible with the requirements in the development of the economic foundation. The problem of the system is how to solve the problem of production relationships. We have to solve the problem of the superstructure so that our production relationships will be more compatible with the development of the productive forces, and so that our superstructure, with its rules and regulations, management systems, and policies and methods, will be compatible with the requirements of the economic foundation. This is a very difficult task.

'QUALIFICATIONS,' ACTUAL ABILITY COMPARED

Beijing RENMIN RIBAO in Chinese 22 Jul 80 p 3

[Article by Li Chun [2621 3196]: "A Brief Discussion on 'Qualifications'"]

[Text] The selection of scientific and technical cadres for appointment to technical and professional posts, especially the assignment of middle-aged and young cadres to leading groups at all levels, often gives occasion to discussion and argument regarding "qualifications." Having given the matter some thought, I want to venture an opinion on it.

The expression "qualifications" first appeared in The New History of Tang, Selected Annals, Part Two: "In the 18th year of the Kai Yuan reign of Tang Xuanzong [0781 3763 1350], Pei Guangting [5952 0342 1656], who was serving the country in the Ministry of Official Personnel Affairs and in the capacity of shang shu [1424 2579], originated the practice of taking cognizance of qualifications. The wise and the stupid alike had to come up to standards if they were to be selected for office. All were to serve a term at each level. Nobody was to be promoted over a level at which he had not served." "Standards" is the title of a decree issued during the Tang Dynasty, and "taking cognizance of qualifications" meant to assign government officials to posts on the basis of their social status and experience. Of course, talk about qualifications and record of service did not begin in the Tang era, but much earlier. In the Warring States period, Han Fei [7281 7236] maintained that "to become prime minister one must begin his career at the zhou [1558] level, and to become a valiant general one must start out as a soldier in the ranks." A regulation put into effect during the reign of Tang Xuanzong provided that "no official who has not served at the zhou and county levels may advance to the provincial level." "Taking cognizance of qualifications" was the statutory embodiment of this provision. It appears to have been like other methods of selecting government officials practiced during the Tang Dynasty, and to some extent counteracted the influence of powerful families, the system which prevailed in Wei and Jin dynasties and the epoch of division between north and south. This practice has definite significance for the modern practice of using officials who have had practical experience in governing. However, the provision that "All were to serve a term at each level; nobody was to be promoted over a level at which he had not served" turned out to be too strict, and "taking cognizance of qualifications meant that a soldier could reach the age of 60 without rising above the company level." (The New History of Tang, Selected Annals, Part Two.) This provision proved unsuccesful as a guide for selecting and assigning worthy and capable persons, so after the death of Pei Guangting "taking cognizance of qualifications" was judged to be "an ineffective method of seeking capable people," and was no longer implemented. Nevertheless, the expression "qualifications" has remained in use up to the present.

Today, the concept of "qualifications" includes such things as a person's record of formal schooling and experience. Because knowledge and ability are always acquired through book learning and social practice, and qualifications roughly reflect study and practice, it can be said in general that a person's ability bears some relation to his qualifications. It is precisely by proceeding on the basis of this materialist theory of knowledge that we will encourage proper consideration of qualifications in testing, assignment, and promotion of cadres, and combat hasty and indiscriminate methods of assigning cadres to posts. Besides, I think that someone who ordinarily resists discussion of qualifications, or who distorts, consciously or unconsciously, the original concept by making a false claim of being qualified (for example, trying to use a callused hand as qualification for exemption from the university entrance examination) is not a materialist.

The preceding comments deal with only one aspect of the problem; there is another side to it. Qualifications are, after all, just that, and not an entirely accurate projection of actual ability. To get away from concrete analysis of cadres, and use an absolute, solidified notion of qualifications as the exclusive criterion for selecting capable people, to differentiate people entirely on the basis of their qualifications, is not what dialectical materialism calls for.

To have an absolutist notion of qualifications is to equate qualifications totally with ability, to fail to see them as not being identical. In reality, mastery of knowledge, technical ability, and work experience are products of a combination of subjective and objective circumstances, and the combination of subjective and objective conditions varies from person to person to a very great degree. Thus, in many cases individuals' qualifications do not match, and may even fall far short of, their capabilities. Uniform, inflexible application of a fixed idea of qualifications undoubtedly would deny the actual diversity of capabilities among people and impede the selection of worthy and capable persons.

To have a solidified notion of qualifications is to deny or be unable to see that qualifications and ability are continuously developed through study and practice. In reality, a person who is totally or partially unqualified may become qualified, but a close correspondence between a person's qualifications and actual ability at a given time is no indication of a permanent state of affairs. What has happened since the shift of emphasis in work to construction of the four modernizations shows the truth of the preceding statement. Things with which we were familiar in the past have been put aside, and we are now faced with things that we did not know about in the past. We need to study anew and change ourselves from laymen into knowledgeable experts. Furthermore, the growth of science and technology is advancing by leaps and bounds in the world of today, and consequently knowledge and capabilities must be renewed constantly. If we choose to be complacent and conservative and rest content with our "old qualifications," our knowledge and technical capabilities will rapidly become ignorance and incompetence.

This absolutist and solidified view of qualifications has long been refuted by a host of facts to be found in the history of social development and the history of science. Down through the ages there have been persons whose accomplishments were far different from those of other persons with similar qualifications. Many qualified persons have been mediocre and passive; there have been others who, due to various circumstances, were denied the necessary education and proper conditions for work and thus were unable to become qualified, yet their strong enterprising spirit, indomitable will, determination to teach themselves, persevering study, diligent work, and selfless labor have produced exceptional achievements in the end. They became experts and scholars, and made important contributions to mankind. Friedrich Engels was only a middle school graduate; Maxim Gorki finished only the 3rd grade; Thomas Alva Edison's inventions numbered more than 2,000, yet he was a formal student for 3 months; Lu Xun [7627 6598] and Guo Moruo [6753 3106 5387] never attended liberal arts college; the philosopher Josef Dietzgen, a contemporary of Marx, was a shoemaker; James Watt, inventor of the steam engine, was an instrument maker; Jacques de Vaucanson, inventor of the loom, was a barber; Robert Fulton, inventor of the steamboat, was a jeweler. It is thus clear that a lack of formal schooling will not necessarily limit the growth of a diligent person's capabilities. Such being the case, why use an absolutist theory of qualifications to limit the development of talent?

To sum up, when we attempt to separate the wise from the stupid and determine who are the persons of ability, we must have an overall understanding of qualifications and adopt a correct attitude toward the subject, particularly in the sense that we cannot consider qualifications exclusively. We cannot look only at a person's record of formal schooling and experience, and disregard his or her actual ability. The proper approach is to judge cadres primarily on the basis of their present competence in work and professional skill, while using their respective records of formal schooling and experiences for reference. Cadres who are proven through rigorous assessment to have real ability and learning, to genuinely be competent in their work, even if such a finding is inconsistent with the qualifications that appear in their dossiers and on official forms, should be utilized and promoted in accordance with their actual abilities. They should be given titles for their professional or technical posts that correspond to these abilities. We should not adhere one-sidedly and rigidly to qualifications. Such an approach is impractical because it results in capable people not being put in important positions. Their duties do not challenge their capabilities, and the rewards they receive are not commensurate with their skills.

It is unfortunate that there are a few comrades who are usually unable to adopt a correct attitude toward qualifications because their way of thinking is one-sided, or their style of work is bureaucratic, or even because of their ideology. They either oppose consideration of qualifications entirely, or they talk about qualifications for the sake of doing so, but without paying attention to ability. When a person's qualifications do not offer a clear picture of his or her actual ability, these comrades still cling stubbornly to qualifications. This practice is precisely what Zhang Jiuling [1728 0046 7881] in the Tang Dynasty was talking about when he said, "The search for talent is carried out through scrutiny of written records. It is not an urgent matter." Taking measures without regard to changes in circumstances is no different. To look at qualifications in this way is to fall into idealism and metaphysics in theory, and to inhibit the growth of talent in practice. This approach hinders the discovery and cultivation of talent, attacks the enthusiasm that is basic to the determination to forge ahead and strikes at the individual's initiative which is necessary for creating and inventing, encourages mediocrity and inaction, and fosters thinking in terms of "job security." It is an approach that is very harmful to our efforts to train contingents of cadres who will be both socialist-minded and professionally competent and who will fit in with the needs of construction of the four modernizations.

PARTY AND STATE

PARTY POLICY ENCOURAGES WORKING SPIRIT

Beijing RENMIN RIBAO in Chinese 22 Jul 80 p 4

[Newsletter by reporter Xiao Du [2556 3256] and journalism graduate student Zhang Shuzheng [1728 2579 2398]: "Policy Gives Them New Life and Strength"]

[Text] The city of Huangshi, located in Hubei Province beside the Changjiang River, was an exciting industrial center in the 1950's. More than 11,700 engineers and technicians of all kinds, including more than 500 personnel specializing in scientific research, were here. In those years they came from far and near, idealistic and ambitious, to take part in construction. Afterwards a number of them suffered various injustices during the endless political campaigns carried on by the followers of the extreme left line. Some persons were even forced to leave their workposts. Since the Third Plenary Session of the 11th Party Central Committee, these unjust and false judgments have been redressed one by one. The power of the party's policy is arousing their idealism and ambition anew. They are now energetically contributing their abilities and wisdom in creative ways to construction of the four modernizations.

Presented here are some sketches of their present working spirit.

The Man Who Reopened an Ancient Copper Mine

One day in August 1978 mining engineer Zhu Guang [2612 0342], who had left the mines 12 years earlier, returned to work at Daye Nonferrous Metals Company's Fengshan Copper Mine as a result of policy implementation. The 63-year-old engineer's eyes became moist and his heart warmed as soon as he set foot in the beloved copper mine that he had known so well. In the 1950's and early 1960's he had helped open 6 copper mines, at Longjiaoshan, Chimashan, Tonglushan, Tongshankou, Fengshan and Yehuaxiang. Back then he was in the prime of life, his heart filled with lofty aspirations. He did not foresee that in August 1966, just when he had finished writing "A Design Manual for the Yehuaxiang Copper Mine" and was preparing a report for the Ministry of Metallurgical Industry, that a "tornado" would strike, that he would be falsely accused of being "a landlord element" and sent to the countryside to do penal labor under surveillance by the masses. For the next 12 years he led a vagrant life, doing unskilled labor and begging. During one period of nearly 2 years he even picked odds and ends from refuse heaps to support himself while he saved money so that he could apply for an audience with higher authorities to appeal for help. Today he is back at the copper mine, determined to offer his accumulated experience in copper mining to construction of the four modernizations.

The Fengshan mine is an ancient copper mine that is still fairly rich with high-grade ore. After Zhu Guang returned he saw that the productive capacity of the ore deposits in this mountain was far short of projected demand, and he pondered day and night how to raise it. People said to him, "You should not go looking for so much trouble at your age!" and he would answer, "The party has given me new life, so I want to do my best to give this old mine new life!" After more than 3 months of investigation and study he made a number of suggestions and proposals regarding opencast mining to the mine leaders. The mine superintendent and the party committee secretary both enthusiastically supported his opinions, and the neighboring copper mines sent technical personnel to lend assistance. In April of last year Zhu Guang wrote "An Opencast Mining Scheme for the Mining System in the Western Area" of the Fengshan mine, based on a preliminary opencast mining plan originally worked out by a group of engineers and technicians. The Ministry of Metallurgical Industry gave its support to the idea. A tentative decision was made to begin construction in the latter half of this year and to put the system into operation in 1982. Soon afterwards Zhu Guang also directed the formulation of "A Scheme for Recovery of Unextracted Ore in the Eastern Mining Area," and promptly carried it into effect.

The Steelmaking Engineers Who Scaled Heights

On 20 June, the delegates attending a conference for appraising the technique of instilling rare earths into steel held under the sponsorship of the Office of Rare Earth Popularization and Application and the Ministry of Metallurgical Industry Office of Science and Technology observed at Daye Steel Plant the application of a technique of having a rare earth rod held in suspension in each steel ingot mold. They congratulated assistant chief engineer Li Juemin [2621 6030 3046] and the other comrades involved in scientific research who were present, and signed a written appraisal of the technique.

Li Juemin, director of the China Metals Institute and assistant chief engineer of Daye Steel Plant, felt very uneasy at that time.

Back in 1960, when Li Juemin was assistant chief of the central laboratory at Daye Steel Plant, he obtained the support of assistant chief engineer Xia Zongqi [1115 1350 6936] and of the Ministry of Metallurgical Industry for experiments he wanted to conduct on the application of rare earths in steel. A special research group was set up, and it conducted experiments on such application on more than 30 types of steel. Preliminary successes were achieved in three types. However, it was impossible to put these types of steel into regular production because there are still problems in the technique of instilling rare earths into the steel. Just when their joint efforts were on the verge of achieving a breakthrough, a catastrophic storm suddenly befell them. Li Juemin was labeled "a reactionary technical authority" and "a bourgeois rightist who slipped through the net," among other things. He was first sent to a machine shop to run milling machines, and later to a waste material warehouse to do coolie work. Xia Zongqi was also falsely accused of being "a reactionary technical authority" and was sent to a refractory workshop to serve as a porter. The experimental research group was disbanded.

After the "gang of four" was smashed the party's policy toward intellectuals was gradually implemented at Daye Steel Plant. Li Juemin, Xia Zongqi and other comrades returned to their research posts, the experimental research group was allowed to resume its work, and the drive to achieve excellence went forward anew. The research group strove arduously for 3 years under the leadership of Xia Zongqi and finally solved the problem of instilling rare earths into steel. Li Juemin then devoted strenuous efforts to probing the mechanisms underlying the laws that govern the formation of rare earth compounds in steel and the distribution of rare earths in steel.

After Li Juemin was elected a delegate to the Fifth National People's Congress, a member of the standing committee of the provincial people's congress, and vice chairman of the standing committee of the municipal people's congress, he approached his work with even greater enthusiasm and higher standard. Under his direction 95 of the 100 scientific research projects assigned to the plant by the Ministry of Metallurgical Industry this year were completed by the end of June.

Shen Yunshu Achieves His Desire To Join the Party

In the still of the night under the lamplight, Comrade Shen Yunshu [3088 0061 5289], deputy director of the Xiongjiaban Coal Mine, spread an application for party membership out on a table and wrote these words: "During the grand democratic reform movement I yearned for the opportunity to stand some day under the party flag and take the oath of membership in the Chinese Communist Party. After 1958 I no longer dared to hold this hope." At this point he could no longer control his excitement and he stopped writing.

It was on another still night in January 1975 that his eldest daughter said to him, "Father, I want to join the youth league, and the league organization at school has asked me to write a paper about my comprehension of your mistakes. What should I write?" When he heard these words he was grieved: His daughter's wish to join the youth league was fine, but what need was there for her to actually do so when she had already rid herself of the label of bourgeois rightist? He said to his daughter: "Your father wants only to be a party member without joining a party organization. Isn't it enough for you to be a youth league member without joining a youth league organization?" When the girl heard this she cried. He was unable to sleep that night after upsetting the child, and he did a lot of thinking. Finally he wrote a report of self-criticism for his daughter. Several years went by. The party Central Committee smashed the "gang of four" with one blow, and his understanding of the party improved greatly. He summoned his courage and applied for admission to the party. Before long his incorrect identity as a bourgeois rightist was rectified, and he was appointed deputy director of the Xiongjiaban Coal Mine. His desire to join the party became even stronger. Now that the party organization has asked him to fill out an application for party membership, he is indeed thrilled!

When Yu Laifa [0151 0171 4099], the mine director, received Shen Yunshu's application for party membership, he was quite pleased to fill in his name and opinion as a sponsor. since the time that Shen Yunshu was incorrectly labeled a bourgeois rightist, he had been working as a technician in the mining area under Director Yu's leadership. For more than 20 years this comrade had worked hard and borne criticism without complaining, persevered year in and year out in the pits alongside the workmen, made many technological innovations, and overcome a number of difficulties related to production. In 1978 Shen Yunshu was cited as "an advanced scientific and technical worker" of Hubei Province and of the city of Huangshi; in March 1979 he was cited as "a model worker" of Huangshi. How could such a comrade not be welcomed into the ranks of the party?

In October last year Comrade Shen Yunshu was accepted as a probationary party member. He enthusiastically said: "Nothing brings a person's full drive into play more effectively than the confidence of the party and the people." In June of this year the higher organization transferred him to the Songping Coal Mine to serve as first deputy director. He resolved to answer the party's confidence in him with concrete action, by doing a good job of running production.

The Venerable Doctor's 'Special Proposals'

On 28 May the planning group of the first session of the Huangshi 6th Municipal People's Congress received motions 207 and 208 which were not concerned with administrative policy, but were proposals for the use of Chinese herbal medicines to treat filariasis and chyluria and for the prescription of activated charcoal dust as a substitute for antibiotics to treat infants for diarrhoea. These two proposals were put forward by a 77-year-old medical doctor named Wang Baoying [3769 1405 2819].

Wang Gaoying studied in Germany when he was young. He earned a Ph.D. at Berlin University, and held the post of lecturer in medicine there. After returning home he was a professor and Dean of Studies at Tongji University. Since liberation he has been continuously involved in medicine. He was also a delegate to the Third National People's Congress and deputy mayor of Huangshi. However, when Lin Biao and the "gang of four" went on the rampage this venerable doctor was accused of being "a reactionary academic authority" and "an evil Guomindang element from the old society," criticized and denounced, and sent to a cadre school to herd cows. People there knew that he was a medical doctor, and many of them came to him when they were sick. The pasture was the sickbed where he examined patients.

Today Wang Baoying is over 70 years old. He says: "The old horse in the manger runs a thousand li a day. I want to give the benefit of my effective years and my medical knowledge to the people and our homeland's four modernizations." He is currently deputy director of the No 3 Municipal Hospital and vice chairman of the standing committee of the municipal people's congress. Even though the higher leadership considers him too old and will not let him work too much, he still examines patients in municipal hospitals 1 day a week, and he still insists on attending important meetings. Ordinarily he makes the best use of his time systematizing his clinical experience, reading domestic and foreign medical writings, and doing research on difficult and complicated cases of illness.

The venerable doctor brought the fruits of his research to the municipal people's congress and presented his proposed prescriptions in the form of motions, which were well received. The municipal public health bureau printed copies of the proposals and distributed them to all local hospitals for further study.

CRITICISM OF MAO PUT INTO PERSPECTIVE

Hong Kong QISHI NIANDAI [THE SEVENTIES] in Chinese No 9, 1 Sep 80 pp 8-11

[Article by Yin Huimin [3009 1920 2404]: "On the Question of Criticizing Mao"]

[Text] In the past few years, along with the continued in-depth development of the movement to expose and criticize the "gang of four," past cases of political injustice became rectified one after another. The earlier the years were pushed back, the weaker became the capacity of the so-called "towering crimes of the "gang of four" to explain everything away. True, the "gang of four" were butchers; but these butchers could only play the role of executer of orders given. What people must ask is: whose butchers were the "gang of four"? Who was the behind-the-scene protector of the "gang of four"? The answer to this root question is already known to everybody on the China mainland, but not made explicit by anyone.

When the Chinese Communist Party reversed the verdict in Peng Dehuai's case, this question was already touched upon; but it was only touched upon in passing: it was on the verge of being revealed, but not explicitly pointed out by anyone.

From the reversal of verdict in Peng Dehuai's case to the rectification of Liu Shaoqi's, what was reflected in the process was not only the result of the struggle between the "practice faction" and the "whatever faction," but also an attendant question of "right and wrong." Although in the expositions reversing the verdict, the Chinese Communist authorities exercised all the soul-searching necessary in order to "avoid mentioning the late emperor," they were forced to acknowledge this question of "right and wrong." The result of their attempt to "avoid mentioning the late emperor" was only to let people see more clearly how heavily immersed in feudal ideas the Chinese Communist Party was, but not in any slightest way a successful cover-up of historical truth.

This was why after Liu's case was rectified, the demand for criticizing Mao became even more urgent.

It Is Necessary To Break Down Superstition

To criticize Mao is to examine his faults. The Chinese communists were able in the past to criticize Liu, to criticize Deng, to criticize Lin and to criticize Confucius; but once the question of Mao Zedong is broached, they somehow prefer to use the phrase "appraising Mao" and not "criticizing Mao." There can hardly be any reason for this except as a demonstration of their feudal ideas.

In order to examine Mao's faults, it is first of all necessary to break down several superstitious obstacles.

The first superstitious obstacle is to say that the merits or demerits of someone of long-range significance must be left to the appraisal of posterity: Mao Zedong has already become a historical personality. In appraising a historical personality, it is very difficult to establish an objective standard because of different standpoints and viewpoints involved, not to mention that such an object of appraisal happens to be Chairman Mao, who ruled China for nearly 30 years. What was done right and what was done wrong, and the attendant grace and grievance during this period touched on all leaders of the Chinese Communist Party and government; those who incurred harm naturally resented it very much, but those who earned benefit also could hardly forget the care extended. Starting from these two contrasting angles, the appraisals people may grant Mao are bound to be considerably different. Hence some think that in the case of such a personality as Mao Zedong, it is best to leave an appraisal to the next generation.

But the question is that Mao Zedong's views on socialist revolution and economic development have not vanished along with his death. These views are up to this day still held among certain cadres and they are deeprooted; not a few persons even think that, apart from Mao's views, all are erroneous lines. Hence, if no serious criticism is conducted and only "inheritance" is undifferentiatingly talked about, then the personal worship that has been practiced over the years and the force of habit in following established conventions are bound to raise their heads again and become obstacles to reform. Pouring new wine into an old bottle, fitting sharply different policies into the framework of Mao's Thought, and thereby magnanimously calling it "comprehensive understanding of Mao Zedong Thought" might answer the need in political struggles temporarily, but if this is allowed to drag on too long, it is bound to mix right with wrong and confuse people's thinking.

Mao Zedong Thought does not exist in a vacuum but is embodied in policies and is influential on the country's fate and people's life. Certain policies and measures formulated in the past according to Mao's thinking have already had an actual impact on people's livelihood. For this reason, whether that thinking is good or bad and whether those policies are successful or inadequate can by all means be inferred directly from this objective reality of people's life with personal gratitude or grievance not at all involved, and there is definitely no need to seek the answers from dogmatic prescriptions.

Furthermore, of the political and economic lines in the past few years--politically such as restoration of the electoral system, the proposing of the cadre tenure system and retirement system, and the elimination of promotion in the helicopter style; economically such as the promotion of enterprise autonomy, the relaxation of the restriction on private lots of land and trade in the market, emphasis on the principle of to each according to his work as a long-range policy--not one was carried out against Mao's way. The result of this practice not only proved that these new policies are welcomed by the people but also demonstrated that, insofar as these policies are concerned, it is no longer possible to make-do with the explanation that they represent a "comprehensive understanding" or "restoration" of Mao's thinking. In economics, the measure to return to order from disorder was actually to pull back the overhurried production relations and make them adapt to the level of production itself; the difference between this and the utopian fancy of continuously escalating and changing production relations in order to improve production power as advocated by Mao Zedong is really abundantly clear, and which is able to give a new life to economic development is also witnessed by everyone. If the conventional framework of Mao's thinking is accommodated any longer, that would be an insult to the people's intelligence and an insult to "seeking truth from facts." In this regard, the necessity of criticizing Mao is also not dependent on man's will.

Now, since the Chinese communists acknowledge the Cultural Revolution to be a catastrophe, then how are they going to appraise the guiding principle of the Cultural Revolution--Mao Zedong Thought? The second superstitious obstacle is to depict Mao Zedong Thought as the "crystallization of collective wisdom; that is to say, Mao Zedong Thought not only includes Mao Zedong's personal ideas but also includes the ideas of Zhou Enlai, Zhu De, Peng Dehuai, and even Liu Shaoqi, and it is cumulated from collective experience of the Chinese revolution. Even if Mao Zedong had made individual mistakes, Mao Zedong Thought has been always correct; criticizing Mao Zedong Thought is tantamount to challenging this collective product. When one hears this for the first time, it sounds almost reasonable. But people cannot but wish to ask: when he was alive, Mao Zedong did not seem ever to have such a generous attitude toward his thought, then why, after his death, can there be such a "collective" interpretation?

The third superstitious obstacle is: "Without Chairman Mao there would have been no New China"; the intention of this expression is to indicate how great Mao Zedong's merits have been and how, compared to his merits, insignificant his faults really are. This is contrary exactly to the foregoing view. The foregoing view is to "collectivize" Mao Zedong Thought; but now this one wishes to "individualize" the merits by which New China was established. These views are different, but their goal is the same.

Actually, the expression "Without Chairman Mao there would have been no New China" is meaningless from the Marxist point of view. Although Marxism by no means denies the role of heroic personalities in history, it basically regards such heroic personalities as products of the time in which they lived; hence, without Chairman Mao, there would still have been a New China, because the relevant time would have created another heroic personality. Furthermore, revolution is not an individual's isolated activity. If "Without Chairman Mao there would have been no New China," then people must ask: could there have been Chairman Mao without Zhou Enlai, Zhu De, Liu Shaoqi, or without hundreds and thousands of revolutionary devotees putting their lives on the line? Could there have been Chairman Mao without the general ideological consciousness of the masses of the people? In the history of France De Gaulle is no doubt a heroic personality; yet during his presidency under the Fifth Republic, his achievements were by no means outstanding and the people had plenty of complaints, and as a result he was forced to quit by way of a referendum. Therefore, some say that a great people tends to be impersonal about its heroes.

The reason a revolution succeeds is because its leading personalities are able to adapt to the tide of the time, reflect the demands of society, and share the rhythm of life and aspirations with the masses of the people. If a leading personality eventually places himself not amongst the masses but above them, deviates from the wishes of the people and deviates from the collective will of the comrades who were originally bound in a life contract with him, then he would be advancing in a direction other than that of revolution, and he would be following not revolution but reaction. On this point, the road followed by Mao Zedong has been similar to that of Stalin.

A Kind of "Socialist Revolution" Theory

The two major points raised by the 20th Congress of the Communist Party of the Soviet Union in criticizing Stalin had to do, first, with the question of personal worship and, second, with Stalin's theory that the further society advances toward socialism, the sharper becomes its class struggle. In these two aspects, Mao Zedong not only followed Stalin as his teacher but did even better than his teacher. In terms of personal worship, not only did he behave just like Stalin in exaggerating his own role up to an inappropriate degree and in placing his power in a position opposite to collective leadership, but he even let his little Red Book exercise the rule over China, thus replacing the scientific basis of rule with his "four volumes of magnificent works" and making things ridiculous. The so-called theory of ever-sharpening class struggle was also the basic content of Mao Zedong's "continuing revolution." "After Mao's death, the Chinese communist authorities once attempted to explain this "continuing revolution" with expressions like technical revolution and others also made by Mao; this was intended to make excuses for him." Stalin used this theory as the pretext for his persecution of those who differed with him; Mao Zedong likewise took this as the "theoretical basis" for attacking comrades whose opinions were not the same as his. Mao Zedong, of course, followed the example of Stalin, but Stalin in turn indicated that this "socialist revolution" theory was taken from Lenin. In his speech given on 1 April 1929, Stalin indicated: "Lenin taught us: only through stubborn class struggle can the classes be eliminated, and under the condition of dictatorship by the proletariat, class struggle is bound to be more fierce than it was before the dictatorship of the proletariat." He also cited Lenin's words to prove the correctness of this point of view, since Lenin said: "The elimination of the classes must be accomplished through long-range, hard and stubborn class struggles. After the overthrow of bourgeois power, after the breakdown of the bourgeois state, and after the establishment of proletarian dictatorship, class struggle is not necessarily going to disappear,... but only changes its form, and in many respects becomes even more fierce" ("The Question of Leninism," p 270).

The two formulas thus derived therefrom by Stalin were: elimination of the classes through the proletariat's fierce class struggles--Lenin's formula; entry into socialism through the dying off of class struggle and capitalist growth--Bukharin's formula. Basing himself on this, Mao Zedong later also attached the label "theory of the dying off of class struggle" to Liu Shaoqi.

But the question is: these words of Lenin are from his article "Salute the Hungarian Workers," which was written in May 1919 in celebration of the founding of the soviet regime in Hungary. That is to say, what was expressed here was Lenin's view in the period of "wartime communism." During that period, the dictatorship of the proletariat in Lenin's eyes "Is not subject to restriction of the law, and relies on violence" ("The State and the Revolution"); the socialist revolution in his understanding was based on the blueprint of "The State and the Revolution," which "directly enters" socialism by means of putting politics in command and class struggles. But, after 3 years of experiment, he was forced to admit in 1921 that this "direct entry" approach was a failure, whereupon he changed his course and carried out the new economic policy. Stalin used Lenin's words in his "left"-leaning period to attack Bukharin; this was an application of the art of power struggle. Even Stalin himself admitted in the "Textbook on Political Economy" he edited just before his death that "the law of bringing about the transition from the old state of society through explosion is necessary in a society divided into hostile classes, but in a society like socialist society in which there are no longer hostile classes, it is definitely no longer necessary" ("Textbook," p 612).

After the Cultural Revolution, the Chinese Communist Party Central Committee, with Mao Zedong as its head and the "gang of four" as its mainstay, continuously cited Lenin's words in his "wartime communism period" as its theoretical basis; apart from the temporary service it rendered to their power struggle, this practice merely indicated their ignorance in respect to history.

The resolutions of the 20th Congress of the Soviet Communist Party criticized Stalin's dictatorship and despotism; at the same time, also negated Stalin's "socialist revolution" theory and mode of economic development, and acknowledged that the economic development of socialist states might follow different paths. The 20th Congress of the Soviet Communist Party also had an impact on the Chinese Communist Party. In September 1956, the measures undertaken by the 8th Congress of the Chinese Communist Party to add a vice chairman and eliminate "Mao Zedong Thought" as the guiding principle were meant to deter the repetition of personal worship and dictatorship. Resolutions of the 8th Congress also pointed out that "History of the system of class exploitation has basically come to a close," "the principal contradiction within the country... is the contradiction between the advanced socialist system and the backward social productive forces." This indicated that during the period of socialist revolution, it was no longer possible to explain the development of social relations with this narrow proposition of "contradiction between socialism and capitalism." The ownership of "state capitalism," with instruments of production under the control of the state, giving rise to the question of bureaucracy; socialist transformation, with reliance on administrative power for its propulsion, often leading to the dislocation of production relations and productive forces; contradictions in economic planning such as those between accumulation and consumption, between investment and distribution; and the phenomena of "imbalance" and periodic convulsions resulting from blind pursuit of speed: all of these turned out to be new contradictions during the transitional period. These contradictions were different from those of the past; hence they could not be solved by the nonchalant fitting of "class struggle" into the conventional framework.

Next, the "principal contradiction" mentioned in the resolutions of the 8th Congress also indicated that, in terms of the nature of production relations and productive forces, it was not a case of the former falling behind the latter, but the latter falling behind the former: that is, the transformation of production relations was already overdone and had become a case of helping the sprouts to grow by pulling them up, so that they became dislocated from the corresponding level of production itself; consequently, not only was it impossible to promote the development of productive forces, but the effort had given rise to an obstructive effect. In order to solve this contradiction, the policy needed should be a readjustment of production relations toward the "lower" end so as to adapt to the situation encountered. In this regard, the political report submitted by Liu Shaoqi at the 8th Congress, Zhou Enlai's Report on the Proposal of the Second Five-Year Plan for the Development of the National Economy," as well as the statements of Li Xiannian, Chen Yun, Bo Yibo and Deng Zihui all basically reflected this demand.

The basic tune of the 8th Congress was: the question of which one was going to triumph over the other between socialism and capitalism was already solved (Liu Shaoqi's words); large-scale, turbulent class struggles of the masses had in the main come to an end (Zhou Enlai's words).

In respect to the "socialist hightide" single-handedly aroused by Mao Zedong in the first half of 1956, this point of view was naturally the "low key" with which he could hardly agree. The "self-examination" submitted to the "Zhongnanhai Brigade of Revolutionary Rebels" by Liu Shaoqi on 2 August 1967 also mentioned that Mao Zedong had expressed opposition to the passage of the resolutions of the 8th Congress which suggested that "our principal domestic contradiction...is the contradiction between the advanced socialist system and the backward social productive forces."

Actually, Mao Zedong disagreed with the criticism against Stalin as launched by the 20th Congress of the Soviet Communist Party from the very beginning. When Mikoyan led a delegation on a visit to China less than 2 months after the 20th Congress, Mao stressed to Mikoyan that Stalin's "merits outweighed his demerits," so that it was necessary to "conduct concrete analyses," "give a comprehensive appraisal." This viewpoint was developed into an article entitled "Concerning the Historical Experience of Proletarian Dictatorship" (RENMIN RIBAO, 5 April 1956). This article acknowledged the struggle against individual worship launched by the 20th Congress of the Soviet Communist Party, but expressed disagreement with the criticism of Stalin's "socialist revolution" theory by the Soviet Party. This can be seen from the passage following this statement in the article: "There have been some naive ideas according to which there would seem to be no longer any contradictions in a socialist society."

At the end of 1956, the article "More on the Historical Experience of Proletarian Dictatorship" published in RENMIN RIBAO further denied that Stalin's mistakes originated from the defects of the system; for the sake of rectifying these mistakes, it is of course not necessary to 'rectify' the socialist system." According to Snow, these two successive articles were both authored by Mao Zedong himself. If this is true, then Mao Zedong's point of view was obviously that the system itself did not need to be changed and the problem lay with man, with man's thinking. Conceived in this regard was thus a large-scale mass movement developed on the basis of socialist education and ideological struggle and the whole model of "promoting" productive forces through changes in production relations. The Great Leap Forward was the first experiment of this model; the Cultural Revolution was the second experiment. The rise of the Cultural Revolution was therefore due to the fact that Mao Zedong did not admit the failure of his Great Leap Forward.

Economic Development and the 'Supply System'

What was reflected in the economic policy under the guidance of the above theory was the extreme left attitude of "seizing the day." Put in Peng Dehuai's words, the case was, namely: "In the method of thinking, strategic deployment and concrete measures, long-range principles and current steps, the whole situation and partial sutations, and big collectives and small collectives are often confused with each other... requirements that can be met only in several years or several tens of years are changed into targets that must be achieved in a year or several months" ("Statement of Views"). The upshot of a substitution of economic laws by politics in command was of course a deviation from realities.

An overall examination of Mao Zedong's views on economic development cannot be done in this short article. Here I might as well take the "supply system" as a clue to discuss a little the initial relationship between Mao Zedong and the "gang of four."

During the Yanan period in the past, food provisions for the Chinese communists, because of the prevailing united front, were allocated by the central authorities, and a supply system was carried out amongst their troops. But, after the founding of their state, a wage system, under the overall plan of the state economy, had to be followed. Zhou Enlai, therefore, pointed out in his "Report on the Work of the Government" in September 1954 that the supply system "played a major role in the period of revolutionary wars but contradicted the principle of payment based on labor and the economic accounting system, and has hence become more harmful than beneficial today"; it was therefore necessary to "gradually change the supply system into a wage system." To each according to his work was originally a long-range principle; but when Mao Zedong started the Great Leap Forward movement in 1958, he proposed the question of the supply system at Beidaihe meeting and wanted to set up people's communes, carry out a semi-supply system, and gradually move on to a full supply system. After that meeting, there appeared an article in No 6 of the Shanghai JIEFANG [LIBERATION] fortnightly: "Eliminate Ideas About Legal Rights of the Bourgeoisie." The author was Zhang Chunqiao. In order to fall in with Mao's viewpoint, this article especially stressed the "life under the supply system of a communist nature" during the Yanan period, "with no thought of paying any wages and still less of carrying out any 'piecework wage system.'" A relationship between Mao and Zhang was thus established, and for this reason Mao also personally sponsored a discussion on legal rights of the bourgeoisie. According to a retrogressive statement made by RENMIN RIBAO director Wu Lengxi in his "preliminary self-examination" during the Cultural Revolution, "Chairman Mao gave me the article Zhang Chunqiao published in Shanghai, and personally added an editor's note to it to basically affirm its viewpoint, asking me to push it in RENMIN RIBAO and launch a discussion. In my own thinking at the time, I also agreed with Comrade Zhang Chunqiao's article, because the basic thinking in the article was what had already been mentioned by Chairman Mao at the Beidaihe meeting in the summer of that year. But after the discussion was launched, it touched upon some rather broad problems...in relation to many questions of current policy, especially the question of the wage system;...the result of the meeting basically negated the viewpoint of Comrade Zhang Chunqiao's article or, that is to say, resisted Mao Zedong Thought, resisted Chairman Mao's directive" (HONGSE XINHUA [RED NEW CHINA], May 1968, No 43).

The relationship between Mao and Zhang was not only uninterrupted pursuant to this impasse about the "semi-supply system" in the people's communes but was becoming even closer and closer thereafter. After the Cultural revolution, Mao Zedong still could not forget, in 1969, the fact that the Red Army had in the past practiced the "supply system" without paying attention to legal rights of the bourgeoisie and thereby developed into a huge army. The relationship between Mao and Zhang also continued forward, with the publication by Zhang Chunqiao in the magazine HONGQI of his article "On Overall Dictatorship Over the Bourgeoisie" in April 1975 as its hightide.

Undeniably, "legal rights of the bourgeoisie" constitute an important theoretical question in Marxism. Marx pointed out in his "Critique of the Gothe Program" that because socialism was developed from the capitalist society, therefore it still carried in various aspects, e.g., in the economic, moral and spiritual aspects, traces of the old society in which it was conceived. This was the reason why bourgeois rights were able to exist for a long time in the socialist society. Bourgeois rights would become extinct, as a matter of fact, only in a situation in which the transition [from socialism] toward communism is being accomplished; but in order to attain this situation it would be necessary to effect a transition from collective ownership toward ownership by the whole people, a transition from "to each according to his work" toward "to each according to his needs," and to eliminate "the three great differences." These prerequisites were of course all rather remote goals. If the suggestion of the question of bourgeois rights were meant to cope with the expansion of the three great differences and wage differences between the classes, it would still have had its realistic meaning; but the question would be with what attitude should one treat such phenomena. One attitude would be to recognize that the realization of the abovementioned remote goals must be based on an extremely high level of productive power and that it cannot be accomplished at one stroke. In the process of economic development, it should be recognized that differences can stimulate the growth of production, and therefore their existence can only be necessary. Another attitude would be to proceed from the egalitarian viewpoint and to solve problems by the mode of equalization, thus stressing the substitution of material stimulation with spiritual stimulation. What effects policies formulated according to these two different attitudes would have on economic growth, however, is not a "theoretical" problem requiring argument.

The argument about bourgeois rights, because it touched upon the principle of distribution to each according to his work and therefore was a rather realistic question, not only affected wage policy but also affected labor enthusiasm. The reason the semi-supply system at the people's communes, such as the slogan "Eat Without Paying," could not continue was because the level of productive power at the time was fundamentally incapable of providing the basis for carrying out this policy. Apart from actual conditions, such empty talk about ideological struggle and socialist education was of no help to coping with realities. Not only was there not going to be a transition from the semi-supply system toward a full supply system, but the former even caused the entire economy to slide toward the brink of collapse in not more than a few months. Yet Mao Zedong never acknowledged the fact of this failure.

After the anti-rightist movement, intellectuals outside the party became already inhibited like cicadas in the winter, those who dared to hint at any admonition or who ventured to criticize the Great Leap Forward policy were all "comrades within the party." Peng Dehaui's "anti-party clique" was, of course, one example; Wu Han, Deng Tuo, Liao Musha, etc, too, were without exception all "comrades within the party." This led Mao Zedong to the thought of instituting a "wholesale replacement." After the Cultural Revolution, talkative and ingratiating fellows like Zhang Chunqiao naturally became successors, but China's economy also entered a dark period.

Mao Zedong's Path

Looking back at the history of this past period, what enlightenment have we derived? Whether Mao Zedong's original motive in instigating the Cultural Revolution was to counterattack other people's allegoric admonition aiming at him ("Hairui's Dismissal from Office") or to restore his absolute authority in the party and government (unified leadership), the Cultural Revolution itself undoubtedly was meant as a blow against bureaucracy; this cannot be obliterated. The fact that the Red Guards in those days were ready to respond to every call and rise with vigor indicates that they were also inspired by this ideal. But when the dust settled and they felt that they were deceived, their ideal also was dashed to the ground. Because they discovered that "after the departure of the old lord, came the young masters," and the young masters prove even more fierce and evil than the old lord, and more bureaucratic, more privileged too. Why, in the case of a vegetable-hawking country woman and a worker of a state cotton mill of proletarian background, once they climbed up the ladder of power, would they put up a different outlook? Why did years and months of class education and ideological struggle not have any effect on them? In the final analysis, it was still a question of system. Mao Zedong was of the opinion that the system was no problem and the problem lay with people; but facts proved that his thinking was wrong. In terms of Mao Zedong himself, what astonishes people is that history actually repeated itself again, and the mistakes made by Stalin were all "inherited" by Mao Zedong. This single point sufficiently illustrates that a reform of the system is necessary. The recent prevailing interpretation has been to attribute past faults all to feudal thinking, as if this can be an all-effective fig leaf. No one can deny that feudalism has left some remnant poison; but feudal remnant poison also must have the necessary soil in which to exist in order to grow the resultant poisonous sprouts, poisonous flowers, and poisonous fruits. What should be discussed, therefore, is why the reputedly superior socialist system should be able to provide such a piece of fertile soil.

Criticism of Mao is a means but not an end; the reason such a criticism of Mao is necessary is because the failings of the system have been reflected in him in a concentrated manner. As a leadership personality, Mao Zedong was able to elevate himself above the state, above the party; he was able to allow his wife to draft at random circulars for the party Central Committee (and yet she herself was not even a member of the Central Committee, as pointed out by Witke in her "Comrade Chiang Ching"); he was able to allow his wife, his nephew to lead a bunch of talkative and ingratiating fellows to uphold his "Thought" and take control of party and government power; he was able to take advantage of his absolute authority, threaten to take people to the hills to fight a guerrilla war, and start large-scale movements of struggle without going through the democratic process, thereby making the 800 million people as materials for experiments on his conceptualizations. Thus, under measures adopted in accordance with his economic thinking, which was oriented toward helping the sprouts to grow by pulling them up, he took the affairs of state and the livelihood of the people as his playthings. Perhaps some regard this precisely as a demonstration of his romantic spirit; but economic policies are concerned with people's life and death, and they must not be undertaken without a sense of caution and prudence. As I recall the time after the failure of the Great Leap Forward, when waves of refugees surged forth in Hong Kong and Macao, with those faces of sorrow and bitterness, and as people think about the floating corpses on the sea during the Cultural Revolution period, who would have any mind to "appreciate" the great leader's debonair and romantic spirit?

True, revolution includes violence. If we recognize this point, then perhaps from the viewpoint of the socialist revolution and economic development advocated by Mao we can describe this lightly as a tragedy of idealism; but who are the bearers of this tragedy? As for violence, there is revolutionary violence, there is also counterrevolutionary violence. In order to insist on the correctness of his "Thought," Mao Zedong did not mind dealing with his comrades with the means reserved for his enemies, thus persecuting them until death; yet they were still led to cry even just before their death: "I did not oppose Chairman Mao..." Was this revolutionary violence?

If we are aware of all this, then we know what kind of path Mao had followed after the Great Leap Forward.

MILITARY AND PUBLIC SECURITY

MISSILE, NUCLEAR, SPACE TECHNOLOGY CAPABILITIES EXAMINED

Hong Kong DONGXIANG [TREND] in Chinese 16 Sep 79 pp 14-17

[Article by Fang Jincheng [2455 6855 1004]: "China's Missile, Nuclear Fission and Space Technology"]

[Text] 8,000-Li Range ICBM

Western diplomatic officials in Beijing have disclosed that China has conducted three medium-range missile tests this year, and that two of them were launched from the Wuzhai area in the western part of Shanxi Province on 7 January and 15 July. The third test was launched from the northern part of Gansu Province and the target area was Lop Nor in Xinjiang, a range of approximately 1,900 kilometers.

Approximately 2 months ago, after China celebrated its "1 August" Army Day, the New China News Agency released several types of photographs taken during missile launchings which showed ground-to-ground, ground-to-air, ship-to-ship, ship-to-air and other types of missiles. A large number of western diplomats in Beijing are military attaches. One of them from a Middle Eastern country said that the level of achievement in China's missiles has broken away from the coattail of the United States and the Soviet Union and taken a path of its own.

In February of this year, a limited war erupted between China ad Vietnam. The start of this war, however, was no small matter for Beijing because it had to be courageously carried out in preparedness against Soviet intervention, even of a large-scale provocation. In dealing with the Soviet polar bear, it is not possible to take things lightly. The way that Beijing has stepped up its missile tests this year, as well as the recently NCNA-released photographs of three types of China-built military aircraft (a medium-range subsonic jet bomber, a supersonic attack plane and a high-speed fighter), shows that China, in the course of advancing the four modernizations, has achieved outstanding success in the modernization of its national defense.

The International Institute for Strategic Studies in England recently issued its annual report pointing out that China has built an 8,000-li ICBM which is believed to have been placed in the actual combat order of battle. The report said that China's ICBM maximum-range launching test would require setting up a target area in the Indian or Pacific Ocean. The test, however, has not yet been conducted. Even so, this does not mean that success has not been achieved with this type of missile. The fact that China has used ICBM's to launch man-made satellites shows that achievements have been made in this area. The report confirmed a number of China's achievements. First, starting in 1976, China already has 3,000-li range ICBM's in its arsenal and its present nuclear strike capability can cover a large part of the Soviet Union. Second, China has stockpiled several hundred nuclear warheads and this number continues to increase. Third, China's tactical air force can carry small nuclear weapons for aerial attacks. Moreover, its medium-range TU-16 bombers can make nuclear deliveries within a radius of 2,000 li (3,200 kilometers).

China's military affairs, especially nuclear weapons and their means of delivery, have been kept secret. During this year's 5th Session of the 2d National People's Congress, however, an exception was made in which China's 1979 annual military budget was revealed to be 20.23 billion RMB (equivalent to US$12.88 billion). It was also stated that in order to counter Vietnamese aggression and sabotage, military expenditures would have to increase. In addition to the troubles at the Sino-Vietnamese border, instability has also developed along the Sino-Soviet border. The Soviets have harassed commune members in the Tacheng area of Xinjiang Province, killing one individual and injuring another. This and the incursion of a Soviet helicopter into Xinjiang's territorial airspace show that such actions are intended to go along with Vietnamese provocation at the southern borders. The Soviets have created a tense situation on the Sino-Soviet border and stepped up the cold war to put China's policy to open up to and carry out of the four modernizations in check. Against this kind of background, it is of great urgency for China to strengthen its national defense. If China does not speed up the modernization of its national defense, the other "three modernizations" in industry, agriculture and science and technology will also be without any safeguards. Today, the Soviets and the Vietnamese have put a pincer movement on China from both the north and the south, and this unfavorable and threatening situation is one which China must reckon with for a considerably long time to come. In August, U.S. Senator Jackson visited Xinjiang and asked about China's defense against the Soviet Union. A local cadre replied, "We can mobilize 200 million militiamen." This shows that China's strategy against the Soviets is defensive. It is correct that a large number of militiamen added to the regular army can put the invading Soviet armies into a passive position. But what if the Soviets are not fooled and do not deploy a large number of divisions and regiments into Chinese battlefields, choosing instead to harass at the borders and, moveover, use nuclear weapons to concentrate at destroying the national defense industries located in the northeastern and northwestern parts of China. Then, what actions can be taken to retaliate? The only answer is nuclear weapons. This would mean it is essential to develop an effective nuclear retaliatory capability so that it would be possible to deter a Soviet surprise nuclear attack. An effective nuclear retaliatory capability that includes nuclear bombs, carrier rockets, bombers and a tactical nuclear air force is China's arms expansion objective. To have such a capability it is not necessary to have a large number of nuclear weapons. The Soviet Union, in striving for world hegemony, has built up a military force superior to that of the United States, which makes it the most powerful in the world. In order to protect its interest in various parts of the world, the United States cannot help but deal with this seriously. As a result, the situation has developed into a nuclear arms race between the United States and the Soviet Union. China, however, will have no part in this rivalry for world hegemony. Therefore, every time a nuclear test is conducted, it is described as a limited nuclear weapons development. In confronting the Soviet Union and the United States which have the nuclear capability to destroy the world 40 times over, even if China does not want to compete with them in numbers, it still has to maintain high-quality standards in its nuclear capability so that if the Soviets launch a full-scale attack, they will not be able to escape a retaliatory attack, which will make them think twice about it.

Eight Satellites and Multiple-Stage Rockets

While the Chinese authorities have not disclosed their actual missile capability, the numerous times China has successfully launched man-made satellites is sufficient to show that it possesses multiple-stage rockets. In early July of this year, a Chinese Space Science and Technology delegation paid a visit to Japan and one of its members, during an academic symposium, revealed that China will soon launch another scientific satellite. China has never before publicized its plans for space exploration before having actually carried them out. But up until mow we have yet to see the actual event. As it turned out, the United States in early August was the one to publicize that China had indeed launched a satellite in July but was unable to put it into orbit. The Soviet Union also announced that China had failed in the test. It can be said that scientific test failures are to be expected. After all, without failure how can there be success? If China had indeed already conducted such test it should say so. Such statement of the facts is even more necessary since the event was publicized worldwide beforehand.

Presently, there are only six countries in the world which have the capability to launch their own man-made satellites with their own rockets. China is one of them. As of now, China has orbited eight man-made satellites varying in weight from 1.2 to 1.5 tons into the earth's outer space. To launch a satellite weighing a ton into outer space, it is necessary to first have rockets with a considerably powerful thrust;

second, have either two-stage or multiple-stage rockets; and third, have precision computing and remote control technology. All three are very essential.

It was not until 1958 that China began research on developing rockets. At the time, the rockets developed were used for observation purposes. The earlier ones were liquid-fuel single-stage types, and they were only a half meter (46 centimeters) in diameter. On the other hand, in 1958, the Soviets had already launched a dog named "Linka" into outer space. Later on China, provoked by the break in relations with the Soviets and the withdrawal of their experts, concentrated efforts on developing missiles and nuclear weapons. At the end of the 1950's, it began building a 330-kilogram two-stage rocket with a liquid-fuel first stage and a solid-fuel second stage which would ascent to a height of 70 kilometers. It can only be used for weather observations. In comparison with the Soviet and U.S. ICBM at the time, it was considered "kid stuff." The Cultural Revolution began in 1966 and the late Premier Zhou Enlai also concerned himself with scientific and technological undertakings and ordered that a space technology research institute be established. In April 1970 the first man-made satellite was launched. The next year, 1971, the second satellite was launched. Later, in 1975, the third one was launched. Between the latter two dates there was a gap of 4 years. This was due to the interference of the "gang of four" who caused delay in research work. From the beginning of 1975, after Deng Xiaoping took charge of the work of the party Central Committee, research work returned to normal. From November 1975 to January 1978, five satellites were launched and all played an important role in making observation in the ionosphere and of solar particles.

The missiles used by China to launch the satellites were the CSS-2 and CSSX-4. These missile numbers were revealed for the first time by the Chinese Space Technology Delegation during its visit to Japan in July. According to U.S. estimates, the range of the CSS-2 is 2,400 to 4,000 kilometers and it is classified as a medium-range missile. The CSSX-4 that was used later is estimated to have a range of 11,000 kilometers and belongs to the ICBM category.

Recovering Satellites at Predesignated Areas

Another even more important achievement in China's launching of man-made satellites is its success in recovering them. This kind of technical capability was achieved in November 1975. To launch a man-made satellite into a planned orbit, it is necessary for the rocket to attain a speed of 7.9 kilometers per second. This is called the escape velocity, which is the minimum velocity required for an object to become a satellite. Since it is impossible for a single-stage rocket to attain the speed a satellite needs, generally a two-stage, three-stage and even a four-stage rocket is needed to increase the speed stage by stage, a very sophisticated technology. However, the predesignated area where the satellite will return to earth for recovery requires even more precision calculation, telemetry and control technology. There are three difficulties associated with a satellite's return to earth. One is speed reduction. To reduce the speed of a satellite below orbital velocity, a small retro-rocket in the satellite has to be ignited by remote control. Moreover, when the retro-rocket is ignited, the satellite has to maintain its correct position so that it re-enters the atmosphere at a perfect angle that is neither too level nor too steep. This requires highly sophisticated satellite control and guidance technology. The second thing is protection against heat. A satellite has to be kept from burning up by atmospheric friction as it re-enters the atmosphere at a high velocity over 20 times faster than the speed of sound. The third thing is the landing. On its descent, a satellite has to open a parachute at a certain height to make certain that it will fall toward the predesignated area. The fourth satellite launched by China was successfully recovered. The seventh one returned to earth in December 1976 and the eighth one was launched on 26 January 1978 and successfully recovered 4 days later. These three satellites were all recovered by the "soft landing" method. Western observers have noted that the apogee of the eighth, 1.25-ton satellite, was 409 kilometers and its perigee 172 kilometers when it orbited over the territorial airspace of the Soviet Union. This required highly sophisticated equipment. Obviously, this satellite is no match for the U.S.'s 12-ton "Big Bird" military reconnaissance satellite. Experts, however, believe that China will concentrate its efforts on developing a new type of reconnaissance satellite similar to the U.S. "Agena-D." Weighing 2.5 tons, it would need an even more powerful rocket.

Will Astronauts Travel to Space?

China's man-made satellite launchings have sufficiently shown that it does possess ICBM's. With less weight being emphasized in new types of nuclear warheads, it would be necessary for delivery means to be overly powerful. China is continuing to improve the quality of its missiles in order to have the full capability to deliver nuclear bombs to target areas 8,000 li away. In this way, the entire Soviet territories would be within China's retaliatory range.

China has conducted numerous nuclear tests, including underground ones using tactical nuclear weapons, thus indicating it has both large and small nuclear weapons in its arsenal. According to estimates, a nuclear warhead with an explosive power equal to 4 million tons of TNT is already in China's nuclear arsenal. Moreover, it is not too large and weighs approximately 1 ton. Hence, it can be delivered by an ICBM as well as a medium-range bomber.

After the PLA General Staff issued the call in September 1977 for "the continued improvement of nuclear missiles," NCNA reported for the first time in July of last year that China had formed a ground-to-air guided missile unit. In July of this year, Japanese military experts analyzed two photographs released by China which for the first time showed training in missile launchings; one photo shows the launching of a guided missile and the other shows the ground-to-air guided missile unit carrying out launch training). They believe that this guided missile unit, which China has named the "Second Artillery," possesses four types of missiles; the CSS-1 (range: 950 kilometers; throw-weight: 27 tons) the CSS-2 (range: 2,400 kilometers; throw-weight: 40 tons); the CSS-3 (range: 6,500 kilometers; throw-weight: no details); and the CSSX-4 (range: 11,000 kilometers). At the present, satellites are mainly launched by the CSSX-4 missiles which have the superior capability of the U.S.'s Hercules Missile and a throw-weight of approximately 200 tons. This shows that China needs only to further develop its technical capability in remote control and control and guidance and then the CSSX-4 missile can be developed into a multiple-warhead missile and can be used to launch people into space.

Last year, when the minister of the 7th Ministry of Machine Building Industry was visiting Japan, he in fact said, "We are in the process of completing the technology to launch a manned satellite." It is reported that China has conducted training of male and female astronauts. So it may be possible that one day Beijing will suddenly come out with the news that Chinese astronauts have traveled to space.

War Preparedness Against the Soviet Revisionists

In July of this year the Chinese PLA General Staff Department presented lectures on the "Knowledge of Modern Science and Technology and Knowledge of Modern Warfare," and middle' and high-level military officers and staff officers from the headquarters of units, all branches of the military, the National Defense S&T Commission, offices in charge of national defense industries, various military and political academies and offices of the Military Commission were organized to attend them. The lectures, taught by stages, were on such topics as scientific knowledge on such modern weapons as nuclear weapons, strategic and tactical missiles, infrared [devices], lasers and masers and the development and use of military systems engineering. In August of this year, on the occasion of the 52d anniversary of the founding of the PLA, the LIBERATION ARMY DAILY issued a call to the 4 million people throughout the armed forces that it is necessary to improve modern warfare technical equipment and, more important, for military officers to know how to apply modern warfare technology. This is an extremely urgent turnabout. In the war against Vietnam this spring, China won a significant military victory, but it nevertheless is deeply concerned about being inadequately equipped with modern technology. According to special reports, a large number of Chinese soldiers were killed and wounded by Vietnamese troops using Soviet-made laser weapons. Many also had their vision impaired by the lasers. Chinese tanks and artillery pieces used in the war against Vietnam were of the 1950's vintage and had limited capability in facing up to strong fortifications.

Chinese troops had to rely on morale, courage and close combat to break through many defense lines the Vietnamese troops had built on obstructive terrain. In the future, it is possible that the Soviet Union will directly send its advisors to engage in the testing of new weapons by taking advantage of the Sino-Vietnamese border dispute. Therefore, it is of utmost importance for China to step up the modernization of its military equipment.

In order to confront the Soviet threat, the Xinjiang Military District has been readjusted, upgraded and named the Urumqi Military Region so that it would be at the same level as the other 10 military regions. It is under the command of Wu Kehua (former commander of the Chengdu Military Region), has a 2,000-kilometer border with the Soviet Union and is an important strategic area. Moreover, China's nuclear plants are located in Xinjiang and Gansu. Xinjiang is huge in size, covering 1.6 million square kilometers, and is the main battleground to encircle the invading Soviet troops. Moreover, Chinese military leader Su Yu has also repeatedly emphasized the need to figure out means to direct a people's war under modern warfare conditions. In a speech to students of a military academy in January of this year, he said that there was no question of the necessity to use Mao Zedong's military thinking to direct and strengthen China's army building and to study military strategy and tactics. This, however, does not mean that Mao's military thinking needs no further development, much less that it should be indiscriminatedly copied word for word. Su Yu went on to say that some of Mao Zedong's military rules do not apply to today's reality, and that Mao had never spoken of the problems arising from a future war which rewuire new explanations and new answers. For example, it is not possible to use rifles, machine guns, grenades and satchel charges to counter today's three-dimensional enemy attacks and enemy electronics defense systems. Rather, antitank artillery and various types of missiles are needed. Moreover, to wage large-scale motorized battles in flatlands, it is essential, first of all, to resolve the problem of providing antiaircraft cover.

PLA Deputy Chief of Staff Wu Xiuquan, on the occasion of receiving former Japanese defense officers, said that China is considering eliminating the present system of having no ranks because it felt that it does not meet the needs of today's modern army. During this spring, on the occasion of traveling to Japan on the "People's Ship," Su Yu, in his highest advisory capacity, paid visits to the installations of Japan's Self-Defense Forces and met with cadres there. He spoke a number of times about China's need to step up the modernization of its military equipment. The purpose of PLA Deputy Chief of Staff Wang Shangrong's present visit to Europe is the same as that of Wang Zhen's visit to England earlier this year, which is to try to get new military equipment from the West.

These examples show that the Chinese military is at a crucial turning point. On the one hand, the fundamental concept of a people's war has not changed, but on the other hand, those military principles which do not do apply to today's modern warfare conditions must be changed. The importance of this new military concept has been strengthened as never before by the war with Vietnam and the Soviet Union's stepped up provocations.

This 1 September marks the 40th anniversary of Nazi Germany's sudden attack on Poland which touched off the start of World War II. In commenting on this event, the Chinese pointed out that the Soviet Union's ambition is even greater than that of Hitler in 1939 and it is the world's most dangerous hotbed of war. In view of the fact that the Soviets are presently engaging in various activities to send Vietnamese and Cuban mercenaries to stir things up in Indo-China, Southeast Asia, the Red Sea area and the Middle East by carrying out overt aggression and covert subversive activities, it can be seen that they are continuing to make provocations to drive out U.S. and West European influence there. To an even greater extent, the Soviet Union utterly detests the way it is being confronted by China's alliance with the United States, Japan and Western Europe and by China's open policy. China has become a thorn in the Soviet Union's flesh and for this reason, not only have the Soviets strengthened their fleets in the seas of the Far East to pose a threat to the United States and Japan and encroach on Southeast Asia, but have also positioned 40 divisions along the some 10,000-kilometer Sino-Soviet border, which includes the Sino-Mongolian border, and have added a force of 1 million men and used more than 3,000 military aircraft for combat support. In addition, the Soviet Union's "Mintze" aircraft carrier and guided missile vessels had sailed to the South China Sea at the time of tense relations between China and Vietnam to serve as a threat to China from the east side. In terms of strategy, the Soviet Union's encirclement of China today is even worse than the previous U.S. strategy of isolation against China. As never before, U.S. interest and Japan's welfare are being jeopardized. To confront this critical situation, the only thing in China's strategy is to strengthen its military effectiveness and speed up its modernization of equipment to maintain war preparedness against the Soviets. The purpose of building up ICBM's and new types of military aircraft is to establish a deterrent force against the Soviets. Viewed from this angle, China is strengthening its combat effectiveness to establish capability to maintain peace in the Far East and the entire world.

TITLE: "Periodic Solution of Vibration of a Two-Degree-of-Freedom Body with Dampers in which Friction Is Proportional to the Displacement"

SOURCE: Beijing BINGGONG XUEBAO [ACTA ARMAMENTARII] in Chinese No 3, Sep 80 pp 1-11

TEXT OF ENGLISH ABSTRACT: This paper studies a periodic solution of forced vibration of a two-degree-of-freedom body with friction dampers. It discusses the conditions in which the road excitation is simplified to the harmonic support motion and the friction is proportional to the displacement of the body [tank chassis]. First, we derived the differential equation of motion of system. Because of the existence of friction, discontinuous terms with sign function Sgn ($x\dot{x}$) appear in the equation, so there will be some difficulty in solving it. By means of the perturbation method we expand the solution in a power series in a small parameter ε and reduce the sign function Sgn ($x\dot{x}$) to sign function Sgn ($x_0\dot{x}_0$) of the first approximate solution. Finally, we obtain

[Continuation of BINGGONG XUEBAO No 3, Sep 80 pp 1-11]

the nonresonance periodic solution of the system and come to some conclusions for vibrational properties.

TITLE: "Acoustic Locating Techniques for the Burst Point in a Horizontal Plane"

SOURCE: Beijing BINGGONG XUEBAO [ACTA ARMAMENTARII] in Chinese No 3, Sep 80 pp 12-22

TEXT OF ENGLISH ABSTRACT: In this article, the formula for locating the burst point in a horizontal plane is developed on the basis of the assumption of the plane wave; the random error is reduced and the locating accuracy is improved by means of statistical theory and correlation analysis. Finally, the values for the correction corresponding to the original assumption are calculated.

TITLE: "The Synthetic Study of Tetranitroglycoluril and Its Hydrolized Product"

SOURCE: Beijing BINGGONG XUEBAO [ACTA ARMAMENTARII] in Chinese No 3, Sep 80 pp 23-27

TEXT OF ENGLISH ABSTRACT: In 1965~1966, we synthesized a new explosive Tetranitroglycoluril and its hydrolized product 1, 1, 2, 2-Tetranitroethane (TNAE), the latter being a good intermediate to synthesize some other explosives.

TNAE is an unstable compound in H_2O, but its salts of K, Ba are stable. TNAE can react with NH_3, CH_2O to obtain Dinitropentmethylentetramine (DPT) like Methylendinitroamine.

TITLE: "Analysis of Movement of Ball Rotor"

SOURCE: Beijing BINGGONG XUEBAO [ACTA ARMAMENTARII] in Chinese No 3, Sep 80 pp 45-55

TEXT OF ENGLISH ABSTRACT: The ball rotor, as an arming and safety device, has found wide application in the fuses for small caliber projectiles used in antiaircraft, aircraft mounted and ship-based guns as well as for recoilless gun projectiles. Its main advantages are that it is simple in structure, easy to manufacture and small in volume. By means of this device we can get an arming delay if the rotational speed of projectiles is low (e.g. $\omega \approx 9000$ rpm). The problem of arming delay may be easily solved if the ball rotor device is combined with a mechanism in which the safety part is made of meltable alloy (e.g., the fuse for small caliber antiaircraft guns). It is the centrifugal moment that causes the ball rotor to rotate, so that it is only used in fuses for spin projectiles whose rotational speed is about 9000-50,000 rpm. The reliability of the function of the ball rotor and the calculations of its arming time are based on the theoretical analysis of its movement. This paper

[Continuation of BINGGONG XUEBAO No 3, Sep 80 pp 45-55]

makes a theoretical analysis of the movement of the ball rotor by means of two non-inertial coordinated systems and introduces the differential equations of the movement of the ball rotor and the calculations of its starting time. Finally, the deviation of the center of the ball rotor from the axis of the projectiles is discussed.

TITLE: "Behavior of Rigid-Plastic Cylindrical Shell under Explosive Loads"

SOURCE: Beijing BINGGONG XUEBAO [ACTA ARMAMENTARII] in Chinese No 3, Sep 80 pp 56-63

TEXT OF ENGLISH ABSTRACT: The behavior of rigid-plastic cylindrical shells under explosive loads has been studied as has the number solution of shell motion and stress field given in references by Odintsov and Baum. On this basis, this paper makes a further investigation and achieves an analytical solution according to the principle of energy distribution. Therefore, it is simple in calculation, compatible with real conditions and valuable to engineering application.

SOCIOLOGICAL, EDUCATION AND CULTURE

PLAN FOR SYSTEM OF SOCIALIST EDUCATION NEEDED

Beijing RENMIN JIAOYU [PEOPLE'S EDUCATION] in Chinese No 7, 20 Jul 80 pp 3-5

[Article by Yan Si [1693 1835]: "An Important Guiding Ideology for Promoting Educational Undertakings"]

[Text] In order to meet the needs occasioned by national economic development we must establish a socialist educational system that will be suitable for China and that will satisfy the demands of modernization construction. Instructions issued by the Party Central Committee call for the entire party and the whole nation to attach great importance to education, work hard in the 1980's to bring about a significant expansion of our country's educational undertakings, and lay the foundation for the establishment of the kind of educational system just described. To this end we need to comprehensively summarize our historical experience, define a guiding ideology that will be appropriate for the development of education, and work out an education plan and build an educational system that will be consistent with our experience and ideology.

I

Existing economic conditions are restricting the growth of education, despite the fact that education is playing a very significant role in the development of the national economy. Our country's territory is vast, its population is extremely large, and its economic and cultural development is highly uneven. Any plan for building an educational system must of necessity be based on the economy. In addition to the absence of economic equilibrium, our country has a diversity of geographic and climatic conditions and a variety of nationalities. These are all factors that strongly influence educational undertakings. Given these objective conditions, to apply a single solution to all problems and to expect educational undertakings in all districts to proceed simultaneously at a uniform pace would simply be impossible.

As far as education itself is concerned, the level of education and the distribution of schools vary among the different types of districts. There is also a disequilibrium of a different character--the diversity of circumstances and existing problems among the various levels and types of schools. The scope of elementary education now includes 147 million people, but the outstanding facts about the system are the instability of the student body and the low quality of studies. Only 40-plus percent of the students who finish elementary school enter schools of a higher grade. The structure of secondary education (especially the senior middle school level) is that of a single unit. More than 90 percent of all senior middle school students attend ordinary schools. The difficulties that several million new graduates encounter each year when they attempt to enter schools of a higher grade of find employment have collectively become an acute social problem. Both higher education and technical secondary education are too small in scale and unsound in structure. There is an insufficient diversity of models for operating institutions at both levels, and the number and quality of capable specialists trained by this system do not meet our country's needs. As for adult education (also called social education), its development is not yet off to a good start, its foundation is very weak, and it cannot satisfy the desire of young workers, farmers and cadres to improve their education through advanced training or studies. Therefore, a plan for building an educational system must distinguish between the different types of districts, the different levels and types of schools, and the different models for operating schools. It will not be enough to formulate a sweeping series of aims applicable nationwide. We cannot wait while we "fill the gaps" throughout the nation and then raise the level of education at a uniform pace. Our country's limited financial and material resources will not permit this course of action, nor will the process of construction of the four modernizations. Of course, nobody really maintains that the development of education should be a response to a uniform set of demands. We should deal with the problems facing us by going a step further in understanding this objective law, acknowledging the disequilibrium, and making use of this law during the next 10 years as we strive to bring about a significant expansion of our country's educational undertakings--[an expansion] that will raise educational standards to their highest levels in history.

II

If we acknowledge the absence of equilibrium and go ahead and build our country's educational system on this admittedly uneven foundation, we will then be able to raise the scientific and cultural levels of all the people fairly rapidly, train capable personnel for socialist modernization faster, better, and more economically, and thus adapt more effectively to the demands occasioned by national economic development.

If we acknowledge the absence of equilibrium, then we must recognize the distinguishing conditions prevalent in each district, ascertain the various requirements, and adopt various measures that correspond to these different circumstances. Coastal areas and inland areas, cities and villages, plains and mountain areas, agricultural districts and stockraising districts, areas inhabited by national minorities, and other areas that are economically backward and where the masses live in straitened circumstances--each must be dealt with on the basis of the particular circumstances. We must carry development forward in a series of waves, apply high, moderate, or low standards in accordance with particular situations, and do more in some places than in others. As for models for operating schools, we need ordinary elementary schools, ordinary middle schools, simple elementary schools, and all types of vocational and agricultural middle schools; we need full-time schools, spare-time schools, correspondence schools, schools that teach by radio, and television schools. Localities with fairly good economic conditions and an adequate educational foundation must invest enough funds and manpower to improve their educational system as quickly as possible. Localities in which economic conditions are difficult and educational standards are low must proceed on the basis of their respective actual circumstances, vigorously and steadily promote educational undertakings, and progressively raise the level of education with the help of the state and advanced districts (although this assistance does not amount to much now, it is certain to steadily become more substantial in the future), so that in days to come they will acquire the kind of foundation they need in order to become advanced districts. Advanced districts should make full use of their own superior levels of education to train greater numbers of capable people and help less advanced districts with their economic, cultural, and educational development. Of course, backward districts should not make unrealistic demands on themselves when building their educational systems, but they can find their own strongpoints and set their own emphasis accordingly. We have already seen the progressive experience of Jilin Province with its operation of a work-study program, which has proven that proper use of all local resources in a productive enterprise such as developing a school system can be the foundation of a position of superiority with great potential for the future.

Henceforth for a considerable period of time, the technology employed by the various departments in charge of the national economy will be composed of advanced technology, intermediate technology, and traditional technology, integrated in uneven proportions. Districts, departments, and occupations and industries are certain to have a variety of standards with respect to the kinds of personnel they will want. Only by adopting many and varied forms of models for operating schools and by developing many and varied channels and standards for training capable people will we be able to bring the educational system into harmony with the development of both the national economy and science and technology, and thereby derive real benefits from the money invested in education. For example, educational undertakings from the county level down should be geared to the needs of the villages and be of service to all kinds of construction projects in the villages. In the cities we should devote major efforts to developing all kinds of vocational and technical education, vigorously promote secondary and higher education for adults, and adopt a system that will include full-time schools, work-study programs, spare-time education, correspondence courses, schools that teach by radio, and television schools, so that we will be able to provide all occupations and industries with laborers and technical personnel in greater numbers and of increasingly better quality. At the same time, we have to set up a nationwide system of key schools--build a "little pagoda" of elementary schools, middle schools, and colleges that will provide excellent training for capable people and will play an exemplary and supporting role for other schools. We must pursue a balanced set of policies toward higher education. While energetically and steadily developing full-time higher education and devoting major efforts to developing varied forms of higher education for adults, we also have to concentrate enough strength at the outset to successfully build up a certain number of key institutions of higher learning and a group of key disciplines that together will constitute a "national contingent" which will measure up to advanced international standards and rapidly become the nucleus of our educational system and our scientific research efforts. This concept of the role of key schools calls for some of them to establish research institutes that will turn out persons with masters degrees and Ph.D.'s whose accomplishments will measure up to international standards.

During the past 31 years, 300 million people have graduated from elementary school in this country. If we properly implement the policies of the Party Central Committee and make great efforts for a period of time, another 300 million people throughout the nation will attain levels of education above elementary school graduation, and the ranks of our country's intelligentsia will be doubled. The formation of our "little pagoda" of key schools should fairly quickly foster the emergence of a "mountaineering expedition" composed of highly educated scientific and technical personnel of sufficient numerical strength. If we follow this proposed course of action, our nation's scientific and educational level will rise dramatically, and by the 1990's our country will be able to rely primarily on its own strength to solve scientific and technical problems that arise in the construction of modernization.

III

Acknowledgement of disequilibrium, which is a fundamental guiding ideology for promotion of educational undertakings, makes necessary corresponding reforms in the system of educational administration that will give full rein to the initiative of all districts, departments, enterprises, and commune groups in their operation of schools. The first step in building an educational system has to be the separate development of programs by individual provinces, cities, and autonomous regions based on the distinguishing conditions prevalent in each area. These programs can then be integrated with plans promulgated by departments under the Party Central Committee and the State Council to form a national program for the expansion of education. We recommend that such planning be governed by the principles of varying criteria and a diversity of models for operating schools. These principles certainly do not imply the absence of standards or the abolition of socialism. We have to keep in mind the bitter experience of the past 30 years; recall how frequent disregard for subjective and objective conditions caused great instability in the educational system; deal properly with the realtionship between demands and possibilities, popularization and the raising of standards, quantity and quality, and key points and ordinary matters; proceed on the basis of reality; and advance steadily. To this end it is necessary that the party take education seriously, fully recognize the status and the role of education in the construction of socialist modernization, conscientiously probe the laws that govern the development of education, and work earnestly to strengthen and improve its leadership in education work.

Education is the foundation for the training of capable people. It is not possible to depend on the labor force to perform naturally according to "human sea" military tactics. If we want to create a socialist civilization that is highly developed both materially and spiritually, we cannot do so with a single contingent of professionals and cadres who adhere to a socialist orientation and who possess real ability and learning. It would be impossible to build up a single contingent with all of its members possessing the same qualities. In this sense, building a socialist educational system that will fit in with the needs of the construction of modernization is a major program of fundamental importance with respect to the stability of the country and to the ensurance of successors to carry on the revolutionary cause of the proletariat. It would be completely incorrect to look upon education as purely a consumer enterprise, to think that we can wait until after the economy is flourishing to attend to education and, in accordance with this view, to fail to pledge the proper amount of money for educational enterprises, or to blindly reduce or divert funds intended for education. If we do not conquer this ideological problem, the struggle to bring about a substantial expansion of the educational system will be just empty talk.

The actual situation tells us the following: The level of education is not high in a number of economically prosperous, densely populated areas, and this is true to the extent that even elementary education is not genuinely universal and that many youths and middle-aged people are illiterate. Yet there are outstanding examples of successfully developed educational systems, such as those of Yangyuan County in Hebei Province, Huaide County in Jilin Province, Taojiang County in Hunan Province, Yanbian Prefecture, and Changtai in Fujian, all of which are areas that do not have very good economic conditions. The key to success in educational undertakings lies in the party's devotion to education and its leadership. The period of time needed to train capable people is fairly long; it takes a person 11 or 12 years of schooling to graduate from middle school, a total of 16 or 17 years to graduate from college, and about 20 years of education to obtain a graduate degree. This means that foresight is a necessary ingredient for the construction of an educational system. Building an educational system and training capable people call not only for satisfying in general the demands of the present, but also for consideration of long-term needs. Because it always takes 5 to 10 years for money invested in education to produce beneficial results, we have to attend to education as best we can under present economic conditions, so that the educational system will be adequately adjusted to the state of the national economy and the state of science and technology 5 to 10 years from now. The construction of modernization will involve a major expansion of the national economy and the growth of science and technology on a large scale, and the need for education to keep up with this accelerated advance will make planning more and more difficult. Therefore we must successfully encourage the entire party and the whole nation to attach great importance to education, and we must implement forceful guiding policies. In accordance with the requirements set forth at the Fifth Plenary Session of the 11th Party Central Committee, every district and department, while making plans and arrangements for economic construction, must also show foresight and make corresponding plans and arrangements to train capable people and build educational systems. To do otherwise would result in far-reaching adverse consequences and would constitute a mistake of historical magnitude.

For the present, adhering to the spirit of the instructions issued by the central authorities and establishing both an education plan and an educational system that will be suited to the needs of national economic development constitute an important task which must be undertaken without delay. It will involve many aspects, including the nation's labor system and cadre system. Both groups need to summarize historical experiences and undertake a series of reforms that will be in line with the special needs of the new period. Accordingly we hope that, besides the comrades on the education front, central and local planning, labor, and economics departments, and especially party administrators in leadership positions at all levels will give their close attention to this task, make their own agendas, draw on collective wisdom and absorb all useful ideas, pool the efforts of everyone, formulate a good plan for the development of our nation's socialist educational system, and vigorously promote the training of capable persons to be specialists in all fields and the work of a large labor contingent.

REFORM OF COLLEGE TEACHING METHODS URGED

Shanghai JIEFANG RIBAO in Chinese 22 Jul 80 p 2

[Article by Chen Qingji [7115 1987 1015] of Fudan University: "College Teaching Methods Must Be Reformed"]

[Text] The question of how our higher education should be conducted is an extremely important one which touches on many areas, including improvements in teaching methods and total mobilization of student enthusiasm and self-motivation for study.

The main teaching problems now found in our colleges are: teaching over-emphasizes the transmission of knowledge and neglects cultivation of the ability to perform independent work. Classroom teaching is mostly "spoon-feeding" which "fills the whole classroom," with very little use of heuristic or discussion methods. There is no skillful application of the principle of teaching students according to their aptitudes, but rather habitual "standardization" and "arbitrary conformity." The testing system is lifeless and does nothing to lead the students to apply their theoretical knowledge or analyze and solve problems. The substance of these problems is that our teaching sees students as passive recipients of knowledge and is thus unable to stimulate student enthusiasm and self-motivation for study. During the last 30 years we have produced many college students but few of these have been outstanding and this is in no small way related to the faults in our teaching methods. These teaching methods cannot remain unchanged. Here are a few suggestions for reforms:

1. Improve Classroom Teaching

The task of classroom teaching is not simply the imparting of knowledge. While the instructor is teaching he should teach study methods to the students, as this is even more important than imparting knowledge. The knowledge that a student can acquire during college is, after all, limited, and teaching correct study methods to the student is like giving him a key which lets him unlock the treasure house of knowledge, so that after graduation he can study by himself and make creative developments in knowledge.

There must be opposition to the "spoon feeding" and "force feeding" teaching methods and promotion of the heuristic and discussion teaching methods. Some information need not be presented in the classroom and what is presented should be the main points and problems which the students cannot easily understand. Teaching requires skill in posing problems for the students to think over, with the teacher providing guidance and suggestions. Some problems need only be suggested but not developed, so that the students will discuss them themselves. In the upper divisions there should be courses devoted to writing reports and conducting discussions, the introduction of varying scholarly viewpoints and the latest developments in a given discipline, the organization of student discussion of special topics to allow them to express their own views and advance competition among differing views. Only in this way can we nourish habits of independent thinking and skills in problem solving to make the students capable of heuristic study and comprehension through analogy.

2. Implementation of the Principle of Teaching Students According to Their Aptitude

There are objective differences in student cultural foundations and learning aptitude and to ignore these differences and demand uniformity and standardization is not beneficial in motivating independence and enthusiasm in student study habits, which will permit them to make vigorous, lively progress, and it is not beneficial in developing outstanding students. Therefore, our teaching must implement the principle of teaching according to student aptitude. One good method of implementing this principle is by carrying out an academic credit system. We should also permit students who are studying according to the requirements of the teaching plan to overcome the current condition of excess narrowness in student knowledge by crossing professional lines and selecting cross-discipline courses under faculty guidance. Outstanding students should be permitted to select additional courses. Some students who have already mastered a course should be given credit by examination. Students can also be excused from attending lectures and take the examinations on the basis of self-study. A small number of outstanding students who have completed the courses required by the teaching plan may take early graduation or register for the graduate student examinations. The minority of students who have school difficulties may extend their education by a year or so.

Students should be encouraged to follow their own specialities and interests in forming academic societies, interest groups and research groups, to read widely in extra-curricular tests, to participate in scientific research activities or undertake specialized research, and they should be permitted to select their own research topics, conduct social investigations, collect materials, consult reference materials and write dissertations.

At present in all colleges, departments and professions there are overly strict restriction so that after a student gains admittance through examination he is "fixed for life" and cannot transfer to another university, department or profession. This does not agree with human laws of knowledge, special characteristics and interests. When taking the examinations many students are not very clear about the nature of the departments, curricula and professions and exhibit great blindness in filling in their areas of interest. Students who have definite abilities and interests should be permitted to study professions which will make use of their talents.

3. Improve the Testing Methods and Grading Methods

The goal of testing is to reinforce what has been learned, develop the application of theory and analysis to problems and to develop problem solving abilities, the latter being the most important. The comprehension of certain concepts and information does not imply the ability to apply it in explaining problems, or the ability to use theory to analyze and solve problems, as these naturally are dependent upon mastery over theoretical knowledge. Because of this, the determination of test questions is extremely important. Questions ought to be set according to emphasis on the basic principles of a discipline and using these principles to analyze and solve certain problems. Merely requiring students to repeat the content of classroom lectures or textual materials only encourages rote memorization and does not nurture the ability to do independent work or enable one to see the true level of a student. There should be more varied methods of testing and checking, for example, oral exams, written exams, open book, closed book, performance of experiments, planning, "writing papers" and so on. A class could also use two types of tests.

The colleges now generally use a hundred point system to record grades. This easily focuses student attention on testing and on methods of coping with tests. The hundred point system is difficult to handle, especially in the humanities, and it is very hard to explain the difference between 89 and 90 points. When the grades are so finely divided the only way to grade properly is to ask lifeless questions on such things as terms and concepts. A grade is only a pale reflection of a student's success in studies, and it is preferable for grades to be more general, such as superior, above average, average, passing and failing.

4. Students Should Be Given Wide Scope and Encouraged in Independent Study.

Colleges now have too many class hours; the lower divisions are generally over 22 hours, with some as high as 30 hours, so that the ratio of student non-class to class time averages less than one to one. The students have very little discretionary time, so how will they be able to think profoundly about problems, read widely, broaden their intellectual horizons and learn in an independent, lively manner? There should be reductions in the present amount of required study time so that students have more time for free study.

OUTSTANDING EDUCATORS EXCHANGE EXPERIENCES

Beijing GUANGMING RIBAO in Chinese 12 Aug 80 p 1

[Unsigned article: "An Inquiry into Education under the New Situation"]

[Text] Not long ago, over 100 outstanding educator representatives from 29 provinces, municipalities and autonomous areas throughout the nation concluded their rest and experience activities in Jinan.

The summertime rest activities in Jinan for the national outstanding educator representatives were co-sponsored by the Ministry of Education and the National Committee of the China Education Union. The 108 outstanding educator representatives who participated in the activities were comprised of primary, middle and college teachers of 9 nationalities, including Han, Mongolian, Moslem, Tibetean, Uygur, Dong, Tujia, Manchu and Korean. They were able to have a complete rest at this seaside city, and moreover took this opportunity to exchange experiences in education and teaching and, especilly, make inquiries into such questions as how to properly conduct the ideological and political education of young people and children and how to advance the students' knowlege under the new conditions.

All of the outstanding educators participating in the discussion felt that it is necessary to proceed from the basis of the special ideological features of young people and children in this new period to strengthen the school's ideological and political education by targeting education of moral character, the ideal future and patriotism and the means to carry out ideological education in areas of teaching. Teaching methods suited to the features of the new period must be discovered, with research not only on the backwards students but also on the ideological features of all students, including the superior ones. There should be a study of our past experiences in ideological and political education, and there must be continuation of the good traditions along with attention to discovering new methods.

How are we to advance the students' intellect? This topic elicited great interest and vigorous discussion from the outstanding educator representatives. They generally concluded that there is an obvious problem in current educational work, which is the overemphasis on promotions, with all sorts of examinations under a multitude of names, so that even the first grade of some primary schools have sealed examinations and constant grading. The teaching method is rote memorization, extra classes, and increased exercises for students, all of which overburdens both students and teachers and leaves the students little time for independent thought. Such an approach not only prevents students from gaining more knowledge, but more importantly, it restricts development of student intellect. They believe that these conditions must be thoroughly changed, and simultaneous with a strengthening in teaching of basic knowledge and basic skills, there must be conscious development of student intellect to make their learning more lively, to learn to make inferences, and to not only acquire knowledge but to also obtain both an interest in knowledge and an ability to use it. A few Beijing and Shanghai municipal education research organs have joined together with front line educators and already are carrying out educational experiments to develop student intellect. They have obtained pleasing results.

From their educational experiments they have learned the importance of studying both the theory of teaching and the science of teaching. Successful educational work first requires the guidance of advanced educational thought, because the mere reform of a few teaching methods will not solve the problem. There must be an understanding of the current situation foreign educational thought, absorption of what is advanced, summarization of our own educational practices and creation of our own science of education.

THREE YEAR SYSTEM FOR SOME MIDDLE SCHOOLS

Tianjin TIANJIN RIBAO in Chinese 11 Jul 80 p 1

[Article: "Thirty-five Tianjin Middle Schools Change to Three Year System']

[Text] In order to improve the quality of general middle school education, the Municipal and Districts Departments of Education jointly decided to change 35 middle schools from the 2 year system to a 3 year system. These middle schools are the 1st, 2nd, 3rd, 5th, 7th, 9th, 13th, 14th, 16th, 20th, 31st, 32nd, 38th, 40th, 43rd, 45th, 54th, 55th, 61st, 78th, 79th and 102nd middle schools; the Hangu 1st, Tanggu 2nd, Chengyouzhuang 2nd, Nankai, Xinhua, Pingshan Road, Dongfanghong, Yan'an, Aiguo Road, Chentangzhuang, Xianyang Road and Lingdang Pavilion middle schools.

The students recruited this year will be taught according to the new teaching plan.

MORE TIBETAN MEDICAL PERSONNEL IN XIZANG

Beijing GUANGMING RIBAO in Chinese 6 Sep 80 p 1

[Article: "Xizang Trains Over 10,000 Tibetan Medical Personnel"]

[Text] Lhasa, 5 Sep (XINHUA)--The Xizang Autonomous Region has trained more than 10,400 Tibetan medical personnel.

In order to train and enhance the medical technical level of Tibetan medical personnel, the Tibetan Autonomous Region has in recent years sent them at different times and in different groups to medical universities and colleges and hospitals in inland provinces and cities for advanced study, and at the same time it has opened different kinds of vocational training classes so as to provide many professional learning opportunities for Tibetan medical personnel. Through advanced study and learning, each of the 19 Tibetan doctors at the People's Hospital of Tagtse County can treat common diseases and recurrent diseases, undertake general internal medicine and surgical operations, and handle some critical illness. After becoming a formal doctor in 1974, doctor of internal medicine Ci Duoji [2945 1122 0679] undertook advanced study at the people's hospitals in Lhasa city and in Qianyang Prefecture of Hunan Province, which resulted in a quick advancement in professional techniques. Not long ago, in treating a patient who had a stubborn skin disease for 20 years, he daringly used a combined treatment including ultraviolet rays, acupuncture, and Chinese medicine, with good results. Shamagele [0084A 3854 2706 0519A], a Tibetan ear, nose, throat, eyes and teeth doctor, not only can now extract teeth, fill teeth, and treat common eye diseases, but also can perform the operation of removing cataracts. The local Tibetan masses called him "our own Haomenba (doctor)."

XIZANG INCREASES ENROLLMENT OF MINORITY STUDENTS

Beijing GUANGMING RIBAO in Chinese 2 Sep 80 p 1

[Article: "Minority Students Account for 70 Percent of New Students Enrolled in Xizang Schools of Higher Learning"]

[Text] Tibetan and other minority students account for 70 percent of the new students enrolled this year in schools of higher learning in the Tibetan Autonomous Region.

In order to put into full effect the central government's recent instructions regarding Xizang's work, to fully realize the autonomy of nationality regions, and to enhance the training of scientific and technical personnel and cultural personnel of Tibetan and other minority nationalities in Xizang, the people's government of the Tibetan Autonomous Region decided that, beginning this year, enrollment of new students in schools of higher learning in the region are to be mainly for Tibetan and other minority students. Schools of higher learning in this region this year enrolled 220 new students, of which 154 are Tibetan and other minority students, and 66 are Chinese.

Schools of higher learning of some other brother provinces, cities, and autonomous regions enrolling students in Xizang also have taken Xizang's recent actual situation into account this year by suitably lowering the standard for enrollment, and they have enrolled Tibetan and other minority students for study in these schools.

QINGHAI YOUTH ACTIVITIES STRESS ETHNIC CHARACTERISTICS

Beijing ZHONGGUO QINGNIAN BAO in Chinese 12 Aug 80 p 1

[Article: "Qinghai CYL Assigns Work According to the Characteristics of Nationalities"]

[Text] Taking into account the characteristics of nationality regions, the Qinghai Provincial Committee of the Communist Youth League assigned such activities as training the league's minority nationality cadres and organizing young Chinese cadres to study the Tibetan language, etc., thus picking up the league's work.

When Comrades Hu Yaobang and Wan Li visited Qinghai on their journey in May, they told leaders of the provincial committee that the six points they mentioned at the meeting of cadres of the Tibetan Autonomous Region are basically applicable to Qinghai's situation and can be carried out accordingly. This indicates the direction for the development of work in Qinghai. In the process of learning and putting into full effect the instructions of the central government, the league's Provincial Committee first assigned three activities:

1. Strengthen the training of the league's cadres of minority nationalities by restoring the league's provincial schools, which had been suspended for 13 years. Participating in the study this term were the league's 60 cadres from counties and communes of six autonomous prefectures, including the Golo Tibetan Autonomous Prefecture, the Haihsi Mongolian, Tibetan, and Kazakh Autonomous Prefectures, etc. Also, the league's Yushu Tibetan Autonomous Prefecture Committee and the league's Haidong Region Committee recently opened training classes and separately trainied the league's 230 cadres in the organizations and communes of 14 counties under its jurisdiction.

2. Organize young Chinese cadres to study the Tibetan language. Recently, the league's Provincial Committee issued a document asking the league's organizations at all levels to educate and encourage young Chinese cadres in the study of the languages of the local minority nationalities, so as to be able to render services to the minority nationalities wholeheartedly. At present, in organizing young Chinese cadres to study Tibetan, the Yushu Tibetan Autonomous Prefecture has established a learning system and put

into full effect in it the five aspects of guidance, teachers, teaching materials, time, and location. Under the support of the party's and league's organizations, league members and young employees of the Xining City's Commerce Bureau opened a Tibetan language class and a Tibetan language conversation class. In cooperation with related departments, the league's organizations for rendering services in trades and professions put up signs in the Chinese, Tibetan and Mongolian languages at such places as movie theaters, shops, post offices, railroad stations, etc.

3. Persistently shift the work emphasis of the Qinghai League to the right track of animal husbandry. To be able to make this change, the secretary and the vice director of the staff office of the League's Provincial Committee have visited the ranches of Dulan County's Balong Commune, taking along their personal belongings and making a thorough investigation and study. Riding on horseback, they have visited all the production teams of the entire commune and written down, on the basis of the firsthand materials they have mastered, the experiences of league members and youths, led by the League's Balong Commune Committee, in building up the ranches. They also planned to have the work experience exchange conference of the youths at the ranches, scheduled to be convened in August in Xining, moved to the pastureland of the Balong Commune. Recently, the leading comrades of the league's Provincial Committee, together with the working people, arrived at the Balong Commune and erected tents on the pastureland. They eat, sleep, and work there, actively preparing for this conference.

INCREASED MARXIST STUDIES IN WESTERN COUNTRIES DISCUSSED

HK160614 Shanghai WEN HUI BAO in Chinese 23 Sep 80 p 3

[Article by Ma Zemin [7456 3419 3046] and Xu Ruomu [1776 5387 2606]: "On Marxist Studies in the West"]

[Text] Synopsis: This article analyzes from the social origins the reason for the fervor of Marxist studies appearing in the developed capitalist countries of the West from the latter part of the 1950's and particularly since the 1960's. It gives a concrete answer to the various representative arguments put forth by Western Marxist scholars regarding the new challenges encountered by Marxism in its own development. It holds that the series of new changes, characteristics and problems caused by the industrial revolution centered on electronics technology have proven that certain Marxist formulations are already no longer in keeping or completely not in keeping with actual conditions at present. It also holds that our urgent and great task is to conscientiously study the scientific and technical revolution according to the basic principles of Marxism, to study the new developments, characteristics and problems resulting from the scientific and technical revolution and to push forward the development of Marxism. Marxism is on the eve of a major development.

Appearance of 'Marxist Fever' in the West

After World War II widespread interest in Marxist studies appeared among the developed countries of the West from the latter part of the 1950's and particularly since the 1960's. This has been one of the most outstanding new social phenomenon since the war.

West Germany is a very typical example. In the latter part of the 1950's and since the 1960's, West German publications, academic meetings and television broadcasts have been discussing Marx almost daily. "Introduction to Marx" has appeared on the television screen and the Frankfurter ALLGEMEINE ZEITUNG has published series of articles introducing the so-called "systematic concepts" of Marx. From 1964 to 1967 West Germany published more than 400 books on Marx and Engels. In particular, students in all the universities are demanding that courses on Marx be set up. Professors of philosophy and social sciences who do not give lectures on Marx are not welcomed by the students. Intellectual and undergraduate organizations are universally taking up the study of Marx. Many Marxist study groups have also emerged in the labor movement.

The "Marxist fever" has also appeared in France, Italy, the United States and Britain, and this has given rise to many contemporary Marxist schools.

What is the reason for the fervor in Marxist studies appearing in the capitalist countries of the West in the latter part of the 1950's and particularly in the 1960's? Marx' teachings have informed us that in the final analysis changes in the ideological sphere must be explained by changes in the economic base. In the latter part of the 1950's and particularly since the 1960's, the capitalist countries of the West have undergone an industrial revolution founded on electronics technology. Although this revolution has not transformed the capitalist private ownership of the means of production, it has, nevertheless, transformed production facilities into an automatic system and therefore enabled productive forces to develop rapidly. The vigorous development in productive forces as well as in science and technology has led to certain changes in the structure of class society and also in the working class and the lifestyle of the whole society. The more prominent of these changes are: Most of the working class have become white collar workers; their scientific and technical level has greatly improved; there is no longer any marked distinction between their working conditions and those of middle class technicians, and they have specific guarantees for the basic necessities of life. Not only are they exempted from cold and hunger, but most of them also have their own cars, color TV sets, refrigerators and washing machines. However, because the scientific and technical revolution has increased labor productivity, it has also caused structural unemployment in various sectors of the capitalist economy. This has resulted in a considerable portion of the workers having their source of livelihood cut off, and it has turned them into the targets of social poverty. The capitalists have taken advantage of the army of unemployed to force the workers to work desperately and have increased the intensity of labor on the automatic assembly lines causing serious harm to the mind, spirit and nerves of the workers. In the United States neurosis and mental illness have become a product of "high industrial civilization," and some 10 percent of the entire population are suffering from various neurotic diseases and mental disorders. At the same time, because of the technological revolution, the monopoly capitalists have become deeply aware of the importance of specialists, scientists, technicians and intellectuals in defeating their competitors and in earning high profits; this they are rushing to set up and monopolize companies of various specialists to strengthen their control and exploitation of specialists, scientists, technicians and intellectuals. This has further exacerbated the contradiction between the specialists, scientists, technicians and intellectuals on the one hand, and monopoly capital on the other, and has brought them closer and closer to the position of hired workers. In the past university students were automatically candidates in line for greater social and economic mobility. Now, because of structural unemployment, they cannot even join the work force, and to many university graduates, graduation means only unemployment. Moreover, regardless of whether they are workers or scientists, technicians or intellectuals, blue collar workers or white collar workers, employed or unemployed, they have all become commodities which are graded and priced and ruthlessly shuffled about according to the needs of the market. As many people feel that they have no control over their own destiny, they become lonely and depressed. The future for them is uncertain. Life has lost its meaning and they are extremely pessimistic about society. They adopt a nihilistic attitude toward everything and resort to hipsterism, terrorism, drink, dope, free sex and religious superstitions. Out of despair and dissatisfaction many people are turning to Marxist studies. In the forefront are the masses of students and young workers. As pointed out by Frankfurter ALLGEMEINE ZEITUNG: "The young people are looking for the correct road. To them, the brightest guiding star appears to be Marx." These conditions and changes are the social roots of the fervor for Marxist studies appearing in the capitalist countries of the West. They are also powerful and effective proof by negative example of Marxism in the developed capitalist countries of the West.

Marxism Has Run Into New Challenges

Under these excellent circumstances, are there still problems? Yes, there are. Some new problems have also actually appeared in the fervor for Marxist studies. In light of certain new characteristics and conditions in capitalist development, some Marxist scholars in the West have put forth the following views: "The proletariat is dying out," "the proletariat has been integrated within the capitalist system," and the proletariat has lost its revolutionary will. Marxism has run into new challenges in its own development. If the Marxists cannot give a scientific answer to these problems but instead allow them to spread, then international proletariat and all revolutionary people will be thrown into ideological and theoretical chaos, they will waver in darkness, and inestimable harm will be caused to the communist movement. How should we actually answer these problems?

First, to prove that the proletariat is dying out, some Marxist scholars of the West have regarded tangible material poverty and heavy physical labor as the essence of the proletarian concept described by Marx. This is a distortion of the original meaning of Marx. Naturally, when analyzing the essential characteristics of the proletariat, Marx had proceeded from facts of the labor conditions and tangible material poverty encountered by the proletariat in the 19th century. However, Marx had never regarded the labor conditions and tangible material poverty encountered by the proletariat in the 19th century as the essential characteristics of the proletariat. Labor conditions and living standards keep on changing with the development of productive forces. Marx had always opposed the method of directly summing up the essential characteristics of a class as the level of development of productive forces. Moreover, he always paid attention to the relations of production based on the level of development of specific productive forces. He said: "The human essence is no abstraction inherent in each single individual. In its reality it is the ensemble of social relations." ("Collected Works of Marx and Engels," Vol 3 p 6) When analyzing the essential characteristics of the proletariat, Marx strictly followed his own materialist method. His formulation of the essential characteristics of the proletariat was based on the position of the proletariat in social economic relations. He held: "Our 'proletarian' is economically none other than the wage-laborer, who produces and increases capital and is thrown out on the streets as soon as he is superfluous for the needs of the aggrandizement of 'monsieur capital.'" ("Das Kapital," Vol 1, p 674 footnote) Here Marx did not consider the poverty of the life and the sordidness and heaviness of the labor as the essential characteristics of the proletariat. To him a member of the proletariat was merely a person who sold his labor for means of subsistence because he did not have the means of production. Precisely because of the lack of means of production, he had no alternative but to sell his labor to the capitalist, to obey the orders of the capitalist in the course of production and to produce and increase capital. These are the common essential characteristics of the proletariat. However, the concept of the proletariat also has a historical category. The forms of manifestation of the common essential characteristics of the proletariat are not the same under concrete historical conditions. Marx and Engels lived in the 19th century. They could only observe and study the proletariat from the forms manifested by the proletariat in the 19th century. Therefore, they put the emphasis on heavy physical labor and material poverty. Some Marxist scholars of the West are unable to master the dialectics of the general and specific and the universality and particularity, and they use the heavy physical labor and material poverty encountered by the proletariat in the 19th century to replace and negate the common essential characteristics of the proletariat. This is obviously a misrepresentation of Marx.

To be sure, the working conditions of the workers have changed and their living standard has improved, and most of the workers have cars, TV sets and refrigerators. However, these changes in the sphere of consumption have not basically altered class relations. Although Marx never knew that the workers of today could enjoy such industrial luxuries, he did not rule out the possibility that the life of the workers could be improved under capitalist conditions, and he also pointed out how the improvement in the life of the workers should be understood. He said: "They can extend the circle of their enjoyments; can make some additions to their consumption-fund of clothes, furniture, etc., and can lay by small reserve-funds of money. But just as marginal improvements in food, clothing, treatment and property could not eliminate the dependency and exploitation of slavery, neither can they eliminate the dependency and exploitation of the wage-workers. In fact, an increase in the price of labor as a consequence of the accumulation of capital merely allows for a relaxation of the tension of the long, heavy, golden chain the wage-worker has already forged for himself." ("Das Kapital," Vol I, pp 677-679)

What is more, labor in developed capitalist countries is very intense and requires a high degree of concentration. This kind of highly intense labor also requires better food. For example, labor in Toyota Motor of Japan is so intense that workers have no time for conversation the moment they start work. Although there are no longer supervisors with whips and clubs, there is closed circuit surveillance and the workers are forced to work desperately. This kind of intense labor causes an excessive drain on the energy of the workers, and as a result, they are required by Toyota Motor to retire at the age of 40. Intense labor requires better nourishment and this is the requirement of capitalist exploitation, just as the exploitation of the capitalists requires the workers to possess certain cultural standards. So this is only the result of the workers' struggle. Therefore, we cannot merely regard the consumption level of the workers and think that this stems from the good intentions of the capitalists. The form of exploitation of the workers has become more humane, but the content of exploitation has not changed.

Under the conditions of the scientific and technical revolution, the improvement in the workers' consumption level is also the direct result of the policy of high production, high wages and high consumption adopted by the capitalists. However, the basic object of the policy of high production, high wages and high consumption adopted by the capitalists is not for the sake of the general material benefits of the proletariat but for the sake of stimulating the workers' desire and making them a slave to their own desire so that they will produce more surplus value for the capitalists. This method is not something new and was proposed by James Steuart as far back as the 18th century. Marx in "Das Kapital" quoted Steuart's original text and in light of it pointed out: "He wishes to increase their wants and to make the increasing number of their wants a stimulus to their labor for the 'more delicate.'" ("Das Kapital," Vol 1, p 710 footnote) The present policy of the three highs of the developed capitalist countries of the West is nothing but a further refinement of this method. Some Marxist scholars of the West have played up the policy of the three highs, which improved the consumption level of the workers, as a basic improvement in the economic position of the proletariat. They even said that the question of whether or not private ownership has been eliminated is immaterial. By doing so they covered up the capitalist essence of the policy of the three high's and wanted the proletariat to always remain a slave to the bourgeoisie. Actually, the use of low wages and extended working time to compel the proletariat to work for the capitalists and the use of high wages and high consumption to stimulate the wants of the proletariat and make them a slave to their own desires and work themselves to the bone for the capitalists are both methods of earning higher profits for the capitalists. We cannot describe the change in the tactics of capitalist exploitation as a change in the objective of the capitalists, or say that the proletariat and the capitalists have embraced and the proletariat has become one with the capitalist system.

Second, some Marxist scholars of the West have categorically asserted that the development of science and technology has enabled science and technology to become an independent source of value and surplus value that do not rely on live labor. This is also incorrect. Because no matter how advanced the technology and how sophisticated the machinery, they are dead, inert and incapable of producing a single thing of value if divorced from the live labor of the workers. If science and technology can really become an independent source of value and surplus value that do not rely on live labor, then why do the developed capitalist countries still require blue collar workers and white collar workers. Why do they still make concessions to the striking workers? Value is created by labor and the capitalists cannot exist without the workers. The prosperity and the development of all capitalist countries are based on the labor of the workers. Technological revolution and new machinery and equipment only create more conditions for creating riches. They do not essentially create value and their value changes only with the development of the form of value. The application of science and technology in production will greatly increase output and keep on reducing the amount of labor society must spend per unit product. This has already been analyzed and affirmed by Marx in "Das Kapital" and the question of negating Marx' theory of value basically does not arise. With less labor than before the workers are nevertheless able to produce more goods than in the past. This is not because science and technology are able to become an independent source of value divorced from live labor, but because science and technology have increased the workers' productivity so that they can produce more goods with less labor. In this way, the necessary labor time required to pay wages is reduced and surplus value is increased. If they cannot supply higher surplus value, the capitalists will definitely not use the new technology. It can be seen that the scientific and technical revolution has not eliminated the exploitation of the workers by the capitalists but has increased the exploitation of the workers and the faster proliferation of capital. Is this not precisely the condition in developed capitalist countries?

Third, some Marxist scholars of the West have also categorically asserted that the revolutionary will of the proletariat comes from poverty. Because of the scientific and technical revolution and the improvement in the living standard, it has lost its revolutionary will and it will no longer implement the immediate need of socialism. This standpoint is also untenable. To be sure, poverty will impel the proletariat to turn to revolution, but revolutionary will does not necessarily come from poverty. When the capitalists were still revolutionary, they were often richer and not poorer than the feudal class. The small farmers on the brink of bankruptcy were often poorer than the hired workers, but the workers nevertheless had stronger revolutionary will than the small farmers. The life of the factory workers was far better than that of the vagrant proletariat such as beggars. It cannot be said that the vagrant proletariat was more revolutionary. Every class has its revolutionary will which is determined by its position in socioeconomic relations. This depends on whether or not the class represents the demand of the development of productive forces and not on whether it is poorer or better off. Some Marxist scholars of the West have compared the improvement in the living standard of the proletariat in the 1960's and 1970's of the 20th century with the living standard of the 19th century and categorically asserted that the proletariat of today has lost its revolutionary will. Basically speaking, this kind of comparison is wrong. If a comparison must be made, they should make the comparison between the proletariat and the bourgeoisie, for they are the two opposite extremes in the capitalist relations of production. Without the one side, the other side would not exist. Marx' method was to compare the different economic positions they occupy respectively in the capitalist relations of production to see which represented the demand of productive forces, which ran counter to the development of productive forces and which harmed the interests of the other. When analyzing class composition, Marx solved for us the problem of whom to compare. He said: "The reason single individuals form a class is because they must wage a common struggle against another class." ("Collected Works of Marx and Engels," Vol 3 p 61) It can be seen that if a comparison must be made, the class composed of individual members of the proletariat can only be compared with the bourgeoisie against which they must wage a common struggle. If a comparison is not made with the bourgeoisie and a struggle is not carried out against the bourgeoisie, then there is basically no need for the proletariat to form a class. So what is the use of prattling about such things as the proletariat? The reason individual members of the proletariat "must wage a common struggle against the other class" is because they have "similar conditions, similar opposites and similar interests." Moreover, these conditions, opposites and interests are identical and have been determined by the common economic position they occupy in the social relations of production. The reason the proletariat must unite to oppose the bourgeoisie is precisely because the economic position it occupies has determined that its interests are basically opposed to those of the bourgeoisie. Even though the wages of the workers have increased along with the scientific and technical revolution and development of productive forces, and even though there has been a definite improvement in their living condition, they still can never catch up with the profit growth of the capitalists, and the conflict of interests between them will never die. Therefore, the proletariat will also never lose their revolutionary will.

In fact, the new changes brought about by the scientific and technical revolution have not repudiated, but on the contrary, have attested to the unassailability of the scientific truth of Marxism and to the fact that it is a powerful ideological weapon for understanding the world and revolutionarily transforming the world. Precisely because Marx can help the people see through bizarre and complex social phenomena, understand the essence and interrelations of things and distinguish the correct orientation for action, the masses of young people who cannot find their way in the new capitalist development and changes by the scientific and technical revolution, the people who feel impotent over their own destiny, the people who have been hurt and the people who feel lonely and depressed are all turning to Marx. This is the reason for the widespread interest in Marxist studies in the developed capitalist countries of the West.

Marxism Is on the Eve of a Major Development

We should also see that we cannot find ready-made answers to the series of new changes, characteristics and problems of capitalism created by the scientific and technical revolution centered on electronic technology in the works of Marx. Moreover, these new changes, characteristics and problems can instead prove that some of Marx' formulations are already not in keeping or completely not in keeping with actual conditions at present. This has set an urgent and glorious task for all the Marxists of the world, and they must conscientiously study the scientific and technical revolution in the light of the basic principles of Marxism, study the new developments, characteristics and problems of capitalism caused by the scientific and technical revolution, and they must develop Marxism in a forward direction.

When we say that certain formulations made by Marx are no longer in keeping with actual conditions at present, this is not at all surprising. Marxism has told us that practice is the source of knowledge and theory is the summary of practice. All great theorists can only base themselves on the social practice of their time. "Every principle has its own century." All theories must bear the brand of their own time and the limitation of their own time. There is naturally no exception for Marx and his theory. Marx lived in the 19th century, and it was impossible for him to talk distinctly about the new changes, characteristics and problems of the 1960's and 1970's in the 20th century, because he did not have the practice of this era.

When we say that certain formulations made by Marx are no longer in keeping with actual conditions at present, does not mean that because they have mistakes they are no longer or not completely the truth? No. Marxism is the greatest objective truth. It was in keeping with the time which gave rise to it.

However, the truth of Marxism, like any other truth, not only has relativity but also absoluteness which is embodied in relativity. Following the development of social practice, certain formulations formerly in keeping with actual conditions have changed and are no longer in keeping with actual conditions. We cannot separate the relativity and absoluteness of truth, deify Marxist truth, think of it in terms of absolutes, negate its relativity and turn it into absolute and rigid dogma. Marx firmly opposed the dogmatic attitude of "appearing in the posture of an armchair theorist, of holding a set of ready-made principles and shouting to the world: Here is the truth, fall on your knees and pay homage!" He advocated combining theory and practice and called for "elucidating new principles for the world from the principles of the world itself." (Lenin also said: "We do not regard Marx' theory as something complete and inviolable. On the contrary, we are convinced that it has only laid the foundation stone of the science which socialists must develop in all directions if they wish to keep pace with life." ("Selected Works of Lenin," Vol 1, p 203)

Compared with the time Marx discovered Marxism, a very great change has definitely taken place in the new capitalist development caused by the industrial revolution centered on electronics technology, despite the fact that the societies of these Western countries are still capitalist in character. Many of Marx' formulations are no longer in keeping with present reality. A very great change has taken place in the present condition of the workers of developed capitalist countries of the West compared with the condition of the proletariat used by Marx as his point of departure when he discovered Marxism. The labor of most of the workers consists of pressing buttons and adjusting dials and their basic livelihood is guaranteed. Most of the people have their own cars, TV sets and refrigerators and some even have their own homes. These changes have made some of Marx' formulations obsolete. For example, Marx in "The Holy Family" said: "The properties class and the class of the proletariat present the same human self-alienation. But the former class finds in this self-alienation its confirmation and its good, its own power; it has in it a semblance of human existence. The class of the proletariat feels annihilated in its self-alienation." "It sees in it its own powerlessness and the reality of an inhuman existence." Here, Marx' affirmation of the same human self-alienation of the properties class and the class of the proletariat is correct, but can it be said that the workers of the developed capitalist countries of the West at present with cars, TV sets and refrigerators "see their own powerlessness" and "the reality of an inhuman existence?" Or that their lives do not have the semblance of human existence?

After analyzing the inevitability of the transformation of capitalism into socialism, Engels in "Socialism: Utopian and Scientific" said: "Whilst the capitalist mode of production more and more completely transforms the great majority of the population into proletariats, it creates the power which, under penalty of its own destruction, is forced to accomplish this revolution." Can we now say that the workers of Western capitalist countries with their cars, TV sets and refrigerators are under penalty of destruction? Even though unemployed workers are more impoverished than employed workers, their basic livelihood is guaranteed by social welfare. So where is there "penalty of destruction?" If the proletariat is no longer under the penalty of destruction, there must be a new expression for the motive of carrying out this transformation. What effect and change will this motive have on the form and way of carrying out this transformation. Should we still adopt Marx' formula of violent revolution or must we carry out new theoretical exploration and discussion? This is the problem placed before Western Marxist scholars.

The conclusion reached by Marx and Engels from the study of monopoly capital was that the socialist revolution could only succeed if it were carried out simultaneously in all or most of the capitalist countries. However, the conclusion reached by Lenin in his study of imperialism from the development of capitalism to the stage of monopoly said that the old formula of Marx and Engels was no longer suited to the new historical condition. He said that socialist revolution could be completely successful in a single country first. At that time, opportunists of various countries desperately stuck to the old formula of Marx and Engels and reproached Lenin for deviating from Marxism. However, the victory of the October Revolution proved that the genuine Marxist who mastered Marxism was Lenin and not the opportunists. It proved that Lenin had advanced Marxism and that the opportunists who tenaciously defended the words of Marx were instead holding this theory back and turning it into a dogma. At present, seven to eight countries in Westerp Europe have formed an economic alliance and many multinational companies have appeared in the capitalist world. They are breaking national and state confines and becoming cosmopolitan in capitalist private ownership of means of production. In this new situation, can a revolution carried out by the proletariat of a country succeed independently? Is Lenin's teaching of the proletarian revolution succeeding in a country first still suitable for Western Europe at present? Should Western Europe return again to Marx' conclusion that the proletarian revolution must succeed simultaneously in all major capitalist countries? This is an important lesson Marxists must theoretically explore and discuss.

Some people thought that the rapid development of productive forces caused by the scientific and technical revolution in developed capitalist societies of the West and the cosmopolitan transformation of ownership of means of production by monopoly capitalists confirmed that the capitalist system would live on forever. Actually this is the proof that the capitalist system is heading toward its own destruction. In "German Ideology," Marx long ago pointed out that communism is preconditioned by the high development of productive forces and the universal development of global contacts. Only when individuals who represent narrow regional history are replaced by individuals who represent global history can proper material and spiritual conditions be prepared for the victory of communism. In terms of the victory of communism, the present ratio of multinational companies in developed capitalist countries of the West is still small and productive forces are still not fully developed relatively speaking. Communism implies the ample flow of all sources of social riches so that everyone will have a great deal of leisure and can fish in the morning and paint and draw in the afternoon. The development of productive forces in developed capitalist societies of the West will promote the gradual ripening of communist revolution. As to the specific conditions under which this revolution will take place, its characteristics, the form it will adopt and the road it will take, thoroughgoing study must still be carried out on the basis of the immediate new conditions in the developed capitalist countries to arrive at a theoretical conclusion corresponding to reality. We cannot indiscriminately apply the effective revolutionary formula of the East to the West.

The industrial revolution centering on electronics technology also raised new questions for Marx' theory on the conflict between town and country and the course of the elimination of this conflict and his theory on the conflict between physical and mental labor and the course of its elimination. In modern developed capitalist countries, the benighted country does not exist anymore. Agriculture is being industrialized and becoming more and more scientific--so much so that in Italy the population of agricultural workers has been reduced to less than 10 percent of the total number of workers. In Britain it has been reduced to 1 percent. In 1979 the total number of agricultural workers in West European countries came to only 12.1 million. These workers deal with highly complex technical equipment and have a certain cultural level. The ignorance of several thousand years has vanished. The bourgeois governments also pay attention to moving industry from town to country, actively strive to solve the problem of pollution by taking strict measures, actively launch mass sports activities and raise the level of health among residents of urban areas. This results in a new trend of integration of town and country. At the same time, due to the revolution in science and technology, industrial and agricultural labor itself requires that workers possess a considerably high level of knowledge in science and culture and a considerable level of technical know-how, that is the integration of physical and mental labor. Thus, on the one hand, there is "white-collarization" of blue collar workers with the blue collar workers catching up with the technological level of intermediate level intellectuals, while on the other hand, most experts, technicians and intellecuals in the technological fields have become employees of monopolistic corporations, with their position becoming closer and closer to workers and their employment and working conditions losing clear distinctions with workers. The majority of the rapidly growing number of university students have become a reserve army of the proletariat. Therefore, there is also a growing trend of integration between intellectuals and workers and between physical and mental labor. Sticking merely to the old formula of contradiction between mental and physical labor under the conditions of capitalism can no longer explain this new phenomenon.

Furthermore, the historical conditions prevailing at the time Marx presented his theory of absolute impoverishment of the proletariat (including working conditions and conditions for reproduction of productive forces) were quite different from present historical conditions. At present, because science has become a direct productive force and because other factors of the productive process are involved, Marx' theory on the absolute impoverishment of the proletariat also has to be reevaluated.

The technological revolution has greatly enhanced human capacity to understand and change nature. For example, man-made intelligence (sophisticated electronics technology) is becoming closer and closer to human intelligence (the human brain). This raises the question of whether an organic fusion of the human brain and computers would come into being and of the proper delineation of artificial reasoning power. Experiments are being performed on artificial cell fusion. Experiments on test tube babies have been successful. Research on asexual reproduction has also been fruitful. New species of beings and even "monsters" could appear in great numbers. How humankind would propagate its species and what would become of ethical and moral concepts is still unimaginable at present. The astronavigation industry has been progressing rapidly. Man has already succeeded in landing on the moon. Humankind's knowledge of celestial bodies has achieved unprecedented progress. Man's knowledge of the secret of the inner structure of atoms and of the basic particles has also developed tremendously. The epochmaking progress of science and technology in the past 20 years is indeed the greatest revolutionary force which has shaken the very foundation of the world. This force will surely give impetus to a great development in Marxism. Today, Marxism is on the eve of enormous progress. Like Lenin, who developed Marxism after encountering the new situation of imperialism, we are today confronted with a situation similar to that which confronted Lenin before. Faced with the new situation of the scientific and technological revolution, we must also push Marxism forward as Lenin said!

Therefore, we must not only study the works of Marx and the new changes brought about by the scientific and technological revolution more thoroughly, but we must also study relevant works by Marxists in other socialist countries and works by scholars of Marxism in the West. They have raised many new questions on the works of Marx which they think ought to be studied based on new changes in capitalism brought about by the scientific and technological revolution. Even though most of their conclusions are wrong, the questions and viewpoints they present assist rather than obstruct our efforts to correctly analyze reality from the basic viewpoints of Marxism and to develop Marxism. As long as we take the analytical attitude of Marxism, theoretical works of Western scholars of Marxism will be good references.

Stalin was right when he said: "Opportunism does not always mean a direct denial of the Marxist theory or of any of its propositions and conclusions. Opportunism is sometimes expressed in the attempt to cling to certain of the propositions of Marxism that have already become antiquated and to convert them into a dogma, so as to retard the development of the revolutionary movement of the proletariat." Stalin also pointed out the great significance of kicking away this dogmatism to the revolutionary cause. He said: "What would have happened to the party, to our revolution, to Marxism, if Lenin had been overawed by the letter of Marxism and had not had the courage of theoretical conviction to discard one of the old conclusions of Marxism and to replace it by a new conclusion affirming that the victory of socialism in one country, taken singly, was possible--a conclusion which corresponded to the new historical conditions? The party would have groped in the dark, the proletarian revolution would have been deprived of leadership, and the Marxists [words indistinct] The proletariat would have lost, and the enemies of the proletariat would have won." ("History of the Communist Party of the Soviet Union (Bolsheviks): A Short Course," conclusion) We must take Lenin as an example and the failure of the dogmatists who clung to the letters of Marxism as a warning!

'XINHUA' INTERVIEWS GHANA FINANCE MINISTER ON FOREIGN LOANS

OW161946 Beijing XINHUA in English 1936 GMT 16 Oct 80

[Text] Accra, October 16 (XINHUA)--Around seven hundred million cedis worth of foreign loans to Ghana have been contracted since the Limann civilian administration assumed office a year ago, according to statistics provided by the country's Ministry of Finance and Economic Planning.

The loans mainly coming from West Germany, the World Bank, the United States, OPEC, EEC and other international organizations provided for the financial backing of a number of agricultural, industrial and transport infrastructural projects in Ghana.

Amon Nikoi, minister of finance and economic planning, told XINHUA recently that the flowing-in of foreign loans as well as the improvement of the country's investment climate which led to renewed interest from some big international companies especially in oil prospecting and the mining sector, and the prospects of resumption of brisk activity in trade are all encouraging developments pointing to a gradual revival of international confidence in the Shanaian economy.

As part of the government's efforts to gain this confidence which is essential in obtaining necessary external assistance to supplement the resuscitation of the shattered economy, the Limann administration has managed to settle a significant amount of foreign debts with countries concerned.

BRIEFS

NEW MINISTERS IN BURMA--Rangoon, 16 Oct (XINHUA)--The sixth session of the Second Burmese National Assembly today formally approved the election of three new ministers. The session yesterday elected U Aung Kyaw Myint minister for information and culture to replace U Mahn San Myat Shwe, U Kyaw Nyien minister for education to replace Dr Khin Maung Win who resigned earlier, and former Vice-Chief of Staff (Navy) Admiral Chit Hlaing minister for labour and social welfare to replace Brigadier General Khin Ohn. U Mahn San Myat Shwe and Brigadier General Khin Ohn were elected members of the Council of People's Justices by the assembly on October 14. In addition, Captain Maung Maung Win has been appointed as vice-chief of staff (navy). Meanwhile, the session has also approved unanimously the agreement on the delimitation of the Burmese-Thai maritime boundary signed by the foreign ministers of the two countires here last July. Commenting on the agreement at the assembly session, some members of the assembly said it was a timely one and would ensure a peaceful solution to any problems that might arise and would strengthen the friendship between the two countries which was conducive to peace in the Southeast Asian region. LOOPHOLES IN HUA GUOFENG'S ASSESSMENT OF MAO ZEDONG

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1 Sep 80 pp 24-31

[Article by Lu Zhongjian [4151 0022 1017]]

[Text] I. On Assessing Mao

Necessity of Assessing Mao

Recently, the Chinese Communist leaders made some public comments on Mao Zedong, affirming his great achievements on the one hand and pointing out his mistakes on the other. It was most noteworthy.

Mao Zedong was closely linked with China's fate of the past half a century. No one had made greater contributions to the creation of the PRC, nor had anyone, when building the nation after 1949, committed graver errors and caused more serious damages to the country and the people. This was one aspect. In the other aspect, for decades, Mao Zedong's each word and each idea, be they true Marxism-Leninism or unsound "leftwing" thinking, were revered as the compass of action, and his tremendous influence in the ideological realm was peerless. Today, to bring order out of chaos and clarify the right and wrong, Mao must be assessed; to learn the lesson and know the course to follow, he must be assessed; to emancipate thinking and boldly create, he must be assessed; to eliminate the remnant ultraleftwing poison and purge the "whatever" influence, he must be assessed. In short, "only by assessing Mao will progress become possible."

One point is easily overlooked by the CCP: The tremendous international significance in assessing Mao. In the past, the ultraleftwing appearance and ultraleftwing line blocked international intercourse, hampered unity against hegemony and produced an undesirable effect in international struggles and the international communist movement. By means of assessing Mao and rectifying the line, China's image will improve, international affairs will develop even more, and a favorable influence on international struggles and the international communist movement will ensue.

First Step: De-deification

Correctly assessing Mao Zedong's merits and mistakes is an arduous and enormous task. To perform it properly, a series of conditions is required. The relatively easier one to accomplish is to restore the true features to Mao Zedong and his ideology. This may be called the first step in assessing Mao, but it is an important one.

What is restoring the true features to Mao Zedong and his ideology? It is: from a deity to a human; from a savior to a revolutionary; from a meritorious and flawless superman to a mortal with serious mistakes as well as great achievements; from the red treasure book of all truths to a work with fallacious words as well as real knowledge and deep insight.

Hua Guofeng's Failure to Be Matter-of-fact

To de-deify Mao and restore him his true features, the principle of seeking the truth from the facts must be strictly observed. Failing to do so, or hemming and hawing and covering up, making Mao Zedong into a demigod or a deity and mortal in one will not be restoring to him his true features. Assessing him in this way will only produce negative results, without any positive significance.

What is regrettable is that CCP Chairman Hua Guofeng, in his assessment of Mao, failed to follow completely the principle of seeking the truth from the facts.

On 26 July, Hua Guofeng answered a series of questions posed by (Dala Yanaikeweiqi), a reporter of the Yugoslavian (XINSHI BAO). A part of his written answers concerned the assessment of Mao Zedong. Reading it, I feel that, in his assessment of Mao Zedong's merits and mistakes, there are four points requiring deliberation.

II. Four Loopholes

First, Hua Guofeng was not comprehensive enough on the relatively grave mistakes made after the founding of the nation.

The main content of his assessment of Mao was:

"According to our party history, from 1935, after establishing Comrade Mao Zedong's leadership position in the party, to 1957, we won the anti-Japanese and the liberation wars, gained national political power, and launched the socialist reform of the production means ownership system while pursuing large-scale socialist construction. From 1958 to the eve of the Great Cultural Revolution, relatively serious deviations appeared in our work. We were impatient for success, and we made the mistake of magnifying the class struggle on some issues. In spite of such problems, the party line, generally speaking, was correct.

"From the second half of 1966 to the second half of 1976, in the 10 years of the Great Cultural Revolution, the party made distressingly grave mistakes.

"As the chairman of the party, Comrade Mao Zedong naturally had his responsibilities for such mistakes."

The comment in this article on Hua Guofeng's assessment of Mao basically refers to the passage cited above. Simple and concise, the passage contains some points which should be affirmed, but his view was not comprehensive enough, and one cannot agree with some of the points.

Why do we maintain that Hua Guofeng was not comprehensive enough when he said that Mao Zedong made "relatively serious deviations" and "distressingly grave mistakes" in those years?

He at least omitted the "anti-rightist struggle" of 1957.

Over 500,000 Unjust and Wrong Cases

In 1957, the Chinese Communist cadres' practice of acting as bureaucrats and overlords was quite serious, and various defects existed in all aspects of government work. At that time, Mao Zedong encouraged the people to "express themselves freely" in aid of the rectification of the CCP. Thereupon, many patriotic people immediately responded to the appeal and expressed their views, making suggestions one after another. It was an excellent thing for the country as well as for the CCP. To their surprise, they were denounced as rightists and encountered criticisms and struggles. A total of 550,000 persons throughout the country were classified as rightists, implicating even their families. Probably around 2 million people were victimized. In recent years, the classification of the 500,000 "rightists" was almost all rectified. The "major rightists" who had never had their classification changed included only Luo Longji [5012 7127 1015], Zhang Bojun [4545 0130 6874], Chu Anping [0328 1344 1627] and others, a total of five individuals. As for the "minor rightists," the number of those whose classification was not rectified was very small.

Actually, even if some individuals within the people made rightwing mistakes, as long as they were not guilty of acts in violation of the criminal code, they were merely "ideological offenders" and "opinion offenders," and should not be regarded as true criminals or labeled as rightists. Those who had undergone severe tempering in the revolutionary struggles might also have made all kinds of mistakes, even line mistakes, and the consequences of their mistakes would be a hundred times more serious than the mistakes of ordinary people. If they must all be labeled, one would like to know just how many of the CCP leaders are exempt. Even if there was the need to oppose rightism in 1957, would not a gentle and mild critical education on the ideological front, without roll call, be adequate? Why must there have been the anti-rightist struggle?

Six Serious Consequences

The consequences brought by the anti-rightist struggle to the country and the people were too drastic:

1. Around 2 million people were victimized, including many outstanding individuals in the Chinese people.

2. Many suggestions beneficial to the national economy and the people's livelihood were rejected and negated.

3. The CCP could have obtained the help of non-party personages to rectify the party style, but the anti-rightist struggle not only caused the rectification movement to be abandoned midway, but fostered the bureaucraticism and other evil trends in the party, leading to even greater mistakes in the future on the part of the CCP.

4. The very superficial democratic life grew even more tenuous. The people could not express their feelings or make suggestions.

5. The intellectuals and patriotic figures encountered particularly severe blows. Their enthusiasm dropped from near boiling point to almost zero.

6. After completing the three great reforms, the hostile classes had basically vanished. The CCP, at its "Eighth Congress," stressed the importance of "rallying all strengths at home and abroad which can be rallied to struggle for a great socialist China.... In our various government organs and all kinds of social endeavors, we must rely on non-party personnel to perform a large amount of work. If we are not adept in relying on the masses and cooperating with non-party personnel, it will be impossible to perform the work properly." (Mao Zedong's inauguration speech at the Eighth Congress). However, the "anti-rightist struggle" ran completely counter to the "Eighth

Congress" line and Mao Zedong's appeal and sowed the seed for the subsequent arbitrary "class struggle." It was too terrible!

In view thereof, was the mistake of the "anti-rightist struggle" not a "relatively serious deviation?"

Different Views in the Party

The CCP's well-known expert in party history Liao Gailong [1627 5556 7127] talked about anti-rightism in Tianjin and indicated that some of the people in the CCP disagreed with it. He said:

"On the anti-rightist struggle of 1957, the views today are not completely identical. According to one view, the struggle itself was not wrong, but the mistake was in magnifying it. According to another view, rightists did exist, but did they constitute a great threat--a threat to our state? According to these comrades, it was not so. As stated by Chairman Mao long ago, as we had a powerful state machine in our hands, we had no fear of the rebellion of the national bourgeoisie. How should we handle the few rightists such as Zhang Bojun and Luo Longji who proposed taking turns serving as the banker? All you had to do was to say no to them! If you pointed out that they were wrong, when there was the Communist Party leadership, would they be able to take the polotical power away from you? Did they have such strength? By resorting to the means of attaching labels on a national scale, 550,000 people were classified as rightists, and the issue has only been solved now. How many of the 550,000 rightists have now had their classification corrected? The answer is 93 percent of them. In other word, over 500,000 were erroneously classified. They were not rightists to start with, but were arbitrarily labeled as such, and 93 out of 100 were erroneously classified. Thus, the extent of magnification was considerable."

Was the attitude scientific when so many unjust and wrong cases were excluded from the "relatively serious deviations?"

According to the foregoing analysis, to call the "anti-rightist struggle" merely a "relatively serious deviation" is rather inadequate. It should be considered a mistake, or even a grave one.

The Person Mainly Responsible

Next, in regard to the mistakes of impatience for success economically and the magnification of the class struggle politically of many years and the error of the "Great Cultural Revolution," Hua Guofeng declared that they were the responsibilities of the party. Without indicating that Mao Zedong should be mainly responsible, he only said: "As the chairman of the party, Comrade Mao Zedong naturally had his responsibilities for such mistakes." His view calls for deliberation.

After 1958, the country experienced three setbacks, viz., the "great leap forward;" the "anti-rightist struggle;" the "Great Cultural Revolution." The CCP must be responsible for the first and second, which were serious mistakes, and the third, which was unusually serious. However, the one mainly responsible should not be the party, but Mao. Mao should be mainly responsible, not just as the party chairman, but mainly as the agitator or initiator of the three movements.

The "Great Leap Forward"

The "great leap forward" was launched by Mao Zedong between the end of 1957 and the first half of 1958. At that time, some members of the Party Central Committee showed support, while others were cool toward it, and were branded as "regressives." Most of the party committees of the various levels bent with the wind and became hotheaded. Deviating to the "left," the party mobilized the entire people to make iron and steel. Immediately thereafter, the people's commune movement was launched, also in a great hurry and with spectacular achievements. Assistant Chief Deng Liqun [6772 0500 5028] of the China Social Science Insitute, who served as Liu Shaoqi's secretary before the Cultural Revolution, said in a speech at the institute:

"Our mistakes were made by Chairman Mao.... One was the people's commune movement. In many areas, this one supplied and that one supplied, and Chairman Mao was very happy at the beginning. In 1958, not long after the Beidaihe meeting, Xushui in Hebei was the first to advance to the communist society. It introduced the total supply system. The chairman was indeed very enthusiastic and wanted to find out how Xushui accomplished it. Taking Chen Boda [7115 0130 6671] and Zhang Chunqiao [1728 2504 2890] with him, he asked the county party committee secretary to make a report.... Chairman Mao added the following passage to the decision on the people's commune at the Beidaihe meeting: By introducing the people's commune, 3 or 4, or 5 or 6 years later, the collective ownership system will change to the popular ownership system.... He also agreed to setting high quotas and doubling the output.... It was decided at the Beidaihe meeting that the iron and steel output would be doubled, and the target for 1958 was set at 10.7 million ton and published. Thereupon, the entire country refined iron and steel on a large scale."

Yu Guangyuan's Report to Mao

Before 1958, the overwhelming majority of the Chinese Communist cadres was hotheaded, as illustrated by the following two instances:

One was Yu Guangyuan's [0060 0342 6678] report to Mao Zedong that apples could grow as big as pumpkins. In his talk at the rotational training class of the cadres of the Sichuan Provincial Institute of Philosophy and those of the provincial and bureau levels and above, he mentioned the incident: "I was the chief of the science office of the Central Ministry of Propaganda during the great leap forward. The position was not high. A member of the Central Science Group was an even higher title. At that time, there were Zhang Jinfu [1728 0513 1133] and Han Guang [7281 0342], and then there was I. At that time, I actually became convinced by a report and had Comrade Nie Rongzhen [5119 2837 5271] take me and Comrade Zhang Jinfu to report to Chairman Mao that, when an apple was inserted in a pumpkin, the apple would grow with the pumpkin and become very big. I studied natural science, and graduated from the Physics Department of Qinghua University. It was really ridiculous when I think of it." From his words, one can see that he was modest, and courageous in self-analysis, but what is even more important is that a scientific mind may also become unscientifically hotheaded.

Deng Xiaoping and the "70,000-Jin" Hoax

The second instance was that Deng Xiaoping was once tricked by unfounded spectacular achievements. This was mentioned by Deng Liqun in his talk in Beijing University. He said: "There was a false labor model in Tianjin's Xiaozhan (a famous rice producing area) who compressed the rice output of 70 plus mu into 1 mu and claimed the mu output to be 70,000 jin. When asked about ventilation, he said that fans were used. Comrade Deng Xiaoping went to see for himself. He said: We saw it; we were convinced. A picture was taken, and placed under glass upon his return. Who could have imagined that it was untrue? Lack of experience, enthusiasm and hotheadedness. There was a popular remark at that time: Whatever can be thought of can be accomplished. As proved by experience, it is no way to run industry and the economy."

Mao Zedong's Self-Criticism

All the data cited above explain one point: For the great setback of 1958, Mao Zedong made a mistake, and the entire party made a mistake. However, Mao Zedong was the promoter of the great leap forward and the people's commune. Therefore, he should be more responsible than others. His self-criticism and admission of error at the central enlarged meeting (a mass meeting of 7,000 people) in January 1962 embodied this idea.

"Anti-Rightwing"

The "anti-rightwing opportunism" campaign of 1959 was yet another serious setback.

At the Lushan Conference in the summer of that year, Peng Dehuai [1756 1795 2037] brought up the issues of the great leap forward and the people's commune. Mao Zedong launched anti-rightism in the whole country, and Peng Dehuai and his supporters Huang Kecheng [7806 0344 6134], Zhang Wentian [1728 5113 1131] and others were denounced as an anti-party clique. Actually, Peng Dehuai was correct and Mao Zedong's anti-rightism was wrong, and it was also wrong to denounce Peng, Huang, Zhang and others as an anti-party clique. Mao Zedong should be mainly responsible for this setback. Naturally, the Party Central Committee must also share the responsibilities. At that time, the supporters of Peng Dehuai consisted of only a minority such as Huang and Zhang. Had the open supporters constituted the majority, the situation might possibly have been reversed. Therefore, the Party Central Committee must also be responsible.

The "Great Cultural Revolution"

An even greater setback was the "Great Cultural Revolution" launched in the second half of 1966.

In his answers to a Yugoslavian reporter, Hua Guofeng said: "The party made mistakes in the Great Cultural Revolution, mainly in making unrealistic assessments of the domestic and party situations and in adopting erroneous policies and methods of struggle." One may affirm that the two points mentioned by Hua Guofeng were two serious mistakes of the Cultural Revolution. However, he failed to point out two other serious mistakes. One was the theoretical mistake: Anti-revisionism was launched when even the meaning of revisionism was not understood. The other was the organizational mistake: The decision to launch the Great Cultural Revolution was made by Mao Zedong personally in disregard of democratic centralism and without going through the Party Central Committee and the Politburo.

Mao's Theoretical and Organizational Mistakes

Hua Guofeng's omission of the two mistakes was very important. In regard to Mao Zedong's organizational mistake, if it is not affirmed, the responsibility for the 10-year calamity, at least, cannot be clarified. Hua Guofeng generalized the issue, feeling that Mao Zedong's responsibility for the mistake of the "Great Cultural Revolution" was limited to his position as the party chairman, while actually, his organizational mistake (just this point alone) was the important basis of his responsibility, the main responsibility. As everyone knows, the "Great Cultural Revolution" was "personally launched and personally led" by Mao Zedong. At that time, the party organizations of all levels were actually in a state of paralysis and collapse. There was a slogan which said: "Kick aside the party committee and make revolution." Many old cadres were placed under supervision, or even jailed. Even if they became aware and wished to resist the "Great Cultural Revolution," it would have been by no means easy.

It was thus with the "Cultural Revolution," and it was more or less thus with the movements prior thereto.

From 1958 to 1976, Mao Zedong's patriarchal style became ever more serious, and intra-party democratic life was extremely abnormal, or even nonexistent. Secondly, the political movements one after another were mostly initiated by him. Therefore, he must be responsible not just because of his chairmanship of the party.

The Fundamental Reason for the Mistake of the "Cultural Revolution"

Thirdly, Hua Guofeng did not mention the most fundamental reason for the mistakes made by Mao Zedong in the later period of the "Cultural Revolution." He said: "Comrade Mao Zedong became sick in his late years. Before his death, his physical condition deteriorated, and he had difficulty with speech and movement. The 'gang of four' took advantage of the situation, deceived him and concealed the truth of their conspiratorial activities, which could not but seriously influence his leadership of the party and the government." The impression conveyed by the statement is: Had Mao Zedong remained healthy in his late years, the "gang of four" would not have been able to deceive or hoodwink him, and the mistakes in the later period of the "Cultural Revolution" would not have been made, or to such an extent. Was Hua Guofeng's view compatible with the practical situation?

One may say that Mao Zedong's ill health in his late years made it easy for him to be hoodwinked, thereby affecting his work. However, it was not the fundamental reason for his mistakes.

What was the fundamental reason?

One must look for it in his ideology.

"Leftism" and the Savior Idea

Mao Zedong had indeed been "leftwing" for a long time. The manifestation of such "leftism" in political work was the failure to distinguish the enemy and the friend and the two different kinds of contradictions (though Mao Zedong himself often reminded people to distinguish the contradictions within the people and those between the enemy and ourselves). Thus, "class struggles," "continuous revolution," "resisting and preventing revisionism" and "punishing the capitalist roaders" were continuously and arbitrarily launched, resulting in extremely unfortunate consequences to the state and the people. In economic work, it was manifested in impatience and recklessness and in overestimating the abilities in violation of the objective laws. This has been extensively discussed above.

In addition, Mao Zedong had, for a long time, entertained the savior idea. As early as in Yanan, he once happily accepted without embarrassment an inscription with the characters "People's Great Savior" written on it given to him by the masses. Even though he proposed a ban on celebrating the birthdays of leaders and naming places, streets and enterprises after them, the whole world knows that "East Is Red," which referred to Mao Zedong as the "people's great savior" and was contrary to the principle that "there has never been a savior" of the "Internationale," was sung throughout the country everyday and everywhere. Instead of abhorring and opposing personal worship, Mao Zedong's reaction was basically affirmative. The substance of the savior idea was subjectivism plus personal heroism. Combined with the feudal ideology and the ideology of royal power, the style of dictatorship, autocracy, arbitrariness and patriarchy was created.

The development of "leftism" and the savior idea led to four mistakes: 1. the wrong assessment of the situation prior to the "Cultural Revolution;" 2. the wrong understanding of revisionism; 3. the organizational mistake in deciding to launch the "Cultural Revolution;" 4. the wrong policies and methods of struggle adopted in the "Cultural Revolution." All these resulted in the grave error of the "Great Cultural Revolution."

"Leftism" Fostering "Leftism"

Hua Guofeng's emphasis on the "gang of four's" utilization of the "mistakes made by the party" and its deceipt of Mao Zedong failed to explain any issue. He never mentioned the real reason for the "gang of four's" ascent to China's political arena and its arrogance and power. Actually, it was inseparable from Mao Zedong's appreciation, promotion and protection. The fundamental reason for Mao's high regard for the gang was his "leftist" thinking, and the "gang of four" was also "leftist." In mathematics, two minuses make one plus; in politics, "leftism" and "leftism" foster each other. Naturally, it was not the sole reason for Mao's good relationship with the "gang of four," but it was the most fundamental one.

Though Mao Zedong finally recognized the problems of the "gang of four," he had no intention to purge them from the Politburo. The veterans of the CCP had long recognized this point. Deng Liqun indicated semi-overtly: "Many comrades said that the 'gang of four' problem must be solved. Chairman Mao did mention it, but what he said was that, if it was not solved the first half of the year, it would be solved the second half of the year; if not this year, it would be next year; if not next year, it would be the year after. However, when it came to Comrade [Deng] Xiaoping, it was solved in one sentence. How does one explain it? The chairman pointed out that Jiang Qing had ambitions and wanted to become the chairman of the state, and that the problem was very clear: She wanted to usurp the party. Yet his criticism of such an individual was very polite in tone."

The Suspicion of Avoiding the Vital to Dwell on the Trivial

Naturally, the CCP high level also had a considerable responsibility in Mao Zedong's promotion of Lin Biao and the "gang of four" to important positions. At that time, Mao Zedong followed the partiarchal practice on the one hand while, on the other, certain people blindly worshipped an individual, taking his every word as gospel truth, raising their hands to show support and acting accordingly. Deng Liqun admitted: "Lin Biao and the 'gang of four's' rise to power was linked with Chairman Mao's mistakes and with his supreme authority. With one word, Lin Biao rose; with one word, Comrade Deng Xiaoping fell. Such authority was not false. On my part, I had long felt that Lin Biao was the best successor to the chairman. Therefore, the moment the chairman named him the successor, I was sincerely happy." Lin Biao had long regarded Liu Shaoqi as an enemy, yet the latter's secretary actually felt such a great admiration for him. It indicated that the number of people in the party deceived by illusions was absolutely not small. Nevertheless, Mao Zedong's power, especially his ultraleftwing line and his patriarchal practice, was, after all, the fundamental reason for Lin Biao and the "gang of four's" rise to power.

By mentioning only that Mao Zedong was deceived due to ill health, Hua Guofeng attended to trifles to the neglect of essentials and ran the suspicion of avoiding the important to dwell on the trivial.

"The Party Line, Generally Speaking, Was Correct?"

Fourthly, Hua Guofeng summarized the course of the CCP of so many years into one point: "The party line, generally speaking, was correct." This summation was also incompatible with reality.

The summarizing statement has been cited above. The final sentence, "the party line, generally speaking, was correct," was not clear in the time concept. The time "generalized" in "generally speaking" could possibly refer to the interval "after 1958 and before the Great

Cultural Revolution" or after the liberation of the mainland to 1966 or, as a third possibility, from 1935 on. The choice among the three possibilities leaves one baffled. In any case, the statement that "the party line, generally speaking, was correct" is perhaps somewhat exaggerated.

What was the line of the CCP from 1958 to 1966? In the 8 years, the CCP deviated from the line proposed by the "8th Congress" of 1956. On the one hand, not only it failed to shift the emphasis of work to construction, but it continued with the class struggle recklessly (the anti-rightism and punishment of Peng Dehuai of 1959; the "four clean-ups," cleaning up politics, the economy, ideology and organization, also known as the socialist education movement, of 1964, to rectify the "capitalist roaders in the party"). On the other hand, it violated the principle of seeking the truth from the facts, which is a fundamental Marxist-Leninist principle, and the objective economic laws and launched economic ventures. Such venturousness and rashness were "leftwing" manifestations, and such "leftism" became fairly pronounced by 1957. Was it not "leftwing" to condemn several hundred thousand as rightists when they were not so? After 1957, every political movement was "leftwing." In other word, it was not just "leftwing" at one time or in one instance, but ever more "leftwing" step by step. By the time of the "Cultural Revolution," it developed to "ultraleftism." Obviously, it was not merely an error of tendency, but a mistake of the line. What line? The leftwing line.

The Year 1949, the Beginning of "Leftism"

When discussing Mao Zedong's leaning toward the "left," one should actually begin with the founding of the nation. Before then, Mao Zedong time and again declared that, after the creation of the new China, the capitalist economy must be permitted to develop for a considerably long period of time. It was a view which was compatible with the state of the country. To put it more concretely, under the situation where the production force was low, the capitalist economy should be permitted to develop to a certain extent and the individual economy should be permitted to exist for a considerable period of time. It would benefit the development of the national economy, the growth of the production force and the improvement of the people's living standard. However, after the founding of the PRC, Mao Zedong changed his original intent. Disregarding the objective laws and the fact that the production force was far behind the production relationship, he attempted to change immediately the coexisting situation of the private capitalist and the individual economies with the state-owned and the cooperative economies. Both the private capitalist and the individual economies were eliminated too hastily, while cooperativization and communization were introduced too soon. Like a potful of half-cooked rice, the national economy encountered many problems and difficulties. Chinese communist theoretician Zeng Yanxiu [2582 1750 0208] made an academic report last year entitled "the Issue of the Popularization and Elevation of Marxism." The passage on the relationship between the CCP and the peasants was relatively matter-of-fact. Though rather lengthy, it is worthwhile reading.

Cooperativization, Communization and Half-Cooked Rice

"Generally speaking, land reform was nominally completed in the whole country in 1952, but actually it was not completed in South China until 1953. However, the decision on cooperativization was made in 1953. Chen Boda made the announcement: In the sphere of the entire country, be they new, old or semi-old liberated areas, cooperativization was to be introduced by the same method, and elementary agricultural cooperatives were to be created. At that time, land was made into shares, and some dividends were distributed. With more and better land, the middle peasants received some dividend besides the labor force. It was called the elementary cooperative. However, the new areas at that time were not liberated until after 1949 or 1950, and the peasants of more than half of China had just received their land. They had barely begun to form an attachment to the land distributed to them, and some of them did not even have any feeling of attachment, as land had not yet been distributed to them. Let us draw an analogy: The situation is the same as when a young man has not even seen his prospective bride, who has been referred to him by a third party, and he is asked to father a child the next day and change the relationship drastically. The land had not been completely distributed, and the peasants were told to cooperativize. Neither the peasants nor the cadres knew what it was all about. The situation in the old liberated areas was different. In the Shaanxi-Gansu-Ningxia region and North China, there was more than a decade of work foundation, and the land issue had been basically solved. The Northeast base also had had a history of 4 or 5 years. However, in the provinces south of the Changjiang River, when land had barely been distributed to the peasants, and the cadres and peasants did not know what it was all about, they were told to cooperativize. Elementary cooperatives were created in 1953, which were completely transformed into advanced cooperatives in 1956. There was no more land dividend, and large farm tools, large animals and land were all turned into shares and became the property of the cooperative. Inevitably the enthusiasm of the middle and well-to-do middle peasants was dampened. One cannot blame them for their dissatisfaction. Thereafter, the middle peasants were criticized for following the capitalist path. It was called the spontaneous force, which was criticized. When the advanced cooperative was not yet consolidated, and some areas still did not know what it was all about, communization was launched simultaneously in the whole country in 1958. JENMIN RIBAO at that time made the appeal to 'set up the framework promptly,' saying that, while experimenting was required in other work, it was not necessary for this kind of work, and all that was required was to set up the framework promptly. No one knew anything about this new thing, not even its name, yet, without any experimental unit, communization was suddenly launched in the whole country. Each covering one route on bicycles, the secretary, assistant secretary and standing committee members of some county party committees, and the unit chiefs and assistant chiefs would organise 3 people's communes in 1 day, and 20 or 30 communes of an entire county in 2 or 3 days. No one knew just what it was all about. All they knew was to share the rice in the large cauldron. They received their grain rations and ate them all up in 2 or 3 months."

The Relatively Successful First 5-Year Plan

In the fifties, as the formulation and implementation of the First and Second 5-Year Plans were fairly successful, the national economy made a certain development. However, it was indivisible from assimilating the Soviet experience. The Soviet experience was not necessarily correct. For a long time, China copied it and followed the Stalin model, and suffered greatly as a result. However, when formulating the First 5-Year Plan, the Soviet experience was indeed useful. Before its formulation, Chen Yun [7115 7189] personally went to Moscow for instructions from Stalin. Discussing the Soviet experience, Stalin said: "You are the first socialist country in the East to launch the First 5-Year Plan. The success or failure of its implementation will have a great impact on your domestic and international influence. One of the Soviet experience is that, when making long-range plans, the target should be set relatively low." Setting the target relatively low meant to refrain from reaching beyond one's ability and departing from reality, and to leave a margin of safety. The CCP Central Committee accepted Stalin's suggestion, and the First 5-Year Plan was arranged accordingly. While speed was sought, attention was given to proportions in planning. When the Second 5-Year Plan was formulated, some margin of safety was left. The plan completion in 1958 was relatively successful. However, precisely because of this, many people in the party were carried away, and the ambitious "great leap forward" was launched. Once started, it became unmangeable. Long-range planning and objective economic laws were brushed aside, and the demand to complete the Second 5-Year Plan in 2 years was made. On the face, the Second 5-Year Plan appeared to be completed in 1958 and 1959, but actually, there were misrepresentations. Originally, after the 1959 Lushan Conference, the CCP should have readjusted iron and steel production as well as the economy. However, the CCP at that time was too hotheaded, claiming that

China's steel output would reach 400 million tons within a given number of years that the 1959 output would be 40 million tons. Subjectivism was indeed rampant.

"Leftism," the Main Aspect

In view of the above, one can see that Mao Zedong and the CCP leaned toward the "left" in economic work right after the founding of the nation. They were also thus in the realm of political ideology. Several political struggles of a relatively small scale were launched in this period, including the movements against "Gao Gang's [7559 1511] anti-party clique," "Hu Feng's [5170 7364] counterrevolutionary clique," the "Biography of Wu Xun," the "Study of the 'Dream of the Red Chambers,'" etc. Looked at today, such struggles were possibly excessive, not very matter-of-fact, or completely wrong.

One can thus see that, from 1949 to 1976, Mao Zedong started with "leftwing" mistakes, continued with a "leftwing" tendency" and developed to the "leftwing" line. Even though the CCP did have some correct policies in this period, especially the "8th Congress" line and the 8-character policy (readjusting, consolidating, reinforcing and improving) on economic readjustment from 1962 to 1964, such lines and policies were short-lived. Relatively speaking, leftwing mistakes and leftwing lines constituted the major aspect, and their dominance was relatively long. Even when we begin with 1935 (the Zunyi Conference), the situation was basically the same. Relatively serious "leftwing" mistakes were also made in the period prior to the founding of the nation, such as the Yanan rectification movement, the land reform of the old liberated areas, etc.

Then, how could it be said that "the party line, generally speaking, was correct?" If the situation was truly as described by Hua Guofeng, today's China should be close to a modernized nation. Hua Guofeng's summation would be quite applicable to Yugoslavia. Their "party line, generally speaking, was correct." For this reason, there is prosperity in today's Yugoslavia. For a long time to come, our country will be too far behind to even see its dust.

III. Whitewashing History

"Adequate; Penetrating; Accurate"

On 14 July this year, the CCP Central Committee called a national propaganda work conference in Beijing. When discussing the issue of assessing Mao in his speech at the conference, Hu Yaobang [5170 5069 6721] said: In regard to Mao Zedong, we must be adequate in listing his merits and penetrating in naming his mistakes. Deng Xiaoping also expressed his opinion on the issue, saying that Mao Zedong brought great misfortunes to the party and the state in his late years. When discussing Mao Zedong's mistakes, he indicated that Mao was severed from three things in his late years, viz., the masses, reality, and the collective. We cannot expect Hua Guofeng to be "adequate" and "penetrating" in his brief written assessment of Mao in answer to the questions of the Yugoslavian reporter, but I feel that he could have been "accurate." To be accurate means accuracy. His assessment of Mao was apparently not sufficiently accurate and matter-of-fact. Generally speaking, he consciously or unconsciously glossed over Mao Zedong's mistakes and the CCP's faults. Actually, history cannot be whitwashed, nor Mao Zedong's historical features and his merits and mistakes. China has an old saying: Trying to be smart only ends up with a blunder. There is also a proverb which states: Trying to hide a mistake only makes it more conspicuous. Anyone who is not accurate and matter-of-fact when assessing Mao, whether negating his merits or concealing his mistakes, is covering up the truth of history, or revising it. It will not be ratified by the people.

The foregoing stresses Mao Zedong's responsibilities for the mistakes made by the CCP for many years. Though the responsibilities of the Party Central Committee and the entire party are mentioned, no analysis of the issue has been made. The following are some supplemental points.

The Scarcity of Peng Dehuai-Type Figures

First, the series of mistakes made by the CCP had a strong and direct link with its line error. The "leftism" of the party line was not a transient thing. Why did it fail to arouse comment or extensive resistance in the party? In the central government, Peng Dehuai had the courage to speak out; at the basic level, Zhang Zhixin [1728 1807 2450] openly expressed his views. However, individuals like Peng and Zhang were too few. If the Peng Dehuai- and Zhang Zhixin-type figures constituted the overwhelming majority in the party, would the party line have remained for so long in the "leftwing" quagmire and sunk ever deeper? In the history of the CCP of almost 60 years, Wang Ming's [3769 2494] "leftwing" line which caused great damages to the party dominated for 5 years, yet Mao Zedong's "leftwing" line was in control for around 20 years. Why was it that the 1935 Zunyi Conference could end the Wang Ming line which started in 1931, yet Mao Zedong's "leftwing" line was not abolished until the "gang of four's" political coup, some 20 years after the "8th Congress?" Does such history not call for deep thinking by each and every member of the CCP?

Problems in the Party's Organizational System

Next, the organizational system of the CCP came from the Soviet Union, from the Stalin model, yet the Soviet model contained many improper things. When the CCP transplanted it, many big problems emerged. The unwritten life tenure, for instance, was a big problem. (In the history of the international communist movement, Stalin originated life tenure). Some cadres became old and infirm, their thinking ossified, and subjectivism and other negative factors hampered their leadership work, yet they still held on to their posts, neither taking a leave of absence nor retiring, and causing many problems in work. It was this life tenure which pushed Mao Zedong to the wrong direction. Had he retired when he became old and infirm, would it not have been a different picture for the party and the state? Though many serious defects were revealed in the organizational system of the CCP, not many party members demanded reform. Thus, outmoded conventions were followed and evil practices were retained. Should the CCP not be responsible for them?

Removing Only Half of a Big Mountain

Thirdly, the CCP devoted itself to the revolution for several decades. In the beginning, it was to resist imperialism, feudalism and bureaucratic capitalism. At the founding of the nation, the CCP vociferously declared in its propaganda that imperialism, feudalism and capitalism (bureaucratic capitalism), the three big mountains, had been removed. Actually, only a part was removed for one of them. Though land reform was carried out, it remained almost untouched in the ideological realm. This big mountain was feudalism. The feudal mentality in the party was very strong, which served as the soil for patriarchy, despotism, hierarchy, life tenure, bureaucraticism and special privileges. The CCP, for many years, only mentioned "eliminating capitalism," but not feudalism. Naturally, not just one or two individuals in the party should take the whole responsibility for this mistake.

The Deification Movement and Patriarchy

Fourthly, there were some people in the CCP who promoted the personality cult and vigorously flattered Mao Zedong, hoping to win his favor and climb to high places. There were many others who followed. When Lin Biao held up the Book of Quotations, everyone followed by waving the "Red Treasure Book." Such individual worship and personality cult deified Mao Zedong even more, aggravating further his savior idea and arbitrary practice.

The Low Marxist-Leninist Level of the Party

Fifthly, the Marxist-Leninist level of the entire CCP was not high, and mistakes were easily made which were difficult to correct. Before the founding of the nation, Mao Zedong solved a serious of problems in China's revolution with Marxist-Leninist principles. He was then a relatively outstanding Marxist-Leninist in the CCP. However, after the founding of the nation, the CCP was unable to solve many of the new problems confronting it with the Marxist-Leninist standpoint, viewpoint and method. One may say that, even in the seventies, the CCP was still immature in the concrete practice of Marxism-Leninism. In regard to the series of tendency and line mistakes made by Mao Zedong, many people in the party did not have the qualification to detect them, let alone analyzing and criticizing them according to Marxist-Leninist principles. Compared with the Yugoslavian Communist Party and Tito, the low Marxist-Leninist level of the CCP would appear even more obvious.

Unsound Party Style and Innumerable Ills

Sixthly, due to the serious problems existing in the organizational system of the CCP, its party style often became unsound. Bureaucraticism and special privileges, in particular, entangled the party like ghosts. At the founding of the nation, there was a campaign against bureaucraticism, and the party style improved. However, in less than a few years, bureaucraticism again became widespread. The "anti-rightist struggle" had a hundred ills and not one benefit. One of the ills was fostering the unsound trend in the party. On the eve of the "Great Cultural Revolution," bureaucraticism and the practice of special privileges further swelled, producing a strong reaction and dissatisfaction among the people. It was one of the objective reasons for Mao Zedong to receive such a powerful response to his appeal, initiate the "Cultural Revolution," and launch indiscriminate criticisms and struggles.

Judging from the above six aspects, we find that Mao Zedong must be mainly responsible for the series of mistakes made by the CCP in the past several decades, while other central leaders, even leaders of the various levels, all had their responsibilities to various extents. Though it will not be matter-of-fact to cover up the mistakes and defects for Mao Zedong, blaming him for all the mistakes will not be seeking the truth from the facts either. Such unscientific attitude must be opposed.

Engels had a famous saying: "No matter where it learns from, a great class, just like a great nation, will learn fastest from the consequences of the mistakes made by itself." ("Complete Works of Marx and Engels," vol 22 p 325).

Undoubtedly, no matter where it learns the revolutionary principles, the CCP will learn fastest from the consequences of the mistakes made by Mao Zedong and itself.

PARTY AND STATE

LIU SHAOQI'S TALK ON 'MISTAKES' REVIEWED

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 4, 20 Aug 80 p 52-57

[Article by Zhou Kang [0719 2123], Jiang Zhaoyi [5592 3564 5030], and Jin Wen [6855 2429] of the Institute of Philosophical Research, Shanghai Academy of Social Sciences: "It Is Hard for People To Avoid Making Mistakes"]

[Text] "Why Do People Make Mistakes?" was the title of a speech given by Comrade Liu Shaoqi in October 1941 at the Central China Party School.

In view of the lessons on mistakes with regard to our line that we learned several times in the history of our party, and for the sake of improving the whole party's perception of the Marxist-Leninist ideological line, Comrade Shaoqi applied the basic principles of dialectical materialism and made a careful and exhaustive analysis of such questions as why it is hard for people to avoid making mistakes, how people can make fewer mistakes and avoid making big mistakes, and what the correct attitude should be toward those who have made mistakes. As we come to review this speech of Comrade Shaoqi given 40 years ago, it still refreshes us and also enables us to discern that it has an important meaning for us.

"Any Person Is Bound to Make Mistakes" Is an Uncontestable Scientific Dictum

In his speech, Comrade Shaoqi first of all brought forward the question that everybody makes mistakes. He said: "We may say without fear that he who does not make any mistake is not a man, and that any person is bound to make mistakes." Why did Comrade Shaoqi choose to talk about this question at the time? Because in the history of our party there were precisely those who called themselves "100-percent Bolsheviks" and regarded themselves as the animation of truth, incapable of making mistakes. But it was exactly these animators of truth who made mistakes repeatedly yet stubbornly refused to admit them, thus bringing great injuries to the cause of the party. Therefore, in order to sum up the lessons of history, it was necessary first of all to answer this question clearly.

Comrade Shaoqi made the statement "without fear." It fully demonstrated the fearless, thoroughly materialistic spirit of a communist and the theoretical courage in daring to declare war on deeprooted traditional concepts. It debunked the whole falsehood fabricated by the ruling class in history for the sake of fooling the people as to the worship of sages and idols; it debunked the whole myth with which those opportunists within the party attempted, for the sake of hoodwinking party members, to propagate superstition with respect to outstanding leaders such as Marx, Engels, Lenin and Stalin; it also punctured the muddle-headed concepts of those who thought that the higher their rank, the more the truth would be on their side, and who thus resorted to superstition about themselves; and at the same time it gave a warning to certain obsequious and toady characters.

The statement made "without fear" by Comrade Shaoqi is not a dogma. Instead, it is based on a foundation of scientific analysis and, furthermore, has been proved by man's historical practice. In his speech, Comrade Shaoqi said, with Marx and Lenin as his examples: "Some say that Marx and Lenin did not make any mistakes' actually, Marx and Lenin also made mistakes of various degrees. If we look at the original drafts of their writings, they are often revised in a topsy-turvy manner; had they made no mistakes, why did they need to revise their drafts? In the second and third edition of 'Das Kapital,' Marx had to make revisions on both occasions; and to the very first sentence in the 'Manifesto of the Communist Party,' 'The history of all hitherto existing society is the history of class struggles,' Engels later had to attach a footnote." There has been an ancient saying in our country which suggested that "not every man is a sage, so how can anyone have no faults?" This was putting the sage in opposition to the ordinary man, as if a sage was not a man and hence could not make mistakes. In reality, this is the superstitious belief of posterity; it was intended as a way of establishing certain idols in order to deceive the people and control their thinking. Who can offer one man from the past and present history of man who has made absolutely no mistakes? This is obviously impossible. Objective facts indicate that any correct perception has to be preceded by many erroneous perceptions, and any success has to be preceded by many failures. In this sense, as long as one is a man, it will be hard for him to avoid making big and small mistakes. Therefore, Comrade Shaoqi suggested that only a dead man no longer makes any mistakes, but a dead man cannot be considered a man. Also, a man who does not do any work likewise would not make any mistakes. But if a man feeds on the people and yet does nothing for the people, is he not going to become a walking corpse and be just like a dead man?

This truth as to how any man is bound to make mistakes has always been acknowledged by Marxists. Genuine Marxists harbor no superstition about anyone; nor do they do so about themselves. Not only do they avoid talking about mistakes, but they treat mistakes from the attitude of seeking truth from facts. However, there are those who look upon themselves as Marxists but try very hard to avoid acknowledging the above truth; while they have obviously made mistakes, they still stubbornly adhere to them. Although some also orally acknowledge that it is always hard for people to avoid making mistakes, for the sake of "educating" others they do not include themselves among those people! Such comrades all regard themselves as superhuman, absolutely correct, and forever correct great theorists, but precisely on this point they have fallen into the pit of mistakes, completely deviating from the standpoint, viewpoint, and methodology of Marxism.

Comrade Shaoqi also took a step further in ascertaining from the root sources of philosophy the reason why it is hard for people to avoid making mistakes. He said: "The reason why it is impossible for people to avoid making mistakes is because in practice their subjectivity runs into contradiction with objectivity." Also: "The contradiction between subjectivity and objectivity and the fact that subjectivity often falls behind objectivity are fundamental reasons why man cannot avoid making mistakes."

Man has developed through the processes of understanding the world and changing the world. According to the Marxist theory of cognition, the world can be perceived, but the road of perception is dialectical, tortuous. Because the objective world is complicated and complex, even the same kinds of things come out in many forms and the same kind of laws manifest themselves in many ways, while people's perception is at the same time constrained by many kinds of conditions. Consequently, people's perception of objective things always proceeds from ignorance to knowledge, from little knowledge to more knowledge. In other words, it always proceeds from a partial state to an overall state, from shallowness to profundity, and from an abstract state to a relatively concrete state. In a word, it proceeds from incorrectness (mistake) to relative correctness. This tortuous course of perception is thus reflected in action as a path from repeated failures to eventual victory. Therefore, in the course of people's understanding of the world and changing the world, contradiction between subjectivity and objectivity constantly occurs; if people cannot manage this contradiction well, they are bound to make mistakes in their actions. We must never think that subjectivity reflects objectivity. This seems "as easy to understand as turning over the palm of one's hand" or that one can "see through it at a glance." After we understand this truism, we are unlikely to think we are always right or to resort to subjectivity and domatism; nor are we likely to feel discouraged or downtrodden once we make a mistake. On the contrary, mistakes are likely to prompt us to engage in careful investigation and study with greater consciousness, and thereby humbly to absorb experience and lessons from such mistakes.

However, the solution of the contradiction between subjectivity and objectivity is not something that we can find once and for all, because the objective world moves forward indefinitely. After repeated practice, people's perception of a certain specific thing may reach a state of consistency between subjectivity and objectivity, but along with this, new situations and new contradictions are likely to emerge. Hence, the phenomenon whereby thinking falls behind reality also occurs regularly. Precisely because of this, people's perception must likewise develop along with the development of objective things; if it becomes stagnant, they are bound to make mistakes. Therefore we must cultivate the habit of conducting investigation and study, turn it into our working style, adhere to it in a sustained way, take the initiative to continuously solve the contradiction between subjectivity and objectivity, and also rectify the many or few mistakes resulting from this contradiction. The great enemy which sabotages our fine working style of resorting to investigation and study is none other than pride and complacency. Generally speaking, when we find ourselves under difficult conditions, we are often more humble and cautious, pay attention to investigation and study, and proceed from reality. Under conditions of victory, on the other hand, it becomes easy for us to have feelings of pride which tend to make us exaggerate the role of individual subjectivity and refrain from respecting objective laws. Then, practices of deviating from reality and deviating from the masses are likely to be followed. It is precisely then, too, that an individual's subjectivity falls far behind objectivity. Falling behind is not so bad by itself, but the problem lies in one's unwillingness to admit it and to catch up with reality accordingly, while an inclination is shown even to think that one is right and that one can do whatever one pleases by oneself. Thus, subjectivity parts company with objectivity, and it becomes inevitable for one to fall into the pit of idealism and metaphysics and become subject to punishment by objective laws! Ordinarily, the mistakes that come about because one's subjectivity falls behind objectivity are hard to avoid in the people's course of advancing, and they are also relatively easy to rectify. But the mistakes that result when subjectivity parts company with objectivity because of pride and complacency can be entirely avoided and should be avoided.

Consequently, we do not harshly require that people never make any mistakes. Just as Shaoqi said: "We only ask that people not make mistakes purposely; that they not repeat their mistakes; that they not make serious, consistent mistakes on matters of principle; and that they make fewer mistakes. We only ask that people courageously and speedily rectify their mistakes."

Comrade Shaoqi's scientific dictum that "any person is bound to make mistakes" is in fundamental opposition to the obscurantism or modern superstition perpetrated by Lin Biao and the "gang of four," who purposely exalted the party leader to the status of a man of foresight and vision, omniscient and omnipotent, and a man whose "every word is truth." The reason why the thinking of certain of our comrades becomes petrified is precisely because they are stultified by this suggestion that "every word is a truth"; they dare not believe the truth that "any man is bound to make mistakes," especially with respect to party leaders. Not only do they bind themselves like silkworms within cocoons without knowing it, but they also want to restrict and suppress other people's thinking. There is always poor synchronization between those comrades and the pace of their time.

"Any person is bound to make mistakes"; this is an uncontestable scientific dictum. Our party has for several decades paid a bloody price for this, and so it should be understood by us today.

Only by Following the Dialectical-Materialistic Ideological Line Can We Make Fewer Mistakes and Greater Contributions

The purpose of our studying the question that "any person is bound to make mistakes" is not to propagate a theory of predestination but to ascertain how can we make fewer mistakes and not make big mistakes. Comrade Shaoqi suggested in his speech that all men necessarily make mistakes. However, this is not the same as saying that there is not truth in the world. Truth is objective; what it designates is the norm (law) by which objective things develop. On the one hand, man is under the control of, and subject to determination by, natural norms and social norms. But on the other hand, what makes man different from other animals is that man can master the objective norms of nature and society, possess the mobile function of perceiving truth, and achieve the unity of subjectivity and objectivity. Therefore, on the one hand we need not avoid recognizing the fact that it is hard for people to avoid making mistakes, but on the other hand we must see that people are not helpless before objective laws but are capable of perceiving those laws and making use of them so as to succeed in making fewer mistakes and greater contributions. Such a dialectical-materialistic viewpoint on treating the question of mistakes helps to break down such superstitious conceptions as those which seek to deify certain people, on the one hand, and to do away with the conception of predestination that presupposes people to be capable only of obeying objective laws submissively, on the other hand. It also points out to us a fundamental means of striving to make fewer mistakes and greater contributions.

In order to master objective laws and make fewer mistakes, it is not enough to have subjective desires. We must also place our perception on the basis of scientific methods. This was what Comrade Shaoqi pointed out in his speech: "Our approach to observation is to proceed from objectivity and not from subjectivity; from the developing and not from the static point of view; from the mutual connection and comparison of things and not from their isolation; and, at the same time, not only from the external but also from the internal contradictions of things in observing and perceiving those things." This scientific approach is nothing more than the principle of seeking truth from facts and our party's dialectical-materialistic ideological line.

What Comrade Shaoqi suggested here as proceeding from objectivity, and not from subjectivity, in observing and perceiving things also means that we must perceive those things according to their original outlook, and do things according to objective laws. He said: "Although man's actions are subject to control by his thinking, man's actions often run counter to his subjective desires, because things develop according to their own norms of development and not because of man's subjective desires." Therefore there can only be subjectivity obeying objectivity, and not vice versa. But those who are inclined to be subjective always think that man's will can be absolutely free and enable him to do whatever he pleases. In the history of our party, lessons in this regard have been rather numerous. After the First Five-Year Plan was fulfilled ahead of time and the three great transformations were basically accomplished, there gradually appeared, under such an unprecedented situation of triumph, a tendency to partially exaggerate the mobile function of subjectivity. This tendency exaggerated the reaction of the senses into decisive action under any circumstances; it exaggerated the thinking of the leaders into a substitute for all material power; and it exaggerated the wisdom and zeal of the masses into random action irrespective of objective conditions: on this basis, certain extreme leftist slogans and policies were put forward. On the surface, there seemed to be a situation of great enthusiasm and great activity, but in reality, it was a case of fantasy and blind action deviating from reality and operating in violation of science and objective laws. It was a reflection of idealism. Thereafter, such subjective, idealistic thinking was again saliently reflected in the realm of political ideology by ignoring new changes in the class situation, repeatedly whipping up turbulent class struggles, resorting unrestrainedly to a broadening of class struggle, and substituting class struggle for concrete laws in all realms. These historical lessons tell us that in order to give scope to the mobile function of man's subjectivity, and to gain freedom of action, we definitely cannot just rely on our subjective desired. Such goals can be established only on the basis of a perception of inevitability or, specifically, on the basis of a perception of objective laws. Otherwise, such freedom constitutes merely a kind of blind action. Just as Comrade Shaoqi profoundly expounded: "Only within the norms of nature and society can man have prescribed freedom. He cannot have any freedom beyond those norms, and there can be no freedom at all without perception of such norms." He who lacks this perception is bound to be punished by objective laws. During the 10 years of disturbances, did not Lin Biao and the "gang of four" make use of this subjective, idealistic tendency with exterior purpose in carrying out their sinister activities?

In order to observe and perceive things from objectivity and not from subjectivity, it is also necessary to carry out specific, concrete analysis about specific, concrete things; otherwise, we will still be liable to make subjective mistakes. Just as Comrade Shaoqi pointed out, the method of thinking of some of our comrades is not one of "looking at problems in a concrete manner" but of "proceeding from concepts," "looking at problems in a general way." The order of their perception is turned upside down, proceeding not first from the specific to the general, and then again from the general to the specific, but proceeding, instead, from the general, and substituting the general for the specific. They fail to understand that "all things are specific, or concrete, because all contradictions are specific, or concrete; there are no so-called general things in the world." Nor do they understand that only the specificity of contradictions constitutes the foundation of our perception of things. Therefore, since they are unable to correctly perceive things from the combination of the generality and specificity of contradictions, they often grasp the former while abandoning the latter. Consequently, it is necessary for us to reverse this order of their perception, which has been turned upside down.

On this question, people have for a long time formed an erroneous conception, as if the universality, commonality, and generality of contradictions can both exist apart from the specificity, individuality, and concreteness of contradictions and also encompass the specificity, individuality, and concreteness of all contradictions, and even take their place. Such an erroneous conception obviously runs counter to the dialectical viewpoint of Marxism. Lenin clearly pointed out: "Individuality, definiteness, and generality exist in relation to one another. Generality can exist only among individualities and through individualities." He also pointed out: "Any generality only roughly includes all individual things; any individuality cannot be entirely included in a generality." What Comrade Shaoqi mentioned as general character "is only one aspect of a thing, and not the totality of that thing." This is consistent with the statements of Lenin. Therefore, if we look at problems merely from their general character and from concepts, it will be impossible for us to really perceive the essence of diversified concrete things. Such an approach can only lead people to the pitfall of static, abstract, shallow study, taking theory as something petrified or wilted.

Then how are we going to perceive the specificity of things? Comrade Shaoqi summarized this in the following passage: "It is necessary to perceive the specificity of a contradiction during a definite time, in a definite space, and under definite conditions, and to perceive the internal structure and internal connections of this contradiction, its totality, its past, its present and future, its inevitable path ahead and accidental path ahead--i.e., the concrete state of this contradiction." In other words, it is necessary for us to analyze a contradiction concretely and historically, all depending on time, place, and conditions.

The reason why the thinking of some of our comrades has become petrified is, in terms of the philosophical root source, precisely because such a method of thinking deviates from reality and violates the practice of analyzing contradictions concretely and historically. Looking back at the history of our party, such petrification of thinking has appeared many times in different forms. The leftist dogmatism of the 1930's, the extremely exaggerated mobile function of subjectivity and "left" deviation in the work of the late 1950's, the ill effects of modern superstition instigated by the sinister plot of Lin Biao and the "gang of four" during the 10-year disturbance, the viewpoint of the two "whatevers" after the smashing of the "gang of four," and the various manifestations of opposition to practice as the only criterion for testing truth: all of these have been closely connected with this metaphysical method of thinking. And among these manifestations, the most dominant has been to freeze Marxism-Leninism and Mao Zedong Thought into unchangeable dogmas and not take them as a guide to action, not study and apply them in combination with specific conditions and the concrete development of history. Whatever is not said in the book, nobody would dare to say or to think about; everything that is said in the book, on the other hand, is honored as golden rules, and nobody dares to deviate even slightly from them, even if they are proved by practice to be erroneous, no longer applicable, or subject to a new development in connection with actual conditions. Such petrification of thinking may be reflected in a rightist form or it may be reflected in a "leftist" form; however, that which has for a long time been stubbornly adhered to by these comrades within our party often consists of certain "left" and extremely leftist stuff, which they contrarily regard as "revolution." This is a question which must command our special attention.

On the question of opposing the petrification of our thinking, promoting the emancipation of our thinking, and insisting on the four principles, we need to conduct concrete and historical analyses about the four principles; we cannot treat them from an abstract, static point of view. On the one hand, there is a need to return to order from the disorder caused by the distortion of the four principles by the extreme leftist line of the "gang of four," but on the other hand, along with the advance of history, the four principles are bound to have a more accurate and a richer content. For example, in the case of the theory of scientific socialism, when Marx and Engels founded it they still had no practice in this regard; after Lenin and Stalin carried out their practice in the Soviet Union, its content became greatly enriched. After another 30 years of China's positive and negative experiences and lessons in building socialism, our perception of socialism has become even more profound. Hereafter, it can be readily believed that in the new historical period, our perception of socialism will also become more concrete through our practice and through our exploration of the laws of socialist development. Therefore, if our understanding of the four principles is ensnared in certain erroneous propaganda of the "gang of four" or the past, it is of course incorrect. Neither is it correct, however, if we think that, after our return to order from disorder, our perception can again become static or stagnant. If we fail to apply or develop in conjunction with concrete historical conditions the relevant principles expounded in Marxism-Leninism-Mao Zedong Thought, but only cling to certain "definitions" and "concepts" and exploit them in arbitrary use everywhere, this would also be incorrect, because all this would be but a reflection of the petrification of our thinking. Therefore, if we really wish to insist on the four principles, whether in connection with a return to order from disorder or in connection with a specific, concrete application and development of the principles of Marxism, it is necessary for us to continue to emancipate our thinking. Of course, we must also make clear that advocating the emancipation of our thinking is decidedly not advocating "free" will; emancipation means enabling our thinking to break through such petrification, from various subjectivities, and thereby advance along with the forward movement of history. Both the aim and the ultimate destination of the emancipation of our thinking should be to bring our thinking more in line with the laws of the development of objective things.

Therefore, when we observe anything we must carry out concrete and historical analyses and dialectically unify the universality and the specificity of the attendant contradictions. This will enable us to perceive the essence of a thing and master the laws of its development, on the one hand, and to continue to enrich and develop our perception of the universality of the material world so that we can more accurately guide our concrete practice, on the other hand. To sum up, only by following such a dialectical-materialistic path of perception can we really emancipate ourselves from the petrification of our thinking and thus make fewer mistakes and greater contributions on our way to revolution and construction.

A Communist's Fundamental Attitude in Treating the Question of Mistakes Is Seeking Truth From Facts

Comrade Shaoqi divided mistakes into two categories, according to different causes: one category consists of contradictions arising between subjectivity and objectivity because of subjectivity's falling behind objectivity; the other category consists of contradictions between subjectivity and objectivity resulting from the irrelevance of standpoint, viewpoint, and methods. The former category is hard for anyone, including theorists or practitioners at the highest levels within or outside the party, to avoid; the latter category, however, is something different and, insofar as we communists are concerned, it should be avoided and we can also strive to avoid it. But in either case, once a mistake is made, we must do our best to correct it. We Communists should especially do so. Comrade Shaoqi put it well: "Man has developed precisely through such processes of continuing to make mistakes and continuing to correct mistakes." Therefore, in order to enable ourselves to move ahead and our cause to develop, we must not be afraid of making mistakes, and still less of correcting mistakes! In order to achieve this, the key lies in seeking truth from facts; we must adopt such an attitude both toward our own mistakes and toward other people's mistakes.

Between dealing with our own mistakes and other people's mistakes, it is more important to deal with our own mistakes by seeking truth from facts. This is even more true for comrades who have positions of leadership.

For a communist, to be courageous enough to admit and expose one's own defects and mistakes is a requirement of his party character, a reflection of the party's high sense of responsibility toward the people, and a reflection of his personal frankness and lack of reserve. However, if a man lacks a dauntless, thorough materialistic spirit, it will be very hard for him to achieve this. Lenin said: "The attitude that a political party takes in regard to its own mistakes is the most important and the most reliable yardstick for measuring whether or not that party is really fulfilling its obligation toward its own class and laboring masses" ("Selected Works of Lenin," Vol 4, p 213). This famous passage obviously also applies to every communist. Comrade Shaoqi set a good example for us in this regard. In certain articles and speeches during his lifetime, Comrade Shaoqi more than once publicly examined the defects and mistakes in his own work. He said earnestly: In a spirit of self-criticism, I should make public all of these mistakes of mine, to the fullest extent that I understand them, and I should deliver them to the party members and the masses as the party's internal teaching materials. I should also resolutely struggle against these mistakes on the basis of the party line. He maintained that this is a responsibility every comrade who has made mistakes must fulfill. From these facts, we can see that Comrade Shaoqi's article "Why Do People Make Mistakes?" also includes his own personal experience and lessons while summing up the party's experience and lessons. It was intended not only to educate others, but also to educate himself. Such an attitude of seeking truth from facts in treating his own mistakes cannot but deeply move us.

However, not everyone within our party ranks can do this. There are those who would avoid talking about their mistakes; there are those who would embellish their errors and dress up their wrongdoings; there are those who would sing their own praises to suggest that they have always been correct; there are those who attribute all merits to themselves and relegate all mistakes to others; and there are those who, in the face of victory, feel so proud that they cannot tolerate a single ounce of criticism. In the person of these comrades we have lost the most precious spirit of self-criticism of a Marxist-Leninist party and have lost the scientific attitude of seeking truth from facts in treating our own mistakes. History has more than once revealed to us this fact: because feudalistic ideas still exist in the minds of certain leading cadres of our party, with the result that in the face of their own mistakes they lack the spirit of self-criticism, this has led to a breakdown of democratic centralism within the party, has made it impossible to develop normally the criticism of those above by those below, has caused the enthusiasm and creativity of the party members and the masses to be subject to suppression, and has made a feudalistic, patriarchal working style grow within the party ranks. In such an atmosphere, people dare not speak the truth and dare not express different opinions. The habit of regarding "the superior as always right" and "the book as always right" begins to prevail, and idealism and metaphysics also begin to spread. The ultimate aftermath of this development is bound to be the emergence of personal dictatorship or oligarchic autocracy within the party. Such conditions would provide ambitious characters and sinister plotters with opportunities to practise their trade. They would cringe and flatter, do what they are expected to do, create personal superstition, propagate without restraint this kind of vulgar, corrupt working style, and thereby cause the disintegration of our party. This shows that, insofar as a party or a party's leading cadres are concerned, once the spirit of self-criticism is lost and the individual in question cannot treat his own mistakes by seeking truth from facts, he is bound to lose his credibility in the eyes of the people and in the eyes of the party. If this were allowed to develop, nothing else could result except the destruction of our great cause.

He who is unable to treat his own mistakes correctly is likewise liable to be unable to treat the mistakes of his comrades correctly. Within our party there have always been two contrasting principles in treating this question: one is the principle of "learning from past mistakes to avoid future ones, curing the sickness to save the patient"; the other is the principle of the so-called "cruel struggle, relentless attack." As for the fascist method of political frameups on the basis of trumped-up charges and factionalism within the same party, as practised by Lin Biao and the "gang of four," that is still a question of an altogether different nature. Comrade Shaoqi always insisted on an attitude of seeking truth from facts in treating others as well as in treating himself, and under this principle he advocated treating himself more strictly while treating others with leniency. He resented very much the cruel, excessive struggles practised by the leftist opportunists.

Comrade Shaoqi suggested that one must put oneself in another person's place and observe a problem from various angles. When a party member makes a mistake, he himself is of course responsible and cannot keep passing the buck or shift it to objective causes. But as a party organism, as a leader and a comrade, his attitude should always be one of seeking truth from facts when analyzing party members' mistakes. In an environment of complicated struggle, in particular, simplification cannot be attempted. By stressing putting oneself in another person's place, Comrade Shaoqi meant precisely for one to compare one's own heart with the hearts of others, to place oneself in the environment of others, so as to experience and examine the conditions at the time the mistakes were made, and thereby to put oneself in other people's places and do some thinking on their behalf. In so doing, clear analyses must be made as to which mistakes were due to problems of subjectivity by the persons involved, and which ones resulted from objective conditions; which ones should be the responsibility of the collective, and which ones resulted from individual arbitrary actions; which ones came about because of execution of directives from above, and which ones resulted from their own doing. After the causes and nature of such problems are made clear, a warm attitude should then be adopted in helping the comrades understand their mistakes and correct their mistakes, thus demonstrating the party's warmth, care, and education in respect to the comrades. We should understand that the aim of criticizing or liquidating the mistakes of a given comrade is entirely to clarify our thinking and unify all our comrades; to learn lessons from these [mistakes], educate our comrades, and take such mistakes as the wealth of the whole party. The purpose is not to use them as a pretext to cause the downfall or death of that given comrade.

Comrade Shaoqi also suggested that one must observe a problem objectively and not confine oneself to one's own standpoint. When comrades within the party make mistakes, theirs is a situation fundamentally different from that of the plotters and ambitious characters who have sneaked into the revolutionary ranks. Therefore we must allow the cadres to make mistakes and also allow them to correct their mistakes. The emphasis that Comrade Shaoqi placed on our not confining ourselves to our own standpoint was to educate the whole party not to base ourselves on "our own individual standpoint" in terms of personal gratitudes or grievances, personal likes or dislikes, and personal gains or losses, and thus not to substitute personal feelings for policy. Instead, we should base ourselves on the party's standpoint, the party's character, and the party's policies. This was originally a fine longstanding tradition of our party, but some of our comrades often took their own will as the standard of right and wrong. Whether you were correct or mistaken, so long as your conduct did not suit those comrades' will, so long as you failed to follow the mold they had conceptualized, you would be subject to exclusion and attack. Political labels such as rightist would also be attached with the slightest excuse. In reality, their own conduct might not have been correct, and the conduct of others might not have been mistaken. In worse cases, one would develop one's own individual standpoint to the extreme, substitute a private motive for public cause, pile insult upon injury, exaggerate or fabricate the mistakes of comrades at random, and thereby frame such comrades. Such examples deviated infinitely farther from the principle of seeking truth from facts. The individual standpoint of such people had acutally already been converted to the side of our class enemies. During the 10-year disturbance, some of our comrades based themselves precisely on such individual standpoints, and they often resorted easily to persecuting their comrades to death. This was mainly because they were fooled by the "gang of four"; these comrades themselves should carefully sum up their experience in this regard.

As we come once more to read Comrade Shaoqi's article "Why Do People Make Mistakes?" we feel especially close to him, but we also experience pain and regret. On the question of how to correctly treat mistakes, we have had both the painful lessons of the 1930's, 1950's, and 1960's and the good experiences gained during the period of rectification in Yanan in the 1940's. With such positive and negative aspects of our experience, we are bound to be able to do better from now on. Revolutionaries are good at learning from their mistakes. As Engels said: "A great class is like a great people; it can learn from the results of its own mistakes faster than from any other aspect" ("Selected Works of Marx and Engels," Vol 4, p 285). As long as we absorb lessons from our mistakes in the manner of seeking truth from facts, and as long as we correct our mistakes in the manner of seeking truth from facts, our future is bound to be full of hope and brightness.

TRIAL OF LIN BIAO, JIANG QING DISCUSSED

HK170327 Hong Kong TUNG HSIANG in Chinese No 25, 16 Oct 80 pp 4-6

[Article by Chu Chung-yi: "Sixty Charges in the Lin Biao-Jing Qing Case"]

[Text] "The whole town is talking about the Lin-Jiang case." This sentence is the most appropriate description of Beijing's current atmosphere.

Following the conclusion of the third session of the Fifth NPC, taking advantage of Beijing's atmosphere of favoring the promotion of democracy and the legal system, the NPC Standing Committee immediately held a meeting which decided to set up special procuratorate and a special court to prosecute and try the defendants in the case. This is the most important case since the founding of the PRC and will also be the CCP's first trial of disgraced political opponents. This case has caused a sensation throughout the country and attracted worldwide attention. Therefore, this case has made a deeper impression on Beijing residents.

I left Guangzhou for Beijing by a civil airline Trident. When I arrived in Beijing, the city was already in the dusk of the evening. After checking in at a hotel, I left the hotel in a hurry to visit my friend. Out of my concern for the Chinese political situation, I was eager to find some answers to the following questions? Is there any undisclosed inside information about the NPC Standing Committee's decision to hold open trials of the Lin-Jiang case? Is there any new development?

After entering my friend's house, I discovered a group of people. I was told that they were my friend's fellow workers who had dropped in for a chat. Bosom friends always drop into each other's houses for a chat. This is a common practice established after the Cultural Revolution.

Although I was a guest from afar, they did not look ill at ease in my presence. This was because they are intellectuals who are concerned with the political situation. After exchanging a few words of greeting with one another, we naturally changed the subject to the Lin-Jiang case.

They said that Public Security Minister Zhao Cangbi personally presided over the pre-trial of the 10 principal defendants in the case, which began last April. During the NPC session in early September, this case was turned over to the Supreme People's Procuratorate for the purpose of starting a prosecution against the defendants.

To state succinctly, the Pulbic Security Ministry has charged the 10 principal defendants with the following four major counts:

1) sedition and conspiracy to overthrow the political power of proletarian dictatorship; 2) frame-up and persecution of party and state leaders and usurpation of party leadership and state power; 3) persecution and suppression of cadres and the masses of people and practice of a fascist dictatorship; and 4) plotting to murder Mao Zedong and engineer a counterrevolutionary armed rebellion. According to a special bill of indictment, there are 60 charges against the 10 principal defendants including conclusive evidences of the major crimes directly committed by them.

On the four major counts of major crimes, all 10 principal defendants are charged with the first three and the second half of the fourth. The Jiang Qing clique is not accused of plotting to murder Mao Zedong. The special procuratorate led by its director Huang Huoqing is examining the 60 charges in order to file charges in the special court. Following the special procuratorate's examination, if evidence of some of the 60 charges is found to be insufficient, such charges will be dropped. However, it is also possible that the special procuratorate will also bring new charges against them after its examination. It is believed that everything will be clear when the trials open.

Beijing's judicial circles disclosed that following the special court's acceptance of the special procuratorate's bill of indictment, it is estimated that a court session will open in the middle 10 days of this month. The trials are scheduled to last 1 month and will close at the end of November.

....It was very warm in the small house. Some of the friends talked about what they had heard and some gave their own views. It was a lively discussion with everybody trying to get a word in. We were all in an unconstrained atmosphere. All of us were very interested in the following subject: of the 10 principal defendants, with the exception of Jiang Tengjiao, Jiang Qing, Zhang Chunqiao, Yao Wenyuan, Wang Hongwen, Chen Boda, Huang Yongsheng, Wu Faxian, Li Zuopeng and Qiu Huizuo were all persons of weight whose crimes are inexpiable. However, Jiang Tengjiao seemed to be a nobody as compared with the above nine principal defendants. He was just a political commissar of the Fourth Air Force stationed in Jiangsu and Zhejiang and was also just a political commissar of the Nanjing Air Force. His political status was far below the illustrious positions those nine held when they were running rampant. How does he come to be numbered among the 10 principal defendants? Nobody can figure this out. The only explanation can be that he was in direct command when Lin Biao and Jiang Qing planned to launch an air attack on Mao Zedong's train during his tour of south China; this would enhance Jiang Tengjiao's negative political status.

I said: "I feel that the name of Jiang Tengjiao has been changed to someone else, which might be more appropriate."

"Who?" "Correct, Mao Yuanxin's several friends seemed to exclaim simultaneously. People find it interesting that Mao Yuanxin is not numbered among the 10 principal defendants. However, the fact that Mao Yuanxin is not included among them certainly does not mean that this gentleman can remain at large. According to a well-informed friend, he will be tried with Sun Yuguo and others in the Shenyang Municipal Higher People's Court.

It is the first time in 30 years that the NPC Standing Committee has organized a special court to try a case. In future, the heavy burden of specifically trying the case will fall on Zeng Hanzhou and Wu Xiuquan, presidents of the number one and number two courts.

According to my information, Zeng Hanzhou is a veteran political and legal man in the CCP. In 1950 he was appointed director of the administrative office of the supreme people's court. After that he was president of the number one criminal court of the supreme court for rather a long time, during which he handled innumerable major criminal cases from all parts of the country, thus gaining abundant experience. He is said to be an upright man who persists in principles, and is also well-versed in the law, with sharp intelligence and eloquence. Therefore, although those on trial before him include the fiery Jiang Qing and the sinister Zhang Chunqiao, while this is the first trial of its kind to be held in China, it is believed that he will be able to handle the matter well. People in judicial circles say that the confrontation between him and the fiery woman Jiang Qing will be absorbing.

Wu Xiuquan is also an extremely appropriate choice for trying Huang Yongsheng and the other military figures. Wu's qualifications go back a long way; during the period of the Cunyi conference, he was an interpreter at the Politburo conference. He is a talented son of the army, who is familiar with both military and legal affairs and should be adequately equipped to deal with Huang Yongsheng and the others.

People are watching and waiting for the opening of the trial of the Lin-Jiang case with great excitement. What then do they think of the CCP's decision to try the case?

Generally speaking, there are three points:

First, it assuages the people's anger. During the 10 years of the Cultural Revolution, Lin Biao, Jiang Qing and company worked hand in glove, caused great misery and suffering, and committed innumerable crimes. It is really intolerable that this bunch of savage and bestial counterrevolutionary criminals should merely be arrested according to CCP custom, interrogated separately, and go on enjoying good food and comfortable quarters costing 200 yuan a month. How then could the millions of souls they persecuted to death be faced? What would be the use of talking about strictly observing state law and promoting uprightness?

Secondly, it shows determination to strictly enforce the legal system. The CCP has talked a lot in recent years about strengthening the legal system. Frankly speaking, the results of carrying it out really fall short of people's wishes. A number of cadres who have clearly committed crimes are still merely punished by a warning or party disciplinary action. This causes a lot of talk among the people. This is obviously placing party members and cadres above the masses, so how can it be said that "everyone is equal before the law?" Trying the Lin-Jiang case proves with facts the determination of the central authorities that nobody, no matter how high his position, can expect to escape punishment by state law if he commits a crime.

The people of Beijing are particularly pleased and surprised that the special court has decided that the trial of the Lin-Jiang case will be a public one. This is because ever since the CCP revealed 2 years ago that the Lin-Jiang case would be tried, it was always said that the trial would be held in camera because state secrets were involved, and only the final verdict would be published. This original intention was eventually changed at the NPC Standing Committee meeting. This probably has something to do with the assault by the tide of democracy at the NPC.

Apart from that, XINHUA director Zeng Tao's answer to a reporter's question at his press conference in which he said that the trial of Lin Biao, Jiang Qing and company would be held according to law was also very popular. This is because he virtually negated Hua Guofeng's prediction made to the British writer Green 1 year ago that they would not be condemned to death. This shows that the CCP now understands that it is improper to substitute words for law and policy for law. Can this not be described as a step forward?

Of course, it is still too early to say that trying the Lin-Jiang case is a hallmark of establishing people's democracy and the legal system in communist China. We will have to go on awaiting proof of that from facts. This is because in this public trial, the degree of "public" will still be limited; only provinces, municipalities and autonomous regions, democratic parties, popular bodies and the PLA will be allowed to send representatives to listen to the trial. The local masses will not be able to enter the special court on a "first come first served" basis. However, no matter what, it is clearly a pleasing step forward towards democratization and establishment of a legal system to progress from a secret or military court trial to a semi-public one and from deciding cases according to policy to judging crimes according to law.

Thirdly, it signifies progress from political strife to civilization. Most people living abroad would agree with the above two points, but the writer had not thought about the question of political strife and civilization. The people of Beijing, living in the capital, have come to feel profoundly from the events of the past 30 years, from the Gao-Rao incident, the anti-rightist movement, the Peng Dehuai incident, the incident of Peng, Luo, Lu and Yang, and the Liu Shaoqi case right up to the Deng Xiaoping case of opposition to the rightist wind of reversal of verdicts, and from the storms and savage political strife in the councils of the CCP: when a bigshot is toppled, the matter is kept a close secret, and people can only gain some gleaning of what has happened from scanning the lists of names attending a reception or a funeral. The loser has no chance to make a self-defense or explanation of what happened and the rights and wrongs of the matter, so the masses are kept even more in the dark. This cannot but give people the impression that "the winner is king and the loser is a bandit." A socialist state system that stresses that it is far more civilized that the capitalist system actually remains in the barbaric conditions of feudal society on the question of political strife. Should this not cause people deep reflection?

The 10 principal defendants of the Lin-Jiang case are now to be tried, and the other criminals involved will be tried by local courts in the provinces and municipalities. Although the trial will be only semi-public and despite the fact that pre-trial preparations have been carried out in many respects, the masses will anyway have another opportunity to view these people after their fall and to listen to their expositions (whether true or false). This is the first time this has happened in the history of the CCP. In addition the defendants will also be allowed to engage lawyers and request that others give testimony for them. Is this too not a great step forward, compared with the past?

The CCP completed the peaceful transfer of cabinet power at the third session of the Fifth NPC, and afterwards rapidly issued a decision on trying the Lin-Jiang case. These two major affairs will have far-reaching influence in the history of the development of the CCP.

At the national day banquet this year, Premier Zhou Ziyang expanded on the previous content of building a powerful modern socialist state. He formally proclaimed "building a modern socialist state with a high level of democracy and civilization," adding the words "high level of democracy and civilization." There is indeed great significance in these words.

REMNANTS OF FEUDALIST THINKING MUST BE ABOLISHED

Shanghai WEN HUI BAO in Chinese 12 Aug 80 p 3

[Article by Wei Keming [7614 0344 2494]: "Pernicious Influence of Patriarchism Must Not Be Overlooked"]

[Text] Our present discussion of patriarchism and the person who lays down the law is directed at the manifestation of the pernicious influence of feudal patriarchism in our family life, social life, as well as inner-party life. Then, what is the substance of feudal patriarchism? How has it changed over the past few years? What are the various measures taken to defend patriarchism?

Feudal patriarchism is a reflection of feudal autocracy, special privilege mentality, and hierarchy in a family. The head of a family has absolute power. His words are regarded as the "infallible rule" ("Golden Rule") which members of a family should unconditionally obey; under no circumstances can it be violated. When Mengyizi asked about filial piety, Confucius said: "Do not disobey." ("The Analects of Confucius.") Mencius also pointed out that "to obey means filial piety," using specific examples. They also stated that the head of a family, when he has made a mistake in words or deeds, may be subject to remonstration, just as officials in the feudal times did toward the monarchs. Then what can we do if the remonstration is ignored? To an emperor, "one who has remonstrated three times but has failed must run away" (Han Fei felt that to run away also meant guilt; he really deserved execution); to the head of a family, "one who has pleaded thrice without success cannot but cry loudly and obey" ("The Book of Rites"). That is the way it was. A variety of "rites" were formulated by the feudal ruling class so as to disguise patriarchism with a veneer of logical. To obey the head of a family unconditionally was thus described as the norm of human conduct.

In order to give the head of a family undisputable power, the feudal ruling class, aside from formulating a set of family rules and disciplines and a variety of "rites," utilized the invisible shackles of feudal blind worship to fix people's conduct. They spread lies by telling people that there are heaven and hell, and the law of causation. They said that if the children of a family should disobey the order of the patriarch, they would sink into a hell beyond redemption after death; on the contrary, if they obeyed in every respect, not only would they be rewarded after death, but miracles could also take place immediately. For instance, one who lay on the ice could get fish from it, or one who cried at the bamboo could see the bamboo shoots grow. In the preliberation period, many families enshrined and worshiped the sacred tablets of ancestors. This meant that, as the head of a family, a deceased could still be enshrined to issue orders to exercise his remaining influence.

Why should the power of the patriarch be strengthened this way? In feudal society, the family was a unit of production and livelihood, on the basis of the small-scale peasant economy which was the social foundation of feudalistic rule. The feudal dynasty depended mainly on the system of political power to rule the people, yet the system of clan authority was also indispensable. They always put "governing a nation" and "governing a family" on a par, and regarded the latter as the foundation of the former. It is said in "The Great Learning" that "those who would order their national life must set about ordering their home life...The ordering of national life depends on the regulation of one's home life, and the restoration of peace in the world depends on ordering national life." They went all out to strengthen the authority of the head of the family for the purpose of unifying the country by commanding thousands upon thousands of families through the patriarchs. It is thus obvious that, in essence, the power of the head of the family was an extension or incarnation of the absolute imperial authority. As other feudal systems, patriarchism has seriously injured the people, particularly women, physically and mentally, stifled their intelligence and wisdom, dampened their enthusiasm for production, and restricted the development of social productivity. The protracted stagnation of feudal society in China is inseparable from the existence of patriarchism.

The feudal economic foundation and political system were abolished following the victory of the new democratic revolution. The socialist reform and socialist construction that were carried out immediately after that have prepared the ground for abolishing patriarchism. In December 1958, the "Resolution on a Number of Problems Concerning People's Communes" adopted by the Sixth Plenary Session of the Eighth Party Central Committee, stated: "We advocate abolishing the unreasonable patriarchism left over by history and developing a democratic and united family life." The person who lays down the law has carried out some criticisms of patriarchism and lessened its influence to a certain extent; therefore we cannot say that patriarchism has been retained intact.

It is, of course, not possible by means of a document or a few movements to completely eliminate the deep-rooted patriarchism and the person who lays down the law. It is a protracted and tortuous process of struggle during which there may be minor reverses as well as major setbacks. The 10-year period of the "Great Cultural Revolution" was a major setback. During that time, patriarchism and what I say goes reached their limits.

The patriarchism incited by Lin Biao and the "gang of four" can be traced to the same origin as feudal patriarchism, as both of them were designed to carry out a policy of obscurantism, to strive for a personality cult, and to foster special personal privileges. Yet, aside from carrying forward feudal autocracy, they also inherited a fascist legacy. It may be said that theirs was a combination of the Chinese and the West which was bound to have new features of its own.

What they mainly utilized to safeguard patriarchism and the person who lays down the law was not the feudal blind worship but the modern blind faith. They directed an unprecedentedly large-scale new deification movement to make the revolutionary leader a deified personality, so that they could utilize the love and esteem of the masses toward him. They not only made every word of the revolutionary leader an eternal tenet, but they also tried to make "one word tantamount to 10,000 words." They required that "passing on information must not be delayed overnight," "everything must get instant results," "one must not alter things under any circumstances," and "one should ask for instructions in the morning and submit reports in the evening." If Confucius and Mencius were still alive, they would probably become dumbfounded and have a sense of inferiority to hear them say so.

For the purpose of safeguarding patriarchism, Confucius and Mencius formulated a variety of "rites"; however, in execution of these rites, at times they adopted a flexible attitude. In the "Canon of Filial Piety," it says that if a father's act is unjust, his son may argue with him. It goes further to praise the "arguing son" who dares to try. Tradition has it that Shun was not on good terms with his father. He did not make it known to his father that he had married the second daughter of Yao and made her his imperial concubine. When asked about the reason by Wan Zhang, Mencius says: "If it were reported, he would not be able to marry. The marriage of a man and a woman is an important human relationship. If it is reported, the important human relationship will be lost." ("Mencius," First Chapter of Wan Zhang.) In order to safeguard this important human relationship, he regarded that it was correct not to report the event. However, under the rule of Lin Biao and the "gang of four," was it allowed to "argue?" Was it allowed to "leave without saying goodbye?" It is evident that the patriarchism envisaged by Lin Biao and the "gang of four" was based on feudal patriarchism, but it went still further. They greatly strengthened patriarchism.

Owing to the fact that patriarchism like this was masked with Marxism-Leninism and carried with is a seriously fraudulent nature, it still has its market today. Of course, we should not obliterate the successes achieved in eliminating the pernicious influence of the past, or should we exaggerate how dangerous it is; but it is more important that we should not lower our guard or become careless and ignore its harmfulness. In order to ensure that this historic calamity will not be repeated, and to create the essential ground for building a socialist nation having a high-level material and spiritual civilization, the only way is to eliminate the pernicious influence of patriarchism step by step, to fully develop socialist democracy, and to replace "what I say goes" with letting everyone have his say.

In order to eliminate patriarchism like this, it is necessary to continually criticize feudal autocracy, special privilege mentality, and hierarchy, because they are the roots of patriarchism. At the same time, we must also continually criticize the modern blind faith and the two viewpoints of "obedience in every respect" in order to unmask patriarchism and restore its true features. In the past, when the ultraleft trend of thought was criticized, some of our comrades were afraid of getting into trouble and tried to shield shortcomings. They were rather reticent and intended to cover up, which resulted in endless trouble for the future. Lessons like this must not be allowed to be repeated.

In capitalist countries which have advanced technology and science, feudal patriarchism has been overthrown by bourgeois democracy, but not in a thoroughgoing way. Only by fully developing socialist democracy can feudal patriarchism be completely abolished. The essence of socialist democracy is to make the masses masters of their own country. The day when the masses really become masters will be the day of doom for patriarchism. Some of our comrades just cannot understand this point correctly. They do not pay enough attention to socialist democracy. For instance, they deem that democracy is merely a means. Certainly, democracy as the superstructure may be called a means, with regard to its function in giving service to the foundation of the economy. Yet at the same time it is an end in itself. Since the essence of democracy is to make the people the masters of their country, how can it merely be called the means but not the end? Various misunderstandings and misinterpretations must be clarified and democratic centralism must be correctly implemented. Following the development of the four modernizations, it is necessary to strive to bring patriarchism and "what I say goes" to the museum of history at an early date.

MASSES' RIGHT TO RECOMMEND WORTHY PEOPLE SHOULD BE RESPECTED

Nanjing XINHUA RIBAO in Chinese 18 Aug 80 p 1

[Article: "Have Complete Respect for the Masses' Democratic Right to Recommend Worthy and Capable People"]

[Text] The selection of cadres is the same as other party work, it necessitates unswervingly following the mass line and completely respecting the masses' democratic right to recommend worthy and capable people. Only by completely following the mass line and allowing hundreds of millions of people to act as "Bo Le" and select "horses that run a thousand li a day" can tens of thousands of worthy and qualified persons be discovered and selected from among the masses and so adapt to the daily increasing need for qualified people in building the four modernizations.

At present, the major obstacle influencing our choice of cadres who completely follow the mass line is the problem of "making a mystery of the handicraft industry form." The so-called "making a mystery of the handicraft industry form" is the feeling that the selection of cadres can only be handled by a small minority of a few people and that we cannot boldly and fully follow the mass line. If they follow the mass line a little they cannot be too careful and they must add on various limitations. For example, letting the masses criticize the good and bad points of cadres is permissible but to let them discuss cadre appointments and removals is not; to allow the leadership group to fix a name list and seek views from the masses is permissible but to allow the masses to break through conventions and widely select qualified people is not; to seek to have individuals talk with the masses or to hold discussion meetings is permissible but having popular elections and letting the masses recommend cadres is not. This type of selection of cadres is very narrow and cannot contribute to the timely selection of qualified people from various areas and sometimes it results in seeing or using people incorrectly.

To change the work method of making a mystery of the handicraft industry, the mass line must be followed completely for the selection of cadres and we must eliminate these types of thoughts and misgivings:

1. Fear of divulging secrets. In the selection of cadres there are secrets. The strict guarding of secrets is an organizational rule for cadre work. Lin Biao and the "gang of four" incited anarchism and ultraleftist thought making it impossible to keep secrets within the party and the results were very serious. We cannot forget the lesson learned from this bitter experience. Yet, there are, after all, it should be made clear which secrets should be guarded in cadre work and which

restrictions should be eliminated. The present situation is that, on the one hand, some affairs that should be kept secret are not well kept and "communications between the inside and outside" have not been completely removed. On the other hand, there are also some secrets that need not be maintained but are still kept secret. Some comrades often excessively stress the specific characteristics of cadre work and see it as totally secret work as if the employment and appointment and removal of cadres was only the affair of the organization and leadership. In this way, they need not boldly and fully follow the mass line. They even go so far as to suggest that the recommendations by the masses to the organization are also secrets. The normal practice of democracy whereby the masses, within a specific sphere, discuss the appointment and removal of cadres, is also said to be divulging secrets. We should see that the preservation of cadre work secrets and the selection of cadres following the mass line are not contradictory but complementary. Our discussion of preserving secrets in cadre work is completely for handling well cadre work and is not for binding the hands and feet of the masses. If preserving secrets obstructs our work then this kind of guarding of secrets is more often than not a synonym for making mysteries. It is an old restriction that binds the hands and feet of the individual and the masses and should be eliminated.

2. Fear of confusing things. After the masses are aroused, it is difficult to avoid everybody talking at once and varying opinions. This is a common phenomenon and cannot be taken as peculiar. Historical experience has proven that on any question total concensus is very uncommon. For differing views on the masses by the leadership, including approval and opposition, the correct and the wrong, it is first necessary to hear both at the same time for the purpose of examining and understanding cadres from various angles and so avoid one-sidedness and blindness. Secondly, it is necessary to do work well and if the masses do not understand matters we must give suitable explanation; it is necessary to carry out patient and painstaking ideological education work to counter the incorrect views among the masses; we must promptly analyze, study and draw systematic, comprehensive and correct conclusions concerning the unsystematic, uncomprehensive and scattered views among the masses. The facts show that only if within the process of the masses recommending cadres, the leadership of party committees is continually strengthened, and we do not use the pretext of "what the masses say counts," refuse to have anything to do with matters or let things drift, then not only will there be no confusion of things but on the contrary it can bring new vitality to cadre work so that cadres can do their work even better. To arouse the cadres to carry out popular elections of cadres, the provincial public security office held seven leading party group meetings and party enlarged meetings within a month. These meetings promptly analyzed and studied conditions that had arisen in the process of selecting cadres by public appraisal and, vigorously guided the selection and insured that selection activity proceeds smoothly. The provincial agricultural bank, in launching the recommendation of cadres by all of its staff and workers, paid attention to doing well all types of ideological and political work, overcame some incorrect ideological understanding and muddled views, strictly accorded with the new viewpoint and standards for employing people, enthusiastically recommended worthy and capable people for the four modernizations and established a name list of outstanding reserve cadres.

3. Fear of the rise of factionalism. This problem is worth watching out for. The factionalism in some units is "usually invisible but shows up when things crop up and comes into strong play at critical moments." The selection of cadres is a

critical moment and at that time factionalism is very likely to be exhibited. We cannot give factionalism an opportunity to arise and even more so should not allow some people the opportunity to give rise to factionalism. Yet, we cannot be overcautious over the rise of factionalism and hesitate and vacillate in following the mass line. It should be known that the form of the recommendation of cadres by the masses is multifaceted and the path is very wide. To have the masses have individual heart-to-heart talks is one form and holding discussion meetings is another. Democratic voting is a new way to recommend cadres and should be encouraged and expanded. Whatever form is employed in the various districts and units and whenever they carry out the activity of the masses recommending cadres, it should be decided by the party committee based on real conditions and not be done in just one step. When the power of many leaders is weak, factionalism is serious, and the holding of district and unit popular elections for recommending cadres is temporarily inappropriate; various other forms can be adopted and the mass line can be and boldly and fully followed. In reality, it is only necessary that the great majority of the masses uphold party spirit and oppose factionalism. If there are individuals who persist in factionalism but seek to be fish in troubled waters, this rarely results in success. Only if they can fully reveal themselves will it be easier to do work within the organization with a definite purpose and thoroughly resolve the problem of factionalism.

4. Fear that the masses will not recommend the cadres the leadership chooses. The leaders are the same as the masses, both have the democratic right to recommend cadres to the organization. Yet, the recommendations by leading comrades must also be investigated and understood by the organization's personnel unit and they must listen attentively to the views of the masses which must be collectively discussed and decided upon by the party committee. Under no circumstances should an individual or a minority have the final say; this is an important rule in cadre work. If the cadres the leading comrades choose are outstanding it is believed that the great majority of masses will recommend them. If they are temporarily not recommended, after patiently presenting the facts and reasoning things out to clarify the situation the masses will be able to approve. If the cadres the leading comrades settle on are not outstanding persons, the masses will recommend a better cadre, which should be welcomed. If the cadres the leading comrades settle on do not conform to conditions, the failure of the masses to recommend them is beyond criticism. All of the leading comrades who keep the public interest in mind and do not practice favoritism should readily accept good advice, be completely convinced and enthusiastically uphold the recommendations of the masses.

Many units have proven in practice that there are many advantages to boldly and fully arousing the masses to recommend cadres. Firstly, it is beneficial to expanding one's outlook, liberating thought, smashing old conventions and opening wide paths for talent. Generally speaking, the masses lay more stress on the actual manifestations and ability of cadres and with less conservative thought they can objectively perceive the cadres. Many brains thinking of a problem will be more thoughtful than a few brains. Millions of pairs of eyes looking at a cadre can look more completely and accurately than a few pairs of eyes. When the masses are mobilized to recommend cadres, it is easy to discover and recommend all types of outstanding people. Furthermore, boldly and fully allowing the masses to recommend cadres is also advantageous to arousing the enthusiasm of the masses and cadres. The masses did not have much of a right to speak in past selections of cadres.

The present situation is different as they feel that they themselves have the right to participate in managing national affairs, and the affairs of their own unit, to strengthen their sense of being the masters of their own affairs, to begin to have initiative and concern and enthusiastically participating in the work of selecting successors. Because the cadres are selected by the masses themselves they have increased their faith and support and the close relationship of the cadres and the masses has been restored. Leading cadres also feel that their own power is given by the masses, and that they must closely conform to the interests of the people, so that they can always win the trust and support of the masses thereby making increasingly strict demands of themselves, closely uniting with the masses, showing concern over the suffering of the masses and wholeheartedly serving the people, and being good public servants and servants to the people. This greatly advances the growth of cadre ranks and the building of each level of the leading groups. On another level, boldly and fully allowing the masses to recommend cadres can also effectively prevent and overcome malpractices in cadre work. The arbitrary appointment and removal of cadres by an individual or small minority of leaders, the formation of cliques, the building up of trusted followers, the engaging in malpractices for selfish ends and the carrying out of retaliation can all be greatly decreased. A minority of persons who are opportunistic, have very bad work style and crave office are hard to exploit to advantage and have infiltrated our leadership group. Because of the deficiency in the work of a minority of leading comrades and the organization personnel departments, the selection of capable people was done improperly but this is easily overcome.

ANGRY HEBEI MASSES RESIST COURT CADRES' UNJUST ACTION

Beijing RENMIN RIBAO in Chinese 3 Sep 80 p 3

[Article by RENMIN RIBAO correspondents Liu Fangchen [0490 2455 6591], Tan Fang [6151 7364] and Cai Nengren [2580 5174 0086]: "Cadres of Xingtai County People's Court Violate Law and Discipline, Arouse Popular Indignation"]

> [Text] Editor's Note: The people have hoped that the laws of the land will be strictly observed, their violators will be punished and law enforcement officials will act as models in this field. The recent case involving the Xingtai County People's Court's deputy chief judge Fan Jingchen [2868 2529 5256] and other cadres who touched off a civil disobedience for illegally tying and beating up the people in the course of settling a civil dispute over the property ownership reminds us that some of our law enforcement officials still don't know how to respect the law. Their deliberate attempt to punish the masses through the framing of false charges as a measure to preserve the judicial dignity backfired because they provoked a new dispute with the masses before the civil dispute in their hands was settled. This incident teaches us this lesson: The law enforcement officials should act as models in strictly abiding by the law.

Last February, nearly 1,000 people in Dajiaxiang brigade of Xingtai County, Hebei Province, angrily surrounded a group of court cadres for almost 8 hours for illegally tying up the people. The higher authorities have ordered the Xingtai County People's Court to temporarily dismiss its deputy chief judge Fan Jingchen from office so that an investigation of this case can be conducted. Comrade Sun Zhihong [1327 1807 1347], deputy secretary of the Xingtai County Party Committee, has led the cadres of the court to openly discuss the case with the masses at the Dajiaxiang brigade. This action has been praised by the people throughout the county.

The civil case that was brought to the Xingtai County People's Court's attention was a dispute over the property ownership involving a female commune member of the Dajiaxiang brigade Zhang Sanni [1728 0005 1200] and her adopted son

Zhang Laxiang [1728 2139 4382], a dispute that occurred after she remarried her present husband (a staff member of the Xingtai County Revolutionary Committee). She sued Zhang Laxiang at the Xingtai County People's Court with her new husband's help. When deputy chief judge Fan Jingchen arrived at the Dajiaxiang brigade at the head of a group of investigators to look into the case on 9 February 1980, he first summoned Zhang Laxiang to his temporary office for an interrogation, which was followed by a visit to his home. While on the way to his home, court clerk Li Shiju [2621 1102 5282] pushed Zhang Laxiang from behind and kicked him twice because of his slow motion. At this time, some people shouted: "Is there any law that empowers the court to beat up the people?" When the effort to settle the dispute failed, Fan Jingchen and his companions placed the property in dispute at Zhang Laxiang's home under the court's custody. This unfair court action immediately touched off a protest from the crowd gathering around Zhang Laxiang's home. Aware of this, Fan Jingchen asked: "Is there anyone who wants to say anything about the court's handling of the case?" Female commune member Yin Xianni [1438 0341 1200], Zhang Laxiang's mother, stepped forward and said: "Your honor, when my husband Zhang Tingai [1728 1694 0366] presented his case against Zhang Sanni at the Nanshimen court last spring, he was kicked several times by the court cadres. After leaving the court, he was very upset, and became sick. He died a few months later." Fan Jingchen replied: "Do you have any evidence? Any accusation without evidence to back it up is a slander." No sooner had he said this than he ordered Li Shiju and three other court cadres to arrest Yin Xianni and take her away. When her daughter Zhang Xiuling [1728 4423 3781], who had just married only a day earlier, tried to protect her mother, Li Shiju and a court guard pushed the young lady into an alley, and then knocked her to the ground and tied her arms behind her back with ropes before escorting her to the Dajiaxiang commune. The crowd who watched this take place pleaded with the court cadres, saying: "They are not supposed to be good speakers. Please free them." The court cadres warned: "We will arrest everyone who is up against us!" Another female commune member Guo Sini [6753 0934 1200] angrily said: "I have never seen such arrogant law enforcement officials, not even in movies!" Fan Jingchen said to his companions: "Book that woman too." Li Shiju and a court guard grabbed Guo Sini by the arms and pulled her into an alley. When her mother tried to plead for her daughter's freedom, she was pushed aside, and knocked to the ground. At this, the angry people closed in from all directions and swarmed into the alley, tightening their circle around Fan Jingchen and his men, dressing them down with these questions: "When you arrest people, don't you need warrants? If you know the law, can you arrest the people without warrants?" Fan Jingchen and his men were stunned by such questions, which forced them into an awkward position from which to extricate themselves. Fan Jingchen and his men were held up by the masses for 8 hours--from 6 pm on 9 February to 2 am on 10 February--until they were freed by cadres and party members of the Dajiaxiang commune and brigade who spent a long time pleading with the masses for their release.

As soon as they returned to the Xingtai County People's Court, Fan Jingchen sent his three companions to a hospital for treatment as an indication that they were injured by the mob. He then filed a report to the Xingtai County

Party Committee accusing Zhang Laxiang, Zhang Xiuling and their close relatives of launching premeditated and well-organized attacks against them, holding them legally responsible for any bodily injuries that the court cadres might have sustained as a result of that incident. But thorough medical examinations showed that the three hospitalized court cadres were all in good health except for light bruises on their faces and legs. On the third day of their stay at the hospital, the three court cadres were released at their own request. At the same time, the Xingtai County Party Committee organized and conducted an investigation into the case on the recommendation of the report from the court. Following a month's stay in Dajiaxiang, the investigators concluded that the aforementioned incident was caused by the court personnel's irritating behavior rather than being "a premeditating and well-organized action" as charged by Fan Jingchen; it was a spontaneous action by the masses instead of being instigated by some bad elements.

Finally, Fan Jingchen and his companions were severely criticized for refusing to acknowledge and correct their mistakes and for ignoring the conclusions of the Xingtai County Party Committee's investigation report by appealing their case directly to the Hebei Provincial People's Superior Court. The Xingtai County Party Committee has also called on county court cadres to launch a self-criticism campaign in connection wiht the Dajiaxiang incident.

ANCIENT STORIES STILL PROVIDE LESSONS FOR TODAY

Arrogant, Foolhardy Persons

Beijing RENMIN RIBAO in Chinese 28 Aug 80 p 3

[Article by He Yu [2688 5148]: "Heading South To Go North, and Letting the Ignorant Exercise Great Power"]

[Text] Volume 6 of the national elementary school language text has a story written in the vernacular entitled, "Trying To Go South by Driving the Chariot North." During the summer vacation, when my child was reviewing this lesson, he suddenly asked me seriously: That man wanted to go to the state of Chu, which is clearly in the south, but he insisted on heading north. Why was he so foolish? Are there still such foolish people? My child's asking this brought to mind some real-life incidents of "Trying To Go South by Driving the Chariot North."

For example, when building a factory we must first have a blueprint and we must consider the supply of raw and processed materials, the market for the product, and a whole series of other questions. This is just commonsense. In the past few years, however, several construction projects did not consider these things. The so-called "simultaneous planning, construction, and putting into operation" was praised as an advanced experience and for a time was spread to all areas. There are other such examples: in the mountains it is possible to plant and grow trees and grass and have a diversified economy. However, under the slogan of spreading ideal experiences, the people were made to whittle away mountain tops and move the loess to build "manmade plains." I could offer many more examples of stupidity. Most typical are the two incidents which were recently revealed in the papers, the "Bohai No 2" incident and the project to "shift the westward-flowing water east." Aren't these incidents just like the story "Trying To Go South by Driving the Chariot North"? I certainly think so. First, they have something to do with the ignorance of some leaders who do not even understand the rudiments of commonsense. Second, because [these leaders] have definite authority in their hands, they can rely on this authority to do what they wish.

Ignorance, of course, is not a good thing, but it is not frightening. No one is born with knowledge. If we study with an open mind, then we can gradually change from being ignorant to being knowledgeable, and gradually change from possessing little knowledge to having abundant knowledge. If we are ignorant and at the same time think we are great, do not study, and in addition mess things up by giving wrong orders, then that is very frightening. As for that fellow who wanted to go to the state of Chu, if he did not know whether Chu was in the south or north, and if he had asked someone or, after being reminded by someone, if he had changed course, he would not have had so much trouble. However, he didn't do this. The reason was because he relied on his authority (the authority to direct the carriage), and his situation (the horse was good, funds for travel expenses were sufficient, and his driving skills were good). As a result, we have the story of the man who, by "Trying To Go South by Driving the Chariot North," made himself an immortal laughingstock.

As for being ignorant and, in addition, having authority, the man who drove north in order to go south cannot compare with the leaders of the petroleum industry department and the former responsible persons of the Xiyang County Party Committee. Obviously there are many cold currents during the winter in Bohai Bay, and heavy seas and the offshore oil rigs have no defense against the cold and are easily tossed around. However, the leaders concerned did not even consider these basic facts, and they refused to listen to the correct opinions of the foremen and team leaders, but instead used their power and influence to force the workers to act recklessly, under the slogan "Sitting out the winter or working through the winter" and other seemingly revolutionary slogans. As a result, the oil rig capsized and many lives were lost. The rivers of Xiyang clearly enter the Huanghe flowing westward; however, they wanted to make it flow east. It is easy to see that this is a case of hurting others to benefit oneself, and a waste of money and manpower. However, they insisted on their way, and those who offered different opinions were labeled plotters and anti-Dazhai. Their persisting in acting blindly brought about widespread indignation and discontent.

The man in this story who drove the chariot north in order to go south actually has lovable traits. One reason is that he did not come down hard on or put label onto those who raised differing opinions. Another reason is that he himself was responsible for any losses that came. The few real-life individuals today who continue to head south by driving north are actually not like this at all. First, they are overbearing and will show you their fierceness. Or else, after a project has failed, they give specious arguments to cover up their errors and faults. Secondly, their positions are high, their authority is great, and they command hundreds and thousands of people. Whatever loss is brought about is far from being their individual loss. It is the party and the people who lose. Based on this, it is the latter which appear abominable.

Ignorance plus authority are the reason that things went wrong in both the present and the past instances of driving north to go south. In order to resolve this problem, we will first need to advocate study, and secondly we must have a guaranteed system. At present, everyone is discussing the four modernizations. If we do nothing more than discuss and do not seriously study the experiences of modern scientific technology and management, or if we do not research ways to change our cadre system, then we will be in a dangerous position. If we do not do a good job, we may end up like that fellow who wanted with all his heart to go to the state of Chu but did not know where he was going. This could lead our great undertaking, the four modernizations, down the wrong road.

Frauds, Charlatans

Beijing RENMIN RIBAO in Chinese 28 Aug 80 p 8

[Article by Shao Yue [6730 6885]: "Mr Nan Guo Yesterday and Today"]

[Text] I was very moved after reading the paper and felt compelled to make some comments.

Several coworkers gathered to chat one evening after dinner. They praised the new practice of some older comrades, which appeared in the paper, as being in the tradition of China's sage kings Yao and Shun. These older comrades, who had been first in command, gave their position to other comrades in the prime of their life and willingly accepted the number-two position. Afterward they again voluntarily stepped down, this time to the number-three position.

This reminded me of the time I was in elementary and middle school and read the entire history of our country four times and the teachers extolled the abdication of Tang, Yao, and Shun. What the teachers emphasized was that Yao and Shun did not worry about their personal loss but considered the benefit of the people most important, and on their own initiative gave the throne to worthy and capable young people who had passed a period of trial (practice). This of course is an instructive anecdote. Many of our older comrades are doing exactly this right now.

However, in ancient times there was also the story of "The Man Who Passed Himself Off as a Player in the Band"--about a Mr Nan Guo who played poorly but joined an old emperor's band pretending he could play the yu, an ancient wind instrument. After the old emperor died, a new one ascended the throne, and when he wanted to examine each person individually, Mr Nan Guo was unable to get by and so he deserted and ran away. Nowadays we often use this idiom to describe phony experts, or we say someone is a "Mr Nan Guo." No doubt the main reasons for Mr Nan Guo's fleeing was his fear of being accused of lying to the emperor, plus the danger of being beheaded. On the other hand, he knew his own limitations to some extent and was apprehensive about their effects. During the era prior to the destruction of the Chinese classics by Shi Huang Di of the Chin Dynasty, when there were numerous feudal states, Mr Nan Guo was still able easily to go to other states in order to make ends meet.

Although there are very few Nan Guos around today, they have not disappeared altogether. However, historical conditions today are, after all, not the same as in the past. First, we now have organizational discipline, and there is no way to desert. Second, the country is united, and there are no feudal states to escape to. This is not permitted by objective circumstances. Subjectively speaking, I'm afraid the Nan Guos of today are lacking a little in self-knowledge and in addition they rest on the superiority of socialism. They hold their steel rice bowls in both hands and steadfastly refuse to relinquish the latrine. These present-day Nan Guos have really become a burden on the road to the four modernizations, and they may turn out to be something more than just a burden. Another type seemed for a period to have remarkable abilities, they were very persuasive speakers, and as a result their positions were very secure. They could not play the yu, but they disguised themselves as theoreticians of the instrument or stood in front of the band pretending to be the leader. They did not feel disgraced because they were unable to play, but instead thought that their social status had been raised. Actually the masses have a pretty good idea of what's going on: no matter how high your position or how glorious your history, if you don't know the ropes and you don't respect those who do, then you won't be allowed to "pass yourself off as a member of the band."

If all the Nan Guos possessed self-knowledge and were realistic, they would first cut out all their big talk and stop their boasting self-appraisal of their qualifications and expertness. At the same time, on the basis of their lack of knowledge, they would stop putting on airs and seriously and honestly make up the lessons they have missed and learn about their professions. If they worked diligently to make up for their lack of skills, they eventually could learn to play the yu, and in addition they could hope to become a famous player of that instrument. Otherwise, Mr Nan Guo the bricklayer could request a return to the profession he was trained for, and give his position to someone who really knows how to play!

When that time comes, the masses will naturally cast off the Mr Nan Guo labels and will call them leaders who know the ropes.

BRIEFS

BEIJING STUDENT ELECTION CAMPAIGN--Beijing City has recently been holding district democratic elections of people's deputies. The candidates have issued election manifestos in their districts and have also held question-and-answer sessions. This is the first time such a thing has happened in Beijing. It has caused tremendous response in society. On 16 October, the day after the list of candidates for the Xicheng District was promulgated, Li Shengping [2621 0524 1627], a history student of class 76 of the No 1 Branch School of Beijing University, announced his candidacy and also published tracts such as "What I will do if elected" on a blackboard in the school. This evoked very great interest among the teachers and students of the school. On the afternoon of 17 October, at the demand of the various faculties and classes and the students, the students' association of the school organized a "Li Shengping candidacy question-and-answer session." At the session, Li Shengping made a speech entitled "The Times We Are Living In," and answered over 100 questions put to him by teachers and students. This is the first time such an election campaign method has been adopted in Beijing. Yesterday ZHONGGUO XINWEN SHE specially transmitted two photographs of the Li Shengping candidacy. (see this page) [The paper prints one of these photos. It shows a young man probably in his early 20's standing behind a table in a courtyard, addressing a large number of young people through a microphone. Another young man at his side is apparently helping to sort out papers on the table. The caption reads "Li Shengping answers questions put by teachers and students at his candidacy 'question-and-answer session'"] [Text] [HK190254 Hong Kong WEN WEI PO in Chinese 19 Oct 80 p 1]

EXTRAVAGANT ENTERTAINMENT--According to our sources, the Liaoning Provincial CCP Committee's discipline inspection commission and the provincial financial bureau recently conducted a survey on the reception work in our province. They discovered that unhealthy tendencies such as lavish wining, dining and sending gifts are still very serious problems. According to preliminary statistics, [words indistinct] million yuan in the entire province from the beginning of January to the end of July. Some units and leading comrades disregarded the repeated instructions and directives of the central authorities on strictly forbidding extravagance and waste and on sending gifts, wining and dining. They continue to practice their old ways. Some inspection, visiting and check-up groups ate free meals, placing great burdens on the grass-roots units. The masses are disgusted. Some enterprises used public funds to wine and dine lavishly when they held meetings to order goods or to exhibit their products. In a 2-day sale exhibition alone, a unit in Shenyang Municipality spent some 9,000 yuan for wining and dining and for sending gifts to some 200 persons at the exhibition. Departments concerned are now conducting thorough investigations in several units which have serious problems. They are preparing to deal with these cases sternly. [Excerpts] [SK161954 Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 14 Oct 80]

NEW MONGGOL YOUNG LEADER NOTED--Beijing, 18 Oct (XINHUA)--China's policy of promoting younger and more expert officials to leading positions continued to receive top coverage today when all of Beijing's newspapers carried the success story of a 31-year-old cadre who has transformed the ailing economy of a state farm in Inner Mongolia. The policy of lowering the average age of leading officials and increasing the level of competence in leadership and management was articulated at last month's National People's Congress by Chairman Hua Guofeng. He called for the promotion of younger experts. Today's papers gave prominence to the story of Zhai Xinhua, director of the Jianfeng farm in Bayannur League, Inner Mongolia, who devoted himself to the study of farm production, planning, finance and supply and marketing. Last December he began delegating responsibility to individuals for particular tasks and also improved the wage scale. The farm earned 52 percent more in the first half of this year than in the same period last year, cut spending by 26 percent and has steadily increased its output. A XINHUA editor's note, carried in the Beijing papers, calls on all young officials to study and become expert as Zhai Xinhua did. [OW181333 Beijing XINHUA in English 1240 GMT 18 Oct 80]

VETERAN RED ARMY SOLDIERS STILL CONTRIBUTE TO SICHUAN

OW201342 Beijing XINHUA in English 1236 GMT 20 Oct 80

[Text] Chengdu, October 20 (XINHUA)—Many former Red Army soldiers—the "rebels" described by U.S. journalist Edgar Snow in his book "Red Star Over China" four decades ago—are spending their old age in comforts.

As "veteran Red Army soldiers"—an honorary title given to those who joined the revolution before or during the long march in the mid-thirties—they are highly respected and cared for by the Chinese Government.

There are several hundred such veterans in Chongqing, Sichuan Province, Southwest China. The city government recently moved 110 of them into new apartments in the suburbs or at scenic spots.

Most of the veterans in Chongqing are either advisers or retired, but all continue to get full pay from their former jobs.

A long march veteran and 83-year old Zhu Yufeng, former regimental political commissar of the People's Liberation Army, and his wife live in a two-storey, 6-room villa at the foot of a hill outside Chongqing. Their five children, all government workers, spend weekends or holidays with them. A boy peasant before he joined the workers and peasants Red Army led by General He Long in 1934, Zhu Yufeng was wounded several times on the battlefield during the long march.

Many veterans are still active—such as 64-year old Liao Qikang, deputy chief of the city steel works, who was an aide-de-camp to Zhou Enlai from 1936 to 1940. Using his spare time, he had been working on a memoir of Zhou Enlai.

Another veteran, Liu Keming, retired from his job at a chemical plant, organized over a hundred dependants of plant workers into a workshop manufacturing semi-finished chemical products out of the wate fluid of the plant. He has been honored by his fellow workers as a model cadre.

The veterans also give lectures to young people on their experience in the revolution, with a view to inspiring them to work harder. Last year they spoke to a total of more than 10,000 people in Chongqing.

IMPLEMENTATION OF NATIONALITY POLICY DISCUSSED

Beijing MINZU TUANJIE [NATIONALITY UNITY] in Chinese No 5, 15 May 80 pp 22-24

[Article: "Recognize the Protracted Nature of the Nationality Issue, Resolutely and Correctly Implement the Party's Policy Towards Nationalities"]

[Text] (Office of the State People's Commission on Policy Research)

Having gone through all the above lectures, we have elucidated from every aspect the party's policy towards nationalities. In that case, is the party's policy towards nationalities an expedient measure for the present time, or it is a protracted policy? Without any question the party's policy on nationalities is decidedly not an expedient measure for a time, but is a protracted and resolute policy. This has not arisen from some person's subjective wish, but is decided by the protracted nature of the nationality question.

Marxism-Leninism has all along considered the problems of nationalities as a long-term problem. Comrade Mao Zedong said long ago: "The problem of nationality may exist for a long period of time." Not only in the present process of building modernized socialism would the nationality problem be in existence; during the entire stage of socialist history, even up to a certain phase of communism, as long as nationalities are in existence there will be problems.

Why is the nationality question a long-standing problem? This is decided by the following several factors:

First of all, the existence of nationalities is protracted. "A nationality is a stable common body formed by people in the course of history and having a common language, a common region, a common economic life, and which manifests itself in the common psychological qualities of a common culture." ("Collected Works of Stalin" vol 2 p 294) People develop from tribes into a nationality, passing through a long and slow historical period. Therefore, a nationality--this common body of people possesses a very great stability; it's dying out also of necessity requires the passing through of a very long historical period. Comrade Mao Zedong said: "First there is the dying out of classes, and after that the dying out of states, and after that the dying out of nationalities; the whole world is like that." Lenin also said that differences among nationalities "even after the dictatorship of the proletariat class is put into effect throughout the entire world, will still be maintained for a very, very long time." ("Collected Works of Lenin" vol 4 p 246) All this clearly indicates that the existence of differences among nationalities is very protracted. Since differences between nationalities exist, naturally the problem of nationality will exist.

Secondly, the real inequality between nationalities, both economic and in terms of cultural development, that history has left with us will still exist for a long time. Although in our country after liberation the system of oppression of [minority] nationalities was abolished and all the nationalities acquired the rights of political and legal equality, nevertheless the real inequality between nationalities, economic and in terms of cultural development that history has left with us still exists, and it is still the root source that produces mistrust, and the oppression of nationalities. If we want to gradually overcome these real inequalities, it still requires a very long period of time; this shall be an important task for us when, in future, we solve the nationality question within our own country.

Thirdly, owing to the long period of oppression, exploitation, bullying and prejudice against minority nationalities by the reactionary ruling classes throughout history, especially reactionary ruling classes of Han nationality, a strong feeling of estrangement among nationalities has been created, and this kind of influence also requires a very long period of time before it can be completely eradicated.

Fourthly, the class struggle both within and outside the country may also be reflected in the relationship between nationalities. In our country, although the exploiting class has already been abolished, the landlord class and rich farmer class have already died out as classes, and the capitalist class as a class already no longer exists, nevertheless all kinds of class enemies will still exist for a long time, and the class struggle has definitely not been concluded. Moreover, our domestic class struggle is also very closely connected with the international class struggle; in particular, the Soviet revisionists are still bent on subjugating our country. Class enemies both within and outside the country will inevitably foment discord between nationalities in a vain attempt to destroy unity, and the unity of nationalities, of our great ancestral homeland. The influence of capitalist class ideology and feudal ideology will also continue to exist for a long time (in the relationship between nationalities these manifest themselves as Han chauvinism and local nationalities chauvinism). In the face of these influences and their reflection on the relationship between nationalities, it is still necessary to carry out a long period of education and struggle.

Among the elements mentioned above, the most fundamental is that the protracted nature of the differences between nationalities determines the long-standing existence of the nationality question.

Lin Biao and the "gang of four" publicly denied the objective fact that there are many nationalities existing in our country. They opposed the scientific thesis of Marxism and Leninism and Mao Zedong thought that the issue of nationality would be a long-standing problem. They nonsensically declared that "Everything has become socialized; how can there be any question of 'nationality'?"; they did not allow any policy on nationalities to be discussed, did not allow any work on the nationality issue to be proposed and, on the pretext of a "fusion of nationalities," put into effect a forced assimilation. That was extremely absurd and extremely reactionary of them. The reactionary fallacies and practice of Lin Biao and the "gang of four" were carried out; in addition to the nationality issue and the class struggle, they carried out a ruthless persecution against the people of the minority nationalities, and created an extremely great disaster for them.

True, Marxism-Leninism foresaw that at a certain stage in the development of communism, nationalities will tend to merge and disappear altogether. Lenin said: "The aim of socialism is not only to eliminate the phenomenon of humanity being divided up into many small states, and all the conditions that tend to keep the various nationalities apart; it is not only to cause the various nationalities to come close to each other but, moreover, to cause all the nationalities to mix together." ("Complete Works of Lenin" vol 2 p 719) Regarding this question of the fusion of nationalities, and eradicating the differences among nationalities, Marx, Engels, and particularly Lenin spoke a great deal. Without accepting this truth, it is not possible to have an accurate Marxist view on the nationality question.

From another aspect, however, Marxism-Leninism also considers that the blending of nationalities, and the elimination of differences between nationalities, is a long and slow historical process. During the stage of socialism, not only is it not possible to realize a blending of nationalities or the dying out of nationalities but, moreover, there will still be a historical period of the development and flourishing of nationalities. Lenin, in refuting Pi-da-ke-fu's fallacy in proclaiming that he wanted to abolish nationalities, pointed out: "Of course, this is an excellent thing, and even a realizable thing, but it can only be at a different stage in the development of communism." ("Complete Works of Lenin" vol 29 pp 165-166). Stalin, in elucidating Lenin's viewpoints, also pointed out: "Lenin did not consider the process of the dying out of differences between nationalities and the merging of nationalities as [something that would happen within the] time frame of socialism becoming victorious in a country, but merely as something that would happen after the dictatorship of the proletariat was put into effect throughout the entire world; that is to say, he considered it as something that could happen only after socialism was victorious in all countries, i.e., after the basis of a world socialist economy is already established." "On the contrary, during the first stage the oppression of nationalities will be completely eliminated; this stage will be a stage in which the nationalities that were formerly oppressed, and their national languages, will develop and flourish; it will be the stage in which the right of equality for all nationalities will be established; it will be the stage of the elimination of suspicion between nationalities; it will be the stage of establishing and consolidating international relations among all nationalities." ("Complete Works of Stalin" vol 11 pp 298-299) It is extremely clear then, that in this historical stage of socialism it is not a question of a nationality being phased out, but it is a period for all nationalities to develop and flourish together. Taking up the situation of our country, before liberation our country was a semi-feudal, semi-colonized country in which all nationalities together including the Han nationality were oppressed by imperialism; the minority nationalities were at the same time oppressed by the Han chauvinism of our domestic reactionary ruling classes. A great many minority nationalities were not even recognized as nationalities. Of the 55 minority nationalities in our country, more than 90 percent were all overlooked for a long time and only recognized after liberation. After liberation, when they were recognized as nationalities, and enjoyed the right of equality, and autonomous regions were set up in the areas they inhabited, how overjoyed and heartened they were, considering it as the greatest affair in their nationality's history and the most meaningful holiday to be celebrated. Is this not a strong reflection of their nationality consciousness? Under socialism however, the multiplicity of nationalities not only cannot diminish, on the contrary it can still greatly increase because of all those heretofore unknown small and weak nationalities mounting the political platform; special characteristics of nationalities not only cannot disappear very quickly, on the contrary they are still to reach their fullest development. And only after undergoing the development and prosperity together can all nationalities benefit in the unity, mutual trust and closeness of all nationalities, thereby gradually eliminating estrangement and barriers between nationalities. We must strengthen the contacts in addition to differentiating the differences between the present practice and the long-range evaluation of mankind in nationality integration and the elimination of differences among nationalities. During this present historical phase, we definitely cannot take the blending of nationalities as a program to be put into practice. Comrade Zhou Enlai said in 1957: "Our policy on nationalities is a policy of allowing all nationalities to flourish. Since all nationalities want equality, and also want to flourish, everybody will flourish. The flourishing of nationalities is a fundamental standpoint of socialism in its nationalities policy." If someone wanted to run counter to this fundamental standpoint, and insisted on making the blending of nationalities a program to be put into practice during the socialist period, in a vain attempt to use the method of coercion to eliminate differences between nationalities, in such a case what he would be implementing would essentially be a reactionary policy of assimilation of nationalities, and not a socialist, proletariat policy. The result of it could only be to increase estrangement and barriers between nationalities, and to create opposition and conflict between nationalities.

In recognizing the protracted existence of nationalities and differences among nationalities, it is necessary in the course of nationalities work to adhere to the principle of integrating theory with reality, and in everything to proceed from the realities existing in the areas where the minority nationalities live. Lenin pointed out: "As long as differences between nationalities and differences between countries still exist among all nationalities and all countries (these differences, even after the dictatorship of the proletariat is put into effect throughout the entire world, will still be maintained for a very, very long time), the unity of the international strategy of the communist workers' movements of the various countries does not require the elimination of multiplicity and the elimination of differences between nationalities (this at present is an absurd illusion) but requires, when applying the basic principles of communism (political power [in the hands of] the soviets, and the dictatorship of the proletariat), taking these principles in detail and correctly changing them so that they may be accurately adapted and applied to the differences among nationalities and nation-states." ("Selected Works of Lenin" vol 4 p 246) Lenin is demanding that when each country adopts a concrete way for resolving [their role in] the unified international task, "they must all investigate, research, explore, guess, and get a grasp of their nationalities' characteristics and traits." (Ibid.)

Our party under the leadership of Comrade Mao Zedong combined Marxist-Leninist theories on the nationality question with the characteristics of nationalities in China, and formulated a complete policy and guiding principle for us to [use to] solve our domestic nationality question. In all nationality work, Comrade Mao Zedong repeatedly emphasized the necessity of giving due consideration to the special characteristics and needs of the minority nationalities. He stated that "work must be carried out in accordance with the situation of the differing areas of the various nationalities." He opposed mechanically applying the experience of Han nationality areas and other countries to the minority nationalities.

Practice is the sole standard for testing truth. In the 30 years since the founding of the PRC both positive and negative experience in nationalities work tell us that our party's entire guiding principle and policy for solving our domestic nationalities question are correct. The crux lies in whether or not we can correctly recognize the protracted nature of the nationalities issue, persevere in proceeding from reality in all [our work] and be good at combining and uniting socialism with the special features of nationalities. Whenever we followed this way, the party's nationality policy as a result was implemented comparatively well and there has been success in the work, and the unity of nationalities can be developed and strengthened. Otherwise, the party's nationality policy might be distorted, and ruined, and the unity of nationalities will be damaged. After liberation, we carried out a cautious and steady policy in the minority nationalities' areas. Based on the differing conditions in each minority area, we adopted policies, methods and procedures that the masses in the area were able to accept and conform to the realities in the area. We victoriously carried out a democratic reform and socialist transformation, enabling all minority nationalities to enter into socialism. However, at the end of the 1950s a trend of nationality integration began to stir up, and minority areas were erroneously criticized using theories to the effect that the inhabitants were the special products of special circumstances, or were backward. As a result, in some minority areas the party's policies on nationalities and religion were violated, special characteristics of minority nationalities were overlooked, and the minority nationalities' partiality for the rights of equality and self-government was damaged, causing the work to suffer a loss it should not have suffered. As for the serious bad results caused by Lin Biao and the "gang of four"'s fundamental denial of the nationality question and ruining of the party's nationality policy, the lesson was even more bitter.

At present, we have entered the new historic period having the four modernizations as the central task, and in the same way we must adhere to the principles of integrating theory and reality, seeking truth from facts, and proceeding from reality in all our work. We must not only proceed from China's special characteristics and start out on a path of building a Chinese-style socialist modernization but, moreover, in building the four modernizations in the nationality areas, we must persevere in carrying through the implementation of the party's nationality policy, pay attention to the minorities' special characteristics, and give due consideration to the needs and advantage of the minority nationalities. In this, in the same way we cannot mechanically apply the experience of foreign countries and Han nationality areas.

As long as we adhere to the materialistic principle that practice is the only standard for examining truth, adhere to the Marxist-Leninist viewpoint that the existence of the nationality question is protracted and persist in correctly carrying through the implementation of the party's nationalities policy, proceeding from reality in all our work and paying due consideration to the special characteristics of the minority nationalities, the party's nationality work will be continuously victorious, and the party of the new socialist period's task regarding the nationality question can definitely be brought to a successful conclusion.

FOUR MODERNIZATIONS CALLS FOR EMPLOYEES EDUCATION

Tianjin TIANJIN SHIYUAN XUEBAO [JOURNAL OF TIANJIN NORMAL COLLEGE] in Chinese No 2, 20 Apr 80 pp 14-18

[Article by Li Zongfang [2621 1350 5364]: "Employees Training Is One of the Strategic Tasks in Four Modernizations"]

[Text] In order to build our motherland into a powerful modern socialist country, it is urgent significantly to raise the entire nation's scientific and cultural standard. It is far from enough to depend on the existing system of colleges, middle schools and primary schools alone to accomplish the task. Also of vital importance is that we direct our efforts toward the development of worker education. This can be clearly seen when we look back on the state of worker education in our city since its liberation 30 years ago.

I

Tianjin declared its liberation in January 1949. To turn a new cultural page without delay for large numbers of workers who had already found a new day politically and economically, the General Labor Union and the Education Bureau of the city, together with the concerned departments, organized in September of that year the "Preparatory Committee for the Establishment of Spare-time Schools in Tianjin for Laborers," and established the first such school in our city. Since then, there has been a rapid advance in the development of worker education in our city. By 1965, Tianjin had established a fairly adequate system of worker education that included literacy classes, spare-time junior and senior middle schools and spare-time colleges and universities (classes). From an accumulation of experiences, there has emerged a set of clearly defined ideas as to the purpose for the development of various classes and types of spare-time schools, the content of the different courses, the range of the curriculum, and the program of instructions, etc. As to the methods of teaching, certain special methods suitable for adults have gradually been devised from the system of examinations. As regards the makeup of teaching materials, textbooks for various courses, ranging from anti-illiteracy textbooks to textbooks for spare-time senior middle schools, have been compiled. To promote research on teaching and to continue to upgrade the quality and quantity of teaching, a department for teaching research has also been set up in Tianjin for the education of laborers and farmers.

In conformance with the guideline set by the policy of "readjustment, restructuring, consolidation and improvement," the Tianjin Municipal Party Committee decided in 1962 to emphasize that workers' schools "should henceforth place technical education in its rightful place," that "they should make an all-out effort to set up a curriculum for political, cultural and technical education," and that "this is a mission of strategic significance." Since then, the various units have shown an even more positive attitude in organizing education for employees. The various industrial and business bureaus followed suit in establishing spare-time universities. As a result of the continual development of worker education, and in view of the need to upgrade the quality of teachers at the workers' schools, the Tianjin Municipal Party Committee also established "a class for teachers of spare-time schools" for the training of such teachers.

In short, during the 17 years prior to the Cultural Revolution, our city had, in the field of worker education, hewed closely to the party line, the party principle and the party policy, and had achieved outstanding results. It produced a marked effect in raising the political consciousness of large numbers of workers elevating their scientific, cultural and technical levels, and making worker education a vitally important component of the entire socialist education system. The students enrolled in the various levels and types of schools for workers reached a peak of 690,000 persons, or over 50 percent of the total number of employees. Between 1949 and 1961, the development of worker education brought about two notable results. First, the worker illiteracy rate took a dramatic plunge from 78 percent in 1949 to less than 10 percent in 1961. Secondly, the number of workers with at least a junior middle school education soared from less than 30 percent in 1957 to over 50 percent in 1961. Worker education was also instrumental in the development of technician and business management cadres. These people have now become leaders in the march toward the four modernizations.

For a period of 10 years after 1966, worker education in our city was brought to the brink of collapse as a result of the rampage of destruction unleashed by Lin Biao and the "gang of four." The management of employees education at various levels was "crushed to a pulp." The engineering college for part-time students, the industrial and agricultural education research institute and the research department for teachers of adult education were decimated. The school buildings were occupied. The laboratory center was smashed to pieces. The teachers were scattered. As a result of the complete destruction of the worker education system, the scientific and cultural level of workers throughout the city took a nose-dive. All that ran counter to the constructive needs of the four modernizations. According to a survey of 1.4 million workers conducted in 1979, 2.8 percent of the workers had the equivalent of a college education, 5 percent had a trade school education, 8.5 percent had a senior middle school education, 50 percent had a junior middle school education, 26.6 percent had a primary school education, while 7.4 percent were illiterate (5 percent of those under 45 alone were illiterate). According to the figures, 85 percent of the workers had only a junior middle school or a lower level of education. After 1968, the 700,000 young workers constituted over one-third of the total number of workers in our city. Their actual average education level was equivalent to that of primary school graduates. Most of them received no proper technical training after being employed by the factories. A survey of young laborers conducted by seven industrial bureaus revealed that only 57 percent of them were equal to the demands of their jobs, while the other 43 percent were not. That is one important factor accounting for the number of production-related accidents, the low quality of the products, the waste of materials and power and the low rate of production.

After the "gang of four" was smashed to pieces, education for workers was gradually restored and developed, and the situation began to take a turn for the better. By the end of June 1979, 1,400 schools of various types and levels for city workers had been restored or established. The number of students came close to 420,000, or 20.5 percent of the total number of employees. Among those schools were 148 institutions of higher learning (classes) with 68,000 students. A vital part of the higher education system, they are certain to exert a positive influence on the development of talented persons for the implementation of the four modernizations.

II

We have learned from experience over the last 30 years that workers' education is not only a must, but that it must be made to succeed.

According to relevant documents, 125,000 students graduated from workers schools in our city prior to the Great Cultural Revolution. These people helped greatly to strengthen and reinforce the contingents of technical workers, engineering technicians and managerial personnel. In their various capacities, they all achieved outstanding results in technical renovations and technical revolutions. Some of them improved the quality of products, some made outstanding contributions in renovating the processes of manual labor, and some exerted an important influence on workers education. Many of them have been promoted to engineers, machinists and technicians, and have become the backbone in the technical area. Some of them have assumed managerial duties and have achieved leadership positions. The Tianjin Salt Factory offers a good example. During the 17-year period prior to the Cultural Revolution, 40 of the workers, after a period of training in worker education, were promoted to engineers. Over 100 were promoted to technicians, and over 500 were promoted to business management cadres. We have learned from experience that worker training has produced many talented persons, and that it is also a major method for developing talents rapidly, adequately, economically and in large numbers.

Our nation has now embarked upon a new historic period of development. Our present mission is to proceed with economic reconstruction with a sense of urgency. This mission represents a reform movement of momentous historic significance. To fulfil this mission, we urgently need a contingent of talented persons who are both red and expert.

Where do we get these talented persons? Obviously, we cannot expect sizable numbers to come from abroad. Likewise, we cannot expect the state to assign to us the people we need from among those who graduate from the universities and colleges each year. Since the number of our university graduates falls far short of the number needed for our production needs, we must adopt a double-barreled course of action to achieve our objective. From 1975 to 1977, the state assigned to the industrial and communications system of our city only 2,040 college graduates, or only 0.18 percent of the total number of our employees. Since there were 3,000 factories and enterprises in the city, each unit was assigned less than one college graduate during the 3-year period. What are we to do? We must stand firmly on our own feet in developing the qualified people we need. To meet the needs of the four modernizations and of the development of industrial production in our city, it is absolutely necessary that we continue to raise the scientific and cultural standard of the people in order to bring about a technical revolution, a renovation or an improvement of the existing enterprises, and an infusion of advanced scientific and technical know-how and modern methods of management. In this regard, the present scientific and cultural standard among the employees in our city falls far short of the needs of the constructive projects of the four modernizations.

As has been noted above, 84 percent of the city's workers have had only a junior middle school or an even lower standard of education. The younger employees, who comprise one-third of the total work force, have had only a primary school education. Unless this situation is reversed, what can we expect? Let us now take a look at the technical grades of our city employees. According to statistics released in June last year, the average grade among the 810,000 city employees was 3.17. Those below grade 3 comprised 66 percent of the total. Those between grade 4 and grade 6 comprised 30.3 percent of the total, while those between grade 7 and 8 comprised only 3.7 percent of the total. As for the engineers and technicians employed in the industrial and communications sector in our city, they comprised only 4.1 percent of the total number of city employees. Among these engineers and technicians, only about 47 percent have had a college education. This contingent of engineers and technicians is not only small in number, but their standard is also not sufficiently high. Not a few of them have only reached the technical standard of the 1940's and 1950's. Furthermore, many of our leadership cadres in the enterprises and in the field of management are lacking in the expertise and experience required for managing modern socialist industrial enterprises. In short, the status of our workers, as characterized by "the three substandards and one shortage," (substandard culturally, technically and in management, and shortage of engineers and technicians), is most untenable. This situation runs counter to our objective of increasing production and of strengthening our productive potentiality.

Under the present situation, the factories and enterprises in our city are faced with a common malady, namely, the high percentage of unfit products, the large amount of waste, and the high rate of accidents. There are also some enterprises which, despite the availability of advanced equipment and modern techniques, are incapable of making use of them because they do not have the personnel of a sufficiently high scientific and technical calibre to do the job. The equipment is left to rust, or dismantled or cannibalized much in the manner of a man who pares his foot to fit the shoe. The advanced equipment is rendered incapable of performing at its best, and enormous waste results.

We have learned from past experience and the present existing conditions that it is a matter of the greatest urgency to expand and to raise the scientific, cultural and technical standard of our employees and that, therefore, the rapid expansion and elevation of workers education is a task that brooks no delay.

In this regard, certain systems have already taken a giant step in the right direction and have been duly rewarded. For example, the chemical engineering system of the city, in view of the low cultural and technical standard of its employees, the obsolete methods of business management, the inexperience of its leadership cadres, the shortage of engineers and technicians and the outdated technical procedures, has in the past few years spared no effort in developing workers education. Up to the second part of last year, over 170 units in the system have set up schools for employees and 30 percent of the workers have enrolled in such schools. After undergoing a period of training, a large number of employees, having achieved a higher scientific and technical standard, have helped to solve a number of problems and have achieved creditable results in increasing production. The North China Oxygen Factory, for instance, increased its production in August last year by over 75,000 cubic meters, or 11.5 percent over the quota.

If we are to keep pace with the phenomenal advances in science and technology, we must redouble our efforts in developing workers education.

Many countries in the world place great importance on the education of their workers. There has emerged a new concept of education, namely, "lifelong education," or "adult education," or "non-stop education." The rationale behind the concept is that education should be a continual process from the moment of birth to the moment of death, and that one must continue to supplement and renew what one has learned if one is to be equal to the demands of one's job. It is a fact that a person spends over 10 years of his early life from his first day in primary school to his graduation from college primarily in building a foundation, and that he acquires most of his special knowledge from actually working on his job. This is especially true at the present time when science and technology are progressing at such a rapid pace that what one has learned soon becomes outdated. How can we cope with this situation unless we keep up with the latest developments? In foreign countries, the idea of "the obsolete rate of knowledge" has already gained currency. According to a survey conducted by some Americans in the early 1970's, 50 percent of what a college student has learned in 1976 will have become outdated by 1980, and that by 1986, all that he has learned will have become obsolete. Although we are not prepared to vouch for the authenticity of such a claim, it is indisputable that unless we continue the learning process, we are certain to fall behind.

At the present time, the development of science and technology in the world is proceeding at an unprecedented pace. According to relevant statistics, there were in the 16th Century a total of 26 discoveries and inventions. The number increased to 106 in the 17th Century, to 156 in the 18th Century, to 546 in the 19th Century, and to 961 in the first 5 years of the 20th Century, or 37 times the number for the entire 16th Century. The rate of development during the past 10 years or so has been even more astounding. The number of new scientific and technical discoveries and inventions has surpassed the total for the past 2,000-odd years. It is projected that in the next 10 years, the number will be twice that for the past 10 years. Furthermore, the period between an invention of a technical nature and its application has been progressively shortened. It took 80 years to put to use the steam engine after its invention, 56 years after the invention of the telephone, 20 years after the invention of the airplane, 3 years after the invention of the crystal tube, but only 2 months after the discovery of laser technology. As new discoveries continue to be made, the old is continually being eliminated. It is said that during the past 10 years, 30 percent of the technical manual labor in the industries has been dispensed with and that 50 percent of the technical manual labor in the electronics industry has been eliminated.

This phenomenal development in science and technology tells us that, in the long run, if we are to keep pace with the rapid development in science and technology and to succeed in modernizing our projects of reconstruction best suited to our particular needs, we must offer large numbers of our workers proper training while there is still time and acquaint them with the new advances in science and technology as well as new manual procedures and new production methods. The fulfilment of this mission calls for the development of workers education.

From the standpoint of improving the distribution and structure of our education system, workers education must also be taken into consideration.

Although we have made great strides in education during the last 30 years, we still lag behind the more advanced countries in the world, and we are far from being capable of meeting the needs of our socialist reconstruction projects. Taking the ratio of college students as an example, the ratio is 295 per 10,000 in Canada and 185 per 10,000 in Japan, whereas in our country, the ratio is only 9 per 10,000, a ratio lower than that of India and Vietnam. We still have 140 million illiterates in our country. In our suburbs and our county alone, there are 500,000 illiterates. The only way to remedy the situation is for us to develop education for our laborers and farmers to the best of our ability. In the city, the factories and enterprises must take upon themselves to initiate education programs in order to raise the scientific and technical level of large numbers of their workers.

III

The urgent need for developing workers education has already been discussed above. To make workers education a success and to meet the challenge posed by a number of problems, we must have a clear sense of purpose, a great deal of determination, and we must adopt the correct methods.

First of all, we must have a clearer understanding of the principle and the purpose of workers education.

At a meeting of the National Workers Education Conference held in Zhengzhou in September last year, it was pointed out that workers education must continue to implement the policy set forth by Chairman Mao that "education must be of political service to the proletariat," and "it must be integrated with productive labor," and that, in answering the call of Chairman Hua to raise in a positive way the scientific and cultural standard of the entire Chinese people, it must offer training to all workers. At the present time, we must "direct our efforts toward development to meet the requirements o the four modernizations, to set a system of priorities in the context of the overall situation, to exercise flexibility in order to achieve actual results, and to work in cooperation under a unified leadership," and to provide our employees spare-time or non-job-related education in science, technology, economic management and cultural matters. It is the responsibility of employees education to provide training on a rotation basis to all leadership cadres and management and technical personnel to continue to raise their standard in scientific management and operational techniques, to raise the scientific and cultural level of vast numbers of workers, and to spare no effort in making higher education for workers a success.

The four modernizations reconstruction program is now a matter of primary political importance. To direct our efforts toward the development of workers education and to develop a large contingent of qualified personnel who are both red and expert for the four modernizations is to serve the political cause of the proletariat. Employees education and productive labor must, in the final analysis, be correlated in such a way as to be in keeping with the level of development in the national economy. For this reason, workers education obviously should not be developed by any unit without regard for the production development level of its own unit or system. We must, in other words, take the actual situation into consideration in the fulfilment of our tasks.

Many things remain to be done. Workers education should be a part of our program and should be taken into account in our overall planning. While attending to our immediate needs, we must also consider our needs in the future. It was Vice Chairman Deng who said, "Our national economy is developed according to a plan and a system of priorities. The development and training of our experts and labor reserve forces should also be undertaken according to a detailed plan that is closely related to the plan for the development of our national economy." In consideration of the actual situation in our city, we should, in providing training to all our employees, raise the political, scientific, cultural and technical level of those young workers who were hired by the factories after 1966.

Secondly, under the readjustment, restructuring, consolidation and improvement policy, we should establish and gradually perfect the network of workers education in our city.

During the 3-year period of readjustment of the national economy, it is hoped that, under the guidance of the readjustment, restructuring, consolidation and improvement policy and on the basis of the existing foundation, we may bring about a further development by setting up a workers education system ranging from the junior to senior middle school level that will take shape as a workers education network which is capable of taking up the responsibility of providing training for the entire contingent of employees.

In order to implement the policy of readjustment, restructuring, consolidation and improvement and to restore and develop workers education in our city in a sound and proper manner, it is necessary for the reestablished and newly established schools for workers to set up a proper relationship between production and training, technical training and cultural education, mass education and higher education, and the quantity and quality of products. Faced with this new situation and new mission, we can neither adopt a wait and see attitude, nor can we make a great fuss without regard for the actual circumstances. There are those who have no great confidence in the merits of higher education for workers and who are rather dubious as to whether such schools are capable of producing the qualified personnel that we need. That is due primarily to a lack of understanding. If we only have the unshakable determination to make higher education for workers a success, if we have full confidence in our ability to do so, and if we go about our job steadily and with an eye on the minutest details, these comrades will learn, from what we have accomplished, to change their opinions.

To make workers education a success, we need a contingent of teachers, the school premises and the necessary equipment and facilities. To build up step by step a contingent of full-time teachers to form a framework for workers education, we also need a sizable number of part-time teachers. Some of the part-time teachers may be recruited from the engineers and technicians within the existing system or from veteran workers. The school themselves may also arrange to hire the teachers they need from the institutions of higher learning and middle schools in the city. As to the problem of school premises, equipment and facilities, arrangement can also be made with the various concerned parties to meet the need on a reciprocal basis. Regarding school premises, for instance, we should ascertain whether arrangement can be made with the middle schools in the vicinity, or a contractural agreement can be made with middle schools to jointly set up spare-time middle schools or technical middle schools (classes). In any case, the difficulty can be overcome if we would only explore all the possibilities.

One of the important requirements to make workers education a success is to boost the positive attitude of those in charge of workers education as well as that of the students. In the process of developing workers education, it is necessary to set up step by step a promotion system for full-time teachers in the trade schools. As for the part-time teachers recruited from the factories and enterprises, we should, aside from paying them the wages agreed upon, also take into account their record as teachers as a factor for promotion. As for the students enrolled in the trade schools for workers, once they have passed the examination and have attained the level set by the state for graduates of middle trade schools, senior trade schools and main course colleges, we should take their educational achievement into consideration as an important basis for promotion and advancement.

Thirdly, strengthening party leadership in workers education is the best guarantee for making it a success.

Workers education has a long row to hoe. It has a heavy responsibility. It is involved with a wide range of issues and the situation is most complicated. It is only when the party leadership is strengthened and workers education is placed high on the agenda of the party committee that we can raise the positive attitude of and work in concert with all the concerned parties in order to make employees education a success in our city, produce the qualified personnel that we need, and make the contributions expected of us to the four modernizations.

HENAN CCP COMMITTEE DISCIPLINES TEACHERS FOR CHEATING

OW210918 Beijing XINHUA Domestic Service in Chinese 1516 GMT 20 Oct 80

[Excerpts] Zhengzhou, 20 Oct (XINHUA)--A serious case of violating law and discipline has taken place in Luyi County, Henan Province. During this year's college entrance examination, a senior class teacher, Sun Guangqian, and Wang Leguan, deputy assistant principal of the Luyu teachers training school, encouraged and helped students engage in fraudulent practices and besieged and fluing abuses at the proctors. Sun Guangqian has been arrested in accordance with law. Wang Leguan has been dismissed from his post as deputy assistant principal. And, Guo Dianmin, who numbered the students at the examination room, has been given an administrative demerit.

It was no accident that the students who took the examination at the Luyi teachers training school openly engaged in fraudulent practices and violated examination regulations. The case was closely linked to the erroneous ideas and educational methods of certain leaders of the county education bureau, who had unduly emphasized having a high proportion of students enter colleges and universities.

At a county educational work conference held earlier this year, the director and the deputy director of the education bureau put forth a target for students entering colleges and universities and made it a rule that half of the senior classes should prepare for the college entrance examination. A deputy director even threatened that, if the target were not fulfilled, he would "show no mercy" toward those responsible.

The case of violating the college entrance examination system at the Luyi teachers training school has aroused strong repercussions among the masses. A joint investigation group formed by the discipline inspection committees of the Henan provincial, the Zhoukou prefectural and the Luyi County CCP committees investigated the case and arrived at initial decisions.

HEBEI EXPERTS PROJECT POPULATION GROWTH

HK180618 Shijiazhuang Hebei Provincial Service in Mandarin 0430 GMT 11 Oct 80

[Text] (Sun Xiao) and (Sun Lianyou) of the Hebei Provincial Automation Association and Comrade (Li Yangxi) of the provincial population association have applied systematic engineering, cybernetics, mathematical models and computers to study and project the present state of population in the province and the development trends over the next century. They have also issued a forecast. The work was based on abstract investigation material on the province's population.

According to their projections: if there is a gradual fall from the 1.8 children produced per couple of child-bearing age in 1979, and only 1 child per couple is produced after 1985, the province's population will go on increasing for 20 years; if every couple produces 1.5 children after 1985, the population will show a sustained increase for years; if each couple produces 2 children from 1982 onwards, there will be a sustained increase for 64 years; and if each couple has 3 children from 1985 onwards, the province's population will go on increasing and will exceed 100 million by the year 2023.

Their projection shows that the province must vigorously advocate that each couple must have only one child, and resolutely control population growth. Otherwise the population provlem will act as a drag on building the four modernizations in the province.

The projection of these three comrades also shows that there is no basis for worries about ageing of the population, exhaustion of the labor force, and excessive burdens. Such worries are unnecessary. This year old people and juveniles account for 38.6 percent of the provinces population. If we attain one child per couple from 1985 onwards, the numbers of old and young will gradually decline and the numbers of laborers will gradually rise. By the year 2000, about three laborers will be bearing responsibility for one other persons; the laborers' burden will be at its lightest that year. After 2000, there will be a gradual rise again, and the present level will be reached again in 2023. From this it is evident that after the province has reached a state in which each couple has only one child, there will be no problem of excess burden on the laborers within 50 years. In addition, after reaching a state in which each couple has only one child, the labor force will gradually increase for 20 years and will be at its highest level in 2000, reaching

39.42 million. By 2022, the labor force will have declined to about its present level. It is thus evident that after the province has completely reached a state in which each couple has only one child, there will be no problem of exhaustion of the labor force within 50 years.

Comrades (Sun Xiao), (Sun Lianyou) and (Li Yangxi) appeal for vigorous publicity of the significance of population control and successful implementation of planned parenthood work.

SHANDONG ISSUES CIRCULAR ON POPULATION CONTROL

SK170006 Jinan Shandong Provincial Service in Mandarin 2300 GMT 15 Oct 80

[Excerpts] According to our sources, the Shandong Provincial CCP Committee recently issued a circular urging all party and CYL members throughout the province to earnestly study and implement the open letter of the CCP Central Committee on controlling population growth in China.

The circular states: provincial party organizations at all levels must actively respond to the call of the party Central Committee, consider the study, publicity and implementation of the CCP Central Committee's open letter as an important matter and grasp it earnestly in light of the current work.

1. It is necessary to universally and earnestly publicize and explain the open letter of the party Central Committee to all party and CYL members and cadres and urge them to thoroughly study and discuss it. All party and CYL branches should hold special meetings to study and discuss this open letter and the related parts of Comrade Hua Guofeng's speech at the third session of the Fifth NPC.

It is necessary to make the broad masses of party and CYL members and cadres understand that the urging of the party and the state on raising one-child families is an important measure concerning the speed of the four modernizations, the future of the country and the health and happiness of coming generations and to encourage them to voluntarily serve as models and vanguards in this work. Young comrades should set themselves as examples by their conduct. Aged comrades should educate and supervise their children to marry late, have children late and have only one child.

2. It is necessary to publicize birth control to make the open letter known to every family and clear to every person. Propaganda departments of the party committees at all levels must grasp the publicity of this open letter as one of their important current tasks. Efforts should be made to carry out all forms of mass propaganda activities and use all available mass media—press, radio, television, movies, slide shows and theatrical performances. Mass organizations such as the CYL committees, the trade unions and the women's federations must extensively mobilize and organize the masses to respond to the call of the State Council and the party Central Committee. The cultural, educational and public health departments must actively publicize this letter in light of their business so that the importance of birth control will penetrate people's hearts.

3. It is necessary to put this letter into practice while publicizing it. We should grasp birth control work firmly and well by using this letter as a motive force.

Party and CYL organizations at all levels should earnestly examine and sum up birth control work in each specific unit and locality commend all party and CYL members and cadres who take the lead in practicing birth control and draw up next year's population plans.

It is first necessary to realistically strengthen the ideologies of those persons who have pledged to raise only one child and to educate and persuade them patiently and meticulously. We should also strictly guard against and correct such phenemona as coercion and the violation of law and disciplines.

WRITERS, ARTISTS URGED TO SERVE PURPOSES OF MODERNIZATION

Beijing BEIJING WENYI [BEIJING LITERATURE AND ART] in Chinese No 4, Apr 80 pp 76-79

[Article by Liu Shaotang [0491 4801 2768]: "A Few Points I Feel Are Worthy of Attention in Literary and Artistic Works At Present"]

[Text] I

Comrade Deng Xiaoping's report "On the Current Situation and Our Tasks" is a scientific review of various tasks carried out by the party and state since the downfall of the "gang of four" and a highly instructive document for the 1980's and beyond. Like the workers on other fronts, writers and artists must use this document as a guide to review their works published over the past 3 years, and to analyze the problems they now face, so that they can take concerted steps in support of the four modernizations program and strive for new and greater victories in the days ahead.

During the past 3 years, and especially during the past year following the Third Plenary Session of the 11th Party Central Committee, rich fruits have been reaped from the garden of literature and art. In a congratulatory speech to the Fourth National Cultural Congress, delivered on behalf of the Party Central Committee, Comrade Deng Xiaoping praised "literary and artistic circles as one of commendable departments, and writers and artists as workers deserving trust, support, and respect from the party and people." This is an honor bequeathed to our writers and artists, who should treasure and take a correct attitude toward it.

The rich fruits they have reaped since the PRC's founding should be attributed to the guidelines of the Third Plenary Session of the 11th Party Central Committee and the Party Central Committee's correct leadership.

Under the leadership of the Party Central Committee, writers and artists have smashed the mental shackles imposed by Lin Biao and the "gang of four," eliminated their pernicious influence, and implemented the policy of "letting a hundred flowers blossom and a hundred schools of thought contend." They have also promoted democracy in the artistic field and implemented the principle of "three don'ts" and the party's policy toward intellectuals. The result is a booming socialist garden of literature and art in which old and middle-age writers are eager to make contributions, young writers are growing in strength, themes are diversified, and artistic standards have been further improved.

Without the party's correct guidance and leadership, we could not possibly have achieved such remarkable success in such a short period of time. Ignoring or disregarding this point as the most important factor contributing to this success is certainly a mistake.

In his speech greeting the Fourth National Cultural Congress, Comrade Deng Xiaoping pointed out: "The party's leadership over literary and artistic work does not mean dictating orders or subordinating literature and art to a provisional, specific, direct political mission. It means aiding literary and artistic workers to create conditions for constantly enlivening literature and art in conformity with the laws governing their development, to raise the levels of literature and art, and to produce outstanding literary and artistic works and performing arts that will glorify the great Chinese people of this great era. We encourage our leaders to exchange views with literary and artistic workers on an equal footing. The bureaucratic workstyle must be discarded; no more administrative orders concerning literary and artistic creations and reviews should be issued. A literary and artistic work results from a complicated process of mental labor, which calls for a display of creative spirit by individual writers and artists. What to write and how to write it is a problem of exploration that should gradually be solved by writers themselves through practice. Any unjustified interference in this direction seems unnecessary." Comrade Deng Xiaoping added: "We will persist in upholding the double-hundred policy and the principle of three don'ts. We promise that the slogan that literature and art are part of politics will not be mentioned again in the future, because this slogan can easily be used as a theoretical basis for unjustified interference in the affairs of writers and artists. Years of practice have proved that this slogan will damage rather than benefit the development of literature and art." As writers and artists who grew up into maturity at the time of the birth of new China, and who have carried with them ever since a fresh memory of the trepidations of 1957, we want to take comfort in the fact that the Party Central Committee has decided to improve its leadership over literary and artistic work after summing up 30 years of its experiences in this field. We also deeply appreciate today's democracy in political and artistic fields, which was denied to writers and artists when Lin Biao and the "gang of four" were in power, and which pales into insignificance that form of democracy practiced during the 17 years prior to the Great Cultural Revolution. Taking this into account, all writers and artists should strengthen their sense of responsibility for the revolution and place greater demands on themselves.

Aware of the aforementioned fact, all progressive and revolutionary writers and artists should demonstrate greater determination to support the party leadership and advance along the course charted by it. They should consciously do everything possible to overcome any temptation to divorce themselves from the party's leadership or to go it alone and deliberately steer clear of the course charted by the party.

II

During the past 3 years, and especially during the past year or more since the Third Plenary Session of the 11th Party Central Committee, a number of talented young writers have emerged in our country and have come up with many outstanding works welcomed by the masses. This reminds us of the 1950's, when a large number of young writers came to the fore like bamboo shoots after a spring rain. These young writers of olden days, who have survived 20 years of the acid tests of the revolutionary storms, are now in their 40's and 50's. A general survey of the works published by them during the past 30 years shows that they have not in any slightest sense let the party and people down; their present significant role in the development of socialist literature and art should be recognized.

The average age of the young writers who have come to the fore in the wake of the downfall of the "gang of four" is comparatively greater than that of their peers of the 1950's. The former are better educated and more experienced in dealing with people than the latter. It is no wonder that they have outproduced their peers of the 1950's by providing the reading public with more outstanding works. Bright, sharp-minded, and energetic, they belong to a generation of writers capable of bringing hope to their country and serving the people well.

Nevertheless, we must also realise that they grew up into maturity at a time when our country was torn by political turmoil. They are among the people who personally watched the drama of the stormy Great Cultural Revolution take place and plunge the country into 10 years of upheaval. This is bound to have a profound impact on their minds, their political stance, and their works. This is why they have produced works which focus on exposing the towering crimes of the "gang of four" and the dark side of society, and which keep reminding us of the unhealed wounds of our time. The role played by these works in the emancipation of the mind in the field of literature and art will long be remembered by people throughout the country.

Undeniably, some young writers who suffered miserably, along with their families, from long years of political turmoil still carry a memory of their bitter past, brumbling that they have been unjustly treated and have been deprived of opportunities to demonstrate their professional writing skills. Since they could not push this unhappy memory behind them, and since they have been fed up with the dark side of society and violence, they have taken a critical attitude toward the party and socialism. For this reason, their affection for the party and socialism is almost nil. This is a feeling we can understand. But since the downfall of the "gang of four," the party has led the people to eliminate chaos and restore order, wherein the aforementioned young writers can again demonstrate their professional literary skills. This is another manifestation of the party's greatness and of the superiority of socialism. Aware of this, they should push that bitter memory behind them. Instead, they should courageously, earnestly and confidently look forward to working together with the people again so that they can introduce to their works lofty revolutionary ideals, vitality, and forward-looking spirit.

The Party Central Committee has repeatedly reaffirmed its determination to implement the principle of three don'ts. During the past 3 years, instead of wielding the big stick, it has invited authors of works with serious defects to exchange views in a solemn but democratic manner in the hope of amicably settling problems concerning literature and art. This is a stark contrast to the days when I and other young writers were threatened with sticks. Today, I envy all young writers' enjoyment of full democratic freedom of expression. Nonetheless, I also hope that this right to practice democracy in the political and artistic fields will not be misunderstood or abused, and that no one will regard this as an opportunity to promote anarchism and extreme individualism. Our literary and artistic works are the concerns of the party and people and are part of the socialist cause, rather than the property of any private enterprises.

Gone are the days when sticks and conspiracies worked wonders. Facts prove that both violence and flattery are counterproductive. Comrades who are in a position to lead literary and artistic workers and to review their works should demonstrate loving care for young writers. But a demonstration of loving care in this case does not mean showering them with flattery. To a writer, the pursuit of literature and art is a lifetime career that bears a striking resemblance to a marathon race. Although at the beginning some racers may run faster than others, none of them should be declared the winner of the championship before the race is over. When a young writer publishes a few relatively successful works, he may deserve encouragement and support. But too generous presentation of cheap honors to young writers may lead them to go astray. During his lifetime, Lu Xun loved young writers and went all out to support them. In writing prefaces to works by Rou Shi [2677 4258], Ye Zi [5509 4793], Xiao Hong [5618 4767], and Xiao Jun [5618 6511], he even took into consideration the possibility that his wording might affect their sales. While praising these works in a general way, he implicitly pointed out imperfections therein that needed to be improved. Comrades who are in a position to lead writers and artists and to review their works are advised to evaluate young writers with a scientific attitude based on the principle of seeking truth from facts rather than prejudices.

Old and middle-age writers should pay special attention to the influence they may have on young writers. It seems that young writers are more susceptible to the influence of the middle-age writers who have benefitted from many years of education provided by the party and who have accumulated rich experiences in writing should act as models rather than teachers in literature and art. If the middle-age writers do not behave themselves, the young writers will become unruly. Great attention must be paid to the ideological aspect of the works of all writers.

III

Literary and artistic works are a reflection of life. But this does not mean overly emphasizing the dark side of life. Nor does it mean that writers and artists can take a political stand inconsistent with that of the party.

To begin with, does our future become increasingly brighter or increasingly darker? A comprehensive and thorough observation of life today shows that darkness is now gradually giving way to brightness, and a more bright future is in sight. If a writer wants to truly reflect real life in his or her works, how can he or she depict only the dark side of society? Any plot to portray individual, local, and temporary social phenomena as reflections of an overall and unchanging situation is a violation of the laws governing the development of literature and art.

Although literature and art are not part of politics, they cannot possibly be alienated from politics. Every patriotic and revolutionary writer must take into account the effect his works may have on the interests of the people, the country and the party, and on politics and society. During the 1980's, our general task is to concentrate our resources on promoting the four modernizations. We must strive to accomplish this task without wasting a single day, as this task will have a direct impact on the destiny of the Chinese nation as a whole. Our writers and artists should also assume an important role in consolidating and developing political stability and unity and rallying 1 billion Chinese people behind the common endeavor to realize the four modernizations. If our writers and artists consciously or unconsciously sow seeds of suspicion, pessimism, disappointment, and mistrust among the people, they will certainly divert the attention of the party and people from the central task of the four modernizations. Acting in this way would be not only harmful to our nation but also immoral.

Since literary and artistic works can play a great role in shaping the ideas of the people and youths, our party has asked our writers and artists to concentrate their efforts on portraying the new socialist personality as a step in raising the levels of literature and art. Our party has also emphasized that the role played by writers and artists in raising the ideological, cultural, and moral levels of our society is a task that cannot be carried out by people of any other professions. Thus far, their performance in this direction remains far from satisfactory. Many works that sympathize with and glorify swindlers, thieves, hippies, and other decadent characters have appeared in society, along with works depicting murder, robbery, cheating, mental disorder, and other social ills and crimes. These works have been called by their writers or by some book reviewers a reflection of the emancipation of the mind. This is a point of view that is unacceptable to me. As far as literature and art are concerned, we cannot wall our country off from the rest of the world, and we must encourage cultural exchange with other countries. Nevertheless, we must clearly understand that modern Western literary and artistic works are faring worse daily and are trailing behind their peers of the 18th and 19th centuries and early 20 century in terms of qulaity. Even new professional skills invented by today's Western writers cannot cover up the spiritual decadence and low artistic quality of their works. Although some of their techniques may be worthy of emulation by us, we should not mechanically copy them. Nor should we be perplexed by their grotesque fantasies. We may go astray if we do.

It must be noted that an outstanding literary and artistic masterpiece should take deep root in the soil of its author's native country.

IV

Although our literary and artistic circles have been praised by the Party Central Committee for their recent remarkable successes, all comrades dedicated to literature and art should remain modest and free from arrogance and should conscientiously review their works.

We have reaped some fruit from our garden of literature and art, but we still have a long way to go to attain the goal of letting a hundred flowers bloom and a hundred schools of thought contend. There are many imperfections in our literary and artistic works in terms of their theme and style. Serious attention must be paid to the fact that during the past 3 years, only a few works directly reflect the life of the workers and peasants, who, as everyone knows, form the backbone of our society, the main force of the revolution, and the huge contingent for the four modernizations today. For this reason, writers and artists should come up in the future with more works that portray the activities and struggles of workers and peasants and reflect their sorrow and happiness, and that extol and praise their industriousness, courage, fortitude, and tenacity, as well as their virtue of cherishing the party, the motherland, and socialism and of bearing the overall interest in mind and observing discipline. Also worthy of praise are their excellent human qualities, their noble spirit in defiance of sacrifice, their wisdom, ideals and creative ways of thinking. Literary and artistic works, newspapers, and journals must lend prominent space to stories about workers and peasants.

"A writer must consider it necessary to keep in close touch with the grassroots units if he wants to improve the quality of his work." It will be impossible to improve his work if he does not want to do so. No writer can depict and reflect the lives of workers and peasants in his work if he does not spend time living and working together with them. In other words, a writer must keep in close touch with workers and peasants as an absolutely necessary step in revitalizing and developing socialist literature and art. Upon entering the 1980's, writers and artists must do everything possible to resolve problems left over from the 1970's. Only in this way can they introduce a new spirit and a new style to their work and can they scale new peaks of literature and art in the coming decade.

TOMB OF QING DYNASTY EMPEROR OPENED IN HEBEI

OW160300 Beijing XINHUA in English 0233 GMT 16 Sep 80

[Text] Shijiazhuang, October 16 (XINHUA)--The tomb of Emperor Guang Xu of the Qing Dynasty, built in 1909 and the last of the imperial tombs, was recently opened. Archeologists are studying the underground palace and the unearthed relics.

This tomb is a part of the Western Qing tombs located in Yixian County, Hebei Province, about 120 kilometers southwest of the center of Beijing. The above-ground buildings of the tombs cover an area of half a million square meters. There are over 1,000 rooms of wooden and brick structure, more than 100 stone buildings and many stone sculptures.

Emperor Guang Xu's tomb, built one year after the emperor's death, was completed in 1915. The buildings are magnificent despite the fact that the Qing Dynasty was overthrown in 1911. The department for preservation of ancient sites has repaired 30 of the main buildings in the past two years.

The underground palace, 41.75 meters long, has four stone arches and four pairs of stone doors. A Buddhist figure is carved in relief on each door. Found in the underground burial chamber were the inner and outer coffins of Emperor Guang Xu and Empress Long Yu and a number of funerary objects.

The tomb was robbed in 1931. When the underground palace was excavated, all the stone doors stood half open. The outer and inner coffins of the emperor and the empress were damaged. A hole was dug through Emperor Guang Xu's coffins and the lid of the coffin of the empress was opened. Four sets of chests were beside the coffins but the funerary objects inside are gone. Only a pair of green jade rings linked together and a jade object shaped like a duck on the front and looking like a lotus flower on the back were found in Emperor Guang Xu's tomb and some 70 pearls in his wife Empress Long Yu's tomb.

In the eastern part of the tomb are buried two sisters, imperial concubines of Emperor Guang Xu.

Archeologists believe that the opening of the tomb, called the Cong tomb, will aid the study of the Guang Xu reign and the history of the later years of the Qing Dynasty.

Seventy-six persons are buried at the western Qing tombs, three other emperors, three empresses, seven imperial concubines and princes and princesses. This is the first tomb to be opened there.

The State Council in 1961 listed the western Qing tombs among the first group of monuments and cultural relics to be given national protection and has allocated funds for its maintenance.

The other Qing tombs, the eastern Qing tombs, are located 125 kilometers east of Beijing on the southern slope of the Changrui Mountains in Zunhua County, Hebei Province. It has 15 imperial tombs of the Qing Dynasty, holding the remains of five emperors, four empresses, and imperial concubines and princesses. Two of these tombs have been opened.

BRIEFS

SICHUAN MINORITY LANGUAGE JOURNAL--Chengdu, 15 Oct (XINHUA)--LIANGSHAN WENYI [LITERATURE AND ART IN LIANGSHAN] started publication in Liangshan Yi Autonomous Prefecture of Sichuan Province last month. This literary quarterly, the first literary journal in the Yi language in China, is edited by A-lu-si-ji, a poet of Yi nationality. The first issue contains literary works written in the Yi language, folk literature of the Yi nationality and literary works of the Han people translated into the Yi language. The first issue also carries excerpts of Comrade Hu Yaobang's speech delivered at the 1979 national conference on propaganda work translated into the Yi language. [Beijing XINHUA Domestic Service in Chinese 0119 GMT 15 Oct 80 OW]

XIZANG WRITERS ASSOCIATION--To promote literary work in Xizang autonomous region, the preparatory group of the Xizang regional federation of writers and artists held an enlarged meeting on 23 September and approved the first group of members to be admitted into the Xizang branch of the All-China Association of Writers. Among the 17 members to be admitted are 13 writers of Tibetan nationality, including workers, teachers and other literary workers. [Lhasa Xizang Regional Service in Mandarin 1100 GMT 13 Oct 80 OW]

SHENYANG SCHOOLS MISUSED--According to LIAONING RIBAO, some 84,900 square meters of building space of secondary vocational schools in Shenyang Municipality are occupied by other units. These units either turn a deaf ear to the directive of the State Council and the decision of the Liaoning provincial and Shenyang municipal party committees or make only empty promises that they will return the school buildings. Only 16,700 square meters of space have so far been returned. As a result many schools fail to fulfill their enrollment plans. At a recent forum called by the provincial higher education bureau, leaders concerned at right schools including Liaoning provincial printing school, light industry school, goods and materials school, meteorological school, opera school and Shenyang first technical school, urged that the occupied school buildings must be promptly returned because the shortage of school buildings has wrought havoc to student enrollment work for several years. [Text] [SK171815 Shenyang Liaoning Provincial Service in Mandarin 2200 GMT 15 Oct 80]

LIAONING EDUCATIONAL REFORMS--According to our sources, the Benxi Municipal CCP Committee has heeded educational work and has performed three deeds this year. First, it has vigorously grasped the reform of the secondary educational structure by developing secondary vocational schools. By the end of September, Benxi Municipality as a whole had established 61 vocational middle schools and 17 agricultural middle schools with enrollments of 9,000 new students. Second, it has actively prepared for establishing universities so as to increase the number of students to be enrolled in institutions of higher learning. The Benxi Municipal CCP Committee had appropriated 350,000 yuan from the local financial funds to run a university. The Benxi Municipal Elementary University was thus established. It began to enroll students this year. Third, it has earnestly grasped education for staff and workers. According to initial statistics, some 2,500 study classes of various subjects had been set up, accepting some 100,000 people. This accounts for 26.2 percent of all staff members and workers in Benxi Municipality. [Text] [SK170756 Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 15 Oct 80]

MOVIE PUBLICATIONS DISCUSSION MEETING--Beijing, 14 Oct (XINHUA)--A discussion meeting of editors of movie publications in various provinces, municipalities and autonomous regions was held in Beijing by China Film Company from 7 to 14 October. Participants at the meeting called for improving the quality of publications and enriching their contents. According to incomplete statistics, some 40 movie journals are now published in China with a total circulation of nearly 10 million copies. [Beijing XINHUA Domestic Service in Chinese 1254 GMT 14 Oct 80 OW]

TEACHERS ARRIVE IN XIZANG--From 14 provinces and municipalities 517 teachers recently arrived in various parts of Xizang to help in developing education in Xizang. During their journey to Xizang, many teachers studied the Tibetan languages hard for everyday and teaching use. Some teachers began their teaching jobs before they could get over mountain sickness after their arrival in Xizang. They are the fourth group of teachers to come to assist Xizang in teaching since 1974. More than 1,100 teachers from Sichuan, Jiangsu and Shanghai came to Xizang earlier. Some of them have completed their teaching assignments in Xizang and returned to their original localities. The teachers from other provinces and municipalities come to Xizang to primarily help in teaching at colleges and prefectural or municipal middle schools. They help in compiling and writing teaching materials and help Tibetan teachers improve vocational skills. Over the past few years, the teachers who have come to teach in Xizang have made remarkable contributions and won the praise of Tibetan people. [Text] [OW131324 Lhasa Xizang Regional Service in Mandarin 1100 GMT 13 Oct 80]

RESTORATION OF GARDENS URGED--Beijing October 18 (XINHUA)--A draft proposal urging the restoration of the Imperial Garden in the northwest suburb of Beijing, which was destroyed in 1860 by British and French forces, was adopted at a two-day research meeting, which closed here today. The proposal to restore the garden and protect and use the ruins was signed by vice-chairmen of the Chinese National People's Congress, Soong Qing Ling, Xi Zhongxun, Xu Deheng and Bainqen Erdini Qoigyi Gyaincain and 500 professors, scholars and specialists in the fields of architecture, garden landscaping, city planning, culture, science, education and tourism. Eight hundred others also signed the proposal. A seven-day forum to discuss the restoration of the garden was held in August this year and preparations are being made to form a society for research of the garden. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CARTER, MUSKIE COMMENT ON U.S.-IRANIAN RELATIONS

OW210744 Beijing XINHUA in English 0701 GMT 21 Oct 80

[Text] Washington, October 20 (XINHUA)—U.S. President Jimmy Carter declared today that it is in the U.S. interest "to have a strong Iran. It is to our advantage to have a united Iran."

During a campaign stop in Youngstown, Ohio, Carter also said: "If Iran should release the hostages, then I would unfreeze their assets, which are several billions of dollars in banks here and in Europe. I would drop the embargo against trade with Iran and work toward a resumption of normal commerce with Iran in the future."

U.S. Secretary of State Edmund Muskie speaking in Chicago today said, "We are opposed to the dismemberment of Iran. We believe that the cohesion and stability of Iran is in the interest of the stability of the region as a whole. The integrity of Iran is today threatened by the Iraqi invasion. We note the government of Iraq has consistently stated that it has no claims to Iranian territory."

He continued to say, "In light of Afghanistan, we must also be concerned about the possibility of new intervention presented by any instability in the region."

He expressed the belief that "the conflict can and must be resolved through respect for cardinal principles of international law—that territory must not be seized by force of arms; that disputes should be settled by peaceful means."

In a television program here yesterday Muskie reaffirmed U.S. impartiality in the Iraq-Iran conflict but said that this position "may have to be adjusted as circumstances develop."

IRANIAN PRIME MINISTER ADDRESSES SECURITY COUNCIL MEETING

OW180747 Beijing XINHUA in English 0725 GMT 18 Oct 80

[Text] United Nations, October 17 (XINHUA)--Prime Minister of Iran Mohammad 'Ali Raja'i reiterated at the Security Council's meeting today that his country would not accept any ceasefire proposal but will continue to fight.

The Iranian prime minister pleaded his case for the first time in regard to the conflict with Iraq before the Security Council as it resumed its consideration of the Iran-Iraq conflict this afternoon.

Raja'i stated that a ceasefire would only condone the aggressor and allow it to consolidate its position.

"Our people are resolute and determined to fight even if the war must be prolonged and if it must be a people's war," he emphasized.

On the issue of the American hostages, he asked: "How is it that the United States sees in this attack an opportunity for the hostages to be freed?"

Following Raja'i's statement, Iraqi Foreign Minister Sa'dun Hammadi, who already pleaded his case before the council day before yesterday, spoke in exercising the right of reply. He reaffirmed his government's position that "we have no territorial claims on Iran," "but we insist on our territorial integrity on our land and on our waterways," and on non-interference in Iraq's internal affairs.

U.S. permanent representative Donald McHenry in his brief statement urged Iran to release the 52 American hostages. He said, "We expect the hostages to be freed on the same principles of humanity, law and justice the prime minister made in his own appeal." "On the basis of these principles the hostages should not have been seized," he stressed.

The Security Council had held three meetings on the conflict between Iraq and Iran. The most recent meeting was held on October 15. The September 28 meeting adopted a resolution calling on Iraq and Iran "to refrain immediately from any further use of force," and urging them "to accept any offer of mediation or conciliation or to resort to regional agencies or arrangements or other peaceful means of their own choice."

REPORT ON UN SECURITY COUNCIL IRAN-IRAQ DEBATE

OW240736 Beijing XINHUA in English 0701 GMT 24 Oct 80

[Text] United Nations, October 23 (XINHUA)--Member states of the U.N. Security Council continued to call for an end to Iran-Iraq hostilities and a peaceful settlement of the conflict as the 15-nation council resumed consideration of the situation between the two warring countries this afternoon.

Bangladesh Foreign Minister Mohammad Shamsul Haq said that the war between Iran and Iraq was a matter of grave concern to his country and to all peace-loving countries.

The conflict showed, he said, that it was not an isolated phenomenon but "an emerging trend of widening areas of tension and conflict all located in Third World. We are, therefore, naturally both disturbed and alarmed."

"Restoration of peace in the region through an immediate ending of this conflict is imperative in the interest of global peace and security," he emphasized.

Bangladesh, he said, assured the council of "its fullest cooperation in performing its charter responsibility in ending the hostilities between Iran and Iraq and ensuring peace and security."

U.S. permanent representative Donald F. McHenry declared that "all of us must be opposed to the dismemberment of Iran. The United States believes that the cohesion and stability of Iran is in the interest of the stability and prosperity of the region as a whole. The national integrity of Iran is today threatened by the Iraqi invasion."

To further clarify the U.S. position on the Iran-Iraq conflict, he continued, "we will not take sides. But to declare that we will not take sides is not to declare that we intend to remain aloof, or that we do not recognize our responsibilities to this organization."

The United States hoped, he said, "the conflict be resolved with respect for the cardinal principles of international law that territory must not be seized by force, and that disputes should be settled peacefully and not by armed invasion."

"The council must work vigorously to assist Iran and Iraq to achieve a cease-fire, to begin withdrawal, and to initiate a process of negotiation in a manner acceptable to both," he maintained, adding that "only a settlement which Iranians and Iraqis can both regard as fair and equitable will create the conditions for lasting peace."

Porfirio Munoz Ledo, representative of Mexico, declared that his country supported the call of the council president for a ceasefire.

The steps to be taken in the future must come through dialogue and consensus, he said. The council should define accurately the principles for a settlement of the conflict. All efforts at mediation must continue to be encouraged, and a specific forum for negotiations should be established, he continued.

Representative of Norway Ole Algard appealed to both Iran and Iraq to cease all armed hostilities and to reach a peaceful settlement. He called for withdrawal of all foreign forces from territories "acquired by force" and respect for the principles of territorial integrity, sovereignty and national independence of the countries concerned.

Exercising their right of reply, representatives of both Iraq and Iran reiterated the positions of their respective governments.

The Security Council will continue to consider this matter tomorrow afternoon.

ECONOMIC LOSSES IN IRAN-IRAQ CONFLICT EVALUATED

OW231927 Beijing XINHUA in English 1906 GMT 23 Oct 80

[Text] Beijing, October 23 (XINHUA correspondent)--The full-scale war between Iraq and Iran has entered its second month. It is likely to drag on for some time, bring untold agony to the people of the two countries and play havoc with the economy of the two belligerants.

AP reported on October 9 that losses in the war for both sides reached 40 billion U.S. dollars (24 billion for Iran and 16 billion for Iraq). Oil installations have been the main targets of attacks mounted by each side. The oil industries vital to the survival of the two countries have suffered unspeakable damage. The WASHINGTON POST has said that "both sides in this destructive war surprised observers by the ferocity with which they attacked, with planes and artillery, each other's oil installations."

To restore these installations destroyed in the war would cost 8 to 9 billion dollars, THE ARAB OIL AND GAS BULLETIN published in Paris said. It added that losses sustained by Iran's oil and gas installations amounted to 4 to 5.5 billion dollars and 3.5 to 4 billion for Iraq. The halt in oil exports is costing Iraq 100 million U.S. dollars a day and Iran 31 million dollars.

Iran's Abadan refinery, one of the biggest of its kind in the world, which refined two-thirds of the country's crude oil output "has reportedly been flattened." All the 152 oil tankers in Abadan were destroyed or damaged. It would take at least four years to repair or rebuild them, a western industry source estimated.

There has been vast damage to the installations on Kharg Island, Iran's biggest loading port. The Ahvaz oil center and pipeline juncture were badly damaged by Iraqi fighter-bombers. Dezful which controls the flow of oil from Khuzestan to Tehran was bombarded by surface-to-surface missiles. The oil pipeline between Khorramshahr and Ahvaz has been blasted. A REUTER report said that the port of Khorramshahr is in shambles.

Iraq's petroleum installations, too, have become the sacrifices of this war. It is reported that "Iraq's prides in developing economy--Baghdad chemical integrated complex, Basra refineries, Kirkuk natural gas factory and pipelines" were bombed and half of that country's eight refinery centres have been attacked. The main Kirkuk and Mosul oilfields north of Baghdad have come under repeated bombing. The oil shipping terminals at Al-Amoya and Al-Bkr, two main Iraqi ports for the export of oil, were not operating because of damage inflicted on them by Iranian warplanes. Tank farms at Al-Muftiyah, Kut and Fao in the Basra region and the costly Basra petroleum chemical integrated complex went up in flames under Iranian air raids.

Oil output of these two major OPEC countries have been reduced to a trickle. Before February 1979, Iran was the world's second largest exporter of crude. The daily peak was 6 million barrels and before the war, daily average had been down to 1.7 million barrels. Three days after the war, it dropped to 500,000 barrels, not enough to meet the domestic demand of about 700,000 barrels a day.

At the beginning of the war, the Iranian authorities were forced to stop gasoline and diesel oil rations to private consumers. Now, they have to buy jet fuel and diesel and fuel oil from other countries.

Before the outbreak of war, Iraq was the world's second largest exporter of crude after Saudi Arabia. Iraq's production had been 3.6 million barrels a day, mostly for export. It dived to one million barrels at present. On the second day of the war, Iraq stopped exporting oil through the gulf and on the fourth day, it stopped oil export to Western countries through the pipelines across Turkey and Syria, thus bringing the flow of this black gold to a complete standstill.

There is no denying the fact that the hostilities between Iran and Iraq grieve their own people and friends and gladden their enemy. That is why the Islamic and other Third World countries are doing everything within their power to mediate, end the conflict by peaceful means and restore peace and stability to the Gulf region. They are doing so also to prevent the superpowers, contending for world domination from profitting from this tragedy.

NATO MEMBERS URGED TO COOPERATE ON DEFENSE PRODUCTION

OW171741 Beijing XINHUA in English 1514 GMT 17 Oct 80

[Text] Brussels, October 17 (XINHUA)--"The need for cooperation within the North Atlantic Treaty Organisation in the field of defence production has never been greater than it is today," said Joseph Luns, NATO's secretary general, here today at the first annual symposium of the AFCEA (Armed Forces Communications and Electronics Association).

The AFCEA is the only professional association linking military, government and industry in the field of communications, electronics, command and control, computer sciences, teleprocessing and intelligence systems. It is a non-profit organisation with members from the relevant enterprises and organisations in West Europe and North America.

Luns pointed out to the members that cooperation is an imperative since "the immediate economic future for the NATO allies will be marked by continued high inflation rates, increasing unemployment, low economic growth and prolonged balance of payments problems." "Furthermore," he stressed, "there is little comfort to be drawn from an analysis of Soviet defence expenditures, where the trend is ever upward."

He pointed out that the Soviet defence budget is rising at the rate of 4 to 5 percent in real terms each year and stands now at the equivalent of about 160 billion dollars. Moreover, a disproportionate share of that budget is allocated to research and development, to armaments procurement programmes and to operations and maintenance, as compared to personnel. 20 percent of the Soviet defence budget is devoted to research and development and 42 percent to the procurement of equipment. Only 11 percent goes towards personnel costs. This means that the Soviet Union allocates something in the order of 142 billion dollars per year to the armaments industries and to training costs, more than the whole of the U.S. defence outlay of about 132 billion dollars, of which nearly 50 percent goes towards personnel.

"The net result has been an all-encompassing Soviet military build-up, which has added steadily and impressively to the Soviet arsenal, both nuclear and conventional, and, concomitantly, to the Soviet ability to wage highly sophisticated war on land, in the air and on and under the sea," he said.

On NATO's long-term defence programme, Mr. Luns told the meeting that NATO's investment in commonly-funded infrastructure over the next ten years or so will be measured in billions of dollars. "The need for cooperation and rationalisation between NATO nations, and particularly between European and North American members, will be essential if we are to obtain the best dividend from this enormous investment," he added.

GREECE TO RETURN TO NATO'S MILITARY WING

OW210740 Beijing XINHUA in English 0706 GMT 21 Oct 80

[Text] Athens, October 20 (XINHUA)--The Greek cabinet today unanimously approved the country's reintegration into NATO's military wing on the basis of the latest proposals submitted by NATO Supreme Allied Commander of Europe General Bernard Rogers.

This was announced in a statement issued at the end of a cabinet meeting tonight.

The statement said that the same proposals had also been submitted by Rogers to the alliance's Defense Planning Committee and were accepted this morning.

The government believes that this would strengthen "our international position and the country's defense capabilities, and for this reason, is seen as a positive step," said the statement.

It added that the decision was made under conditions which Greece considered acceptable and which had the unanimous approval of the country's military leadership.

The arrangements decided upon, the statement said, do not concern matters of operational control over the country's territorial waters and air space which, now as in the past, is the exclusive responsibility of Greece's armed forces. With respect to international waters and air space, the decisions taken are considered absolutely satisfactory.

It said that the government believes that Greece's full EEC membership has created favorable prerequisites for the country's economic development and its participation in the building of a united Europe, and that its return to the NATO military integrated structure will also strengthen its defenses at a time of world-wide anxiety and instability.

"These developments open good prospects for the future and the government is certain that this view is shared by the majority of the Greek people," the statement said.

'AFP' REPORTS ON GISCARD'S PRC VISIT

OW171424 Paris AFP in English 1407 GMT 17 Oct 80

[Report by Laurent Chenard]

[Text] Beijing, Oct. 14 (AFP)—French President Valery Giscard d'Estaing today announced that a tentative agreement has been reached for France to help build two nuclear-fueled electric power plants in China.

Summing up the first three days of his official visit, the president said the positions of China and France on the major international issues were "close and in some cases alike."

Chinese leaders have not alluded to the possibility of seeking military equipment from France, he told a press conference after his second meeting with Premier Zhao Ziyang.

Chinese strongman Deng Xiaoping said in a 90-minute talk today with the French president that peoples should "unite to oppose (Soviet) hegemonism, postpone the outbreak of a world war and safeguard world peace," Mr. Deng told newsmen afterward.

Mr. Deng said of their discussion on global strategy: "We feel uneasy about the current international situation, but at the same time we are full of confidence.... We are in agreement on many points."

At the press conference, Mr. Giscard d'Estaing underscored the need of developing relations with China politically, but also economically, scientifically and culturally.

He said his trip here amounted in part to "recognition by France of China's importance at present and in the future.... Much of the world's future will be designed and modeled here."

The French consider China "an important factor of balance and peace in the world," he continued, after stressing the "open and confident" relationship between Paris and Beijing.

"In the world such as it is," the president commented, "the existence of such relationships is a factor of optimism and confidence."

When asked if France and China might work together for peace, he indicated that was a possibility.

He said the two countries "converge in analyzing" the Kampuchean crisis and its "solution." He confirmed that he will meet with Prince Norodom Sihanouk of Kampuchea on Saturday morning before leaving this capital.

Concerning the Iraqi-Iranian war, the president said he did not think "there is a will to enlarge that conflict." The Chinese shared that opinion, he said.

He praised the "extreme cordiality and extreme simplicity" of the Chinese leaders in their talks with him.

The two proposed nuclear power plants would generate 900 megawatts each.

As to the Chinese economic situation, he said it was "without an equivalent in the world and could constitute a new and original solution to development."

The president said the Chinese people's "qualities of delicacy, goodwill and discretion" were destined to play a "considerable" role.

At a dinner in the French Embassy for Premier Zhao, the French president assured him France was ready to "participate in (China's) effort to equip itself and progress."

"It is in our common interest to continue the action started 16 years ago and increase it to give our relations the substance called for by friendship and confidence," Mr. Giscard d'Estaing said.

Earlier, he and Premier Zhao attended the signing of an agreement to open a French consulate in Shanghai and a Chinese consulate in Marseilles.

POLISH PARTY LEADER CITED ON ECONOMIC REFORM

OW190712 Beijing XINHUA in English 0700 GMT 19 Oct 80

[Text] Warsaw, October 18 (XINHUA)--A top Polish party leader exchanged ideas with a group of economists yesterday evening and told them that economic restructuring must be carried out without delay. He added that this was dictated by the political, social and economic conditions prevailing in this country.

Stefan Olszowski, member of the Political Bureau, and secretary, of the Central Committee of the United Workers' Party, stressed that reform of economic management, too, "is necessary either from the economic or politico-social point of view."

He went on to say, "Workers must be drawn to take part in the management and the role of the self-management of the workers must be expanded in all important aspects of the activity of the enterprises. Meantime, the guidance and the strategic significance of central planning must be upheld. The two (workers' self-management and central planning) are complementary to each other and constitute the guidelines of economic reform."

In view of the present dire economic difficulties, Olszowski said, a program for "small-scale reform" should be devised and put into effect as of January 1, 1981. The program is to be submitted to the Committee for Economic Reform under the Political Bureau of the party Central Committee and the government on October 22.

He said that Poland would make use of the proven theories in the sphere of economic reform of other socialist countries and their rich experience. The reform would not be confined to changes in the economic-financial structure or the system of planning. "The reform must cover all vital problems of socio-economic life. It is particularly important to show the younger generation prospects for development and a wide range of possibilities," Olszowski said.

'XINHUA' CITES BURMA'S ATTEMPTS TO DIVERSIFY EDUCATION

OW201520 Beijing XINHUA in English 1505 GMT 20 Oct 80

[Text] Rangoon, October 20 (XINHUA)--The Burmese Government has managed to open more spare-time schools and popularize correspondence schools while energetically developing full-time schooling.

The country's annual population growth rate of 2.2 per cent has resulted in an average yearly increase of 200,000 pupils and students in recent years. Boosting the appropriations for education as much as possible, the government has built more schools and stepped up the training of teachers. According to official figures, the country's educational expenditures rose to 560 million kyats (about 104 million U.S. dollars) in the fiscal year 1979-80, up 48 million kyats from that of the last fiscal year. 2,200 primary schools, 80 junior middle schools, 20 senior middle schools and two regional colleges were set up in the year. Over 5,600 more teachers were appointed and the number of students was brought to a new height of 5.1 million.

The spare-time education was developed to give further schooling to those junior middle school graduates who failed to get into the limited number of senior middle schools. The Ministry of Education has opened many evening schools for the youngsters. It will issue diplomas to those who pass the graduation exams. The 28 evening schools in Rangoon Division have a total enrollment of more than 15,000.

Higher education has also made rapid progress in the country. The number of senior middle school graduates receiving correspondence education rose to 380,000 in fiscal 1979-80 as against 16,000 in 1975-76. Correspondence refresher courses have been initiated in 26 townships across the country. A special department has been set up in the Ministry of Education to take care of correspondence education.

Some government departments undertook to run their own spare-time schools and training courses to raise the educational level of their employees.

Meanwhile, the government has attached much importance to the campaign to eliminate illiteracy among the adults. To date, illiteracy has been wiped out in 100 townships in the country.

PAKISTANI PAPER DISCUSSES KARMAL'S DILEMMA

OW181638 Beijing XINHUA in English 1624 GMT 18 Oct 80

[Text] Islamabad, October 18 (XINHUA)--The Pakistan daily THE MUSLIM today carried a PPI (Pakistan Press International) report from New Delhi entitled "Karmal's Days Appear Numbered."

The report said that Babrak Karmal, hand-picked by the Kremlin, arrived in Moscow on October 16 for a visit just ten months after the Soviet occupation of his country.

The uncertain situation in Afghanistan, it noted, will force Babrak Karmal to adopt a defensive line in the Kremlin. His days appear numbered.

It said that the situation in Kabul has increasingly deteriorated in the immediate past, according to foreign reports there. Rebel forces around the capital have mounted repeated attacks on the aggressors. Soviet officials and their Afghan counterparts are only able to leave the city in convoys protected by tanks. The KABUL TIMES carries daily reports of bloody conflicts outside the capital. The curfew hours there have been extended by two hours beginning October 12. The tight curfew has resulted in dissatisfaction and unrest. As the days have gone by, the freedom fighters have become bolder and more daring. A Soviet major and a number of other Russians have been murdered in the last few days, in and around Kabul.

It said that the Afghan forces have lost two-thirds of their original strength and now consist of no more than some 30,000 troops, which tend again and again to mutiny and are exposed to contempt and ridicule from their nationalistic countrymen.

Faced with these problems, the Kabul regime is attempting to increase its prestige by trying to rebuild the Afghan Army, the report added.

SHANGHAI RADIO TALK COMMENTS ON FRG FIRST LADY'S GOOD DEED

OW240747 Shanghai City Service in Mandarin 1130 GMT 23 Oct 80

[Radio talk by (Yu Chong): "The News Value of the President's Wife Giving First Aid to a Patient"]

[Text] The news concerning Mrs Carstens, wife of the West German president, giving first aid to a patient was carried by broadcasting stations and in newspapers, winning much praise from people and becoming a story on everyone's lips. Where lies the value of this news? I think it lies in the fact that she is the wife of a chief of state, especially the wife of the president of a capitalist country. The news would not be as significant if she were the wife of a minister. It would not be anything special if she were the wife of a commoner.

In a socialist country, the wife of a chief of state giving first aid to a patient should not have any news value because cadres at all levels, regardless of their positions, are all public servants. What is there to be surprised at when the wife of a public servant cares for a patient? However, in our socialist country, news concerning the wife of a chief of state has aroused wide interests. True, there have been quite a few scandals involving women in our country. There was one who called herself the "matriarch" and abused her power. There was one who bullied people by flaunting her powerful connections. There was one who engaged in pervasive and unbridled behavior without considering the consequences. For example, the wife of the director of a certain research institute frequently applied for an audience with the higher authorities to appeal for help and, if her requests were not met, she would roll on the ground before a big crowd and so forth.

Therefore, news concerning the good deeds of the wife of the West German president, which has been praised by the Chinese people, has a higher news value.

OMANI SULTAN DISCUSSES SOVIET EXPANSION, BILATERAL RELATIONS

HK230934 Beijing RENMIN RIBAO in Chinese 16 Oct 80 p 6

[Special dispatch from Muscat by correspondent Lin Jiaoming [2651 4109 2494]: "The Sultan of Oman Talks About Soviet Expansion in the Gulf Region and Sino-Omani Ties in Interview With a RENMIN RIBAO Correspondent"]

[Text] Muscat, 14 Oct--His Majesty the Sultan of Oman, Qabus Ibn Sa'id, sent a written reply on 14 October in answer to this correspondent's questions. The questions and answers are as follows:

Question: Since the Soviet invasion of Afghanistan, the Gulf area and other oil-producing regions have been threatened successively by Moscow. This is a fact which is becoming more apparent. How do you view this threat and estimate its development?

Answer: The Soviet Union is currently pushing forward a scheduled and fixed policy of expansionism in this region. This policy is in no way different from the savage acts of the old colonialists during their time. This has been obvious for some time. Undoubtedly, the Soviet Union has two intentions: ultimately gaining control of the Middle East and, in particular, the oil regions; and secondly, carry out expansion towards the Indian Ocean in order to control the African countries and then the entire Far East.

Question: The Strait of Hormuz is a very important channel for international oil supply. What is the current situation along this passageway? And [what] safety measures have been taken?

Answer: The present situation of the Strait of Hormuz is that international ships are still free to pass through. As you know, the deep waterway of the Strait of Hormuz used by international ships is within the territorial waters of Oman. Oman is determined to do its utmost to keep this passageway open for all peaceful international shipping.

Question: China and Oman maintain friendly diplomatic relations. The recent visit of Chinese Vice Premier Ji Pengfei to the Oman Sultanate proved to be successful. Can you give us your opinion on the future of Sino-Omani relations?

Answer: Vice Premier Ji Pengfei's visit was a promising symbol of the friendly relations between the two countries. Our relations are built on the basis of mutual respect and noninterference in each other's domestic affairs. Since the two countries established diplomatic relations 2 years [ago] and through numerous useful and constructive talks of state delegations during their visits to the other country, I believe that Sino-Omani relations will grow and flourish to a further extend amid the good intentions of our countries.

WARSAW COURT PRESIDENT ON 'UNITY' TRADE UNION CITED

OW230934 Beijing XINHUA Domestic Service in Chinese 1736 GMT 21 Oct 80

[Text] Warsaw, 20 Oct (XINHUA)--According to a report by the Polish press on 20 October, President (Stanislaw Paveri) of the Warsaw Provincial Court said: The Polish independent and self-governing "unity" trade union has been unable to complete its registration with the government because the court has yet to reach a consensus concerning certain articles in the charter of the trade union.

(Paveri) said: The main issue is that the trade union charter does not clearly state Article 2 contained in the agreement reached by the government committee and the Gdansk strike committee; that is, "the new trade union does not intend to play the role of a political party and, based on the principle that public ownership of the means to production is the foundation for the Polish socialist system, recognizes the Polish United Workers Party's leading role in the country and will not disrupt the international alliance system that has already been formed."

The president of the Warsaw Provincial Court held that it is "inconceivable" that the independent and self-governing "unity" trade union did not include in its charter the above-mentioned article of the Gdansk agreement, and that it is difficult for him to accept the union's explanation of this question.

The Polish independent and self-governing "unity" trade union applied for its registration on 24 September. The union holds that the court's instruction, which "involves political affairs and does not meet the requirement of law, should not be implemented."

Moreover, the union's draft charter stipulates that leaders of production enterprises and political organizations at all levels cannot play a leading role in the union. President (Paveri) pointed out that this stipulation deprives some union members of their right to vote, thereby providing unequal rights for union members. He said that owing to the above-mentioned situation, the independent and self-governing "unity" trade union cannot complete its registration, although 12 other trade unions have already done so.

The independent and self-governing "unity" trade union, with its headquarters in Gdansk, is the largest new trade union in Poland. Its leader is Walesa.

SIHANOUK SOURCES, OTHERS ON PREM PRC VISIT CITED

OW241045 Paris AFP in English 0954 GMT 24 Oct 80

[Commentary by Francis Deron]

[Text] Beijing, Oct 23 (AFP)--Thai Prime Minister Gen. Prem Tinsulanon begins a five-day visit here on Sunday which Western observers, in the light of this week's United Nations vote in favour of holding a conference next year on Kampuchea, expect to prove of capital importance in the Indochinese crisis.

Starting Monday, General Prem will have three days of talks with China's top leadership, including the new prime minister, Zhao Ziyang, Communist Party Chairman Hua Guofeng, and party Vice-Chairman Deng Xiaoping, who notwithstanding his recent resignation from the vice-premiership remains the strong man of the regime.

According to observers here, Gen. Prem's visit should provide Beijing with a useful opportunity to renew its promise of defending Thailand in the event of an attack by Vietnam--an eventuality China's leaders have been expecting since last June's incursion by Vietnamese troops across the Thai-Kampuchean border.

That Kampuchea will top the agenda of these talks is all the more likely, in that China and Thailand are far from agreeing over the stance to be adopted towards Vietnam.

The Chinese are demanding that an international conference on Kampuchea along lines envisaged by the United Nations must be preceded by initial withdrawals from Kampuchea of the 200,000 Vietnamese forces currently there, and Beijing is intent on obtaining a phased timetable for complete withdrawal.

It is understood that Gen. Prem for his part will urge the Chinese to effect changes in the leadership of the ousted Khmer Rouge "Democratic Kampuchea," so as to make their proteges more acceptable to Hanoi and to signify a willingness to compromise.

Chinese pressure has already improved the international image of the Khmer Rouge in bringing in Khieu Samphan as prime minister in place of Pol Pot, whose past "errors" are now coming in for public attack here, observers noted.

Already exiled Kampuchean leader Prince Norodom Sihanouk, currently living in Beijing, has indicated that a reconciliation with Mr Khieu is more likely than it ever was with his former "goalers" Pol Pot and Ieng Sary. However, despite discreet overtures to the prince by the Thai Government, there seems little chance of any meeting between him and General Prem here next week, sources close to the prince said.

It is understood that Gen. Prem's talks here will also touch on the campaign launched by ASEAN (The Association of South-east Asian Nations comprising Thailand, Malaysia, Singapore, Indonesia, and the Philippines) to keep Kampuchea represented in the United Nations by China's protegee, the ousted Khmer Rouge regime.

Another item on next week's agenda will reportedly be the guerrilla activities of the Thai Communist Party, which at one time had the backing of Beijing.

The Thai Communist Party is hard-line Maoist in its ideology, has no dealings with the "revisionist" Soviet Union, and has been guardedly non-committal towards Vietnam's communist regime.

That Chinese support for the Thai communists has recently diminished is evidenced by the decision to close down the "Voice of the Thai People," the radio station in southern China that beamed communist propaganda at Thailand.

At the same time Beijing is wary of abandoning the Thai communists entirely in their fight agaisnt Mr Prem's government in case the Vietnamese should step in and fill their place.

The question is a tricky one for Beijing, which has a similar situation on its hands in the case of neighbouring Burma, where it gives moral support to communist guerrillas there and at the same time was able this week to give a cordial welcome to visiting Burmese Premier U Ne Win.

In the area of bilateral relations, Mr Prem and Chinese leaders are expected to seek to extend existing economic cooperation, notably in the public construction sector, according to Thai sources here.

The two governments have already a number of cooperation agreements dating from the 1978 visit here of then Thai Premier Gen. Kriangsak Chamaman, including a Sino-Thai air service which has just recently come into operation.

General Prem, who is the third Thai prime minister to make an official visit to Beijing since normalization between China and Thailand in 1975, is scheduled to leave Beijing next Thursday for the southern provincial capital of Yunnan.

He will return to Bangkok on Friday.

BRITAIN'S CARRINGTON QUOTED ON USSR AFGHAN POLICY

OW230726 Beijing XINHUA in English 0700 GMT 23 Oct 80

[Text] London, October 22 (XINHUA)--Pressure on the Soviet Union to withdraw its forces from Afghanistan must be maintained, said British Foreign Secretary Lord Carrington in a statement issued here today.

The Soviet Union had not so far shown a readiness to negotiate seriously for a peaceful settlement in Afghanistan, he added.

He declared that "The British Government has continued to condemn the occupation of Afghanistan and to call on the Soviet Union to end it."

"Any prudent Western policy must take account of the Soviet Union's evident willingness to use any means, including force, to further its objective of gaining influence in other countries at the expense of the West, particularly in areas where the latter's interests are intimately involved," the foreign secretary stressed.

He pointed out that NATO countries which had the resources "should take steps to defend the interests of the West wherever these may be threatened." "The Soviet forces are closer to the Gulf and this has made a significant difference to the balance of forces in the region," he stated.

Lord Carrington declared that the British Government favoured cooperation among Western and like-minded countries in a three-part policy: first, economic measures taken against the Soviet Union should be continued; second, military deterrence should be extended into new areas by means of member states' individual measures, and third, key states in the developing world should be better supported, by concerting political and economic efforts.

ITALIAN PREMIER PRESENTS NEW PROGRAM

OW230749 Beijing XINHUA in English 0721 GMT 23 Oct 80

[Text] Rome, October 22 (XINHUA)--Prime Minister Arnaldo Forlani today reiterated Italy's loyalty to the Atlantic Alliance to maintain the balance of forces and security.

Presenting his new government's program to parliament, he said his country will work for the pursuance of a policy of peace and detente.

He condemned the Soviet invasion of Afghanistan.

As an EEC member country, he continued, Italy hopes for the contribution of the Islamic conference to the settlement of the Iran-Iraq conflict and supports the efforts of the U.N. Security Council to this end.

The American hostages in Iran should be released as soon as possible, he added.

Forlani stressed the importance of the solution of the mid-East crisis and the necessity of participation by the Palestine Liberation Organization.

The prime minister said it is of great significance to maintain relations with the United States. Italy should also make use of its positive ties with the Soviet Union and East European countries to deepen and develop dialogue in bilateral political and economic relations.

He praised China's policy of being open to the West and expressed his readiness to contribute to the further development of the existing cooperative relationship which, he said, has been promoted due to the president's recent fruitful visit to China.

"The Italian Government will do its utmost to strengthen its relations with various countries in Asia, Africa and Latin America," Forlani stated. These countries, he added, are playing "an important role" in "promoting and defending peace."

The prime minister said Italy "will pay attention to the reinforcement of political and economic relations with its neighbours." Its ties with Yugoslavia, "characterized by mutual trust and understanding," "have been strengthened through frequent contacts," he noted.

Forlani stressed, "another objective of Italy's foreign policy is furtherance of security in the Mediterranean area."

The part dealing with domestic affairs in the program includes the issue of system and the economic policy. [sentence as received]

"The present decisive task," the prime minister said, "is to maintain public order, fight terrorism and raise the efficiency of judicature."

He spoke at length about economic issues. "Our country faces great problems and difficulties," he said. The focus of the economic policy is to stem inflation. In fighting inflation, he noted, recession and lira devaluation should be avoided, production cost reduced, productivity increased and the competitive power of exports strengthened.

The debate over the program will began in parliament tomorrow. A vote of confidence is expected to be held early next week.

PORTUGUESE PRESIDENT CALLS FOR UNITED EUROPEAN STAND

OW221704 Beijing XINHUA in English 1644 GMT 22 Oct 80

[Text] Lisbon, October 22 (XINHUA)--Portuguese President Antonio Ramalho Eanes stressed last night that a unified West European defence means a common stand must be adopted by West European countries in all fields.

The president made the statement at a reception in honour of Admiral Robert Falls, chairman of the military committee of NATO on a visit to Portugal.

Reaffirming Portugal's ties with NATO, the president said, "Our continued stay within NATO, our determination to cooperate in the common endeavours in defence of the cultural values that are models for Europe and North America, and our long-lasting unity with our allies--all these are indisputable facts."

"The events taking place in recent years and our experiences in the course of negotiations show that a case of chronic suffocation harmful to the Western bloc may change from a theoretical assumption into a reality which we must face, because there has been doubt about the West's ability to maintain a geo-political equilibrium," he said.

In view of this, the president added, it is necessary for the Western bloc to adopt a common stand not only on military matters but also in the fields of mutual economic and political support.

"The economic crisis that we are facing and that is going to further deteriorate," the president went on, "is a crucial factor shaking the determination of the Western bloc and diminishing its ability to adopt a common stand. This factor will also render many Western countries extremely vulnerable in face of the events that are evolving before us."

He stressed in conclusion that a firm answer to this reality must be sought in closer and unified action by West European countries.

Admiral Robert Falls arrived in Portugal on October 20. Yesterday he was received separately by the vice chief of the General Staff of the Portuguese Armed Forces, the army, navy and air force chiefs of staff and the minister of defence.

POLAND TO BOOST FARMERS' PRODUCTION

OW230758 Beijing XINHUA in English 0737 GMT 23 Oct 80

[Text] Warsaw, October 22 (XINHUA)--Poland will distribute the increased part of the mineral fertilizer output among individual farmers next year. The supply of cement to them will be increased to 6.5 million tons.

These are part of the measures to be taken to boost the production of individual farmers in the country, which were decided by the Polish United Workers' Party and the Polish United Peasants' Party. The positions of the two parties on key problems of agricultural and food policies were made public by the party organ TRYBUNA LUDU on October 20.

It was also decided that the purchasing prices of farm produce from the farmers will be raised: that of milk from November 1, and that of other produce in the first quarter of next year. All state purchasing units must try to save the farmers' time and be honest in evaluating their products.

The two parties declared that the agricultural policy guarantees the correct development of state farms, agricultural cooperatives and other allied bodies. These units should turn out means of production for agriculture.

The decision said that big steps should be taken to speedily change the state of self-management of the cooperatives and individual farmers. Agricultural groups and mass organizations are the factual representatives of the farmers and are playing the role of federations of farmers' unions. They should be given appropriate authority.

The actual state of social life in the countryside must be changed quickly and the existing indifference must be overcome. At the same time, services and education must be improved, the decision said.

GENG BIAO ATTENDS CONCERT BY TRINIDAD STEEL BAND

OW221843 Beijing XINHUA in English 1831 GMT 22 Oct 80

[Text] Beijing, October 22 (XINHUA)--Stirring applause greeted the visiting musicians from Trinidad and Tobago at their premiere here this evening. Their steel orchestra music, popular within the Caribbean, was an entirely new but delightful experience for the Chinese audience.

The 40 amateur musicians, ranging from 16 to 50, of the Trinidad Catellic All Stars Steel Band, played steel-made musical instruments in the shape of drums originally made from oil barrels, cello pans, guitar pans and ping-pong with drum sticks covered with rubber. [as received]

The audience were spellbound by the symphonic rhythm produced in the rendering of a varied program of European classics, U.S. pop, Latin American pop and African music.

Vice-Premier Geng Biao and Minister of Culture Huang Zhen were among the packed audience of 2,000 who enthused over the lively and swinging atmosphere that prevailed.

During the intermission, Vice-Premier Geng Biao met with members of the visiting Trinidad and Tobago government delegation who attended the concert, leader of the band Clement James and 53-year-old conductor Jemmot Fitzgerald.

One of the leading members of the band, Mr. Everton Smith, introduced the audience to the seven sections of music presented to enable them to appreciate its specific features.

Also present tonight were Zhang Wenjin, vice-minister of foreign affairs; Zhou Weizhi, vice-minister of culture; Madame Lei Jieqiong, vice-mayor of Beijing; Li Huanzhi, vice-chairman of the Union of Chinese Musicians, and Wang Yanchang, Chinese ambassador to Trinidad and Tobago.

The band will give two more concerts in Beijing and two in Tianjin City.

ACROBATS PERFORM AT SOMALI CELEBRATION

OW220746 Beijing XINHUA in English 0703 GMT 22 Oct 80

[Text] Mogadishu, October 21 (XINHUA)--A mass rally of about 100,000 people was held here on October 21 to celebrate the 11th anniversary of the "October 21 Revolution."

The rally was attended by President Mohamed Siad Barre, First Vice-President Mohamed Ali Samantar, Second Vice President and Assistant to the President on State Affairs Hussein Kulmiye Afrah, chairman of the Standing Committee of the People's Assembly Ismail Ali Abucar, commandant of the National Security Service and presidential adviser on security affairs Ahmed Suleiman Abdulle as well as government ministers.

A grand parade was held at the rally. Tens of thousands of workers, peasants, herdsmen, students, government functionaries and residents in colourful national costume, singing and dancing, passed before the reviewing rostrum. They acclaimed the achievements made by the Somali people over the past eleven years.

The rally concluded with a military review.

Delegations and observers from 50 countries who attended the third congress of the Organisation of African Trade Union Unity as well as well as diplomatic envoys of various countries were also present.

President Siad Barre and other Somali leaders watched in the evening the performances given jointly at the National Theatre by the visiting Shaanxi Provincial Acrobatic Troupe of China and Somali artists.

The sixth Somali national fair opened yesterday. Exhibits showing the Somali peoples' achievements in the past 11 years were displayed at the fair.

BRIEFS

IRAQI PRESIDENT ON PEACE--Baghdad, October 17 (XINHUA)--Iraqi President Saddam Husayn affirmed yesterday evening that Iraq was ready to stop the fight with Iran if its sovereignty over its territories was recognized, the press here reported today. Husayn made the statement during a meeting with Secretary General of the Islamic Conference Organization Habib Chatti, who arrived here yesterday. Husayn also said that Iraq was ready to respond to the calls of the Islamic Conference Organization and the Non-Alignment Movement for a just and peaceful settlement of the Iraq-Iran dispute. [Text] [OW171312 Beijing XINHUA in English 1200 GMT 17 Oct 80]

RAJA'I DISCUSSES U.S. HOSTAGES--United Nations, October 18 (XINHUA)--Iranian Prime Minister Mohammad 'Ali Raja'i said today that a decision on the release of the 52 American hostages is "not far away." Speaking at a press conference at the U.N. headquarters this morning, the Iranian prime minister said that the decision of the Iranian Parliament on the release of the American hostages will not be far away if right conditions are met. When asked if the issue could be solved before the American presidential election on November 4, he said that "the question will be finally solved." Raja'i said he had come to New York "only to present his country's complaint of Iraqi aggression" to the U.N. Security Council and that he would not meet with American officials on the hostage issue. "Neither the hostages nor any other questions have been negotiated with American officials," he said. [Text] [OW181925 Beijing XINHUA in English 1907 GMT 18 Oct 80]

ISLAMIC CONFERENCE OFFICIAL ON GULF WAR--Islamabad, October 17 (XINHUA)--Habib Chatti, secretary general of the Islamic Conference Organisation, said here tonight that big powers' interference in the Iraq-Iran conflict was very much there. "This is a danger which is inevitable if the war continues," he observed. Dr. Chatti who arrived here at about midnight today from Baghdad, told newsmen at Islamabad Airport that any incident in the Strait of Hormuz could invite intervention by outside powers. Its repercussion would be very grave, he added. The secretary general said he would report to President Ziaul Haq tomorrow about his talks in Baghdad with President Saddam Husayn. Asked if he hoped to visit Tehran soon, Dr. Chatti said, "I hope to go tomorrow after I contact them." He said the Islamic Conference goodwill mission headed by President Zia was still continuing and he had visited Baghdad as a member of the mission. Replying to a question regarding the possibility of President Zia's visit to Tehran and Baghdad, Dr. Chatti said at the present phase he himself was establishing contact with both sides as secretary general of the Islamic Conference. He did not visualise an early visit of President Zia at this stage. [Text] [OW180147 Beijing XINHUA in English 0135 GMT 18 Oct 80]

INDIA, BANGLADESH BOUNDARY PACT--Beijing, October 18 (XINHUA)--India and Bangladesh have agreed to complete the demarcation of their land boundaries in the next two years under the provisions of the 1974 boundary agreement, says a report from New Delhi quoting a report from New Delhi today's INDIAN EXPRESS. The understanding was reached yesterday at the end of three days of official-level discussions between the two countries. Certain apprehension regarding the implementation of the agreement was removed during the discussions which were held in a "friendly and cordial atmosphere," the report added. According to informed sources, it was agreed that the present status in the Muhuri Char area in the Belonia sector of Tripura will be maintained till further surveys are conducted to demarcate the area finally. [Text] [OW180848 Beijing XINHUA in English 0833 GMT 18 Oct 80]

MUSKIE REAFFIRMS GULF WAR IMPARTIALITY--Beijing, October 20 (XINHUA)--U.S. Secretary of State Edmund S. Muskie yesterday reaffirmed American impartiality in the Iran-Iraq conflict. But this position "may have to be adjusted as circumstances develop," he added. Answering questions on ABC's "Issues and Answers" about the Iranian prime minister's accusation that the U.S. sent intelligence to Iraq gathered by its AWACS planes stationed in Saudi Arabia, Muskie said the reconnaissance planes were dispatched there at the request of the Saudis and they were "a pure defensive piece of technology." The information the planes gather about Iranian and Iraqi air strikes goes solely to the Saudis and not to either of the belligerents. He emphasized that the U.S. feels no one's interest would be served by widening or prolonging the war. Talking about the U.S. hostages being held in Iran, he said that the measures the United States has taken against Iran, including the enforcement of a trade embargo and the freezing of Iranian assets, would be reviewed once progress is made toward the release of the hostages. [Text] [OW201837 Beijing XINHUA in English 1831 GMT 20 Oct 80]

JAPANESE PAPER ON SOVIETS IN AFGHANISTAN--Tokyo, October 21 (XINHUA)--"Far from going to withdraw its troops from Afghanistan, the Soviet Union has made it clear that it will further strengthen its military presence there. This Soviet attitude of obstinately trying to wrest 'international recognition' of the fait accompli of its aggression is most regrettable," the YOMIURI SHIMBUN said editorially today. Commenting on the joint statements signed between the Soviet Government and the Babrak Karmal regime on October 19, the paper said that by inviting Karmal to visit the Soviet Union, the Kremlin aimed at "taking this opportunity to establish its rule in Afghanistan by further increasing its military and economic aid to the Karmal regime." With Afghanistan as a base, Moscow seeks greater military and political influence in the turbulent Middle East and the Islamic world. The paper went on to say that "no matter what this Soviet move may turn out, Afghanistan will remain a heavy burden to the Soviet Union for a long time to come." Another disturbance will undoubtedly take place sooner or later within the Karmal regime, it added. [Text] [OW210944 Beijing XINHUA in English 0806 GMT 21 Oct 80]

USSR AFGHAN ATROCITIES REPORTS--Beijing, October 20 (XINHUA)--About 200 men, women and children were reportedly killed and 50 per cent of the houses destroyed in Farza, north of Kabul, early this month when Soviet MiG-21s and helicopter-gunships pounded the tiny valley town, reported today's EXPRESS quoting an eyewitness, according to a report from New Delhi. Orchards and standing crops in the town have been totally destroyed, said the eye-witness who had arrived in Delhi. Most of the residents there have taken to the mountains. Farza is part of the grape valley of Khodaman. Soviet planes, he said, have reportedly flown a total of 107 sorties from the nearby Bagram military airbase under the Russians' control. The eye-witness said that a Soviet MiG-21 was seen in flames over the mountains behind Farza. Some helicopters were also hit by ground fire. According to an Afghan journalist who hailed from Farza and lives in Delhi, the valley town is famous for its multi-variety grapes and is inhabited by Pathans mostly belonging to the Nasiri tribe. [Text] [OW201212 Beijing XINHUA in English 1201 GMT 20 Oct 80]

USSR'S MILK, MEAT DECREASES--Moscow, October 16 (XINHUA)--The total meat and milk output of the state and collective farms in this country in the first nine months of this year was three per cent lower than that in the same period last year, the output of pork went down by six per cent. These figures were disclosed by the Soviet weekly ECONOMIC GAZETTE which said that during the nine months, livestock and poultry sold to the state were 460,000 tons less than those in the corresponding period of last year, and dairy produce 1.71 million tons less. By October 1, the number of cattle on the hoof was 720,000 head more than at the same time last year, but the number of pigs was 300,000 head and sheep 204,000 head less. The decrease in meat and dairy produce was largely due to fodder shortage. The GAZETTE reported that farmers on the whole had not yet managed to overcome the consequences of the difficult winter and the lack of fodder in spring. Recent press reports lead one to believe the country's fodder stores for the coming winter are again inadequate. Hay stores in many regions can only meet 60-70 per cent of the needs, and green fodder stores in many regions are well below half of the demand. The fodder situation is particularly disappointing in the Russian Federation, the largest Soviet republic. [Text] [OW170306 Beijing XINHUA in English 0249 GMT 17 Oct 80]

NORWEGIANS SUPPORT STRONG DEFENSE--Stockholm, October 17 (XINHUA)--A public opinion poll showed that the Norwegian people favour a strong national defence. A convincing 86 per cent majority of Norwegians questioned in an opinion poll for the organization, "People and Defence" by Norges Markedsdata answered that Norway should have a strong military defence, according to a recent report reaching here. This is the greatest recorded support in the country since the first opinion poll on the public's attitude towards defence in 1969. The poll was carried out last April among a selected group of about 1,450 people. Support for a strong Norwegian military defence has increased from 75 per cent in 1969 to 84 per cent last year and 86 per cent this year. According to another report reaching here, it is for the first time in three years that the Norwegian Government's defence budget proposal for 1981 involves a real growth of 3 per cent. This accords with the obligations Norway has assumed as part of the NATO Pact. The total defence budget framework for 1981 is 9,300 million NOK, registering an increase of 1,300 million NOK compared with the defence budget for 1980. [Text] [OW172012 Beijing XINHUA in English 1939 GMT 17 Oct 80]

THAILAND READY TO DEFEND ITSELF--Bangkok, October 18 (XINHUA)--Thai Prime Minister Prem Tinsulanon said yesterday that in face of the threat from the external enemy and the turmoil prevailing in the region, Thailand's armed forces must strengthen their combat capabilities and be always ready to defend the country. He was speaking at a ceremony of receiving a number of U.S. planes at Don Muang Airport near the capital. These include three Hercules C-130H transport planes, three Merlin 4-A reconnaissance planes and six trainers. He went on to say that to strengthen national defence, remains an important policy of his government because upon it depends the survival of the Thai nation and its people. He said, "We don't want war. But if necessary, we are capable of defending ourselves and defeating the enemy." On the same day, Phaniang Kantarat, deputy defence minister and commander of the Thai Royal Airforce, said in an interview with the Thai paper MATICHON that Viet Nam is likely to renew its attacks on Thailand and that the Thai Airforce is ready to repel such act of aggression. [Text] [OW181311 Beijing XINHUA in English 1232 GMT 18 Oct 80]

WARSAW CHOPIN CONTEST--Warsaw, October 20 (XINHUA)--The final competition of the Tenth International Chopin Piano Contest closed here yesterday. According to an announcement of the panel committee, the top three winners were Thai Son Dan of Viet Nam, and Tatiana Szebanowa and Arutiun Papazjan of the Soviet Union. Akiko Ebi of Japan and Ewa Poblocka of Poland shared the fifth place. Erik Berchot of France and Irina Pietrowa of the Soviet Union tied in the sixth. Special awards went to Alexander Lonquich of West Germany, Chen Hongkuan of China's Taiwan Province and Kevin Kenner of the United States. Pianists from Canada, France, the United States, Romania and Yugoslavia were awarded honourable titles and Liu Yifan of China was awarded a prize for his excellent rendition of Chopin's Humoresque. The Chopin piano contest came to an end formally this evening. At the closing ceremony, the panel committee presented prizes to the winners. Among the more than one thousand people attending the closing ceremony were J. Pinkowski, chairman of the Council of Ministers of Poland; J. Waszczuk, secretary of the Secretariat of the Central Committee of the Polish United Workers' Party; and J. Tejehma, minister of culture and art. [Text] [OW211220 Beijing XINHUA in English 1206 GMT 21 Oct 80]

'PAP' CRITICIZES WESTERN MEDIA--Warsaw, October 19 (XINHUA)--The varied interference in Poland's internal affairs by Western mass media and radio in particular, certain political parties and trade union centres in the past weeks have impeded Poland's process of change, exacerbated the tension and disturbed the country's current efforts to overcome the difficulties, POLISH PRESS AGENCY (PAP) said yesterday. PAP went on to say that these acts and the spread of tendentious news injured the interests of Poland and the Poles, adding that the motives behind them were to intensify popular unrest and tension, and impair Poland's position in the world. The Polish authorities firmly opposed the attempt against the national interest of Poland and demanded that some Western countries refrain from such acts of interference. [Text] [OW201913 Beijing XINHUA in English 1843 GMT 20 Oct 80]

POLISH TRADE UNION LEADER--Warsaw, October 20 (XINHUA)--The leader of the independent trade union has announced during his tour of southern Poland from October 18 to 20 that his union has no plans to call a new strike and that it intends to function with or without the court's recognition. A POLISH PRESS AGENCY report said that at the head of an activist delegation of the independent and self-governing trade union, Lech Walesa visited Krakow, Katowice and four other cities, where he met with representatives of local trade unions, spoke at mass meetings and gave press conferences. Speaking to Polish reporters, Walesa said: "Trade unions are supposed to defend the interests of not only the working class, but also the intellectuals and all professional groups." He declared, "We certainly want to cooperate with other trade unions, youth movement and the party," adding that "as to the form of the cooperation with the party, I have not yet thought about it." According to another report, Walesa, in his speech at a miners' meeting at a coalmine town, said that his union did not intend to give in before the court on the issue of registration. "Solidarity" (the name of the independent union--editor) will function no matter whether the law recognizes it or not, he added. [Text] [OW211855 Beijing XINHUA in English 1847 GMT 21 Oct 80]

BRUSSELS ANTIFASCIST DEMONSTRATION--Brussels, October 20 (XINHUA)--50,000 people demonstrated here this afternoon to voice opposition to racism, fascism, terrorism and anti-Semitism and demand the banning of the private militia of fascists and the adoption by vote of an efficient anti-racist law. The demonstration, sponsored by the National Youth Council, was attended by people from political parties throughout the country, nearly all government ministers, representatives of hundreds of trade unions and cultural, youth and immigrants' organizations as well as ex-internees of fascist concentration camps during World War Two. The placards and streamers held by the demonstrators read: "No fascism," "Fascism and racism, stop" and "Belgians and immigrants, fight for liberty together." The fascists have reportedly committed a series of murders in France, Italy and West Germany in recent months. In Belgium, an ultra-right organization sponsored a "demonstration" on October 4. These fascist actions aroused public indignation in this country, where many mass rallies and demonstrations against fascism and racism have been held in the past few days. [Text] [OW210934 Beijing XINHUA in English 0810 GMT 21 Oct 80]

MILAN DEMONSTRATION CONDEMNS FASCISM--Rome, October 20 (XINHUA)--Over 3,000 young people held a street demonstration in Milan this evening in protest against the terrorist incidents aimed at restoring fascism. The incidents included the bombings at the Bologna railway station in Italy, on the Munich Beer Festival in West Germany and at a Jewish synagogue in Paris. The Milan demonstrators held streamers which read: "No to fascism," "No to anti-Semitism," "Paris, Bologna and Munich, by the same hand, the same shame!" They shouted slogans denouncing the Nazis for setting up death camps and committing other crimes. The demonstration was sponsored by the Jewish Communal Council of Milan and received widespread support from the affiliated youth organizations of the Christian Democratic Party, the Communist Party, the Socialist Party, the Republican Party, the Liberal Party and the Social Democratic Party. Municipal government officials met a delegation of the demonstrators after the march. [Text] [OW211216 Beijing XINHUA in English 1200 GMT 21 Oct 80]

UK'S HEATH ON ANTI-SOVIET WORLD STRATEGY--Geneva, October 21 (XINHUA)--Former British Prime Minister Edward Heath said here yesterday that Americans and Europeans should jointly adopt a world strategy to counter the Soviet challenge, according to press reports today. Heath made the remarks at a joint meeting of the International Club of Americans and the Swiss-American Chamber of Commerce. To effectively counter the Soviet challenge, he stressed, European countries should shoulder a greater share of NATO military activities so that the U.S. forces would be free to cope with the tasks outside Europe. He also emphasized the importance of the West's relationship with the developing countries. Western European countries should give priority to North-South dialogue, he maintained. ROMANIAN, AUSTRALIAN DELEGATIONS--Xia Zhengnong, secretary of the Shanghai Municipal CCP Committee, on 19 October met and feted Romanian party workers visiting group headed by (Alexandalu Bugnalu), first secretary of a Romanian municipal communist party committee. Hn Zheyi [as printed] vice mayor of Shanghai, on 17 October met and feted Australian journalist delegation headed by (Johan Hall). [OW201113 Shanghai City Service in Mandarin 2300 GMT 19 Oct 80]

DANCERS IN YUGOSLAVIA--Belgrade, October 16 (XINHUA)--The China Nationalities Song and Dance Ensemble gave its premiere here this evening to the warm applause of the audience. Young artists from nine nationalities of China performed Tibetan, Mongolian, Li, Dai and Uygur songs and dances and music with different instruments of their own. The items vividly depicted the bravery and industry of the people of the minority nationalities and their patriotism. Young soprano Fang Ming, male soloist Jiang Xunzhi and Mongolian woman soloist Dedema were especially warmly applauded when they sang Yugoslav folk songs in the Yugoslav language. The Chinese ensemble led by famous Mongolian dancer Bovinbatu arrived here on October 14. During its three-week stay in the country, the ensemble will tour the republics of Serbia, Montenegro, Bosnia and Herzegovina and Croatia, and will give 13 performances altogether. [OW201113 Beijing XINHUA in English 0726 GMT 16 Oct 80]

BRAZILIAN MUSICIANS' PERFORMANCE--Beijing, October 19 (XINHUA)--The trio artists, comprising noted Brazilian pianist Arnaldo Cohen, violinist Cussy de Almeida, and cellist Peter Dauelsberg, presented a programme of European classics and modern Brazilian music to a Beijing audience at their premiere here this evening. This is the first time that musicians from Brazil have performed in China since the establishment of diplomatic relations between the two countries in 1974. Among the over 1,000 audience this evening were Chinese Minister of Culture Huang Zhen and Brazilian Ambassador to China Aluizio Napoleao and Mrs. Aluizio Napoleao who mounted the stage at the end of the performance and congratulated the Brazilian musicians. The trio arrived in Beijing on October 17 as guests of the Ministry of Culture. During their two weeks' performance tour of China they will give solo recitals in Beijing, Nanning and Kunming and two more trio concerts in Nanning and Kunming. [OW201113 Beijing XINHUA in English 1842 GMT 19 Oct 80 OW]

NEW ZEALAND MILITARY EXERCISE--Wellington, October 21 (XINHUA)--Warships and aircraft of the United States, Australia and New Zealand started a five-day joint exercise off New Zealand's northeast coast yesterday, it was reported here today. The exercise, code-named "Autex '80," is based on the hypothesis of an Anzus naval task force under submarine and air attacks as it sails through a hostile zone. The exercise involves eight surface vessels and one submarine. The United States is represented by three destroyers, including the spruance-class "Oldendorf," the flagship of destroyer Squadron 21 of the U.S. Seventh Fleet. Australia has sent a submarine and two destroyers while New Zealand sent three frigates. The Australian submarine "Onslow," as well as New Zealand and Australian air force planes will simulate attacks from the "bad guys" on the allied naval task force, which will have live-firing practice in the Bay of Plenty, New Zealand, during the exercise. The American and Australian ships will visit some New Zealand ports after the exercise. [Text] [OW211548 Beijing XINHUA in English 1532 GMT 21 Oct 80]

EQUATORIAL GUINEA INDEPENDENCE DAY--Beijing, October 23 (XINHUA)--The 12th anniversary of the independence of the Republic of Equatorial Guinea was marked at a reception given by the Equatorial Guinean Embassy here this afternoon. Among the guests were Qian Xinzhong, Chinese minister of public health; Gong Dafei, vice-minister of foreign affairs; Cheng Fei, vice-minister of economic relations with foreign countries; Mao Henian, vice-minister of power industry; Cheng Wang, vice-minister of communications; Luo Shuzhen, vice-minister of telecommunications; Zeng Delin, vice-minister of education; and Luo Shigao, vice-president of the Chinese People's Association for Friendship with Foreign Countries. Diplomatic envoys of various countries to China were also present. [Text] [OW231302 Beijing XINHUA in English 1244 GMT 23 Oct 80]

SOVIET, CUBAN INTERFERENCE--Bogota, October 22 (XINHUA)--Colombian Defence Minister Luis Carlos Camacho said in a Senate debate yesterday that Colombian guerrillas are financed and trained by the Soviet Union and Cuba. The Colombian minister said that at least 749 Colombians had received guerrilla war training in Cuba. He named 17 of them. By doing this, the Soviet Union and Cuba created "disorder and subversion" in Colombia, he added. Financial aid to the guerrillas was given through the Prague-Paris-Bogota channel and in the name of scholarships granted by the Soviet Union's Lumumba University. POLISH OFFICIAL MEETS CARDINAL--Warsaw, October 22 (XINHUA)--Stanislaw Kania, first secretary of the Polish United Workers' Party, met with Roman Catholic Primate Cardinal Stefan Wyszynski here yesterday. They discussed matters of great importance for the internal peace and development of the country, says a PAP report today. "A unanimous view was expressed that constructive cooperation of the church with the state serves well the interests of the nation and therefore will be continued on behalf of the welfare and security of the Polish People's Republic." [Text] [OW230838 Beijing XINHUA in English 0759 GMT 23 Oct 80]

ISLAMIC LEADER ON IRAN, IRAQ--Islamabad, October 22 (XINHUA)--Iranian leaders have promised to study the proposal for the formation of a committee of six leaders of Islamic countries and convey their reply later, secretary-general of the Islamic conference Habib Chatti said today. Speaking to the press at the airport upon his arrival here this evening from Tehran, Chatti said that there had been definite improvement of atmosphere for talks in

Iran. His discussion with Iranian leaders was frank and in good spirit, he added. He told newsmen that Iranian leaders maintained that there could be no negotiations so long as the Iraqis were present on Iranian territory. "They want to find out if the proposal regarding the formation of the committee is compatible with their position," Chatti said. On Iraq's side, he said that Iraq had agreed in principle to the proposal on condition that their claims are guaranteed. Chatti said he would fly to Lahore tomorrow to report to President Ziaul Haq on the outcome of his visit. He also planned to leave for Jidda, Saudi Arabia. TWO JAILED FOR TAIWAN ATTEMPT--Beijing, Oct. 22 (AFP)--Two men have been jailed for trying to emigrate illegally to Taiwan from Hainan Island, the newspaper HAINAN RIBAO reported in an edition received here today. Li Hongyu and Xing Fuxian were sentenced to one year and six months imprisonment. Their first bid to emigrate in August 1979 was foiled when their boat ran into a storm and developed mechanical trouble. They were arrested last May when they made a second attempt with 11 other persons. Three of the latter received minor sentences of detention. [Text] [OW220501 Hong Kong AFP in English 0454 GMT 22 Oct 80]

DOCUMENTARY ON POLISH STRIKE--Warsaw, 16 Oct (XINHUA)--A news documentary recording Polish workers' strikes was recently shown at various movie theaters in Warsaw. The film was warmly welcomed by large audiences. Aside from recording the workers' strike that had apread throughout Poland last August, the documentary made by the Warsaw News Documentary Studio also recorded scenes of the Polish Government suppressing a Gdansk workers' strike in December 1970--Soviet-made tanks and armored cars patrolling the streets, armymen and policemen in full battle gear throwing teargas grenades at unarmed workers on strike and aiming their guns at the masses in the streets. The film strongly contrasted the violent suppression of 1970 and the talks and negotiations in 1980. The audiences are profoundly impressed with this contrast. Since the documentary was shown, it has drawn large audiences in the capital of Poland. Many movie theaters draw larger audiences than usual. HARBIN-HARVARD ACADEMIC EXCHANGES--Harbin Engineering College, Heilongjiang, has agreed on academic exchanges with Harvard University of the United States. Harvard agreed to give free short-term training courses to 10 teachers and high-level management personnel of the province each year. According to this agreement, three people have been sent to Harvard University this year. Harbin Engineering College also sent a delegation to the United States to inspect education work on 8 October. [SK170540 Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 10 Oct 80]

PARTY AND STATE

STRUGGLE AGAINST EXPLOITING CLASS IDEOLOGY EMPHASIZED

Shenyang LILUN YU SHIJIAN [THEORY AND PRACTICE] in Chinese No 1, 1 Jan 80 pp 15-18

[Article by Li Zhun [2621 0402]: "A Talk on Ideological Class Struggle"]

[Text] How can we assess and what attitude should we take toward the ideological class struggle? This has become a subject of study by many comrades. Contained in this article are some of my initial views on this subject, which are presented in hopes of stimulating further discussion.

I

The theory of class struggle in the economic, political and ideological fields was first advanced by Engels, one of the co-founders of Marxism. In this connection, he pointed out: "The theoretical, political and economic aspects of struggle (against capitalists) began with the birth of the workers movement, and were carried out in coordination with one another and in a well-planned manner." ("Collection of Works by Marx and Engels," vol 18, p 566) A series of similar theses can also be found in works by Lenin and Comrade Mao Zedong. Nevertheless, what does "the ideological aspect of class struggle" really mean? What is its content and effect on society? I feel that these questions need to be straightened out and should be analyzed from the basic historical materialist standpoint in the following three ways:

First, basically, the so-called ruling class means a group capable of controlling the labor of another group. In scientific Marxist terms, class struggle refers to a struggle between two rival classes whose economic and political interests are diametrically opposed, or a struggle between exploiters and the exploited. Class struggle should not be interpreted as all forms of struggle and contradictions among all different groups or conflicts among the people of different shades. Although there are conflicts and contradictions between two different exploited and oppressed working classes--for example between the workers and peasants--such contradictions and conflicts, including the ideological struggle, do not stem from any fundamental clash of interests, and therefore should not be interpreted as a form of class struggle.

Second, it is man's social being that determines his thinking. The ideology of every class is determined and affected by its social status (primarily economic status). Class ideology often patterns after class status. Strictly speaking, the class struggle in the ideological field is only one aspect of class struggle as a whole. Through such struggles, rival classes or their members will use their respective ideologies as weapons to defend their interests. The ideological aspect of class struggle will fade out in a society where the two rival classes with a fundamental clash of political and economic interests cease to exist. The existence of the ideological aspect of class struggle depends on whether the two contending sides involved in it are really in rival and irreconcilable positions. Materialists will never pick up a few isolated remarks on both sides of contention as a basis for starting an ideological aspect of class struggle.

It must be pointed out that in slave-owning and feudal societies, where the modes of production were limited and the means of mental labor were controlled by the exploiting classes, the exploited slaves and peasants had never been in any position to challenge the ideological system of the exploiting classes because they lacked spontaneity to organize themselves into an ideologically competitive force to be reckoned with, although they formed the majority of the population at that time. For this reason, the ideological aspect of class struggle was nonexistent in the minds of the exploited. The scientific ideological system that has been used by the proletariat as a spiritual weapon to combat the bourgeoisie and all other exploiting classes did not take shape until the birth of Karl Marx. At the core of the proletarian ideological system (Marxism) is authentic materialism or a form of totally disinterested collectivism which opposes any form of exploitation and oppression. At the heart of the ideological systems of the feudal landlord class and the bourgeoisie was the concept of the division of society into various classes, which regards the commoners as "beasts," and extreme egoism which regards everything as commodity. All exploiting classes, however, have at least one thing in common, that is, they all consider their exploitation and oppression of the majority justified. This form of ideological struggle takes place only between two rival classes with a fundamental clash of economic and political interests, (or between their members). Such struggle will never occur within a single class.

Third, during a protracted class struggle, some members of one class may be invariably affected by the ideology of another contending class. For this reason, it must set its ideology in competition with the ideology of another class or its influence. Should we regard this as part of the ideological aspect of class struggle? I feel that the two forms of struggle are related but should not be regarded as the same struggle. The reason is that the influence of the ideology of one class remains an influence that is not necessarily capable of converting members of another contending class. On the other hand, some members of one class are unlikely entirely to give up its ideology and become converters of the ideology of another contending class as long as they display no intention of radically changing their class stand. Furthermore, the ideological struggle between those elements of one class who are influenced by the ideology of another contenting class and its staunch supporters should in no way be construed as a direct ideological struggle between two rival classes. As long as the two groups in the same class are not diametrically opposed to each other in terms of political and economic interests, their debate can be interpreted as a reflection of the ideological struggle in that same class. If the two forms of struggle are viewed as the same struggle, the so-called ideological aspect of class struggle will become a strife likely to go haywire. But only after the aforementioned wavering elements are determined to desert their class to another rival class after being exposed to the ideology of the latter can we call the ideological struggle between the infidels and staunch supporters of that class an ideological aspect of class struggle.

II

Lenin said: Socialism means annihilating classes. Since the founding of new China 30 years ago and especially since the establishment of the socialist system of public ownership over 20 years ago, not only have the classes of landlords and rich peasants been eliminated, but also capitalists as a class have ceased to exist in our country. This being the case, what is the content and characteristics of the current ideological class struggle in our country?

I feel that since the exploiters as a class have ceased to exist in our society, our current ideological class struggle, just like similar struggles that have taken place in the economic and political fields, is no longer a class struggle between the exploiters and the exploited but an ideological struggle between workers, peasants and intellectuals (part of the working class) on the one hand and remnants of the exploiting classes and new class enemies on the other. It can be called an unfinished business of the ideological aspect of class struggle under the new historical conditions or a special form of class struggle in the ideological field, which can be spelled out as follows:

First, it is an ideological struggle between workers, peasants and intellectuals dedicated to socialism on the one hand and a few unreformed landlords, rich peasants and remnants of the old exploiting classes on the other. Since the system of private ownership has been eliminated, these remnants of the old exploiting classes have never wanted to give up their class ideology. In addition, they have carried out various antisocialist economic and political activities, thus continuously placing them in a position hostile to that of the working class. The ideological struggle carried out by the broad masses against them can certainly be called a part of class struggle.

Second, it is an ideological struggle between socialist workers, peasants and intellectuals on the one hand and embezzlers, speculators and other new exploiters on the other. As new exploiters, these embezzlers and speculators still act and think in the same way as the members of the exploiting classes did in the old society. Certainly, the ideological struggle carried out against them by the broad masses is a class struggle in the ideological field.

Third, it is an ideological struggle between socialist workers, peasants and intellectuals on the one hand and saboteurs of social order and other criminals and degenerates on the other. Just as those elements who were found guilty of felonies can no longer be treated as ordinary criminals within the ranks of the proletariat and the working people, neither can the degenerates. They act and think in a way detrimental to the interests of the proletariat. In short, their political and economic interests directly contradict that of the proletariat and the working people. The ideological struggle carried out by the broad masses against them undoubtedly takes the form of class struggle.

Fourth, it is an ideological struggle between socialist workers, peasants and intellectuals on the one hand and a few counterrevolutionaries (including some remnants of the "gang of four") and enemy agents on the other. Enemy agents from the enemy camps, and counterrevolutionaries (no matter whether they are old or new) are vicious class enemies. They often use the reactionary ideologies of the exploiting classes to instigate the people to create public opinions to serve their counterrevolutionary aim of subverting our country and overthrowing the socialist system. The ideological struggle waged by the broad masses against them has developed into a sharp class struggle in the ideological field.

In short, the objective existence of various class enemies in our society justifies the necessity of carrying out the current class struggle in the ideological field. Facts remind us that it is only class enemies who dare to take a radical position against the proletariat and the working people, openly defend the ideologies of the exploiting classes and wage ideological struggle against the proletariat. The focus of the struggle is over whether to preserve and develop or destroy and overthrow the socialist system aimed at eliminating the vestiges of exploitation and serving the basic political and economic interests of the proletariat and the working people. This ideological form of class struggle will automatically die out as soon as class enemies cease to exist, along with the basic contradictions between ourselves and class enemies in the political and economic fields. An assessment of the activities of the class enemies that still exist in our country, and class struggles at home and abroad reveals that the influence of the ideologies of the exploiting classes over the people, including the working class, will exist for a long time to come. Among them are the ideology of exploitation of man by man, the concepts of the division of society into various classes originating from feudalism, autocratic ideas, and extreme bourgeois egoism. For this reason, a protracted struggle is anticipated between the proletarian ideology and the influence of the ideologies of the exploiting classes. As I have mentioned earlier, it is more scientific and realistic to call this form of struggle a reflection of ideological class struggle among the people and members of the proletariat rather than a direct struggle between the proletarian ideology and the ideologies of the landlord and capitalist classes. At the same time, it must be further pointed out: judging from the current domestic situation, a variety of backward non-proletarian ideas still exist among the people, including members of the proletariat. But their emergence cannot be attributed to the influence of the ideologies of the exploiting classes. Nor do they reflect the ideological class struggle among the people. At this point, I must also point out that every specific problem must be analyzed in concrete terms. For example, bureaucracy and the idea of using executive power to control everything have been described by some comrades as a reflection of the resurging influence of the feudal landlord class. As an individual, I do not agree with this observation. As a matter of fact, the idea of using executive power to control everything resulted from the feudal system of production or small-scale peasant economy on which the feudal system of production was built. Just as Marx once pointed out: "Because small-scale peasant economies were geographically isolated from one another, their respective representatives were also their masters and supreme power holders or unrestricted government authorities. In the final analysis, the political influence of the small-scale peasant economy could become an executive power which could be used to control the society." ("Selected Works of Marx and Engels" vol 1, p 693). Today, some people in our midst still like to exercise their leadership by dictating orders to their subordinates, and to use power that is delegated to them to serve their private interests. This conduct of public affairs reminds the people that the influence of the old small-scale peasant economy remains deeply rooted in our country. There are many other comrades who mistake the "me first" idea for the bourgeois ideology. They must understand that no classes except for the proletariat can produce that disinterested form of collectivism; the "me first" idea is not only popular with the small peasants, but also with small handicraft producers and small venders (who belong to the petty bourgeoisie); the backward "me first" idea that exists among the people should be listed as part of the traditional petty-bourgeois ideology; only unscrupulousness and extreme egoism embody the influence of the bourgeois ideology. Undeniably, we must uphold the proletarian ideology and struggle against the petty-bourgeois ideology and the influence of the small peasant economy. But this form of struggle has nothing in common with the ideological struggle between the proletariat and various class enemies.

III

The question of how to carry out the class struggle in the ideological field that has come in the wake of the establishment of the socialist system of public ownership is not only a theoretical but also a practical problem. We must conscientiously sum up rich experiences we have accumulated in this field over the past 20 years or more and draw lessons from them. Since the limited space allowed to me by this journal has prevented me from reviewing such experiences and lessons in detail, I can only discuss this problem on a selective basis.

First, it is necessary to apply Marxism to assess the general trend of ideological class struggle that has taken place since the establishment of the socialist system of public ownership. Since the establishment of the socialist system of public ownership in our country, and since the exploiters as a class have been eliminated, the ideological class struggle as part of the class struggle should no longer take the old form of large-scale struggle. Although a hot debate over many problems cannot be avoided in the future, all signs indicate a toning down rather than an escalation of the class struggle in the ideological field. But for a long time, many comrades have predicted that after the system of private ownership is eliminated, the ideologies of the exploiting classes will grow in strength and the class struggle in the ideological field will become sharper and sharper, thus clearing the way for a large-scale class struggle. This view is not in conformity with the basic materialist principle. Facts powerfully prove that if this idea is adopted and put into practice, it will certainly lead to the escalation of class struggle, providing careerists and conspirators with an opportunity to stage a comeback. As everyone knows, it was precisely this idea that once inspired Lin Biao and the "gang of four" to concoct an ultraleft line along with a reactionary formula "from democrats to capitalists." Their aim was to divide the people into various classes according to their "ideological standards," to condemn anyone with a slip of the tongue as "class enemy" and to bring catastrophe upon our country. Inspired by this painful lesson, we must do everything right in the future. No matter what happens in the days to come, we must never forget the basic materialist viewpoint that with the system of private ownership dying out and the system of public ownership gaining strength, class antagonism will certainly give ground to public interests and the class struggle in the ideological field will gradually be tapering off. Only by bearing this general trend in mind can we achieve a clarity of thought.

Second, we must distinguish the ideological system of the exploiting classes and its influence from the popular backward ideas. In real life, there are generally three forms of struggle, notably ideological class struggle between socialist workers, peasants and intellectuals on the one hand, and various class enemies on the other, struggle between the proletarian ideology and the influence of the ideology of the exploiting classes over the people, and struggle between the advanced and backward ideas among the people. These three forms of struggle are closely related and interconnected. For this reason, we must clearly define the three forms of struggle and adopt a different attitude toward the ideological struggle of different nature. Only in this way can we handle every problem properly. Facts show that if the three forms of struggle are not clearly defined, we may mistake the popular backward ideas for the ideological system of the exploiting classes or its influence and may lend credence to the proposal for the exercise of the "ideological dictatorship" over the people (whose damage to the nation has been well known to all), and to the argument that why can't we adopt the "left" logic to exercise the "dictatorship" over the followers of the ideological system of the exploiting classes which is aimed at protecting the interests of the class enemies and which is diametrically opposed to the proletarian ideological system? Nevertheless, it must be pointed out that when Lin Biao and the "gang of four" were in power, the real target of their so-called "ideological dictatorship" was not the ideological system of the exploiting classes but that of the proletariat. At present, we must strictly distinguish the ideological system of the exploiting classes and its influence from the backward ideas among the people and clearly declare that the ideological system of the exploiting classes has no chance to stage a comeback, although it still makes its influence felt among the people. As long as we can do this, careerists and conspirators will absolutely have no chance for exercising the "ideological dictatorship" over the people. Nor can they change the target of the "ideological dictatorship." We must attach great importance to this matter.

Another problem is that we must rapidly develop the productive forces in order to create a better material condition for triumphantly carrying out the class struggle in the ideological field. The existence of classes is determined by the development of production while the class struggle in the ideological field is a process that can be affected by the level of the development of productive forces. Over 20 years of practical experience tell us that the ideological struggle against class enemies will not triumph unless we give first priority to the development of productive forces instead of the ideological struggle, following the establishment of the system of public ownership in our country. It is a well-known fact that failure in production and the existence of poverty will provide class enemies with an opportunity to spread the ideologies of the exploiting classes and will induce some people to become new exploiters, and to break and violate the law; feudal superstition, autocratic ideas, bourgeois laissez-faire tendencies and extreme egoism will become widespread and will prevail over the proletarian ideology wherever production fails and the masses lose their sense of security in terms of economic well-being. Is this fact clear enough to all? Lenin said: socialism must demonstrate its superiority over capitalism by bringing greater labor productivity to the world. Stalin said: the aim of socialism is to eliminate poverty. Only by greatly increasing the labor productivity and by improving the material well-being of the masses can we induce more and more people to spontaneously follow the socialist road, uphold Marxism and prevent class enemies from preaching and spreading the ideologies of the exploiting classes. In short, efforts must be made to promote the modernization program with the aim of creating greater material wealth for the proletariat to take a giant step forward in defeating the ideological system of the exploiting classes and its influence on the people.

LEADERSHIP CHANGES TO TAKE PLACE IN GUANGDONG

HK240246 Hong Kong SOUTH CHINA MORNING POST in English 24 Oct 80 p 10

[Text] The incumbent governor of Guangdong, Mr Xi Zhongxun, and the mayor of Canton, Mr Yang Shangkun, will shortly be transferred to Peking to assume new responsibilities in the capital, it was reliably learned yesterday.

Both have been elected vice chairmen of the Standing Committee of the National People's Congress while 72-year-old Mr Yang is the Standing Committee's new secretary general.

There is as yet no official word on who their successors will be. However, there has been much speculation that Mr Xi will be succeeded in one of his concurrent post as provincial party first secretary by the incumbent party chief of Liaoning, Mr Ren Zhongyi.

Mr Ren may also hold Mr Xi's other concurrent post of first political commissar of the Canton Military Region while a government minister may be transferred to head the provincial government.

Mr Yang also holds other posts, including vice governorship of the province and first secretary of the Canton municipal party committee.

Although he is generally referred to as Canton mayor, the official title remains the chairman of the Canton Revolutionary Committee, a legacy of the Cultural Revolution.

The municipal people's congress has yet to be held and the municipal people's government remains to be organised, under which the new mayor will be named.

Preparations are also actively underway for the holding of provincial party congress when a reorganisation of the party committee is expected to take place.

Other similar meetings are expected to take place at the municipal, prefectural and county levels both for a restructuring of the party organisations at these levels and to elect delegates to the coming 12th national party congress later this year or early next year.

Earlier this year, there were talks of appointing the eldest son of Marshal Ye Jianying, 52-year-old Mr Ye Xuanping, either to be the Guangdong governor or the mayor of Canton. However, recent inquiries in the provincial capital indicated that a decision has yet to be made on the choice.

It is believed that Marshal Ye, who is a vice chairman of the party and chairman of the National People's Congress, has opposed his son's appointment.

Mr Ren is an experienced party and administrative official who spent most of his career in the northeast since the people's republic was founded. He was purged during the Cultural Revolution, and returned to his posts after the "gang of four" was arrested.

Together with Prime Minister Zhao Ziyang and senior vice premier Wan Li, Mr Ren played an important role in the ideological contest with the "whateverism" faction two years ago when he championed the concept that "practice is the sole criterion in examining truth." A battle that ended with the resounding defeat of the "whateverism" faction.

Mr Ren's appointment to preside over party matters in Guangdong indicates the importance the party centre places on the southern province.

Meanwhile, the Japanese JIJI Press reported that Wan Li, an agricultural expert, has taken over as the executive vice premier, a post once held by Vice Chairman Deng Xiaoping, and recently by Mr Zhao.

TRAIN OUTSTANDING YOUNG, MIDDLE-AGE CADRES

Nanjing XINHUA RIBAO in Chinese 13 Jul 80 p 1

[Article: "Vigorously Grasp the Work of Training Good Cadres"]

[Text] In order to confidently increase the level of education and professional knowledge among cadres, the [Jiangsu] Provincial Party Committee has decided that, starting this year, it will entrust to a number of institutions of higher learning the establishment of classes for cadres. These classes will specialize in training outstanding young and middle-age cadres. This will be an important measure in training and bringing up people of ability.

At present, one prominent question exists in our leading groups and cadre teams. That is, the educational level is on the low side and there are too few persons who possess professional knowledge. This is not suitable to the needs of modernized construction in socialism. If this type of situation is not changed, it will undoubtedly affect the course of the four modernizations and will adversely affect our cause.

"It takes 10 years to grow a tree, but 100 to rear a person." With regard to the strategic question concerning the training of cadres--a question which has bearing upon the overall situation of the four modernizations--we comrade leaders at all levels must possess vision, act decisively, and grasp things early and quickly. Only if we work hard from the beginning will we be able to quickly develop people of ability. During the 1950's, several of our cadres were selected to be sent to institutions of higher learning for advanced study. Now they are all considered expert leaders on all fronts. This is a successful experience. We should proceed from the overall situation, with an eye to the future, and be willing to send our outstanding middle-age and young cadres for study.

If we wish to carry out the training of cadres, party committees at all levels should earnestly strengthen their leadership and conduct overall planning. Aside from support for in-service study, we must also adopt all types of ways to fully utilize educational fronts presently in existence, such as planned organization of cadres going to party schools on all levels, cadre training schools, all types of middle-level vocational schools, all types of part-time universities, correspondence schools, and college TV to engage in study. We must adopt effective measures to bring about a new upsurge of cadre training on a large scale and allow everyone to study diligently so as to help the four modernizations and advance toward scientific education. We firmly believe that within a few years, through the joint efforts of the entire party, the scientific educational levels of the vast number of cadres will have shown a significant increase and the situation of the cadres will have changed greatly.

PARTY AND STATE

NINE JIANGSU INSTITUTES GIVEN TASK OF TRAINING CADRES

Nanjing XINHUA RIBAO in Chinese 13 Jul 80 p 1

[Article: "Train Oustanding Young and Middle-Aged Cadres"]

[Text] Beginning this year, the Provincial Party Committee has entrusted to Nanjing University, the Nanjing Industrial Institute, the Nanjing Chemical Industry Institute, the Suzhou Silk Industry Institute, the Yangzhou Industrial Training School, the Zhenjiang Agricultural Machinery Institute, the Huadong Water Conservation Institute, the Nanjing Agriculture Institute, and the Jiangsu Agriculture Institute--the above nine institutions of higher learning--the task of setting up classes for cadres. The purpose of the classes is to conduct comparatively systematic professional training for a number of young and middle-age cadres and to raise their educational level. These cadre classes will be run continuously in the future according to plan.

The fields to be offered by the nine institutions of higher learning are: economic management, radio technology, chemical engineering, textiles (silk cloth), industrial management, machinery manufacturing, agricultural machinery management, water conservation, agricultural economics, agriculture, and other subjects. A total of 300 students have been enrolled.

The concerned institutions of higher learning all enthusiastically support the Provincial Party Committee's entrusting them with the task of running these classes. They feel that these classes will meet the needs of the four modernizations and will be an important strategic measure in reforming the makeup of cadres, and they have indicated that they are resolved to do a good job. Leading cadres from higher institutions of learning have had personal discussions with responsible leaders from the educational administration, logistics departments, and concerned teaching and research sections and have conducted a specific study of ways to implement the above program. Under the promise of not affecting the nation's enrollment plans, they have enthusiastically tapped latent potential, overcome the problems of finding qualified teachers, dormitories, and other difficulties, and have made preparations so that the classes for the second half of the year may start on time. Concerning the problem of how to adopt teaching plans to the special needs of the cadres, comrades from the provincial education bureau and higher institutions have repeatedly conducted studies and have decided, through mutual consultation, that in setting up specialized fields of training and in planning the content of instruction, importance must be attached to the management aspects of specialized fields, doing all that is possible to strengthen adaptability and to widen the range of knowledge. The Nanjing Chemical Industry Institute, in order to improve teaching of cadre classes, has specially interviewed several older comrades who previously enrolled in the above-mentioned schools as cadre students during the 1950's, and has sought their opinions concerning the raising of the quality of education. In view of the fact that the cadres had been away from a learning environment for a long period and were rusty in math, physics and chemistry, all of the concerned institutions prepared, after school began, to first have tutoring in basic courses available, or to combine it with professional education. They adopted a method of starting at a low level and progressing slowly with a longer period of time in order to solve this contradiction. At present, Nanjing University, the Nanjing Industrial Institute, and the Zhenjiang Agricultural Machinery Institute have already formulated teaching plans. The remaining institutions are now in the process of working out their plans. Concerning the students' management work, some schools are preparing to provide full-time assistants and the necessary administrative cadres in order to reduce the administrative work of students in the cadre classes. At present, the preparatory work of starting cadre classes in schools is already more or less completed.

In choosing the students for study in higher institutions, the Provincial Party Committee required that all students must have a correct ideological and political line, be honest and upright in their ways, be full of vigor, be willing to study intensively, have practical experience and organizational ability, be under the age of 40, be in good health, and be a high school graduate or have an equivalent educational level. All local and municipal party committees and provincial party units are attaching great importance to the selection of students, and they have all organized special strengths, supported the terms, and painstakingly chosen students. In addition, they have selected two students for every opening and have submitted a student list to higher authorities. The great majority of students who were chosen are responsible personnel from communes and basic-level factories and mines. Some are key leaders from organizations above the county level, and their average age is around 35.

In the first part of August, the province will assign Nanjing, Suzhou, and four other areas as testing districts, in order to carry out educational testing. Afterward, excellent students will be chosen for enrollment, based on political, educational and other considerations. Presently, all areas are in the process of organizing students to review and prepare for tests. Nanjing, Suzhou, Changzhou, Yangzhou, and other localities and municipalities are also inviting experienced middle school teachers to coach these students.

LEFTIST INFLUENCE ON LITERATURE, ART ATTACKED

Wuhan CHANGJIANG WENYI [CHANGJIANG LITERATURE AND ART] in Chinese No 7, 25 Jul 80 pp 9-11

[Article by Tang Ming [0781 2494]: "Literature and Art Must Not Be Restricted by Leftist Interference"]

[Text] During the last 3 years, in literary and artistic creations, we have made breakthroughs in numerous prohibited areas and many excellent pieces have appeared which have been enthusiastically welcomed by the masses. This type of vitality in the literary and artistic world is becoming brisker by the day and is unprecedented since liberation. Yet, in the last 3 years the promotion of a thriving literature and art to serve the people and to serve socialism has often been ignored. The policy of letting a hundred flowers blossom and a hundred schools of thought contend has often been censured and in its implementation it has met with a good deal of resistance. This is a problem worthy of our study and attention.

Resistance to our advances comes mainly from the leftists. Because the literary and art world had been under the poison of ultraleftist ideology for a long time, prohibited areas became numerous for creations, and in criticism, the enemy and ourselves were not separated. This caused many people to become accustomed to handling problems in literature and art according to the will of senior officials and administrative orders. These long time ultraleftist influences can be said to be very deep and firm and even after several sessions of criticism they cannot by any means be eliminated. A very small minority of remaining "gang of four" forces, as always taking pleasure in the misfortunes of others, keep a close watch on trends in the literary and art world. They do not hope for the flourishing of creations in literature and art but wait for us to make mistakes and have flaws and long for the complete failure of the double-hundred policy so as to prove that they are correct. Then, they will be able to restore prohibited areas and order people about. These conditions further explain that the ultraleftist poison cannot be underestimated in the literary and art world.

These interferences coming from the left are sharply revealed in the separation or the tendency in literature and art to serve the people and serve socialism from the double hundred policy. On the one hand, this disregards and negates the socialist direction of literature and art. On the other hand, it also isolates the double-hundred policy and misrepresents it as a thing that is classless, without ideological and political inclinations and that can be used by all classes. It is an extremely unsafe policy and if we are not careful it can lean toward the capitalist class. Because of this, they use various excuses to personally interfere:

For example, the four basic principles are the basic standpoint we have maintained over a long period of time. Yet, there are still people who oppose it to the double-hundred policy and say such things as "now we talk of the four upholds, we are unable to 'let go' again so we should 'accept'." In a discussion of "accepting," the voices censuring the double-hundred policy will be very loud.

There is also the view of commanding the double-hundred policy by "fostering proletarian ideology and eliminating bourgeois ideology" and raising "the struggle to continually pay attention to utilizing this policy to develop 'the fostering of proletarian ideology and the elimination of bourgeois ideology'" and only in this way "can we not lose direction when implementing the double-hundred policy." Whether or not the "fostering of proletarian ideology and the elimination of bourgeois ideology" can replace the socialist direction of literature and art is a question that needs continued discussion and study. Here, we should explain that firstly, literature and art have class character and also possesses its own special characteristics and patterns. This is reflected in the special characteristics and patterns of the creative works, which existed and developed long before the appearance of the capitalist and proletarian classes. After the dying out of classes in the future, as long as there is literature and art, they will still exist. This explains that there is a difference between the class nature of socialist literature and art and its own special characteristics and patterns. In the same way, the struggle between the proletarian and capitalist classes cannot be the same as the question of right and wrong of literature and art itself. The former cannot replace the function of the latter. Secondly, although the controversies and the disputes of the literature and art field includes the struggle of the two classes, yet it is not its total content. If the questions of form, style and schools could be freely discussed and freely compete all would be the site of "endless" class struggle and be completely brought into the proletarian struggle against the capitalist class. That is actually equivalent to abolishing free discussion and contention. Thirdly, when one part has mistakes, and goes so far as to be a seriously flawed work, if the reason arises from the author's understanding, it cannot be viewed as a manifestation of class struggle and it is not beneficial to use class struggle to handle it. It is necessary to put an end to the former malpractice of using class struggle to handle literature and art problems. It has been practically proven that that type of method can never deal heavy blows to the capitalist class or can never deal blows to it at all, but can only wrongly drag out ones own comrades to be ruthlessly criticized and struggled against, and lower the stick so that many will be "destroyed." Therefore, in bringing forth this problem, I feel that if the "using of the class struggle as the guiding principle" is continued, the double-hundred policy will exist in name only.

Another view is that we must think of implementing the double-hundred policy by "placing the task before us" and "drawing a clear boundary line with bourgeois liberalization." Our socialist literature and art must naturally clearly distinguished from bourgeois liberalization. The problem is that in the present situation in literature and art of "placing the task before us" we must clearly define what belongs to bourgeois liberalization or else who will do the demarcating! ["HUA" 0553--"transformation"] is change which shows a certain quantity of something transforming into a certain type of quality. Does the present literary and artistic world already have a certain quantity or "transformation" forming capitalist class things? If it does, we must certainly distinguish it clearly and if we cannot find these "transforming" things, should this policy be implemented? In view of the numerous past criticisms of bourgeois liberalization by the literary and art world and the nonexistence of authors and works with who suffer from the corrosive and degenerative influence of the capitalist class, the bitter lessons of those who "transformed" to the side of the capitalist class by means of a rod cannot be forgotten. Because of this, we should use reality as the starting point and seek truth from the facts on this question of demarcation. We cannot draw circles out of thin air and obstruct the pace of advance.

The ideological feeling of a small minority of works that have appeared are not sound enough and their sentiment is gloomy. They even go as far as to depict the vulgar and the effect on society is naturally bad. We should conscientiously deal with the problems that exist in these works, use the double-hundred policy to handle them correctly; using the method of free discussions and contention, carry out analysis, criticism and assistance and give them enthusiastic guidance. If the result of people criticizing certain works is bad, this is completely correct. Workers in literature and art should use a high sense of responsibility to seriously and conscientiously consider the effects of their own works on society and try harder to offer the best spiritual food to the people. Yet, there are people who grasp a hold on certain questions and do not let go to the point of exaggerating, seeing the nonessentials as the essentials and the part as the whole. Certain unstable factors and crimes in society are also blamed on literature and art to the point of considering them to be disastrous effects created by the implementation of the double-hundred policy. This type of behavior is obviously wrong.

Some comrades are full of worries about the double-hundred policy, are apprehensive about opening the flood gates and not being able to draw in, fear the appearance of differing views, fear they might make wrong comments and fear coming out with bad works. Because of this, they suggested that we enlarge the insurance coefficient of works, require works to take praise as their main principle and to only write about new people, new matters and new practices, and even make praise or exposure as the criteria for accepting or rejecting a work. They took a negative attitude toward works that touched upon negative and gloomy aspects. This type of mental condition of fearing this and fearing that is also not advantageous to the implementation of the double-hundred policy.

There are also some people who feel that the double-hundred policy is unreliable and not trustworthy. As a result, they often pay attention to the direction of the wind, try to find out the climate, try to find out leadership intentions, chime in and curry favor, turn their boats according to the wind and cast aside formal decisions of the Party Central Committee and do things based on hearsay. They sometimes want to "let go" and sometimes want to "accept." They can even praise as good the same work but as soon as events change they let out with a flood of curses. This type of vacillating, unsteady and changeable behavior is really a bit like the actions of many opportunistic scholars. In this type of troubled situation where hearsay has a market, some people often grasp a few words to suit their own intentions and add inflamatory details, exaggerate their works and indulge in unbridled propaganda so as to disturb and confuse the public. They even stir up trouble and create a "little climate." This kind of evil work style runs totally counter to the party's ideological line and also shows a lack of faith in the party's direction and policies.

The lack of understanding, inadequate faith and opposing behavior towards the double-hundred policy mentioned above has these common points: to negate the double-hundred policy is to resolutely adhere to serving the people and to serving socialism but not to see this policy as a firm class policy of the proletariat, a basic long-term policy to develop the socialist literature and art, and a scientific policy that is formulated according to the law of the unity of opposites. The dialectical materialist world view first and foremost demands that we see the objective world as a material world that constantly develops through the movement of self-contradiction. Our methodology then is to use this type of world view to observe things, analyze problems and guide work. The law of the unity of opposites is the essence and core of dialectical materialism and is also the powerful ideological weapon used by the proletariat for understanding the world and transforming the world. The double-hundred policy is the concrete application of this basic law to ideology and culture. Because new and old, correct and wrong all have the relationship of unity of opposites, they depend on each other for existence, exist through comparison with each other and develop through mutual struggle. Any correct thing always develops by struggling with a wrong thing. Marxism also develops by struggling with non-Marxism and anti-Marxism. Moreover, only after struggle can a thing develop. It is just as Comrade Mao Zedong said: "This type of struggle can never be finished. This is the law of the development of truth and naturally is the law of the development of Marxism." Because of this, the double-hundred policy is essentially the struggle of developing opposites and is a policy that helps objects to move in a direction that benefits socialism. If we fear exposing contradictions and fear struggling with wrong and negative things, this is also equivalent to stripping the double-hundred policy of its essence. This is not helping contradictions to transform themselves through struggle for the benefit of socialism, but retareating in defeat in the face of wrong and antagonistic things, compromising and getting along, and allowing them to spread unchecked. The problem is that some people use this type of compromising attitude of evading the struggle of contradictions to censure the double-hundred policy. Isn't such "letting off" and giving the green light to wrong things completely ridiculous?

Wrong and even opposite things exist objectively and since they exist, they seek an opportunity to manifest themselves. In the process of implementing the double-hundred policy, letting out many wrong things should be viewed as a normal phenomenon. It is not a problem for us to fear but of how to more conscientiously apply the double-hundred policy, to firmly grasp the driving power of the struggle and to enthusiastically and effectively struggle with them. This demands that, on the one hand, we let go. Resolutely letting go includes letting go of certain wrong things. On the other hand, it demands that we struggle, and resolute struggle naturally requires struggle with those wrong, harmful things. If we only let go and don't struggle we will certainly help wrong things to spread unchecked and bring about the danger of bourgeois liberalization. By both letting go and struggling and enthusiastically guiding the great masses to participate in this type of struggle we bring the people into contact with the wrong and negative things. By having discussion and criticism, recognizing their nature and harm, and undergoing training, we can raise ideological consciousness and strengthen immunity to these wrong and negative things. This is effectively transforming disadvantages into advantages and is the dialectical method of the mutual relationship of the correct and wrong. Furthermore, by implementing the double-hundred policy, enthusiastically supporting the growth of new objects and weakening and speeding up the elimination of old objects, we constantly develop and expand the strength of socialism and strengthen and consolidate the leading position of Marxism in the areas of ideology and culture. This causes the proletariat to vanquish the capitalist class and the thinking of all exploiting classes in the realm of ideology. At the same time, this will necessarily greatly advance the flourishing of socialist literature and art, further help the broad masses of literary and art workers to establish the Marxist world outlook and completely arouse our enthusiasm and creativity to serve the people and serve socialism.

The ideological and political line of the Party Central Committee is firm and unshakable and its determination to implement the double-hundred policy is unswerving. At present, it can be said that the outcome is a foregone conclusion and each of our literary and art figures must believe in the party line and the resolution of the Central Committee, uphold the four basic principles, eliminate misgivings and follow the party's direction and policies on literature and art so as to quickly forge ahead. Because we necessarily will encounter new problems, new difficulties, interference and obstruction when forging ahead, we should be completely prepared mentally and must face up to the test of struggle. Yet, no matter how much difficulty and how many setbacks we encounter, under no circumstances can we retreat one step. Because we use fighting troops armed with Marxism and Mao Zedong thought we should clearly place ourselves in an offensive position and enthusiastically praise new people and new things that benefit socialism, benefit the people and benefit the four modernizations. We must also dare to criticize those old things, bureaucracy, the "special privilege" mentality, anarchism, extreme egoism and all things that run counter to socialism. We should have the courage to touch on the dark and negative side of real life and we have the power to force them to change for the good and transform the negative elements into positive elements. This accords with the interests of the party and the people and is loyal to socialist work. It is also where the force of revolutionary literature and art propelling socialist history forward lies.

The double-hundred policy reflects the world view and methodology of the proletariat and we should earnestly study and consciously increase our use of it. Its socialist orientation is firm and unshakable and its fighting power cannot be discredited. By penetrating through the shortsighted ridicule and the various accusations imposed on the double-hundred policy, we can see its strong vitality. It is just like a gentle breeze and mild rain urging on spring and urging fresh flowers to compete in a riot of colors throughout the vast lands of the motherland.

BRIEFS

GUANGXI MINORITY NATIONALITY CADRES--Guangxi region now has some 170,000 minority nationality cadres, 5.8 times more than in the preliminary period of liberation. Of these, some 18,000 have been promoted to leadership posts at all levels, accounting for 24.7 percent of the number of cadres at the same level. Some 52.4 percent of the secretaries of 32 county and municipal CCP committees are minority nationality cadres. [Nanning Guangxi Regional Service in Mandarin 1130 GMT 5 Oct 80 HK]

ZHUHAI PUBLIC TRIAL--The Zhuhai Municipal Intermediate People's Court held a public trial on 6 October and sentenced (Zhang Xuxian) of the Zhuhai Municipal Aquatic Products Purchase and Supply Company to life imprisonment for practicing corruption. (Zhang) had obtained 220,000 yuan by deception during his service in the Aquatic Products Purchase and Supply Company as a cashier. [Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 7 Oct 80 HK]

GUANGXI CHEMICAL INDUSTRY--Between January and August this year, the Guangxi chemical industrial front fulfilled 74.92 percent of the chemical industry quota for 1980 and earned profits of 13.36 million yuan. [Nanning Guangxi Regional Service in Mandarin 1130 GMT 3 Oct 80 HK]

SHANGHAI TEA PARTY--Shanghai, 17 Oct (XINHUA)--The double ninth festival--the 9th day of the 9th lunar month in China--falls on 17 October. On this day, more than 30 former Kuomintang military and government personnel in Shanghai as well as Taiwain Kuomintang military and government personnel's relatives in Shanghai happily came to the Shanghai mansion (formerly known as the broadway mansion) by the Huangpujiang River and held the double ninth festival tea party. The tea party was presided over by Zhao Zukang, Shanghai municipal vice mayor, chairman of the Shanghai municipal committee of the Kuomintang Revolutionary Committee and former acting Shanghai mayor of the Kuomintang. Zhang Xiuqing, sister of Zhang Qiyan, member of the Taiwan Kuomintang Central Committee Standing Committee, and Sun Mingjiu, councillor of the Shanghai municipal people's government office of councillor and former garrison battalion commander under General Zhang Xueliang, spoke. [Beijing XINHUA Domestic Service in Chinese 1705 GMT 17 Oct 80 OW]

XIZANG VISITING DELEGATION--After attending the national day celebrations in Beijing and visiting various parts of northeast China, a 44-member delegation formed by minority nationalities in Xizang Autonomous Region arrived in Nanjing Municipality on 15 October by train. Returning on the same train was the national minority delegation of Jiangsu Province to the national day celebrations in Beijing. The delegation from Xizang will also visit Changzhou, Wuxi and Yangzhou cities. The delegation's visit will definitely play an effective role in strengthening the unity among various nationalities, promoting the friendship between the people of Xizang and Jiangsu, and exchanging experience on industrial and agricultural production. 'BA YI RADIO' URGES ZHANG AIPING TO OPPOSE 'ERRONEOUS LINE'

OW190515 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 18 Oct 80

[Text] It was quite unusual that Comrade Xu Xiangqian was relieved from his vice premiership. In the past, our country's defense minister was also a vice premier. Serving concurrently as vice premier, a defense minister possessed great power. Why was Xu Xiangqian relieved from his post as vice premier and his power reduced? A large number of commanders and fighters in our army have raised different opinions over this question.

Although Comrade Zhang Aiping has been appointed vice premier, he has yet to independently handle any question related to his position and exercise his power as a vice premier. Comrade Deng Xiaoping has resigned from his vice premiership and retained only the position of vice chairman of the party, but his patriarchal style has remained unchanged, continuing to exert pressure on the army and the government and repeatedly interfering with Vice Premier Zhang Aiping's work. Undoubtedly, Deng Xiaoping's actions are aimed at undermining the position of the army leaders, weakening their power and obstructing their participation in discussion and deciding on important national political and economic questions.

Comrade Deng Xiaoping's assertion that the army should return to the barracks and engage only in military training and should not interfere in political and economic affairs is completely erroneous. His criticism of the army's interference in party and government work during the Cultural Revolution is also unfair. The army's involvement with the Cultural Revolution and its interference in the party and government was carried out in accordance with the instruction from the chairman of the Military Commission of the CCP Central Committee. Therefore, the responsibility should rest upon the "great commander" and should not be diverted to cadres at all levels in the army. It is absolutely impermissible to take revenge on the army leaders and corrupt their prestige in order to give vent to personal spite.

As the people's public servants, representatives of the army have the right to present their opinions on party and government work and safeguard the people's interests. Particularly senior leading comrades assuming important posts should be given the opportunity to take part in studying and solving important national political and economic questions. We earnestly hope that as a vice premier, Comrade Zhang Aiping will actively and firmly exercise his power and use his position in the party and the army in order to serve our party, our army and the people of our motherland.

All the army commanders and fighters firmly believe that with his qualifications, service record, ability and moral character, Comrade Zhang Aiping will be fully competent in his job as vice premier. The whole party, the whole army and the people of the whole country still clearly remember that Comrade Zhang Aiping was an old comrade in arms of Comrade Peng Dehuai. During the 1959 Lushan conference, Comrade Zhang Aiping, together with Comrades Zhang Wentian, Huang Kecheng and (Zhu Shouzhou), resolutely supported Chief of General Staff Peng's heroic struggle against the erroneous line. The whole party, whole army and people of the whole country highly evaluated Comrade Zhang Aiping's daring spirit in disregarding his personal safety and detested the "gang of four" and (?their followers) who had persecuted Comrade Zhang Aiping for a long time because of his daring spirit.

Now the people hope that Comrade Zhang Aiping will inherit and carry forward the heroic spirit of Chief of General Staff Peng in daring to safeguard the people's freedom and the vital interests of the country and people. It is hoped that Comrade Zhang Aiping will live up to the expectation, trust and support of the whole party, whole army and people of the whole country and, following the example of esteemed and beloved Chief of General Staff Peng, dare to wage a tit for tat struggle against erroneous lines and policies. We must bear in mind a motto of Comrade Peng Dehuai: If one is afraid to die, he should not become a communist. Even a person (?as old as I am) should dare to make criticism.

MILITARY AND PUBLIC SECURITY

'BA YI RADIO'COMMENTS ON OUTDATED MILITARY EQUIPMENT

OW210354 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 20 Oct 80

[Text] Judging from a study and discussion of the documents of the third session of the NPC, there is a more democratic atmosphere within the PLA than there used to be. Aside from paraphrasing such stereotyped words as "support," "endorse," etc., many comrades dared to express disapproval or to sharply criticize the documents. A majority of comrades held that the policy of reducing army manpower resources and concentrating all financial and manpower resources on improving military equipment and on studying and manufacturing new weapons with a reduced military budget of 2.94 billion yuan is feasible. Quite a few comrades, especially PLA leading comrades, held that Vice Chairman Deng's call for shifting the focus of our work henceforth to economic construction is above criticism but that we should by no means relax our efforts to modernize the army and national defense.

There is still a long way to go before our army can reach modernization. The month-long Sino-Vietnamese war proves that our country's weaponry and equipment cannot basically meet the demands of modern warfare. As we enter the 1980's today, an overwhelming majority of our troops is still using the 1956 submachineguns, 1958 semiautomatic rifles and light machineguns, 1957 heavy machineguns and 1969 antitank rocket launchers. During the war with Vietnam, some troops even used the 1956 bazookas. A small number of troops is even equipped with the already outmoded 1071mm rocket guns [as heard] and ground-to-ground guided missiles. There is only a limited number of the imported Sidewinder guided missiles and [word indistinct] guided rockets, which can only be used in military training and cannot meet the demands of an actual war.

A certain person in the (?central authorities) has fervently advocated importing modern weaponry and equipment. However, some comrades, in particular leading comrades of the PLA air force and 2d artillery units, have pointed out that it will be impossible to use the new policy on army building to modernize the PLA in the near future. No matter how much modern weaponry and technology we import from foreign countries, we still cannot solve the problem fundamentally. In light of our past experiences, the most urgent task now is to train military cadres to be proficient in their specialized fields and to raise the cultural standards of the commanders and fighters in general. This is the correct viewpoint.

The conscription system, which has been started this year to enlist mainly urban young people, still cannot solve the problem, because, first of all, at the cultural level of a primary or secondary school graduate, most urban young people are incapable of mastering modern [word indistinct] and military training and, secondly, a large number of urban young people have been deprived of schooling and have been unemployed since they became teenagers, which has naturally affected their thinking and style. In view of these two reasons, urban youth are not necessarily better than country youth.

Therefore, in modernizing the PLA, we should not import advanced weaponry and equipment and electronic technology, as advocated by the certain person, but should first train the PLA commanders and fighters with the culture and professional skills needed for studying modern technology. However, according to the new education budget, the per capita education expenditure is merely 2.7 yuan, the lowest figure among all the countries in the world. Next year, the institutes of higher learning in the country will accept only 270,000 students, the same as last year. May we ask where military cadres with professional knowledge are going to come from? The military academies in our country can only satisfy 30 percent of the military technical cadres needed for the next decade. Even if in the next decade, from now on till that certain person dies, we import a large quantity of the most advanced radar and radio equipment and electronic military technology, will we have sufficient proficient technical cadres to operate these weapons and effectively use them in an actual war? Therefore, we should give the question of modernizing the PLA further thought and discuss it later. We should set up a special committee in which cadres from all circles would participate to carefully study and formulate an effective and feasible plan. For this reason, (?no matter who has brought up) the new policy on army building, it should be revised and corrected.

CONTENTION OF DIFFERENT SCHOOLS OF THOUGHT DISCUSSED

Anhui ANHUI WENXUE [ANHUI LITERATURE] in Chinese No 4, 1980 pp 74-76

[Article by Lin Hanbiao [2651 3211 5903]: "How to Protest"]

[Text] In an article on the topic "Speaking of 'How to Let A Hundred Schools of Thought Contend'" by Comrade Liu Jin [0495 6855] carried in WEN HUI BAO 26 February, it was mentioned: "How do a hundred schools of thought contend? It is not necessary to be perplexed or to question it. Just go all out and feel relieved to contend and to speak out." This is a very good idea.

However, even though the reason is obvious, and we have drawn benefits from the practice of letting a hundred schools of thought contend, yet it is not to say that the issue of "how to let a hundred schools of thought contend" will go off without a hitch, or it will no longer be perplexing, or it should not be questioned further. The real situation is: The atmosphere of letting a hundred schools of thought contend has yet to be shaped, and it needs protection from all of us. To go all out without any inhibitions or to feel relieved to air or to contend one's thoughts is an ideal which has not been totally realized at present.

In order to implement the principle of letting a hundred schools of thought contend, it is indeed necessary to further expel the interferences from both the "left" and the right.

It is absolutely not a "commonplace" to speak in this way.

Let's first refer to the interference from the right since we are always anti-right.

We do not intend to discuss the so-called "to speak out" which the hostile elements utilized to do damages to the four fundamental principles because it does not fall under the category of "letting a hundred schools of thought contend." Basically they are not entitled to be called a "school." The words and deeds of the hostile elements have only to be banned. This is another issue which may be studied separately. The interference from the right which is mentioned here is mainly directed at the rightist manifestation and interference in ideological lines. I understand that either the "left" or the right are that of the political or ideological lines. At present, what is the rightist manifestation which prevents a hundred schools of thought from contending?

I think the principal manifestation lies in the fact that the remaining organizational and ideological capacities of the "gang of four" have been somewhat underestimated, and that some of our comrades lack Marxist vigilance toward the organizational and ideological remnants of the "gang of four," which pretends to be a "school" to abruptly contend with others. To a certain extent, some of our comrades are soft or have a rightist sentiment regarding them. In letting a hundred schools of thought contend, some of our comrades are indifferent to struggles among the ideological lines, or they do not enthusiastically support straight pointing out of the essence of the divergence of ideological lines and contention for speaking out their opinions in order to bring about a settlement of the issues which involve ideological lines (for instance, the problem of the attitude toward the principles adopted by the Third Plenary Session of the 11th Party Central Committee). It is intended to attenuate problems with regard to the nature of ideological lines by terming it so-called "protecting the thought of a school" to relax the struggle against the organizational and ideological remnants of the "gang of four." It is a rightist sentiment not to completely smash the counterrevolutionary ideological system (including the counterrevolutionary ideological system of literature and art) of the "gang of four." Such a kind of rightist sentiment has protected the counterrevolutionary ultra-left ideological system of Lin Biao and the "gang of four," and has let off a thorough remolding of the remaining organizational and ideological capacities of Lin Biao and the "gang of four." The movement to ferret out the factionalist setup of Lin Biao and the "gang of four" has been successfully carried out. Many people who have committed errors have been corrected and redeemed. Comrades who have shown real signs of repentance are, in accordance with our policies, allowed to correct their mistakes and to perform meritorious services to atone for their crimes in implementing the "four modernizations." However, it is absolutely not permissible to unilaterally think that the organizational and ideological remnants of Lin Biao and the "gang of four" no longer have any capacity or that their counterrevolutionary ideological system has already been totally smashed. If the capacity of these remnants is underestimated, a mistake is sure to be made. This is exactly a rightist manifestation. Remnants of this kind should not be regarded as a "school." Their "contending" by launching attacks and mud-slingings on the achievements of our efforts in bringing order out of chaos over the past three years should not be "protected" as "the thought of a school." It is allowing them to do damage to socialism and to the very good situation of stability and unity if such a "thought of a shcool" is "protected." In the world of literature and art, isn't it true that there are still individual remnants of the "gang of four" who confuse truth and falsehood in ideological lines in the name of "contending," or even reverse verdicts? Isn't it true that there are still individuals who raise shouts such as "I do not quite understand whether you are in favor of revisionism at present," or "you are a national literary prostitute?" On this, is it possible that we do not differentiate right from wrong, or that we become soft on them and deviate toward the right?

We now turn to the interference from the ultra-left.

Generally speaking, the interference from the ultra-left is the fear of voicing different views. Fear of voicing different views is to say that there is fear of problems coming out. The time when the people were not allowed to speak out has gone forever. At present, the problems of some comrades in interpreting and treating the issue of letting a hundred schools of thought contend lie in the fact that they do not keep the stand of the proletarian class, or do not keep in line with the Marxist discourse of Comrade Mao Zedong regarding the principle of "dual hundred," but keep the stand of the petty bourgeoisie which is vacillating, advocating one thing today and another tomorrow, looking forwards and backwards, sometimes left and sometimes right, worrying about gains and losses. They may at once jump from the right to the ultra-left, or from their unconcern about struggles among ideological lines in contending for speaking out different opinions to "all views aired must come out from the right." They advocate "limited voicing" or that contending for speaking out different opinions should be relaxed one moment and brought to an end the next," etc, because they refrain from doing something necessary for fear of a slight risk. The fear of voicing different opinions is the professed love of what one really fears. One is anxious when no opinion is aired, but wants to "stop" it when different opinions come out. "To relax at one time and to stop the next" is to distort the principle of the "dual hundred," and, therefore, how can different views be aired or contended? The mistakes of these comrades lie in the fact that they always subjectively, oversensitively, or mistakenly estimate the situation, make groundless accusations, and fail to believe in the leadership of the party and the strength of Marxism. Someone says that the Third Plenary Session of the 11th Party Central Committee is for a "relaxation" and the four principles are for a "stop." This is a total distortion! The four principles asked in the first place for adherence to socialism. Isn't adhering to socialism a "stop?" Isn't it true that we are utilizing "stop" to adhere to socialism? This is indeed sheer nonsense of the ultra-left. It is totally incorrect to advance the interpretation that the principles of the party are unstable by saying that they switch all of a sudden from the "left" to the "right," or from "relaxation" to "stop." This is to force the wavering ideology of the petty boureoisie on the principles of the party, and basically this is a dangerous ultra-left ideological tend. Failure to resist the ultra-left interference of this kind will lead letting a hundred schools of thought contend to stagnation at a point of "how to contend." The source of the fear of speaking out different opinions rests with the narrow mind, the wavering, and the "left-wing" infantile disorder of the small producers, and among them is the pernicious influence of the feudal fascism of Lin Biao and the "gang of four."

Only in a struggle to uninterruptedly expel the interferences from both the "left" and the right can we go all out and feel relieved to carry out a real contending and a real voicing.

Letting a hundred schools of thought contend which we uphold is now in the ascendant. It is still necessary to raise it to a corresponding scientific level and to a condition where democracy can be fully developed. In the history of our motherland, there were splendid times such as the period from pre-Qin times to the early years of the Han Dynasty during which the various schools of thought and their exponents were prevalent, and other periods such as the one immediately following the "May Fourth Movement" during which the various schools of thought emerged. Among these schools, there were indeed incompetent ones. However, each of the schools cared about its own scientific level, and those who had high aspirations tried untiringly to found thought of their own until demise in contending with others. Nowadays, the various schools themselves are very humble, and thus they always use self-depreciatory expressions such as "do not regard it as the thought of a school." Humility, of course, is a virtue, but it is absolutely not advisable to be always satisfied with mediocre theory. We must raise both the level of Marxism-Leninism and the level of professional theory of our own. We must set up high aims and lofty aspirations to become an out and out school in contending with others. At meetings, one is sure to say that it is always harping on the same "old tune." He depends on the reputation he built up decades ago for support. He is not eager to make progress, but tends to please the public with claptrap. This is far removed from letting a hundred schools of thought contend. Practice as the sole criterion for testing truth must be used to measure what is speaking out by oneself and to raise the level of what has been said. To fully develop democracy is to say that on the one hand, one has to speak out freely without any inhibitions, to speak in a rational and convincing way, and to seek truth from facts, and on the other hand, it is necessary to carefully listen to different opinions from different schools, to learn from others' strong points in order to abandon one's own weak points, to respect different schools of thought, to carefully avoid envy at the achievements of others, and not to foster evil trends. To develop democracy is to develop a socialist democracy which in the first place needs to follow thenew morality of socialism. To lay emphasis on this point is necessary because in the past few years the pernicious influence of the "gang of four" has not yet been cleared away. Someone who has been profoundly indoctrinated speaks only on the basis of his own individual democracy in contending with others without respecting their democratic rights. Some even give themselves the airs of heroes by hurling insults at others. Is there the least bit of socialist morality in it? Can this be termed letting a hundred schools of thought contend? There are still other evil trends in which they use dirty tricks to start a rumor behind others' backs, to attack others in person, or to incriminate somebody politically. It is important to combat bludgeoning, framing a case against somebody, or seizing on somebody's mistakes or shortcomings, yet it is also necessary to add the following: Be resolute to expose and to puncture hooliganism, which is one of the manifestations of anarchism in letting a hundred schools of thought contend! It can be illustrated by only a few examples: There are people who never speak or write, nor are they courageous enough to participate in a debate, yet they are inclined to hide themselves in dark corners to attack contending for voicing different opinions. They even look upon others as "Khrushchev" and blame others "not on good terms with the aged every day" in a purely fictitious way in order to put others to rout; also, there are people who are unable to come up with any convincing argument. As a result, they fly into a rage out of shame, engage in little tricks, spread fantastic fabrications based on hearsay, make oblique accusations, foment discord, or even face others with drowning brows and angry eyes, or pick a quarrel to make trouble and claim that they will "retaliate." In order to protect letting a hundred schools of thought contend, it is necessary to expose and criticize such hooliganism! So far as I know, some of the people among them were the most effective writers in the years the "gang of four" was in power. They go all out to act indecently and interfere with letting a hundred schools of thought contend because they do not resign themselves to the loss of their "heaven." They want to wage a class retaliation. Therefore, this is not a fear of voicing different opinions, but a tactic which resembles theone employed by the rogues in the old society to pack bullets in envelopes for threatening others. Then, which vocabulary can best be used to describe it? I recall the "bat for deflating arrogance" as depicted in "All Men Are Brothers" and tentatively call it "killing the voice!"

NEI MONGGOL CONVENES DISCUSSION ON TEACHER SHORTAGE

SK241100 Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 22 Oct 80

[Text] According to our reporter (Wu Xiannian) and NEI MONGGOL RIBAO reporter (Liu Shanhua), the autonomous regional leading departments concerned and responsible persons from various higher educational institutions recently held a forum to earnestly and painstakingly analyze and discuss the current teacher shortage, low teacher quality and the teachers' professional spirit in higher educational institutions throughout the region. The forum also formulated concrete measures for strengthening teacher contingent building and quickly raising the quality of teachers.

Since the smashing of the "gang of four," regional higher education has been restored and developed at a good pace. In addition to the 9 existing schools, we have reopened 2 former schools and built 3 new ones, bringing the total number of institutions of higher learning in our region to 14. A total of 13,400 students are studying in these schools. There are 3,594 higher education faculty members, of which 1,655 or 44 percent are instructors or professors.

Regional higher education suffered serious setbacks during the 10-year turmoil. The teachers contingent had been subject to ruthless attacks. Some teachers were forced to change their profession, while a fairly large number of teachers--among them many backbone--were transferred from the region. The teachers contingent as a whole has become aged, and there are not enough younger teachers to succeed the aged. The education of the younger teachers is poor, and they need further studies. Some schools set up a department and enrolled students only to find that they did not have the teachers for that department. Many schools are unable to teach basic courses--general or specialized. Because of the shortcomings in our work and other practical matters such as poor working and living conditions and low pay, some 20 or 30 percent of the backbone higher education teachers in our region are requesting transfers.

In confronting these problems, the autonomous regional departments concerned held that major tasks for achieving success in our regional higher education must be to achieve success in building a teacher contingent. The forum decided to add 2,000 teachers at the higher educational institutions throughout the region by 1985 in order to meet the needs of teaching tasks for the 30,000 college students throughout the region. The average number of teachers to be added each year is 400.

To fulfill these tasks, the forum urged that efforts should be made to do a good job in selecting promising teacher successors. From now on, various higher educational institutions should choose a number of outstanding students to undergo training for a specific field so as to ameliorate the shortage of college teachers. In particular, attention should be paid to training minority teachers who are proficient in both Mandarin and Mongolian. Beginning in 1981, some higher educational institutions should open 2-year graduate classes or teacher training classes. In coordination with departments concerned, efforts should be made to select a number of outstanding regional students and research fellows who have taken uniform national examinations at colleges and universities outside the region over the past several years and persuade them to become teachers in our regional higher educational institutions following their graduation.

In building the teachers contingent, it is necessary to pay attention to the following tasks: 1) to train experts in a specific course. 2) to raise the professional level of younger teachers. In training experts in a specific course, efforts should be made to discover talented people who are in the prime of life, have scored achievements in work and are conscientious and resourceful. All selected experts in various fields throughout the region should be supplied with assistants and appropriated special funds every year to purchase teaching and research material. Every higher educational institution should adopt measures to enthusiastically train the younger teachers who had graduated from schools during the Great Cultural Revolution and to raise their level of knowledge.

We need to do a lot of work to build and preserve a teachers contingent that is both red and expert. We need to continue to criticize the pernicious influence of the left-deviationist ideology, to implement the party's policy toward intellectuals and to strengthen the ideological-political work. In addition, we should have complete trust in the teachers and harbor no political prejudice against them. Furthermore, we should respect their work and allow them to display their ability.

Middle-aged and young backbone teachers account for more than 80 percent of the total number of higher education teachers. A major problem facing them is that they have too much teaching and research work but receive pay that is inadequate to support their families. We need to improve their working and living conditions and give them appropriate subsidies. At the same time, we need to do a good job in collective welfare to reduce their household chores and enable them to concentrate their time and energy on teaching and on training more capable people for the four modernizations.

HUNAN INCREASES EDUCATIONAL BUDGET, ALLOCATIONS

Beijing GUANGMING RIBAO in Chinese 4 Sep 80 p 1

[Text] According to Xinhua News Agency correspondent Liu Shixun [0491 6108 6064], the majority of the perfectures, municipalities and counties in Hunan Province, conscious of the need to invest in the development of talented persons, have increased the budget for education as from this year. Up to the present, aside from the increased allocations by the provincial government, 80 out of the 117 prefectures, municipalities and counties in the province have increased their education budgets by over 5.3 million yuan.

Like other provinces, Hunan has had a large deficit in the budget for education over many years. This year is no exception. In order to turn this situation around and to restore and develop educational projects, the Hunan people's government has decided to increase the educational budget by 53.2 million yuan, to be contributed by the local prefectural, municipal and county governments on top of the amount allocated by the state. Because of the lead taken by the provincial government, many prefectural, municipal and county governments have taken an interest in developing educational projects. In the Lingling area, where local revenue resources are limited, not one county has reduced the budget for public education or for basic allocations for education. On the contrary, it has increased the education budget by 450,000 yuan from local financial resources. According to stipulations previously made by the state, each county is to allocate 25 percent of the farm surtax for the development of educational projects each year. However, this has not been done for a number of years. Since the beginning of this year, however, the situation has taken a turn for the better. Up to the present, 14 counties (municipalities) have allocated the full amount to education. Sixty-three of the counties (municipalities) have allocated part of the amount to educational projects.

Earlier this year, seven counties, municipalities and prefectures in the Changde area had reduced allocations for educational projects by 710,000 yuan. Since April and May, such local government units as Changde City, Anxiang, Hanshou, Cili, Lixian County and Changde County have not only restored the entire amount to educational projects, but have increased the education budget by over 560,000 yuan from local financial resources. The various counties in the Hengyang area, which had previously reduced the education budget by 2.6 million yuan, have restored a large part of the amount to educational projects since April and May.

EDUCATOR CALLS FOR LEGISLATION ON EDUCATION

Beijing GUANGMING RIBAO in Chinese 4 Sep 80 p 1

[Article by Wu Fusheng [0702 4395 3932] of the Central Institute of Educational Sciences: "Education Needs Legislation"]

[Text] Many countries in the world attach great importance to the work of legislation on education. In the past several decades, many countries have speeded up the work of legislation on education in order to facilitate unified control and to coordinate educational development. In this respect, the United States is an outstanding example. In the past 100 years (1965-1965), the United States Congress passed a total of 47 important pieces of legislation on education. Among that total, over half (30 acts) were passed between 1958 and 1965, including the "National Defense Education Act" (1958), the "Trade Education Act" (1961), the "Higher Education Facilities Act" (1963), the "Elementary and Secondary Education Act" (1965) and the "Normal Education Act" (1961), etc. Among socialist countries, the Grand National Assembly of Romania passed the "Education Act of the Socialist Republic of Romania" in December, 1978. Yugoslavia promulgated the "United Labor Act" in 1974, giving autonomous power to educational institutions. All socialist countries and autonomous provinces have, according to the provisions of their constitutions, legislated a long list of education acts, including the Preschool Education Act, the Elementary School Education Act, and the Middle School and Higher Education Act. Educational undertakings are placed in the hands of the people themselves according to the law.

Many countries are also very interested in research on education legislation. For example, the Max Planck Institute of Education in West Germany has placed "education legislation" among its important areas of research. In 1962, the Intermediate Education Act was promulgated by Switzerland after a research and trial period of 20 years. West Germany has published "The Study of School Legislation," a book which deals with the legal basis for the education system.

In the interest of educational development, we, too, should greatly strengthen our work in education legislation. In the 1960's we adopted certain temporary working provisions for colleges, middle schools and primary schools on a trial basis. Because these provisions were an accurate reflection of the objective educational discipline at the time, the educational standard was raised both qualitatively and quantitatively and educational development proceeded apace. After the "gang of four" was smashed to pieces, we reactivated the temporary working provisions for colleges, middle schools and primary schools, restored the system of examinations for applicants to institutions of higher learning, and set up uniform regulations for middle school and primary school students. The Standing Committee of the National People's Congress has also adopted a resolution for the awarding of academic degrees. We have already done some work in education legislation and have chalked up some experience in that area. However, in order to further strengthen and improve upon the party's leadership in the work of education, to further develop our educational activities according to our plans and priorities, and to elevate education both qualitatively and quantitatively, we should, on the basis of our positive and negative experiences since the establishment of the republic and the existing circumstances of our country, make further efforts in the field of education legislation. Our educational system needs legislation. The structure and the duties of various schools on various levels need legislation. Preschool education, compulsory education, adult education, and education for the national minorities all need legislation. The position of teachers, their duties and responsibilities, their grading and their promotion also need legislation. In short, we need legislation on education if we are to greatly expedite the development of education.

WARNING ABOUT BACKWARDNESS OF EDUCATION IN GUANGDONG

Guangzhou NANFANG RIBAO in Chinese 13 Aug 80 p 2

[Article by staff reporter: "All Levels of Society Should Work Together To Improve Education in Guangdong"]

[Text] Education has a dominant position in our province. However, the actual situation is as follows: compared to many other provinces, our educational system is backward; compared to the situation prior to the Cultural Revolution, we have regressed in several areas. At the recently concluded Provincial Education Work Conference, several experienced education workers and experts sincerely said: It has been 30 years since the revolution, but we still do not even have universal elementary education, and the quality of education in both middle and elementary schools is very low. The present situation concerning the four modernizations has put pressure on the people. If we once again fail to make loud appeals and improve education, then the four modernizations will be held back, and we will have to be responsible to history. Not only will we have done a disservice to the elders of the entire province, but we also will have no way of justifying our actions to the coming generations!

Why has education fallen behind? Some comrades say that the horror wrought by the ultra leftist line of Lin Biao and the "gang of four" no doubt had a great effect. However, we should now look for more subjective reasons. Most important are: several leading comrades are not familiar enough with the important place of education and its effect on the four modernizations. They do not give education its proper place, nor do they consider it important. Liu Tie [0491 6993], the deputy secretary of the Zhanjiang Prefectural Party Committee, has said that the handling of education is very important. At present, the problem is not that the masses do not understand enough, but that the leaders' understanding is more backward than that of the masses. Several comrades from the Hainan administration area feel that the masses, although very poor, still understand the importance of education, are enthusiastic about running schools, and will use every possible means to send their children to school. Some comrades say that the relationship between education and economics was originally very simple and clear. However, for a long period these problems have not been resolved, or it is said they have not been really resolved. Now it is a matter of the top and lower levels showing interest, while those in the middle turn a cold shoulder. Some local party committees for long periods have no one responsible for education. When the party committee assigns work, everyone fights for industry, communication, and commerce and no one wants to work in education. Prior to the Cultural Revolution, local and county party committees each had a secretary of culture and education, and communes had an assistant for culture and education. Presently, granted that people are assigned by local party committees to handle education, in reality it is in name only, with few people really doing anything. Why isn't education given its proper position? Xiao Yaotang [5135 5069 1016], deputy administrative commissioner of the Huiyang administrative office, made an analysis of this problem. He felt that one reason is that the time it takes to develop qualified people is very long, unlike the ease in industrial and agricultural production, where quick results can be seen. It is easy to neglect education and look on it as a "soft job." After all, if it is not handled well, it won't kill anyone. The second reason is that the development of qualified people through education has proceeded from the overall situation of the country, uniformly distributed according to national needs. This locality or county would not necessarily immediately see any advantage--unlike the distribution of reinforced bars or cement, more practical items. Thirdly, objectively speaking, the development of the economy has not been balanced. There are still many places where it has been temporarily impossible to bring the effects of modern scientific techniques into play, and where the urgent feeling for developing qualified people was never realized. He said that these were all examples of a lack of vision. Along with development of economic construction and active foreign economic exchange, the need for qualified people will become more and more prominent in the future. If we once again fail to grasp the important task of tapping this natural resource of intelligence, then it will be too late for regrets! Many comrades list facts which show clearly that the problem concerning the lack of qualified people is already extremely pressing. Raoping County, with a population of over 700,000 people, is unable to find anyone who is capable of repairing television sets. Yangshan County not only had difficulty disseminating advanced scientific technology in agriculture, but was also hard pressed to find vehicle drivers and tractor drivers. One commune set up a small hydroelectric power station, but it had no one who could operate the machinery. All they could do was to send someone to learn, like digging a well after you are thirsty. Everyone felt that the question of changing the backward face of education in this province and the problem of increasing the speed of developing qualified people had already reached a point where it had to be resolved.

How can we turn around the present backward situation of education in the province? Of all the numerous projects, the most important is to strengthen and improve the leadership of the party in regard to education work. Huang Dafang [7806 1129 0119], deputy director of the Hainan administrative office, and Li Lingbing [2621 0407 0393], deputy secretary of the Shaoguan Prefectural Party Committee, have both said that education should be on the important agenda at all levels of the party committee, with the number one man being responsible for education. This is a key point. Wang Deliang, [3076 1795 0081], assistant principal of Huanan Teachers Institute, Prof Yan Yongguang [0917 3057 2515], of the Guangdong Education and Administration Institute, and other experts in educational circles all feel that a good shock is urgently needed now, but first it should come from all levels of the party committee. Leadership in education definitely may not stop at just making appeals, and it cannot be satisfied by making decisions or issuing documents. We must plant our feet on solid ground, make comprehensive plans, take strong action, and make everything workable. Comrades have put forth many good examples of this type. For the past several years the Qionghai County Party Committee has added education to its agenda, and the top man has taken up the matter of education personally. In addition to assigning responsibility for education to a standing committee, everyone from the "members" of the Party committee are concerned with education, helping to solve practical problems. This has spurred on all communes and professions throughout the county. County local financial authority and the commune brigade collective economy appropriated funds for education. Finance and economic departments have supplied materials needed by the schools. Commune brigade and party organizations have mobilized children of school age to enter schools, and the mass commune members have made respect for teachers a common practice. As a result, the cause of education is thriving in the county, making it one of the most advanced counties in universal elementary education in this province. The Lechang County Party Committee, also due to a "squad" which paid serious attention to education, strengthened leadership and especially assigned former teachers to the standing committee responsible for education, grasping the problem in a down-to-earth manner. Throughout the county a remarkable job was done in all areas, regardless of whether in general education, in spare-time education, or in programs to wipe out illiteracy. Shaoguan Prefecture was among the best of the successful areas. Many counties in Foshan Prefecture increased appropriations from local finances for education funds, enabling education departments to solve quite a few problems. Many comrades have said that if all levels of the party committee had such as good a grasp of education as these areas, then there would be no need to worry that the backward situation of education would not change.

Because education involves a wide area, such as spreading elementary education, reforming the structure of secondary education, running key schools and teacher education, deciding policy concerning intellectuals, and other questions, we cannot rely soley on education departments to solve all the problems. Many comrades feel that if we want to change the backward situation of education in this province, we will need powerful support from all professions throughout society. Comrades from Jiangmen, Xinhui, and Zhongshan have said that in their areas, some key schools had done a better job of starting to take steps to reform the structure of middle schools, and that this was all the result of support from all professions. However, comrades reflected that the actual number of departments enthusiastically supporting education was really very small. In one county, in order to solve the problem of obtaining funds for education, the county education bureau once put forward a plan requesting 600,000 yuan a year from the county's communes. This figure accounted for only 3 percent of the communes' net income, for a per capita figure of 1.50 yuan. This was not a heavy burden, but concerned departments were unable to pass this proposal. Comrades from Hainan said that in order to solve the problem that key teachers had concerning the separation of husbands and wives, the district party committee approved the transfer of close to 100 dependents. The departments concerned could not solve the question of food, however, and so the transfer could not take place. A comrade from the county education bureau said their county has over 200 middle and elementary schools. Each year they receive only 6 tons of steel products and 15 cubic meters of wood products. What problems can this help solve? At a county normal school in Foshan Preferture, a unit occupied half the dormitories during the 10-year period of chaos. Last year the education department appropriated 100,000 yuan and gave it to them for moving expenses. Now, after taking the money, not only have they not left, but they have taken over six classrooms as well. Everyone earnestly hopes that all levels of party committee will be able to give impetus to all professions to proceed with an overall goal in mind. We should think about generations to come, with everyone giving concerned support to education. Working together wholeheartedly, bringing into play the dominant position of education in our province, we all must do all we can so that elementary and secondary education can forge ahead in the 1980's.

FOREIGN ARTISTS PRAISE MINORITY ART FESTIVAL IN BEIJING

OW171302 Beijing XINHUA in English 1216 GMT 17 Oct 80

[Text] Beijing, October 17 (XINHUA)--Attending the minority nationality arts festival in Beijing has been an impressive and moving experience, according to James Murdoch, president of the UNESCO Music Council's International Group of Music Information Centers.

The festival, which has drawn 2,000 artists to Beijing from China's 55 minority nationalities, is staging simultaneous performances every night at several theatres throughout the capital. It ends on October 20.

Mr. Murdoch said the festival organizers had made the basic folk arts of the minority nationalities into great theatre entertainment in a "graceful and sensitive transformation."

For him, the highlight of the program was a Tibetan opera. "I never expected to see that," he said.

Artists from Australia, Canada, India, Japan, Romania, Thailand, the U.S., Yugoslavia and Hong Kong are attending the festival at the invitation of the Chinese dancers' and musicians' associations.

The noted Indian dancer, Sonal Mansingh, who is chairman of the Center for Indian Classical Dances, said the festival was a unique opportunity to see and compare minority dances.

A number of the dances, particularly those from Xinjiang, Yunnan and Tibet, were similar to the dances of India, she said. She hoped that the festival would be held every year.

The director and choreographer of Yugoslavia's "Kolo" ensemble, Dragomir Vukovic, called the dances "beautiful works of art." Yugoslavia has sent musicians and dancers to China in recent years and a song and dance ensemble, representing nine Chinese nationalities is now touring Yugoslavia.

A number of forums are being held in Beijing at which visiting artists and performers in the festival can exchange views and experiences.

'RENMIN RIBAO' EDITORIAL ON SUCCESS OF MINORITY ART FESTIVAL

OW220420 Beijing XINHUA Domestic Service in Chinese 1136 GMT 21 Oct 80

[Report on RENMIN RIBAO 21 October editorial: "Enliven the Literature and Art of Minority Nationalities"]

[Text] Beijing, 21 Oct (XINHUA)--The editorial says: After 1 month of magnificent and vigorous presentations, the National Minority Art Festival has come to a victorious close. It was a minority art festival on the largest scale since the founding of new China 31 years ago, as well as a grand review of the literary and art work of China's minority nationalities after the downfall of the "gang of four." During the festival, more than 400 acts, including music, dances and theatrical works, were presented to a Beijing audience by literary and art delegations from 17 provinces and autonomous regions and by a nationalities song and dance troupe in Beijing. Those troupes are composed of some 2,000 literary and art workers of 56 nationalities. The programs showed the unique lifestyle of various minority nationalities in China and the revolutionary spirit they display in the struggle for the four modernizations.

The editorial points out: Under the correct leadership of the party Central Committee, political, economic and other fronts in China are vigorously and seriously summing up their experience and actively conducting reforms. The literary and art front, too, should further emancipate its mind, conscientiously study how to improve party leadership over literature and art and enliven literature and art. This is an important matter on the literary and art front, as well as a key to the prosperity and development of the literature and art of the minority nationalities. The development of the literature and art of the minority nationalities is an important aspect of nationalities affairs during the new period. We must pay full attention to it. The literature and art of minority nationalities occupies a particularly important position in our national life. A song or a dance is often the cultural symbol of a nationality. As our fraternal nationalities have made great contributions to the development of the culture of the Chinese nation as a whole, the literature and art of minority nationalities of course should occupy a position in China's flowery literary and art garden.

The editorial says: To develop, prosper and enliven the literature and art of minority nationalities, we must keep to the orientation that literature and art serves the people and socialism. We must seriously implement the party's "let a hundred flowers blossom and a hundred schools of thought contend" policy and other policies concerning literature and art.

We should continue now to treat the severe wounds inflicted on our national literature and art by Lin Biao, Jiang Qing, Kang Sheng and their ilk. We should eliminate the remaining pernicious influence of the ultraleftist line. We should continue to do a good job of rehabilitating the victims of injustice and to implement the policies concerning literary and art workers and their works. We should resolutely smash the mental shackles put on minority literary and art workers, bring their wisdom and talents into full play and create the necessary conditions for them to continue to contribute to the growth and prosperity of socialist literature and art. To develop, prosper and enliven the national literature and art, the leadership must pay full attention to the salient features of minority nationalities. Each nationality has its own history and character that are different from those of other nationalities. Each nationality has its own preferred cultural and art forms. We should pay full attention to and respect the characters of various nationalities and let them demonstrate their life in their own way and develop their own literary and art style and schools. We should rely primarily on minority literary and art workers to inherit, reform and develop the culture of various nationalities. Success or failure should be judged by the minority nationalities themselves. The leadership at all levels should make great efforts to provide financial and material assistance and support to the literary and art undertakings of the minority nationalities in order to bring about faster development and prosperity of minority literature and art.

PROPOSAL ON MORE RECREATIONAL FACILITIES FOR YOUTH

OW221254 Beijing XINHUA in English 1212 GMT 22 Oct 80

[Text] Beijing, October 22 (XINHUA)--The Ministry of Culture, the Ministry of Education, the Scientific and Technological Association, All-China Federation of Trade Unions and Communist Youth League have jointly called on the organizations under them to create more recreation facilities for children and young people.

The proposal recalled that above the county level, there were 195 youth palaces and clubs and 6,850 Young Pioneer palaces and centers in China. Up to now only around a dozen youth palaces and 1,500 children's centers have resumed work. The reason was that most of the buildings and grounds had been taken over for other uses. These should be returned or new ones built by the units that had occupied them.

It asked parks, workers' palaces, stadiums and other institutions to provide more facilities and organize more activities for children and youth.

Those now functioning should receive attention from the leadership, be given more funds, and be better staffed. All public places should open their doors to children and young people. For instance, the cinema houses should arrange special Sunday shows for students, especially during school vacations. Special arrangements should be made and tickets sold at reduced prices. Public libraries should provide more reading rooms for children and youth, and arrange discussions. The local cultural palaces, youth league, trade unions and education bureau should jointly organize performances and draw local young people in these performances.

The proposal asked all government departments and organizations to make their facilities available for activities by children and youth, especially recreation for the children of their staff and young people in the neighborhood.

It called on all cities and organizations to put into their construction plan the building of more recreation facilities for young people. In particular, when new districts are constructed playgrounds and other facilities for children should be included.

The proposal pointed out that in the countryside the communes and production brigades should also attempt to provide more recreational facilities.

The proposal said it was not possible for the state to cover all the costs. The public and the young people should be invited to make contributions too.

SHANDONG MEETING DISCUSSES CONTRACEPTIVE TECHNIQUES

SK170058 Jinan Shandong Provincial Service in Mandarin 2300 GMT 15 Oct 80

[Text] According to our sources, Shandong Province recently held a meeting to exchange experiences in contraceptive techniques in Jinan. Some 170 theses were received at the meeting.

The meeting noted: Shandong Province has achieved great progress in carrying out birth control work. In practicing birth control, our province has adopted a series of comprehensive measures and succeeded in reducing the natural population growth rate in the province from 27.55 per thousand in 1970 to 10.79 per thousand in 1979, a reduction of some 6.6 million children in 9 years. All localities have strengthened medical work for women and children and popularized new child delivery methods and virtually eliminated newborn baby tetanus. Over the past few years, our province has checked and cured some 12 million patients suffering from gynecological diseases and performed checkups on more than 5.5 million children, promoting the development of birth control work.

The meeting urged the party committees and governments at all levels to further strengthen the leadership over birth control work. All localities should accelerate the pace of scientific research on birth control, study and research medicines or contraceptives that are more safe, effective, simple and convenient and actively popularize new contraceptive techniques. It is necessary to strengthen the training of personnel for performing contraceptive techniques, organize a birth control work network and techniques guiding teams and insure that this work has been regularly and systematically carried out in the grassroots units. It is necessary to raise the quality of contraceptive operations. Medical personnel should improve their techniques and insure patients' safety with the spirit of being responsible to the people. We should also do a good job in giving medical care to women and children, publicize eugenics and insure that all newborn babies are strong and that they will be well educated.

Following the meeting, the Shandong provincial people's government also held a birth control work meeting, stressing the study and implementation of the party Central Committee's open letter so as to lay a good foundation for carrying out birth control work during the winter-spring period.

The secretary of the provincial CCP committee, Li Zichao, and provincial Deputy Governor Wang Zhongyin addressed the meeting.

SOCIOLOGICAL, EDUCATION AND CULTURE

BRIEFS

FUJIAN LITERARY, ART SOIREE--The Fujian provincial people's government, Fuzhou municipal people's government and the Fujian frontline PLA units held a literary and art soiree on 30 September to mark the 31st founding anniversary of the PRC. Some 5,000 people, including responsible comrades from the party organizations, attended the soiree. Vice governors of Fujian Province Zhang Gexin and Wen Fushan and the secretary of the Fuzhou Municipal CCP Committee Cai Liangcheng also attended the soiree and greeted the performers. [Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 1 Oct 80 HK]

JIANGSU ART EXHIBITION--An exhibition of calligraphy and paintings by Lai Shaoqi opened in the Jiangsu art gallery on 19 October. Responsible comrades in Jiangsu Hui Yuyu, Chu Jiang, Sun Keji and others visited the exhibition. Lai, a noted artist in China, is now a standing member of the council of the Chinese Artists Association, vice president of the Chinese Society of Engraving Art and president of the Anhui Federation of the Literary and Art Circles. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 20 Oct 80 OW]

SHANDONG BIRTH CONTROL--Shandong Province has scored achievements in birth control. Some 19 million contraceptive operations have been performed in the past 10 years. Births in 1979 declined by some 920,000 as compared to 1970 figures. The birth rate in the province declined from 33.89 per thousand in 1970 to 16.94 per thousand in 1979. About 1.45 million families in the province received one-child certificates. The one-child birth rate is now 62 percent. [SK021124 Jinan Shandong Provincial Service in Mandarin 2300 GMT 30 Sep 80 SK]

ZHEJIANG FAMILY PLANNING--Commenting on the question of how to grasp well family planning after the promulgation of the marriage law, a responsible member of the Zhejiang provincial leading group for family planning pointed out that marked results have been achieved in promoting family planning throughout the province since February. The total number of new births in the first half of 1980 was 26,000 less than the same period of 1979. The rate of natural population growth in Zhejiang Province is expected to drop to less than 9 per thousand. He urged all departments to thoroughly study a new important task, that is how to promote the marriage law and family planning side by side under the guidance of party and government policies. He also called for better understanding of family planning, a long-range strategic task which has a direct bearing on the overall situation. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 25 Sep 80 OW]

HUNAN CADRE TRAINING SCHOOLS--Hunan has set up 15 cadre training schools throughout the province for the purposes of restructuring the cadre force and improving the standards of the leadership groups. These schools were opened in September and October, and responsible comrades of the Hunan Provincial CCP Committee, provincial people's government and other departments concerned attended the opening ceremonies. The training classes will last for 1 or 2 years and some 955 cadres will take part in the training classes. Their subjects of study include economic management, water conservancy, chemical industry and so on. [Changsha Hunan Provincial Service in Mandarin 1100 GMT 8 Oct 80 HK]

GUIZHOU TRADE UNION MEETING--The Guizhou Federation of Trade Unions held a meeting on ideological and political work in September, demanding that trade unions at all levels attach importance to the education of young workers. The meeting pointed out that the trade unions should be responsible for launching ideological and political education for young workers since: 1) trade unions are closely related to the workers; 2) trade unions can make use of activists to guide young workers toward wholesome development; and 3) trade unions can provide sparetime activities for workers. Responsible comrades from the Guizhou Provincial CCP Committee attended the meeting and spoke. [Guizhou GUIZHOU RIBAO in Chinese 21 Sep 80 HK]

GUIZHOU CONGRESS ON EDUCATION--The Guizhou conference of representatives of advanced collectives and workers on the education front closed on 27 September. Responsible comrades of the Guizhou Provincial CCP Committee, provincial people's congress Standing Committee, provincial people's government, provincial CPPCC and the provincial military district attended the closing ceremony. Li Tinggui, deputy secretary of the Guizhou Provincial CCP Committee and vice provincial governor, presided over the closing ceremony. The meeting commended some advanced collectives and individuals. Su Gang, secretary of the Guizhou Provincial Service Committee and provincial governor, gave the closing speech. [Guiyang Guizhou Provincial Service in Mandarin 2315 GMT 27 Sep 80 HK]

QINGHAI RELIC CONFERENCE--The Qinghai provincial conference on historical relics was held in Xinang in mid-October. The conference pointed out that to value cultural legacy is an indication of the high degree of civilization of the socialist society. Many ancient temples, such as the temple of Princess Wencheng, have been repaired. The provincial archaeological team has carried out large-scale archaeological surveys and excavations in many localities. The conference urged efforts to protect historical relics. [Xining Qinghai Provincial Service in Mandarin 2330 GMT 23 Oct 80 SK]

ZHEJIANG FAMILY PLANNING--The Zhejiang provincial conference for exchanging experience in planned parenthood and in material and child care closed on 13 October. It was pointed out at the conference that in order to achieve the goal of one child per married couple, it is necessary to vigorously popularize the comprehensive birth-control devices and bring about a general improvement in health condition of women and children. The contraceptives now in use in Zhejiang are safe and effective. The goal of one child per married couple can be achieved if the masses are constantly reminded of the significance of planned parenthood and are given technical guidance in contraception. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 14 Oct 80 OW]

SHANGHAI MINORITY GROUP--A Shanghai minority people's national day visiting group returned to Shanghai on 15 October after visiting Nei Monggol, Heilongjiang, Jilin and Beijing. It is composed of local people of Hui, Zhuang, Tibetan, Taiwan, Gaoshan, Korean and Mongolian nationalities. [Shanghai City Service in Mandarin 1130 GMT 15 Oct 80 OW]

SHANGHAI YOUTH WORK--The Shanghai leading group for young people's education recently held an enlarged meeting, asking all walks of life of society to take part in young people's education, help employ more jobless youth and in particular understand the work of organizing and educating the 1980 school graduates. The meeting pointed out that the present rate of local juvenile delinquency is still high and the young people face problems of morality. [Shanghai City Service in Mandarin 2300 GMT 15 Oct 80 OW]

NANJING CHRISTIAN CHURCH--A Christian church was formally reopened in Nanjing's (Mochou) Street on 12 October. This was the first Christian church reopened in Nanjing since the Cultural Revolution. The first religious service was held yesterday morning with delegates to the third national conference on Christianity attending. The church was turned into a printing house during the Cultural Revolution. With the implementation of the party's religious policy and the assistance from the departments concerned in Nanjing, the second floor of the church was returned in late September. The rest of the church will be returned by the printing house soon. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 13 Oct 80 OW]

JIANGSU KEY MIDDLE SCHOOLS--The Jiangsu provincial education department recently called a work conference on key middle schools. The meeting decided to run well a group of key middle schools in accordance with the directive on educational work issued by the secretariat of the CCP Central Committee. In order to improve the quality of teaching, train more able persons and do an even better job in running the key middle schools, the meeting called for greater efforts to strengthen the schools' leading groups, establish a contingent of backbone teachers, improve the enrollment methods, run well the key primary schools and provide sufficient funds to key middle schools. Anhui Province has 84 key middle schools. The meeting decided to run well 22 schools within the next 3 years. Vice Governor Wei Xinyi delivered a speech at the meeting. [Hefei Anhui Provincial Service in Mandarin 1100 GMT 15 Oct 80 OW]

NEW ANHUI UNIVERSITY--The Hefei associated university held an opening ceremony on 11 October. Present were Gu Zhuoxin, secretary of the Anhui Provincial CCP Committee; Lan Ganting, deputy secretary; Yang Chengzong, vice chairman of the provincial People's Congress; Wei Xinyi and Yang Jike, vice governors of Anhui; (Zheng Rui), secretary of the Hefei Municipal CCP Committee; representatives of relevant departments and 322 new students. In his speech, Gu Zhuoxin extended greetings to the teachers and students and called for emancipating the mind and conducting educational reforms. [Hefei Anhui Provincial Service in Mandarin 1100 GMT 12 Oct 80 OW]

ANHUI TEACHERS COLLEGE--An inaugural ceremony for the Anqing Teachers College in Anhui Province was held on 14 October. Speaking at the ceremony, Vice Governor Wei Xinyi urged the college staff to train more and better teachers for improving the teaching quality of primary and middle schools in Anhui. The State Council approved the establishment of the Anqing Teachers College in May this year. More than 1,000 faculty staffs and students participated in the inaugural ceremony. [Hefei Anhui Provincial Service in Mandarin 1100 GMT 15 Oct 80 OW]

LIAONING COLLEGES, UNIVERSITIES--Over the past 2 years, some colleges and universities in Liaoning Province have carried out cultural exchanges with foreign countries. Some 50 foreign experts have been employed by eight colleges and universities as teachers. Some 150 students have been sent abroad for advanced study in 29 countries. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 22 Oct 80 SK]

EDUCATION, SCIENCE OUTLAYS--In his report to the Third Session of the Fifth National People's Congress, Finance Minister Wang Bingqian [3769 0014 0051] revealed that for 1980, 148.3 billion yuan had been budgeted for education, health, and science, or 16.2 billion more than for 1979. Wang stated that it was crucial to speed up the development of science and education for the implementation of the four modernizations, that the increase was warranted because of the sizable deficit chalked up over the years, and that a suitable increase for this year had been determined on the basis of the nation's financial resources. He added that the projected budget for education, health and science would reach 169.5 billion in 1981. [Text] [Beijing GUANGMING RIBAO in Chinese 1 Sep 80 p 3] 9621

DEVELOPMENT FUND--In his report to the Third Session of the Fifth National People's Congress, Finance Minister Wang Bingqian [3769 0014 0051] announced that the government will set aside a development fund for the benefit of the undeveloped areas as from this year, and that the fund has been budgeted at 5 billion yuan for this year. He said that the development fund for the economically undeveloped areas will primarily be used to speed up the development of productive enterprises in the old revolutionary bases, remote border areas, the minority nationality autonomous regions and areas with comparatively weak economic foundations. [Text] [Beijing GUANGMING RIBAO in Chinese 1 Sep 80 p 3] 9621

GREATER ROLE FOR WOMEN--Beijing, October 22 (XINHUA)--Women should be encouraged to play a greater role in the country's modernization in agriculture, industry, national defence and science and technology, said Wang Renzhong, head of the Propaganda Department of the Central Committee of the Chinese Communist Party at yesterday's enlarged Executive Committee meeting of the Chinese National Women's Federation. He cited barriers holding back women's initiative, such as the feudal notion that women are inferior. Equal pay for equal work must be ensured in the countryside, he said. Women should be represented in administration wherever women hold jobs, he said. There must be full respect for women's rights and interests. Wang Renzhong called for more city neighborhood canteens, service centres, nurseries and kindergartens to help lighten household chores. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

U.S. REDUCTION OF CRUDE OIL IMPORTS DISCUSSED

OW221536 Beijing XINHUA in English 1517 GMT 22 Oct 80

[Text] Beijing, October 22 (XINHUA)--U.S. imports of crude oil showed a marked drop in the first nine months of 1980 as a result of rising U.S. oil production and lower levels of consumption, according to Washington reports.

The imports of crude oil during this period averaged 5,363,000 barrels a day, a decline of 16.3 per cent from the same January-September period last year. Crude imports averaged 4,948,000 barrels a day in September, donw 22.8 per cent from the same month last year.

Large oil imports have been an important factor accounting for the huge deficits in U.S. foreign trade in recent years. So the considerable decline in oil imports will help correct the adverse balance in foreign trade. U.S. Commerce Secretary Philip Klutznick predicted on October 20 that the country's trade deficit in 1980 would not rise above last year's 37 billion dollars owing to lower oil imports and improved manufacturing and agricultural exports.

The huge cut in oil imports was brought about by reduced oil consumption against the background of economic recession. The American Petroleum Institute (API) reported that oil use in the first nine months was 8 per cent under the levels of a year ago inspite of an increase in oil output. AP also said that for the nine-month period U.S. oil production averaged 8.7 million barrels daily, up 1.9 per cent from the same period last year.

AP reported on October 19 that the current drilling pace in the United States is about 35 per cent higher than last year. It predicted that 59,107 oil and gas wells will be completed in 1980, breaking the previous record of 58,160 set in 1956.

Increases in both production and consumption of coal as a partial replacement of oil were reported.

Coal production in the first six months of this year was also reported up ten per cent over a year ago, with coal providing over 50 per cent of the nation's electricity in the period, which has not happened since 1968 on an annual basis.

The United States has increased its oil inventories in recent years in the face of a steady rise in oil prices and fear of an abrupt stoppage in oil imports which would gravely affect the economic and military interests of the country. AP reported on October 18 that U.S. crude oil inventories rose to a record 394.3 million barrels in mid-October, up 20.1 percent from the 328.2 million barrels on hand a year earlier.

UK'S CARRINGTON OPPOSES UNILATERAL DISARMAMENT

OW251228 Beijing XINHUA in English 1204 GMT 25 Oct 80

[Text] London, October 24 (XINHUA)--It was a dangerous illusion to think that unilateral gestures of disarmament could bring results, particularly when one was dealing with a power like the Soviet Union, said British Foreign Secretary Lord Carrington at the United Nations Association in London today.

"I believe we have brought the Russians to the negotiating table just because the NATO allies have agreed [on] a programme for modernising their own theatre nuclear forces, in parallel with the United States' offers to negotiate," he added.

Lord Carrington stated that he was speaking in the aftermath of a Soviet invasion of Afghanistan, now nearly a year old, which had been a severe blow to detente. The British Government saw no alternative but to continue to maintain the forces and weapons necessary for deterrence, he stressed.

The brutal, calculated use of force by Moscow to occupy another country had damaged the whole basis of public support for arms control, especially in the United States, he pointed out.

"Nobody would be happier than I to abandon our nuclear weapons, if I believed that by doing so I would really be improving the prospects for lasting peace," the foreign secretary said. But he emphasized that he did not believe this. "Experience did not suggest the Russians would respond, except to exploit our subsequent weakness."

Declaring that arms control could not solve defence problems, Lord Carrington told the association: "We must stick firmly our commitment to base United States cruise and Pershing missiles in Western Europe from 1983."

He pointed out that the difficulty of arms control was that the Russians "declaim a lot" but initiated little of substance. He singled out the need for a comprehensive test ban treaty and urged support for an international convention banning chemical weapons. Unilateral nuclear disarmament by Britain would be exploited by the Soviet Union and increase the risk of war, Lord Carrington said.

CSO: 4020

BRITISH ECONOMIC PROBLEMS ANALYZED

OW250324 Beijing XINHUA in English 0239 GMT 25 Oct 80

[Text] London, October 23 (XINHUA correspondent Yang Yi)--Britain's economy remains in straits despite some recent improvements.

Inflation has shown a steady decline since last May. The annual rate has fallen from 21.9 per cent in May to 15.9 per cent. Visible trade has continued to show a surplus every month since last July. Hence, a balance of payments surplus of more than 900 million sterling in the third quarter. However, money supply increased by only 0.6 per cent in September, much less than the 8 per cent increase in the previous two months. British officials hold that these tendencies show that the British economy has begun to turn for the better and the trend will continue.

However, some British economists, businessmen and the press have expressed doubts about the optimistic opinions of the officials. They are deeply disturbed by the fact that unemployment is still climbing as the economic growth rate continues to drop. The official figures show that the number of unemployed in Britain has risen to 2,063,000 or 8.5 per cent in October. Anxiety increases as the number of jobless mounted for the 13th successive month. Industrial production in August fell off 8.5 per cent from that in July. From June to August, the total value of industrial production dropped by 5.5 per cent as compared with the corresponding months last year and by 12 per cent in comparison with last year's average.

Total industrial production is now down to the lowest point since 1975 and the manufacturing industry at its lowest point since 1968.

Some observers here are of the opinion that the falling inflation rate in the past months is due to the economic gloom at home and abroad, shrinking markets and sluggish sales. All this is bound to slash the rate of profit and consequently affects technological renovation and enlarged reproduction. Moreover, the relatively high exchange rate of the pound and soaring public utility charges will make it impossible to keep prices staple in the long term.

The held that the increase in the British balance of payments could be partly attributed to North Sea oil earnings, and more important, to reduced imports as a result of the industrial recession. The value of imports in this year's third quarter was about 900 million pounds and 1,340 million pounds less than the second and first quarters respectively. The annual growth rate of money supply still stood at 17.5 per cent, or much higher than the ceiling of 7 per cent to 11 per cent fixed by the government for the current fiscal year. In the first half of this fiscal year, the government's public debt reached 7,500 million pounds, or close to the original target of 8,500 million for the whole year. Therefore, the government is facing a difficult task to check inflation by means of controlling money supply.

CSO: 4020

POLAND TAKES MEASURES TO OVERCOME ECONOMIC DIFFICULTIES

OW250617 Beijing XINHUA Domestic Service in Chinese 1244 GMT 23 Oct 80

[Text] Warsaw, 22 Oct (XINHUA)--To overcome its serious economic difficulties, Poland has recently taken such measures as revising its agricultural policy and reducing the number of capital construction projects.

Regarding agricultural policy, the Polish United Workers' Party and the Polish United Peasant Party jointly proposed a "draft directions" on "key problems of agricultural and food policies. The "draft directions" said that the agricultural policy should guarantee the equal development of all agricultural units under different systems of ownership. To achieve this, all units under public ownership as well as individual farmers will be "equally provided" with investment, means of production, loans and other assistance.

The "draft directions" stressed that industrial departments should strengthen their support for agriculture; that land should be utilized in a better way; that products should be increased; and that living conditions for peasants should be improved. The new 5-year plan (1981 to 1985) will, first of all, create conditions for expediting the development of both agriculture and the entire food economy. The "draft directions" said that the purchasing prices of farm produce will be raised--the price of milk will be raised beginning 1 November, and the price of other produce will be raised beginning in the first quarter of next year. At the same time, the tax collection measures will be revised to provide "favorable conditions for the vigorous development of production by small farming units." State-run agricultural units and agricultural cooperatives should promote cooperation with individual farmers on a more extensive scale than ever before.

The Polish United Workers' Party and the United Peasant Party have instructed the government to take the positions of the two parties on agricultural policy into consideration and work out, by the end of this year, a plan for putting these measures into operation.

With regard to reducing the number of capital construction projects, the Council of Ministers made a decision in mid-October suspending construction projects for the state administration in order to reduce expenditures. The same restriction applies to the administrative construction projects for the National Federation of Cooperatives and for social organizations, with the exception of those construction projects that are conducive to the welfare of workers and staff members or that are needed for promoting production. Financial supervision over construction projects by private investment will be conducted and investigations into the source of funds for some construction projects by investment will be carried out.

In addition, Polish press and radio stations have exposed and criticized improper investment in some production projects. For example, the construction of Katowice steelworks with a planned annual output of 9 million tons of steel, has been denounced as a project carried out to satisfy a "desire" by some people. According to the exposure, the investment for the Katowice steelworks was originally estimated at 25 billion zloty. However, the current investment has reached 120 billion zloty and further increases in investment costs are expected.

POLISH TRADE UNION REGISTRATION CAUSES PROBLEMS

OW270546 Beijing XINHUA Domestic Service in Chinese 1723 GMT 25 Oct 80

[Text] Warsaw, 25 Oct (XINHUA)--The Court of Warsaw Province, Poland, announced on 24 October that the registration of the Polish Independent and Self-governing "Solidarity" Trade Union was approved after the trade union's constitution was revised. However, the trade union issued a statement on the same day, protesting the court action to change trade union's constitution without authorization.

The issue of registration is one of the principal contradictions between the new Polish trade union and the government. On the basis of the agreement reached on 31 August between the government committee and the Gdansk United Strike Committee, the newly established independent and self-governing trade union must submit an application to the court to register itself within 1 month after the agreement comes into effect. The trade union can function only after its registration is legally approved. The preparatory committee of the independent and self-governing "solidarity" trade union headquartered in Gdansk officially files its application for registration to the Court of Warsaw Province on 24 September, but its application was rejected by the court. According to a court statement, the main reason for the rejection was that the constitution of the new trade union did not conform to the Gdansk agreement and had to be revised. However, the "solidarity" trade union believes that its constitution totally conforms to the Gdansk agreement and it has no intention of making any essential revision.

For a month, the court and the new trade union exchanged their views on the above-mentioned differences, but they failed to obtain specific results. On the afternoon of 24 October, the Warsaw Court started to review the application filed by the independent and self-governing trade union for registration. At the court, Lech Walesa, chairman of the National Consultation Committee of this trade union, reaffirmed his own basic stand. Later, the legal counselor of the trade union was authorized to make several nonessential revisions to the constitution. Then Judge (Z. Koshichrlniak) announced a court adjournment.

After 1 hour, the judge read a decision on the approval of the registration of the "solidarity" trade union by the court. The decision included major revisions to the trade union constitution. Passages recognizing the leading role of the Polish United Workers' Party over the state and those on the socialist system were added, passages on the "right to strike" were deleted, and restrictions on factory administration and party organization leaders assuming leading posts at all levels in the trade union were lifted.

In the evening on the same day, Walesa held a press conference for Polish and foreign reporters and issued a statement protesting the court action to revise the "solidarity" trade union constitution without authorization, and declaring that the revised portion of the constitution was unacceptable. The statement said: the court "made an arbitrary decision on the registration of our trade union, and at the same time, revised our constitution without authorization and in its own way." This "runs counter to aspirations clearly expressed by the plenipotentiary representative of the trade union." The statement stressed that the court action "infuriated" us. It said: "At present we cannot agree with any action to interfere with the independence and self-governing principle of the trade union. Nor shall we agree in the future." It pointed out: "We will act upon the constitution which we have adopted and which has not been revised by the court."

The statement said in conclusion: "The authorities should be held fully responsible for the tension in society created by the issue of the registration of the "solidarity" trade union.

At the press conference, Walesa also said: The "solidarity" trade union will appeal to the supreme court in the near future, and has decided to call a meeting of the National Consultation Committee of the "solidarity" trade union to discuss countermeasures.

CSO: 4005

JAPANESE FOREIGN MINISTER VIEWS NORTHERN ISLANDS

OW251943 Beijing XINHUA in English 1933 GMT 25 Oct 80

[Text] Tokyo, October 25 (XINHUA)--Japanese Foreign Minister Masayoshi Ito said today that for a possible solution to the problem of the northern territories, Japan "has spent 35 years. It should never take a wavering stand again on the issue but should pay full attention to the settlement of the problem."

The Japanese foreign minister made the remarks on an inspection tour near the four Soviet-occupied islands this afternoon, according to a KYODO report.

His tour was conducted by way of watching the four Japanese northern islands from a patrol boat on the sea. This is the third inspection tour by the foreign minister after he took office last July.

Today, the weather was gloomy over the sea off Nemuro, and the Kunashiri Island could only be seen dimly. Braving the chilly wind, Ito watched the four northern islands through a telescope and said with a deep feeling: "Having come to the front line, I have truly felt the sternness of the territorial and border problem and felt for myself how inexorable the history is."

Ito told reporters in Nemuro that one should not be optimistic about the Soviet attitude toward the northern islands. Japan had referred this problem to the U.N. General Assembly. It would seize appropriate opportunities in future to appeal to public opinion of the world, he said.

Ito pointed out that in its diplomatic activities with the Soviet Union in the future, Japan "will not adopt the opinion to separate politics from economy."

AFGHAN UNESCO DELEGATE CONDEMNS SOVIETS

OW260728 Beijing XINHUA in English 0700 GMT 26 Oct 80

[Text] Belgrade, October 25 (XINHUA)--The Afghan delegate to the 21st conference of the U.N. Educational, Scientific and Cultural Organization (UNESCO) drew warm applause from other delegates but startled the Soviet delegation here this morning by making an impromptu accusation of the Soviet invasion of his country.

During discussions on a resolution on exchange of information at the last session of the fourth committee (culture and exchange) of the conference, Akhtar Mohammad Paktiawal, acting leader of the Afghan delegation and secretary-general of Afghanistan's National Commission for UNESCO, said, "In our country, information exchange is controlled by the Soviet Union."

"Afghanistan," he pointed out, "is not a free country anymore. It is completely dominated by the Soviet Union. The Soviets violated our human rights. Their tanks killed our women and children and one million Afghans have fled the country. We want freedom."

What the Afghan people want is the right to manage their own affairs without external interference, he added.

He called on the international community to help the Afghans obtain such right.

He "would tell the Afghan 'government' the same thing," he said, although his wife and children in Afghanistan would suffer from the consequence.

Previously, when the Soviet invasion of Afghanistan was mentioned at the conference, the Soviet delegation or someone from the Afghan delegation who was compelled by the Soviet delegation would argue that the Soviet troops had been sent there upon the Afghan Government's invitation to quell foreign intervention there.

But Paktiawal, as an official delegate of Afghanistan, gave lie to the Soviet allegation.

The Soviet delegates were stupefied by this speech which won warm applause.

The news spread to the conference halls of every committee of the conference within half an hour.

AFGHAN RESISTANCE SPOKESMAN INTERVIEWED

OW231840 Beijing XINHUA in English 1831 GMT 23 Oct 80

[Text] Islamabad, October 23 (XINHUA)--"Babrak Karmal's visit to the Soviet Union cannot in the least promote his prestige in Afghanistan and the world as well as he wished to. On the contrary, the Afghan people will hate him more and intensify their struggle against the regime," a spokesman of the Islamic Alliance for the Liberation of Afghanistan told XINHUA over telephone in Peshwar today.

He added, "The peace-loving people in the world can also see more clearly Babrak's true face as a Soviet puppet through this visit."

Babrak Karmal went to the Soviet Union on October 15. This is his first trip abroad since he came to power in the Soviet-engineered coup on December 27, 1979.

The spokesman added that Babrak's Soviet visit is "useless" and "cannot help the deteriorating situation in Afghanistan."

He said that Babrak cannot last very long. The whole nation and people are rising against him and his regime.

He said that the United Nations is going to debate on the Afghan issue in the near future. Through this visit Babrak wanted to give the world some impression that his government represents Afghanistan and the will of the Afghan people. However, he noted, the people the world over are aware of the basic facts: "Babrak regime is only a puppet regime imposed on the Afghan people by the Russians" and "is deeply hated by the Afghan people." He demanded that the Soviet Union "abide by the U.N. resolution on Afghanistan, stop its aggression and withdraw its troops from Afghanistan."

Commenting on Babrak's visit to Moscow, a spokesman of Hazb-i-Islami of Afghanistan, another Afghan Islamic guerrilla group, in Peshwar today said that Babrak wanted to get more Soviet troops and weapons to Afghanistan to kill Afghan people. But he stressed "he will never achieve his aim. Babrak regime will be defeated in the end."

"We will fight to the last drop of our blood for the establishment of a real Islamic republic in Afghanistan. This is our determination," he emphasized.

"Perhaps Babrak wanted to get some consolation from Moscow because his one more minister has been killed in Paktia Province by freedom-fighters recently," he added ironically. [sentence as printed]

PAKISTAN PRESIDENT DENOUNCES USSR'S AFGHAN ROLE

OW230742 Beijing XINHUA in English 0717 GMT 23 Oct 80

[Text] Islamabad, October 22 (XINHUA)--The Soviet intervention in Afghanistan was a flagrant violation of the United Nations Charter and the issue might be taken to the world body again shortly, declared Pakistan President Mohammad Ziaul Haq in Lahore today.

Speaking at a civic reception held for the president in Lahore, capital of Punjab Province, he said that Afghanistan was a political issue and Pakistan, abiding by the resolutions of the Islamic foreign ministers conference, was seeking its political solution and clouds were expected to clear shortly.

Referring to the country's defence capabilities, President Ziaul Haq said that Pakistan had no aggressive designs against any country. But at the same time, he added, it would fight to the last to protect its honour and self-respect.

He said people must strive to augment their own resources by increasing production so that the country could stand economically on its own feet.

The president said the present government was bound to stay till the completion of its mission--the complete Islamisation of the Pakistani society.

The president denied any consideration to form a political party.

PAKISTAN PRESIDENT DISCUSSES SOUTH ASIA, MIDEAST

OW241334 Beijing XINHUA in English 1244 GMT 24 Oct 80

[Text] Islamabad, October 24 (XINHUA)--President Ziaul Haq has stated that the situation in the South Asian region and particularly in the Gulf was becoming more and more complex.

Speaking to newsmen at the Lahore airport yesterday before his departure for Rawalpindi after a two-day visit to the provincial capital, President Zia said that in general, this is a bad trend for the region, "The Gulf is feeling unstable." However, he said that peace and stability prevail in Pakistan.

Answering a question if there had been any change in the Soviet attitude towards Afghanistan, President Zia said that discussions were in progress. "We are trying to find a political solution" there, he added.

Asked about Habib Chatti's visit to Iraq and Iran, he said that it was an effort and that there might be some results, he hoped.

President Zia and Chatti, secretary-general of the Islamic Conference Organization, were chosen by the foreign ministers of the 40-nation organization to try and bring about a peaceful settlement of the conflict between the two Moslem states.

Iraq has agreed in principle to the proposal but Iran has yet to make its decision known.

It was reported that President Zia and Chatti, who left Pakistan for Jiddah, Saudi Arabia, yesterday afternoon, would be in touch with each other in the light of the talks they had in Lahore yesterday. They are waiting for a reply from Iran.

PAKISTAN ISSUES WARNING ON IRAN-IRAQ CONFLICT

OW280132 Beijing XINHUA in English 0117 GMT 28 Oct 80

[Text] Islamabad, October 27 (XINHUA)--Pakistan Foreign Minister Agha Shahi warned last night that the conflict between Iran and Iraq "would have an overall debilitating effect on the region and carries the concomitant risk of a superpower confrontation or, in the alternative, of mutual accommodation by dividing the region into spheres of influence."

The foreign minister issued the warning in an exclusive interview with a special correspondent of the associated press of Pakistan (APP) at New York's Kennedy International Airport when he was heading for London after leading Pakistan's delegation to the current session of the General Assembly.

The conflict "could have a profound bearing on the security environment of the region," he added. "Pakistan views the situation with the gravest concern and is most anxious that this conflict between two brotherly Islamic nations, which militates against the ideals and principles of the Islamic conference as well as the non-aligned movement, comes to an end as quickly as possible. The differences between Iran and Iraq do not lend themselves to a military solution. Being neighbours, there is no escape for them from peaceful coexistence."

Talking about the Islamic group-sponsored draft resolution on Afghanistan to be tabled on November 18 for debate in the U.N. General Assembly, Agha Shahi said the draft resolution is based "on the same internationally recognized principles" which include the withdrawal of Soviet forces from Afghanistan and respect for the sovereignty, territorial integrity and political independence of Afghanistan. At the same time, the resolution "provides for the possibility of a role for the United Nations secretary-general acting directly or through a designated representative, in instituting an indirect political dialogue."

Agha Shahi said the problem that the world faces in Afghanistan is a grave one. The situation there is worsening steadily and the Afghan people are suffering heavily. The resistance of the Afghan people to the present regime in Kabul, he noted, is continuing throughout the length and breadth of Afghanistan.

PAKISTANI PAPER HITS KARMAL'S VISIT TO MOSCOW

OW231909 Beijing XINHUA in English 1901 GMT 23 Oct 80

[Text] Islamabad, October 23 (XINHUA)--The conditions reiterated in the joint communique issued at the end of Babrak Karmal's visit to the Soviet Union mean nothing more than that Moscow is bent upon prolonging its occupation and provides itself with a pretext for continued presence of its forces in Afghanistan, said Pakistan's Urdu paper JANG in an editorial yesterday.

It said the communique shows that the Russians have decided to keep their forces and even to refurbish them in that country. Hence, their condition that external aggression must be stopped, is manifestly unacceptable to the world community, particularly to the neighbours of Afghanistan. This condition, besides being extremely ridiculous, indicates the obstinacy of Russia and the Kabul government, it said. Obviously, it added, no neighbour is committing any aggression, direct or indirect, in Afghanistan. The power that has done so is Russia. The Soviet condition that external aggression must stop in Afghanistan is thus nonsensical.

Touching upon the second condition that the neighbours must recognize the Kabul government, the paper pointed out, a government should be a representative one for being recognized or at least it should be free from direct control and domination by foreign forces. However, it noted, if the Soviet forces leave Afghanistan and a government in Kabul is able to maintain itself and wins the confidence of the people and the armed forces, its recognition would certainly be considered.

Without this prerequisite, the paper said, recognizing the Kabul regime would be equivalent to recognizing the Soviet military intervention legitimate.

'XINHUA' CITES 'AFP' ON PROTESTS AGAINST AFGHAN REGIME

OW271712 Beijing XINHUA in English 1646 GMT 27 Oct 80

[Text] Beijing, October 27 (XINHUA)--Students and professors of Kabul University went on strike on October 24 in protest against the Babrak Karmal regime's forced conscription of students into its nearly depleted army, according to an AFP Kabul report quoting sources of the university.

This is the first students' strike since last April when middle school students turned out in force to demonstrate against the Soviet occupation of their country.

A special AFP correspondent who had just left Afghanistan after a two-week visit wrote in one of his dispatches that the strike and flight of youths abroad to escape conscription "underline the difficulties faced by the regime of President Babrak Karmal in his bid to build up his armed forces."

He reported that "a veritable exodus of students of military age has started, with some classes being reduced by one-third as youths flee abroad to escape conscription."

The Afghan army, numbering over 80,000 men before the Soviet invasion in December 1979, is believed to have been reduced to some 35,000 because of numerous defections and desertions.

Other reports said that the Karmal regime had barely managed to prevent an anti-Soviet strike of Kabul shopowners by threatening them with fines and loss of their licenses. The strike call was issued in "night letters" sent by resistance groups. It urged the people to stage a five-day general strike to protest the Soviet military presence and the "sell-out of Afghanistan to the Soviet Union" by Karmal who was then visiting the U.S.S.R.

"Night letters" were also addressed to Afghan army officers urging them to show their support for the resistance movement by staying at home and in their barracks on October 27.

Meanwhile, there were frequent reports of assaults on Soviet soldiers or Afghan officials in the Afghan capital and other towns. On the night of October 15, two Soviet army officers and a senior official of the Karmal regime's Finance Ministry were shot dead in separate attacks near a Soviet military camp in the capital's suburb of Khiar Khana. On the same day, the information minister of the Karmal regime was said to have narrowly escaped an attempt at his life in the southern Afghan city of Kandarhar.

VODK COMMENTARY CALLING FOR SRV WITHDRAWAL CITED

OW280844 Beijing XINHUA in English 0817 GMT 28 Oct 80

[Text] Beijing, October 28 (XINHUA)—Vietnam must withdraw its troops completely from Kampuchea in accordance with the two related U.N. resolutions on Kampuchea before peace and stability can be realized in the Southeast Asia, Radio Democratic Kampuchea points out in a commentary today.

The commentary says the U.N. resolution of October 22, 1980 calling for an international conference on Kampuchea early next year was opposed by Vietnam, the Soviet Union and Cuba and Vietnam intended to submit its own draft resolution on "the question of peace, stability and cooperation in Southeast Asia" for the United Nations General Assembly to vote. But the majority of the member nations did not even bother to take the floor when the question was debated. So the draft resolution became stillborn.

The commentary notes that Vietnam has stationed over 200,000 troops in Kampuchea and deployed much of this force and arms in areas close to the Thai frontier. It has committed armed provocations against and even incursions into Thailand. It has held Laos under military occupation and even dreamed of annexing some one dozen of Thailand's provinces to its "greater Indochina federation." Under such circumstances, can there be any "peace, stability and cooperation" to speak of in the region?

The commentary concluded by saying that if Vietnam has any desire for peace, stability and cooperation in the Southeast Asia, it should first withdraw all its troops from Kampuchea to meet the demand of the great majority of the countries in the world in accordance with the two U.N. resolutions on Kampuchea.

THAI PAPERS COMMENT ON UN RESOLUTION ON KAMPUCHEA

OW241536 Beijing XINHUA in English 1522 GMT 24 Oct 80

[Text] Bangkok, October 24 (XINHUA)--Thai papers carried editorials and commentaries today hailing the adoption at the 35th U.N. General Assembly of the ASEAN proposal on solving the Kampuchean problem.

The BANGKOK POST editorially welcomes the passing of the ASEAN draft resolution by an overwhelming majority at the U.N. General Assembly which calls for an international conference on Kampuchea in order to restore peace and stability in Southeast Asia. It writes: "The most optimistic estimate of support by 94 countries has been exceeded. The 97 votes are six votes more than last year's support for the ASEAN resolution calling for total withdrawal of foreign forces from Kampuchea."

The editorial points out: "The announcements by Vietnam and other Soviet bloc countries that they would not attend the proposed conference had been anticipated, but as preparations are made for the meeting, these nations can be made to understand that if they fail to attend, their protestations of desire for peace as expressed in a rival resolution are mere hypocrisy."

"TONG HUA YID PAO in a commentary today says the adoption of the resolution sponsored by ASEAN and other countries is yet another proof: "ASEAN's just stand has won widespread international support, while Vietnam has come under condemnation from more and more countries for its aggression against Kampuchea. Vietnam is under the broadside of the public."

The commentary points out that should Vietnam refuse to come to its senses, but instead, stick to its rigid stand, and be a willing subordinate to the big hegemonist and a tool of aggression and expansion to prolong the war in Kampuchea, it is bound to ruin completely in its economy, and its people would lead a more miserable life. As a result, Vietnam will ultimately lose its sovereignty and national dignity, it adds.

BRIEFS

FUZHOU DELEGATION TO JAPAN--With Fuzhou municipal mayor (Liu Guoqing) as the leader, and municipal people's congress Standing Committee chairman Cai Liangcheng as the adviser, the Fuzhou municipal friendship visiting delegation comprising seven persons left Fuzhou for Nagasaki in Japan via Shanghai by plane on the afternoon of 13 October. In July of this year, the State Council approved the agreement making Fuzhou Municipality and Nagasaki sister cities. While the delegation is visiting Japan it will take part in the ceremony for signing the sister city agreement. [HK180436 Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 13 Oct 80]

FUJIAN ENTERPRISES IN HONG KONG--Huamin Company, the general agency in Hong Kong for all Fujian economic enterprises opened on 6 October in Hong Kong. The Fuzhou provincial delegation headed by Guo Chao, vice governor of Fujian, arrived in Hong Kong on 3 October to attend the opening ceremony and to investigate the Hong Kong market. [Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 8 Oct 80 HK]

MALAYSIAN DELEGATION IN XIAMEN--Accompanied by Xing Yimin, deputy secretary general of the NPC Standing Committee, the Malaysian parliamentary delegation arrived in Zhangzhou from Hangzhou by special plane on 13 October at noon and then proceeded to Xiamen by car. When the special plane arrived in the Zhangzhou airport at 1110 hours, Fujian Provincial People's Congress Standing Committee Vice Chairmen Cai Li and Hou Linzhou, Xiamen Municipal People's Congress Standing Committee Vice Chairman (Zhang Dushan), Xiamen Municipal People's Congress Standing Committee Vice Chairman (Dong Houying) and his wife, and municipal foreign affairs office director (Zhang Mingtao) welcomed the delegates and shook hands with them. They also accompanied them to Xiamen. When the delegates arrived in and left Zhangzhou, Longxi prefectural administrative commissioner (Zhang Tianying), prefectural foreign affairs office director (Wang Xiezhi) and Zhangzhou Municipal Revolutionary Committee chairman (Liang Caimei) welcomed and saw them off. [Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 13 Oct 80 HK]

JAPANESE DELEGATION IN LIAONING--The nine-member Japanese friendly delegation from Sapporo City, Hokkaido region and its entourage correspondents arrived in Shenyang 21 October to arrange a talk on relevant matters in establishing friendship ties between Shenyang and Sapporo. After arriving in Shenyang, the delegation paid a courtesy call to the Shenyang municipal people's government. They were warmly welcomed by Song Guang, mayor of Shenyang Municipality, and more than 200 cadres from the municipal level organs. During its stay in Shenyang, the delegation will visit plants, schools and places of historic interest and scenic beauty. [SK240631 Shenyang Liaoning Provincial Service in Mandarin 2200 GMT 21 Oct 80 SK]

JILIN DELEGATION TO JAPAN--A seven-member friendship delegation left Changchun for Beijing 16 October. It will fly to Japan 22 October to attend a ceremony for establishing friendly relations between Sendai City and Changchun Municipality. Feng Yingkui, deputy governor of Jilin Province and mayor of Changchun Municipality, is the head of the delegation. (Zhu Wenyu), deputy director of the Jilin provincial foreign affairs office, is the deputy head. [SK210720 Changchun Jilin Provincial Service in Mandarin 1100 GMT 16 Oct 80 SK]

BRITISH VISITORS--Beijing, 18 Oct (XINHUA)--Professor Zhou Peiyuan, vice chairman of the CPPCC National Committee and president of Beijing University, met and feted member of British House of Lords Sir (Fulton) [Fu Er Dun 1381 1422 7319] and his wife at the Great Hall of the People in Beijing on 18 October. The British guests arrived in Beijing on 15 October at the invitation of Beijing University. During their stay in Beijing, they called on the Education Ministry and toured Beijing University and scenic spots. [OW201113 Beijing XINHUA Domestic Service in Chinese 1601 GMT 18 Oct 80 OW]

PHILIPPINE AGRICULTURAL DELEGATION--A 13-member Philippine agricultural delegation arrived in Nanjing Municipality on 16 October for a friendly visit. The delegation was received and feted by Vice Governor Chen Ketain of Jiangsu Provincial People's Government. The delegation left Nanjing for Shanghai by train on 17 October. [OW201113 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 17 Oct 80 OW] Chen Zonglie, vice mayor of Shanghai, on the evening of 18 October hosted a banquet in honor of the Philippine agricultural delegation headed by (Manultimu), Philippine vice minister of agriculture, and (Benjamin Pautista), vice chairman of the Philippine Agriculture Council. [Shanghai City Service in Mandarin 0000 GMT 19 Oct 80 OW]

AFGHAN OFFICIAL SEEKS REFUGE--Islamabad, October 27 (XINHUA)--Dr. Abdul Ali, a high official in the Public Works Ministry of the Kabul regime, has recently crossed over to Pakistan from Afghanistan and taken refuge in this country, Radio Pakistan reported today. Dr. Ali, who obtained doctorate in engineering in the Soviet Union, has been serving in the present Babrak Karmal regime, the report said. The radio quoted the former Afghan official as saying in an interview that Soviet advisers were in virtual control of the civil administration in Afghanistan. Under these circumstances, he could not continue in service and decided to quit to take refuge in Pakistan, he added. Dr. Ali repudiated the often repeated claim that the Afghan economy was improving, saying that no public works project had been implemented since the Soviet military intervention in the country. He said that the economic exploitation of Afghanistan was going on and that the projects being undertaken were only those which benefit the occupying military forces. He particularly mentioned the bridge over the Amu River which is being used for the movement of Soviet troops and military equipment in Afghanistan. [Text] [OW280122 Beijing XINHUA in English 0113 GMT 28 Oct 80]

AFGHAN REFUGEE CAMP ATTACKED--Islamabad, October 24 (XINHUA)--Six gunships attacked an Afghan refugee camp situated between Miranshah and Dattaknel, ten miles inside Pakistan territory in the Northwest Frontier Province at about 15:45 p.m. today, according to official sources here. The camp was strafed for some time, the sources said. It was learned that the gunships came from Afghanistan. [Text] [OW250142 Beijing XINHUA in English 0127 GMT 25 Oct 80]

FRENCH INDEPENDENT DEFENSE POLICY--Paris, October 23 (XINHUA)--French Defense Minister Joel Le Theule today reaffirmed at the national assembly that the primary objective of his country's defense policy is "to maintain under all circumstances the independence and liberty of France to act in the world in the interest of peace." When presenting the defense budget for 1981, Joel Le Theule described it as "conforming to the military programming law of 1976" and giving "priority to the development of our nuclear forces and the modernization of our conventional forces." He stressed, "France is engaged in a major effort which will bring about a new generation of weapons destined to maintain the quality and credibility of our deterrent force." He held that French nuclear technology is "at the level of that of the United States and the Soviet Union." France's military budget for 1981 will amount to 104,443 million francs, a 17.9 per cent increase over 1980, and account for 3.85 per cent of the gross domestic product. [Text] [OW262340 Beijing XINHUA in English 1215 GMT 24 Oct 80]

FRANCE ON INTERNATIONAL PROBLEMS--Paris, October 27 (XINHUA)--French Foreign Minister Jean Francois-Poncet said here today that the action taken by Akhtar Mohammed Paktiawal, acting leader of the Afghan delegation to the 21st UNESCO conference in Belgrade, showed that "the Afghan people are far from submission." In an interview with the French television station "Antenne-2," the French foreign minister said that in Belgrade, the "courageous" Afghan diplomat reminded world public opinion of the fact that military suppression was going on in Afghanistan, so was the resistance movement. Referring to the situation in Poland, Francois-Poncet pointed out that the problem should be solved by the Polish people themselves and other eventualities should not be mentioned. "One should not envisage lightly external interventions which, of course, are unacceptable." The French foreign minister opposed the French rugby team's tour of South Africa. The French Government, he said, has instructed French enterprises in South Africa to assume obligation not to carry out South Africa's racial discrimination regulations, especially in sports. Referring to the U.S. hostages in Iran, the foreign minister said, "I think the international community will finally take more coherent, more rapid and more energetic action to deal with such matters." [Text] [OW280811 Beijing XINHUA in English 0719 GMT 28 Oct 80]

NATO OFFICIAL ON SOVIET THREAT--Paris, October 26 (XINHUA)--The Soviet invasion of Afghanistan signifies "a new stage in the execution of a colossal plan the aim of which is to strangle the Western economy by cutting off its oil supply from the Near East," said NATO secretary-general Josef Luns yesterday evening. Speaking at a banquet organized by the "Euro 9" club in southeast France, Luns said he was particularly perturbed by the Soviet's naval buildup. "Not only can the Soviet Union disturb or even paralyse the trade between the (NATO) allies within a definite area, but it is highly possible that Moscow has an over-all plan for domination over all the oceans." He said the (NATO) allies have a great superiority in surface fleets, but the Soviet submarine force is at least equal to that of the NATO states." He believed that in the near future the Soviet Union will build "very impressive nuclear-powered tactical aircraft carriers." Luns stressed the need for a "powerful, vigilant and united (Atlantic) alliance to cope with the challenge posed by a more complicated and more dangerous future." He also expressed satisfaction that Greece had returned to NATO's unified military command. [Text] [OW271358 Beijing XINHUA in English 1238 GMT 27 Oct 80]

FRG MEDICAL EXHIBITION--Tianjin, October 17 (XINHUA)--A ten-day exhibition of medical apparatus and instruments sponsored by the International Fair and the Exhibition Services Company of the Federal Republic of Germany closed here today. The exhibits, supplied by over 70 industrial enterprises, included medical apparatus, dental and ophthalmological technology, electronic instruments, and veterinary instruments, as well as sophisticated ambulances. The exhibition, which drew 40,000 scientists and medical workers from various parts of China, was the first ever held in Tianjin after the establishment of diplomatic relations between China and West Germany. It fostered mutual understanding and friendship, and promoted trade and technical exchanges. Scientists and technicians of China and West Germany had a technical discussion and exchanged their experiences. West German Ambassador Guenther Schoedel attended the opening ceremony. [OW201113 Beijing XINHUA in English 1608 GMT 17 Oct 80]

MILITARY ACTION IN SOMALI --Cairo, October 25 (XINHUA)--Chief of staff of the Somali Armed Forces Major General Omar Haj Mohamed said in an interview with the Egyptian weekly AKHBAR AL-YAWM today that since September 18, Ethiopian forces backed by Soviet and Cuban forces and merceneries are trying to bring about turmoil in Somalia, but they have failed and will never succeed. The Somali general added that the Soviet forces are behind these attacks and are concocting the plots. This was borne out by reactions to the Somali resolution to give facilities to the American forces at Berbara port. Omar Haj Mohamed who arrived here on October 23 to pay a 5-day visit to Egypt, said that he will meet with Egyptian Defence Minister Badawi on Sunday and added that the relations between the Egyptian and the Somali armed forces are stronger than any events. [Text] [OW261311 Beijing XINHUA in English 1200 GMT 26 Oct 80]

SOVIETS USE CAM RANH BAY--Manila, October 27 (XINHUA)--"Soviet expansion and improvement of Cam Ranh Bah in Vietnam as a triple-threat military base should explode all illusions about the Kremlin's intentions in this area " said an article appearing in today'S BULLETIN TODAY. "Already in the final stages of completion, the base has been serving the military and naval needs of the Soviet Union in this part of the world. Already, the aircraft carrier 'Minsk' with a capacity of 39,000 tons has made its first call there. The military airport has been expanded to enable the big Tupolev transport planes to take off or land," it said. The article pointed out that "from Cam Ranh Bay ships and planes can easily reach Thailand in the West, Singapore and the Straits of Malacca to the south, the Philippines to the east and China to the north. Soviet heavy bombers from Cam Ranh Bay can reach the Straits of Malacca in two hours and seal that vital waterway to traffic." "Opening of the port facilities at Cam Ranh Bay will, likewise, enable the Soviet Pacific Fleet to push south of Vladivostok and give it freedom to roam the South China Sea," it added. The article emphasized that it is now clear to everyone who is threatening the peace in Southeast Asia. [Text] [OW270731 Beijing XINHUA in English 0706 GMT 27 Oct 80]

NIGERIAN PRC EXHIBIT--Lagos, October 15 (XINHUA)--An exhibition of Chinese sculptures and carvings, sponsored by the Nigerian Federal Ministry of Social Development, Youth, Sports and Culture, opened in the National Theatre here this evening. Over one hundred pieces of bronze, pottery, wood, stone, ivory, jade sculptures and carvings were on display. These works of art indicate how the Chinese artists have developed the art of sculpture and carving on the basis of their rich tradition. They depict of the different facets of life in China and that of various nationalities. Presiding over the opening ceremony, Minister Paulinus Amadike said that both China and Nigeria are members of the Third World community and that there are interesting similarities in the history of their arts. He said, "this exhibition will afford our two countries additional opportunities for further strengthening the already good cultural relations." After the ceremony, the minister and other guests saw the exhibition in the company of Chinese Ambassador Lei Yang. The Nigerian minister held a reception this evening on the occasion. The exhibition will remain open till October 26. [OW201113 Beijing XINHUA in English 0226 GMT 15 Oct 80]

SINGAPORE PHOTO, OPTICAL FAIR--Beijing, 17 Oct (XINHUA)--China's photographic and film equipment and optical instruments are being shipped from Tianjin port to the international photo technology and optical instruments fair to be held in the Singapore trade center from 20 to 23 November, the goods are to arrive by the end of this month. Also attending are Japan, West Germany, Britain, Malaysia and the host country, Singapore. The more than 230 Chinese exhibits include cameras, enlargers, cinecameras, projectors, microscopes and theodolites. Trade talks will be held during the fair. China now has over 20 major factories producing film and photographic equipment, including cinecameras, processors, projectors and optical lens of more than 150 kinds and specifications. [Text] [Beijing XINHUA in English 0723 GMT 17 Oct 80 OW]

ITO ON NORTHERN ISLANDS--Tokyo, October 27 (XINHUA)--Japanese Foreign Minister Masayoshi Ito yesterday expressed once again resolve to recover the four northern islands under Soviet occupation when he inspected Nosappu Cape, Nemuro Peninsula and watched Habomai Islands through a telescope. He arrived in Hokkaido on October 25 and told the press yesterday that a package return of the northern territories is the desire of the entire Japanese people. Japan will continue its talks with the Soviet Union though this is difficult. He said that for the return of these islands, Japan "will not only have to deal with the Soviet Union but appeal to the whole world." When he returned here from Sapporo yesterday Ito made a report to Prime Minister Zenko Suzuki on his tour and conveyed to him the desire of Nemuro citizens for him to make an inspection tour of the northern territories. [Text] [OW271349 Beijing XINHUA in English 1211 GMT 27 Oct 80]

KAMPUCHEAN ATTACKS ON SRV--Bangkok, October 26 (XINHUA)--The Democratic Kampuchean Armed Forces yesterday destroyed a helicopter parking apron in their attacks on the Vietnamese troops in Malai and Mak Heun mountainous areas. This was the heaviest fighting in these areas in the past two months, according to local press reports. Thai paper BAN MUANG reported today that the armed forces of Democratic Kampuchea mounted a surprise attack on the Vietnamese troops in places within Kampuchea opposite Thailand's Aranyaprathet District, Prachinburi Province early yesterday morning. The battle lasted for one hour and a half. Heavy gunfire could be heard 16 kilometres from the fighting area which extended over ten kilometres. The report said that battalion commander Mitr Thiep of Democratic Kampuchean Armed Forces told Thai correspondents that their battalion had separated into small groups to launch simultaneous attacks on the Osompo Bridge and the surrounding areas, making it impossible for the enemy to repair and build highways and bridges. VIEWS OF MAO ZEDONG THOUGHT AS COLLECTIVE WISDOM EMPHASIZED

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 1, Feb 80 pp 15-18, 34

[Article by Jiang Zhesheng [5592 0772 3932] of the Historical Research Institute of the Shanghai College of Social Sciences: "A Brief Understanding of Mao Zedong Thought"]

[Text] In his speech on the occasion of the 30th National Day Anniversary, Comrade Ye Jieying pointed out: "The Chinese communists and people regard Mao Zedong Thought as a result of the development of Marxism-Leninism in the Chinese revolution, attributing all our victories to the guidance of Mao Zedong Thought without which there would have been no new China today. This assessment is entirely consistent with historical facts." A study of Comrade Ye Jieying's speech and a review of my own experiences in carrying out the revolution under the party's leadership and tutelage tell us that this speech was an accurate document which assesses events with a serious Marxist attitude and in a way that takes into account objective reality and in a spirit of seeking truth from facts. For this reason, it can withstand any tests in history. This speech should and can be used as a basis for solving some related problems that we face today.

A review of some serious mistakes committed by our party during the past 30 years and especially during the Great Cultural Revolution which began in 1966 has led some of our comrades to raise a series of questions as follows: Are there any imperfections in Mao Zedong Thought? Do we feel guilty of "covering up wrong doings" if we treat Comrade Mao Zedong's works in such a way as to regard their accurate contents as belonging to Mao Zedong Thought and the remainder connected with the mistakes made by the party not as part of Mao Zedong Thought? After Comrade Mao Zedong's death, should we continue to hold high the banner of Mao Zedong Thought?

These questions largely stem from some comrades' misunderstanding of the relationship between Comrade Mao Zedong and Mao Zedong Thought.

Comrade Ye Jieying's speech explicitly pointed out: "Mao Zedong Thought resulted from an application and development of Marxism-Leninism in the Chinese revolution, and from integrating the universal truth of Marxism-Leninism with the concrete practice of the Chinese revolution." This remark tells us that Mao Zedong Thought is a scientific theory of the proletarian liberation movement, just like Marxism which came into being after Marx and his close comrades-in-arms such as Engels worked together to apply scientific methods to sum up the experiences of the proletarian political parties--the "Communist League" and the "International Workers' Association (or the First International), and revolutionary people, and to convert them into a law governing a great historical movement and universal truth guiding the revolutionary struggles. This revolutionary theory was named after Marx because he was a great representative of the founders of this branch of science, just as Comrade Mao Zedong was the most outstanding representative of the founders of Mao Zedong Thought. Through the struggles collectively carried out by our party and the people, he and his close comrade-in-arms Zhou Enlai and others worked together to apply Marxism to develop that scientific ideological system--a combination of the universal truth of Marxism-Leninism and the concrete practice of the Chinese revolution and construction. It goes without saying that as an individual, Comrade Mao Zedong was not born to be inalienably associated with that scientific system of Mao Zedong Thought. Nonetheless, when Lin Biao and the "gang of four" were in power, in order to attain their counter-revolutionary aim, they set in motion their propaganda machine on a round-the-clock basis to persuade the people to worship Comrade Mao Zedong as God and to regard "Mao Zedong Thought" as "Chairman Mao's thought." As a result, they created a confusion and a modern cult of worship in the people's minds. "The rise of the red sun from Shaoshan marks the beginning of a new era of human history" was a song in praise of Comrade Mao Zedong's birthday. The daily airing of this song over the years led some comrades to treat that scientific system of Mao Zedong Thought as purely a product of the wisdom of Comrade Mao Zedong himself. In fact, one's stand and viewpoint with regard to the development of the world do not originate from one's mother's womb, but evolve from certain ideas one shapes under specific historical conditions long after one's birth. Such stand and viewpoint are subject to changes as the time goes on. As far as his viewpoint was concerned, Karl Marx remained a Hegelian idealist upon his graduation from college. When he discussed his past in 1957, Comrade Mao Zedong said: "For myself, I used to have all sorts of non-Marxist ideas, and it was only later that I embraced Marxism." ("Selected Works of Mao Zedong," vol 5, p 382) This is a true story from history. But this does not imply that Marxism contains idealism and Mao Zedong Thought contains non-Marxist ideas. The reason is that the scientific Marxist system was not conceived and adopted by Marx before Marxism was founded. Likewise, all ideas Comrade Mao Zedong had before he became a Marxist differ in essence from Mao Zedong Thought which has been a principle guiding the work of our party.

Marxism holds that no revolutionary leader is God and perfect. In his play "Self-Torture," humorous Roman playwright Teluntius said: "I am a human being. I inherit in my blood all characteristics of mankind." This motto indicates that whoever you are, you are a human being and you have weaknesses just like any other person. Whenever he spoke of his past, Marx quoted this motto. In 1865, he quoted it again in his "rejoinder" to a series of questions raised by the people all over Europe at that time. He repeatedly did so on the grounds that this motto truly reflected his personality and could be used to dispel any misunderstandings some Europeans had about him.

At a time of surveying the mistakes committed by the Marxist classic writers and their shortcomings, and assessing the correctness of the scientific system of Marxism, Lenin set a brilliant example for us to follow. In this connection, Lenin once said: "Surely, Marx and Engels made many mistakes and frequently erred in predicting the events to come. For example, they misjudged the timing of the revolution, and its victory (including the victory of the German revolution of 1848) and of the birth of the Republic of Germany (see Serve the Republic written by Engels after he took up the cudgels for the movement to defend the constitution of the monarch from 1848 to 1849). Nevertheless, such judgments made by these two great revolutionary thinkers, however erroneous, were more decent, valuable, and greater than the clumsy wisdoms of those bureaucrat-libertarians who loudly claimed that the revolution was a meaningless business." ("Selected Works of Lenin," vol 1, pp 709-170) In addition, Lenin also hailed the Marxist theory as an "omnipotent and correct thesis."

Does Lenin's remark that "Marx and Engels made many mistakes and erred frequently" contradict his statement that Marxism is "correct" and "omnipotent?" No. A realistic analysis clearly shows that the former remark reflects only an insignificant episode or a brief intervening act in a long drama about the activities of the representatives of the founders of scientific theories. In analyzing such episodes, we must realize that their aim was to triumphantly advance the cause of the working class and that few great historical figures could ever avoid mistakes when they stood in the forefront guiding the march of events and, in a sense, their shortcomings can be a legacy beneficiary to the generations to come. In other words, "their shortcomings should be explained in the light of historical conditions so that people can understand; we should not be too critical of our predecessors." (Selected Works of Mao Zedong," vol 5, p 312) The latter statement was a fair evaluation of our great revolutionary teachers who devoted their lifetime to seeking truth in defiance of frustrations, truth that has been proven universally applicable through practice. Furthermore, we must pay attention to the fact that when Lenin described Marxism as correct and omnipotent, it does not mean an unconditional endorsement of every remark, every thesis or instruction made or issued by Marx and Engels. In discussing his experiences in studying and applying Marxism-Leninism, Comrade Mao Zedong often identified it as "universal truth" "basic theories or principles" as distinguished from other theses and instructions made public by Marx, Engels and Lenin and Stalin. In view of this, Marxism-Leninism deserves to be called "the crystallization of the most correct and most revolutionary scientific thought of the world proletariat." ("Selected Works of Mao Zedong," vol 3, 994)

We must adopt the same scientific attitude and method in assessing and evaluating Mao Zedong Thought.

Mao Zedong Thought is a theory based on the practical experiences gained by our party and the Chinese people in carrying out the protracted revolutionary struggles under the guidance of the universal truth of Marxism-Leninism. From the outset, the members of the Chinese Communist Party (Comrade Mao Zedong included) did not know how to apply Marxism-Leninism to destroy the old and build the new in a populous country like ours. At the initial stage of the struggle, they certainly could not avoid making mistakes. They then applied the basic principles of Marxism-Leninism to sum up their experiences (both correct and incorrect). Through a process of weeding out the rubbish and selecting the essential, discarding the false and retaining the true, they transformed what they intuitively perceived into rational knowledge, put it into practice and tested it out in order to enrich it. By persuading its members and cadres to keep in close touch with the masses, to listen to their voice and to put their knowledge through repeated practices, our party eventually deepened its understanding of the objective laws, and the universal truth of Marxism-Leninism and transformed itself from a blind follower of Marxism-Leninism into a political organization capable of consciously applying it. As the "crystallization of the Chinese people's 50-year-old experiences in waging revolutionary struggles and in building a new society," Mao Zedong Thought is not merely a parade or combination of both positive and negative experiences, but quintessence deriving from such experiences. As a result of practice and repeated tests by millions upon millions of Chinese people over the past 50 years, Mao Zedong Thought has gained a reputation as a veritable scientific system--a combination of the universal truth of Marxism-Leninism and the Chinese revolutionary practice. We really have no reason to cast any doubt on its correctness. This objective truth has nothing in common with the extreme form of egoism which influences people to "blame all faults on others and regard themselves as flawless persons" and to cover up their shortcomings.

Certainly, the aforementioned analysis will give rise to a demand for achieving a comprehensive and correct understanding of the scientific system of Mao Zedong Thought and for applying it properly. During his lifetime, Comrade Mao Zedong consistently stressed the need to seek truth from facts. But toward the waning years of his life, he issued some instructions and decisions incompatible with objective reality. This occurred when he was surrounded by the "gang of four" and other bad elements who prevented him from getting into contact with the masses and reality. During that 10 long years of turmoil, vicious political ambition also drove Lin Biao and the "gang of four" and their ilk to deliberately distort, chop up, tamper with and adulterate Mao Zedong Thought, thus creating a confusion in the people's minds about this otherwise comprehensive scientific theoretical system. Today when we endeavor to implement the party's political line and to study and apply Mao Zedong Thought to solve problems resulting from the realization of the four modernizations, we should, as was pointed out in Ye Jieying's speech, regard it as a product of collective wisdom pooled by Comrade Mao Zedong and his comrades-in-arms and the party, and should integrate into a single ideological system major works by Comrades Mao Zedong, Zhou Enlai and other comrades and the Party Central Committee's documents concerning our party's line, principles and policies. Only in this way can we systematically study and digest them along with the basic principles of Marxism-Leninism, and fully appreciate and firmly grasp this fundamental ideological system which has been consistently applied by Comrade Mao Zedong and the party to observe and solve theoretical and practical problems in the revolution and has been verified as the truth through practice. Our primary task in the future is to effectively grasp and uphold the dialectical and historical materialist ideological line set forth by our party under Comrade Mao Zedong's leadership during the long period of revolutionary practice. In his speech, Ye Jieying described this ideological line as "the focal point of the proletarian world outlook, the essence of Mao Zedong Thought, the basis for formulating our political line and various principles and policies, and a key to success in correctly understanding and implementing the party's line, principles and policies." Only by persisting in upholding this ideological line of "taking actual conditions into account, seeking truth from facts and integrating theory with practice," can we fully comprehend and accurately apply the scientific system of Mao Zedong Thought. The fact that Mao Zedong Thought is not only indispensable to the development of the four modernizations but also cannot be estranged from the practice in struggle at home and abroad testifies to the truth that it is not only "omnipotent, but correct."

In the past, some individual comrades asked: Since Comrade Mao Zedong's death, should we still have to hold high the banner of Mao Zedong Thought? Guided by the commonsense about historical materialism, I have no alternative but to answer this question this way: the proletariat should respect rather than chop up its own history. Marxism--the scientific ideological system of the proletariat-embodies almost everything of value to the centuries-old human civilization and culture. It not only absorbs but also transforms everything of value. This is why it has won a reputation as a thought of universal and historical significance. For example, in the 1970's Engels advised the proletarian leaders to translate works by the bourgeois atheist-thinkers in France like Adren Helvetius, who died nearly a century ago, and to widely disseminate them among the workers, commenting that "these works reflect the French achievements of the highest order both in form and content; even if they are measured by today's scientific standards, they remain highly valuable and are unsurpassed by their modern counterparts both in form and content." ("Selected Works of Marx and Engels," vol 2, pp 591-592)

As far as the proletariat--the most revolutionary class in history--is concerned, no task is more important than to inherit its own ideological and theoretical system, a system which profoundly reflects the urgent need for the development of material well-being in society, and which can inspire millions upon millions of people to solve the problems of their concern and push society forward along a new course. Over 10 years after Karl Marx's death, Lenin thoroughly criticized and exposed the then Russian national elite group for smearing and distorting Marxism. In this connection, he resolutely pointed out: "The key to quick success in the revolution lies in the Russian socialists' ability to swiftly grasp Marxism as the only revolutionary theory and devote their full energy to apply it in Russia." ("Selected Works of Lenin," vol 1, pp 82-83) When he reviewed our party's experiences in the First and Second Revolutionary Civil Wars half a century away from Marx's death, Comrade Mao Zedong said: The basic principles of Marxism are "universally true because it is impossible for anyone to escape from its domain in his practice." ("Selected Works of Mao Zedong," vol 1, p 269) In disputing this essential truth, Lin Biao and the "gang of four" alleged that since Marx and Lenin died long ago, their theories must now be outdated. Their aim was to viciously discredit Marxism-Leninism and to estrange the universal truth of Marxism-Leninism from the Chinese revolutionary practice and to negate Mao Zedong Thought despite their open declaration of "being boundlessly loyal to Mao Zedong Thought." I believe that the basic principles of Marxism-Leninism will be valid for a long time to come and will significantly guide our cause forward; the argument that Marxism-Leninism is outdated is unworthy of comment. On the other hand, we must thoroughly eliminate the influence of this fallacy and forever hold high the banner of Marxism-Leninism during our march forward. Marxism-Leninism symbolizes an endless search for truth. It represents a boundless power of vitality at the service of the world's revolutionary people. It can guide them to open a new path toward knowing truth through practice. In other words, Marxism-Leninism can develop only through the expansion of the revolutionary struggles in various countries. The Chinese Communist Party and the Chinese people regard Mao Zedong Thought as a result of the practice of Marxism-Leninism in the Chinese revolution. Furthermore, Mao Zedong Thought embodies significant progress in three major aspects of Marxism. The victory of the revolution and construction won by China over the past 50 years means a victory for Mao Zedong Thought--the Chinese brand of Marxism-Leninism. During the Democratic Revolution, we mainly relied on three magic weapons--the united front, the armed struggle and the building of the Party--to completely overthrow the rule of the three major enemies. A review of our work over the past 30 years following the birth of new China proves our political line to be correct. The four basic principles consistently promoted by Comrades Mao Zedong and Zhou Enlai--allegiance to the socialist road, the dictatorship of the proletariat, the CCP leadership, and the cause of integrating the universal truth of Marxism-Leninism with the concrete practice of the socialist revolution and construction in China; the "On the Ten Major Relationships" and a series of theories, lines and policies on socialist construction published by Comrade Mao Zedong in response to China's needs at that time; the thesis on the correct handling of the two different types of social contradictions; the basic cultural and political policy of "letting a hundred flowers blossom and a hundred schools of thought contend;" the basic socialist political requirement for creating a political situation in which there are both unity of will and personal happiness and liveliness in the party and throughout the country; the strategic concept of three worlds and foreign policy--all these will remain to be our victorious banner and powerful weapons to defeat subversive enemies at home and abroad, to correct our mistakes in work, to withstand severe tests, and to build China into an advanced and powerful socialist country so as to make a greater contribution to humanity.

In his speech, Comrade Ye Jieying solemnly declared to the world: "The Chinese people will forever remember Comrade Mao Zedong's immortal contributions, and are determined to defend and develop the scientific system of Mao Zedong Thought." This remark expresses the aspirations of the entire party and the people throughout the country. Awaiting us now is a great task handed down by Comrades Mao Zedong, Zhou Enlai, Zhu De and other proletarian revolutionaries of the older generation to build China into a powerful socialist country with modern industry, agriculture, national defense and science and technology. We firmly believe that by holding high the banner of Marxism-Leninism-Mao Zedong Thought, the people throughout the country under the leadership of the Party Central Committee, the NPC Standing Committee and the State Council certainly can conclude this task with better and faster results.

NPC HAILED FOR EXERCISING DEMOCRATIC RIGHT, STARTING REFORMS

Free Expression of Will

Beijing RENMIN RIBAO in Chinese 17 Sep 80 p 1

[Today's Talk by Chen Ping [2525 1627]: "A Talk on 'One Abstention'"]

[Text] On its closing day, the Third Session of the Fifth NPC adopted a proposed amendment to "Article 45 of the Constitution of the PRC." After the voting was counted, its executive chairman Peng Zhen corrected an earlier announcement, saying: "The vote for the amendment to Article 45 of the constitution was not unanimous, because one deputy abstained." This announcement was very interesting.

When the People's Congress is in session, each deputy is entitled to one vote on any resolution. He may vote for or against it or abstain. This normal exercise of the democratic right must be preceded by careful and serious deliberations. But in our country, the "unanimous passage" of resolutions through the people's congresses at all levels has long been the case most familiar to our ears. Was the voting really unanimous? If the answer is yes in most cases, the soundness of our democratic centralism would be in doubt. Although deputies often unanimously raised their hands in favor of certain resolutions through a roll call, it was not necessarily an indication of "an agreement" from the bottom of their hearts. When Lin Biao and Jiang Qing and company held sway over the political life inside and outside the party, no deputy dared to cast a negative vote. If he did, he would have no way of escaping an investigation which marked the beginning of an end to his political career. In those old days, who could freely express their will?

Although I personally discourage any negative vote against the resolution on amendment to Article 45 of the constitution or abstention, I highly admire the democratic atmosphere in which the Third Session of the Fifth NPC was conducted and the courage displayed by that deputy in expressing an opinion different from others. Political democracy will prevail as long as we uphold the system to grant the people the right to freely express their will.

Reform in Significant Ways

Beijing RENMIN RIBAO in Chinese 17 Sep 80 p 1

[oday's Talk by Wang Yufeng [3769 3768 0023]: "Trifling Matters Reflect a New Spirit"]

[Text] In its editorial entitled "A Democratic Congress, A Congress of Reform," RENMIN RIBAO used the phrase "trifling matters reflect a new spirit" to praise the Third Session of the Fifth NPC for pushing through many reforms. These reforms not only touch matters of principle but also trifling and specific aspects of political life. Apart from those minor reforms already published in the newspapers, I would like to point out many others known to me. Among them were the disappearance of slogans from the meeting hall except for a large streamer hung across the rostrum of the Presidium; the resolution on banning deputies from bringing their own secretaries and other aides to the session with the exception of the aging and ailing deputies who could not take care of themselves; the decision to transfer the personnel of nearby government offices to work for the Third Session of the Fifth NPC so that they didn't have to live in hotels and eat at restaurants at government expense; the cancellation of privileges formerly granted to deputies to see movies and Beijing operas free of charge.

When the NPC was in session last year, its deputies and staff were served food at 11 pm every day. During the Third Session of the Fifth NPC, only those comrades who worked late into midnight were served food.

The reform of the unreasonable rules and regulations and elimination of archaic systems call for action and must take into account both long-term and short-term interests. The reform must touch every aspect of political life. Only in this way will the reform not be criticized as "something that can never materialize." As far as the reform is concerned, the Third Session of the Fifth NPC has got off to a good start. I sincerely hope that the reform movement will soon spread to every aspect of life.

PARTY AND STATE

ZHAO ZIYANG'S PROMOTION EXAMINED

Hong Kong QISHI NIANDAI [THE SEVENTIES] in Chinese No 9, 1 Sep 80 pp 27-33

[Article by Qi Xin [7871 6580]: "The Background and Outlook of the Advancement in position of Zhao Ziyang--The Bombardment of Chinese Communist Newspapers at the Errors and Failures of the Economic Departments and Their Affirmation of the Economic Reforms Carried Out in Sichuan Are the Main Background of the Personnel Changes This Time"]

[Text] The 14th session of the Standing Committee of the Fifth National People's Congress that came to a close on 16 April this year announced that the Third Session of the Fifth National People's Congress is to be convened in August this year. Since that time, a series of changes in the ongoing state of affairs has invariably indicated that this Session of the Congress is likely to make a number of important decisions. The most noticeable of these are of course personnel changes such as Zhao Ziyang's succession to Hua Guofeng as premier of the State Council and the resignation of Deng Xiaoping and others as vice premiers. But hidden behind these changes are also many more important, major differences relating to the national economy and livelihood of the people, and economic changes and reforms brought about on account of those differences. The relevant background in this regard has also gradually revealed itself in the course of July and August.

Public opinion overseas in the past usually considered the meeting of the National People's Congress an application of the rubber stamp, since all decisions of the Chinese Communist Party were still usually made by the Party Central Committee or the party's meetings. This is of course also true. In addition, the Chinese Communists time and again indicated that they are going to insist on "leadership by the Communist Party"; this is tantamount to admitting this fact without any attempt to hide it. But, is party leadership, as in the past, a case of control intended for all matters, big or small, or is it now concerned only with the determination of some general orientations by way of so-called "ideological leadership" while leaving administrative matters to the fully authorized autonomous disposal of the State Council? It seems that the Chinese Communist authorities have now woken up from the errors of their former type of practice and thus are inclined toward the latter view.

From the Fifth Plenary Session of the 11th Party Central Committee concluded in March this year, this tendency toward the separation of the party from the government could already be seen. At that time, two members, Hu Yaobang and Zhao Ziyang, were elected to the Standing Committee of the Political Bureau; the Central Secretariat was set up, with Hu Yanbang as general secretary; although Zhao Ziyang was a member of the Standing Committee, he did not join the Secretariat, which indicated that he was going to take up an important post on the State Council and carry out "party leadership" on the State Council on the basis of his very status as a member of the Standing Committee of the Political Bureau. By the middle of April, the Standing Committee of the National People's Congress appointed Zhao Ziyang and Wan Li as vice premiers of the State Council; when Deng Xiaoping accepted an interview by an Italian journalist on 17 April, Zhao Ziyang was vice premier for Standing Affairs on the State Council.

During the 2 or 3 months thereafter, Deng Xiaoping repeatedly indicated to foreign visitors that he was going to retire. By the end of June, Hu Yaobang indicated in a conversation with a Yugoslav journalist that a whole series of measures was being prepared for adoption in order to prevent excessive concentration of power, that the practice of granting lifelong tenure was to be abolished, and that efforts were being made to let younger persons around 60 years of age take up posts of responsibility. On 10 July, Bo Yibo hinted to a visitor that Hua Guofeng and Deng Xiaoping would "lay down their duties as premier and vice premier." Thereafter, on 27 July, Li Xiannian indicated to deputy editor-in-chief Sulzberger of THE NEW YORK TIMES that Hua Guofeng, Deng Xiaoping, Chen Yun, Xu Xiangqian, Wang Zhen and he himself (Li Xiannian) were going to resign from their posts as premier and vice premiers. Besides, NEW CHINA NEWS AGENCY reported in a news item that Yao Yilin was chairman of the State Planning Commission and Yu Qiuli was chairman of the State Energy Commission; this revealed that Yao Yilin had already replaced Yu Qiuli at the important post of chairman of the Planning Commission.

During July and August, RENMIN RIBAO and other Chinese Communist newspapers started to bombard the Chinese Communist economic departments. Most sensational was the story about the major event of the capsizing and sinking of the oil drilling rig "Bohai No. 2"; then it was criticism of the Wuhan Steel Plant's importation of the "1.7 meter steel-cutting works," criticism of the Dagang oil field and the civil aviation bureau. Prior to all this, there were also criticism of "promotion of the Dazhai experience" and Bo Yibo's criticism to a Japanese visitor of the Baoshan Steel Plant's importation of foreign technology. This series of bombardments directly or indirectly reproached Communist China's Petroleum Ministry, State Planning Commission, Economic Commission, Capital Construction Commission, Ministry of Economic Relations With Foreign Countries, Civil Aviation Bureau; they criticized the policies and concrete measures of the State Council in promoting the "In Agriculture, Learn From Dazhai" movement and in importing foreign technologies between 1975 and 1978.

This expose by the Chinese Communist newspapers of the major errors and failures of the economic departments not only reflected differences on economic policy in the upper strata of the Chinese Communist Party during the past few years, but also reflected forthcoming policy orientation and personnel changes.

Bombardment at the Economic Departments

The oil drilling rig "Bohai No. 2" capsized and sank on 25 November last year. But not until 22 July this year did RENMIN RIBAO report this serious incident, and the newspaper also criticized by name "the Oceanic Oil Exploration Bureau of the Petroleum Ministry." Seventy-two persons died in this incident, and total loss was put at more than 37 million yuan (people's currency). RENMIN RIBAO's report pointed out that the occurrence of this incident "was by no means accidental, but a result of the fact that the Oceanic Oil Exploration Bureau for a long time had overlooked safety work and failed to respect objective laws in its oceanic oil drilling production. According to only incomplete statistics from 1975 to 1979, incidents of various kinds which occurred under the jurisdiction of the Bureau numbered as many as 1,043 (of which more than 30 were major incidents), resulting in the death of 105 persons and serious injury of 114 persons; economic losses were staggering. After the occurrence of these incidents, in most cases, no effort was made to mobilize the masses to seriously sum up experience and to try to solve the hidden causes behind the events."

What was sensational about the incident of "Bohai No. 2" was not the death of people and loss of money but the continuous expose through this incident by the Chinese Communist newspapers of the bureaucracy and bad working style which ignored questions of life and death concerning the workers as exemplified by the Oceanic Oil Exploration Bureau of the Petroleum Ministry. "Bohai No. 2" was imported from abroad in 1973; but this drilling rig's "stability calculation statement" was written in a foreign language and the material was never translated for study; not until the occurrence of the incident did the Tianjin Municipal People's Procuratorate, for the sake of investigating the case, ask someone to have it translated.

According to the report, when "Bohai No. 2" capsized, tug No. 282, which was responsible for tugging the rig on its voyage, even "failed to issue international s.o.s. signals immediately according to navigation regulations and ascertain the position of the rig, but, instead, it was unable to report the accurate position of the sunk rig for quite some time, and the lifeboats and liferafts on the tug, too, were not launched to save the victims" (RENMIN RIBAO, 25 July).

Besides, a "small incident" exposed in the report of GONGREN RIBAO likewise fully revealed the ugly faces of certain leading cadres of the Oceanic Oil Exploration Bureau: "At one time, a worker of 'Bo 4' fell on the rig and was wounded; his wound was serious, and he was in a coma. The drilling rig requested the Bureau to despatch urgently a helicopter to save him. The helicopter came, and in it sat Sun Zhiye [1327 3112 2814], head of the drilling department, and the head of another oceanic engineering department. Because the helicopter could only accommodate three persons, the captain and the guide explained the situation and asked them to get down so that the worker could be sent ashore to be taken care of. The head of the oceanic engineering department alighted from the helicopter, but department head Sun stubbornly refused to budge; drilling team cadres pleaded with him with profuse apologies, but he was still not moved. Finally, a worker had to be asked to kneel in the cabin in order to take care of the wounded, while department head Sun sat in the cabin in grand style without lifting a hand."

After reading such related reports, any conscientious person would have his blook boiling in his veins, for this was no longer any question of bureaucracy but the correct name should be: "cold-blooded animal." Compared to such ugly scenes in reality, the problems of cadre privileges and bureaucracy described in the literary works of new realism are too insignificant, indeed.

The spearhead of the incident "Bohai No. 2" was thus pointed toward the Petroleum Ministry. Then, on 11 August, RENMIN RIBAO published a "letter from the correspondent" which even more directly and explicitly criticized the Dagang oil field, pointing out that its "departments in charge lacked overall planning. Production of various plants was uncoordinated, resulting in huge waste." The letter pointed out: In the case of the Dagang electricity plant, because no consideration was given at the time it was constructed as to the amount of fuel that could possibly be supplied by the Tianjin oil refinery, even though the amount of US $86 million was spent to import from abroad two power-generating assembling units of 320,000-kilowatt capacity each, at a total investment of nearly 500 million yuan, but because fuel supply turned out to be insufficient, one assembling unit could not operate for a long time, nor could the other assembling unit give full scope to its role. Thus, each year the electricity generated was 2.1 billion kilowatts less, an equivalent to half of the electricity for industrial use in Tianjin Municipality. Apart from this, in the case of the Tianjin petrochemical fibre plant being constructed, after it is launched into production, it will need 180,000 tons of naphtha as its principal raw material, and such naphtha also depends on the Tianjin oil refinery's supplies. But the department in charge has long ago put down a great amount of investment to let the Tianjin oil refinery produce jet fuel; this makes it impossible for the refinery to produce 180,000 tons of naphtha each year at the same time. The petrochemical fibre plant is going to put in the raw material and try out its machines the next half of this year; since the raw material problem is still not solved, this key works with an investment of 1.3 billion yuan is bound to become completely stopped, or semi-stopped, in its operations.

The criticism of the Dagang oil field and industrial district touched upon the big questions of importation of large-type equipment and the state's overall planning, and the criticism of the Wuhan Steel Plant and the Baoshan Steel Plant for their importation of foreign equipment also turned its spearhead toward the State Planning Commission and the Ministry of Economic Relations With Foreign Countries, even though no names were specified.

Wuhan Steel Plant's "1.7 meter steel-cutting works" was imported from West Germany; the state invested several billion yuan. It took 5 or 6 years from construction planning to the gradual start at successive points of its production. "Only after it was launched into production was it discovered that there was not enough raw material, nor enough electric power, and certain energy media (water, electricity, gas, air, wind) were lacking; thus there was a shortage of this and of that...In the end, the equipment was first-rate, but the quantity of production was low, the cost was high, and the products were not competitive; not only were they unable to enter the international market, but their outlets for domestic sales were also very limited." Several billion yuan thus went down the drain!

Another example of wrong importation of foreign technology was the Baoshan Steel Plant. Two years ago, Chinese Communist leaders criticized Japanese merchants as being dishonest since they did not provide the Baoshan Steel Plant with the most advanced technical equipment; thereafter, the Japanese side made some adjustments according to China's demands and brought in first-rate technology accordingly. But on 3 July Bo Yibo indicated to Japanese visitors that "the Baoshan Steel Plant is neither the path nor the model to work on modernization; it has already become the Chinese people's cumbersome burden. What China needs from now on is not to import first-rate technology but to combine with China's actual situation and mainly pay attention to carrying out improvements on the basis of existing technology, and import foreign technology under this principle. But construction of those parts of the Baoshan Steel Plant for which contracts have already been signed will continue to be carried out hereafter."

Since the Baoshan Steel Plant imported the most advanced equipment, why did it become China's burden? It has become known that the Japanese equipment was designed according to Japan's situation. Japan lacks natural resources; since iron ores and coal have to be imported anyway, it is better to use such iron ores and coal of the highest quality so that better results can be achieved. For this reason, there was pertinent accommodation in the design of the machines to be used. China adopted Japan's first-rate equipment, but the quality of its iron ores and coal is not good enough and hence cannot be used to the greatest advantage according to the design of these machines; as a result, high prices had to be paid in order to import good enough iron ores and coal from Australia, Brazil, and places of the like. China itself does not lack iron ores and coal; yet it was forced to import iron ores and coal from foreign countries just because it wanted to import advanced equipment. This constitutes quite a grievance, indeed. In particular, the Shanghai harbor is rather shallow, and large vessels find it hard to dock there; thus the raw materials needed had to rely on Japan for entrepot facilities--that is, they must be first transported to Japan by large vessels, and then transferred by Japan with small vessels to Shanghai. Because of this, not a little transportation fees have been added.

In an article in which he examined the "1.7 meter steel-cutting works," the Baoshan Steel Plant's translator Meng Xiancheng [1322 2009 2052] quoted the words of a West German expert: "I don't understand why you must import such expensive equipment. In the case of some key items of equipment such as electronic computers, there are not very many who can understand them even in our own country. After you have purchased them at a high price, you cannot use them, do not know how to repair them, nor have any spare parts. We use them because we have a small population and labor power is very expensive. What you have is plenty of people; you may buy certain cheaper and not so advanced things in order to use more people. You can also manage well; so long as you produce continuously, you can still make money. Any equipment must be able to make money. It will not be too late after you have trained competent people and can then import the most advanced equipment."

RENMIN RIBAO affirmed the stance of Meng Xiancheng and the West German expert's opinion that he quoted. On 11 August, RENMIN RIBAO even published an editorial to point out that in the work of importing advanced technology and equipment from abroad, "there existed for a long time a 'Left' tendency in thinking of the largest scale and demanding the greatest speed" and, because of improper importation, "the comprehensive balance of the national economy has come to be affected, and the situation of disproportionate development has also come to be aggravated." These ill effects have been concretely reflected in the fact that the scale of the imports was too large; no consideration was given to the country's lack of matching manufacturing and operational capability, technical level, management level, and foreign exchange payment capability; there was a great deal of blind urge involved; the proportionate imports in agriculture, light industry and heavy industry were improper, with too many in heavy industry, too few in light and textile industries, while the amount of money spent on imports in communications and transportation enterprises in the past 30 years made up only 0.5 percent of the total, and the amount of money on imports directly used in agriculture was practically equal to zero; too many whole sets of equipment were imported, as they made up more than 90 percent of the total amount of money used on imports, but little money was really used on the importation of technology. "Furthermore, because certain imports were put to use in a hurry and hence failed to function properly after much construction work, their economic results turned out to be far from satisfactory; in the case of certain items, no one took the responsibility; hence up to millions and tens of millions of yuan's worth of equipment were left idle in the warehouses, exposed in the wilderness, subject to abuse by the elements until mildewed, rusty, and ruined. All this constituted a waste of the people's blood and sweat."

Besides, criticisms of the Civil Aviation Bureau and the "In Agriculture, Learn From Dazhai" movement also touched on those who have been in charge of the economic departments of the State Council since the Fourth National People's Congress (1975). Put more clearly, this means that the derelication of duty on the part of the vice premiers and ministers of the State Council in charge of the State Planning Commission, the Economic Commission, the Capital Construction Commission, the Ministry for Economic Relations With Foreign Countries, the Petroleum Ministry, and also those in charge of the work of the agricultural departments since 1975 has now been publicly criticized in the newspapers. The nature of the errors committed by these people is very different from the case of the "whatever faction" like Wang Dongxin and others; in the latter case, they perhaps because of old age, were rather conservative, tended to make-do with whatever happened to be on hand, got used to the old ways of doing things or a bureaucratic working style or problems of the like, and hence became derelict in their duties. But the economic problem is the key to the stability of political power; this is no exception to any country in the world. If the economy is not handled well, the political power will not be stable; leaders lacking the competence to solve the economic problems are bound to be dismissed from their offices, no matter what reasons are cited when they are dismissed.

The Big Change of Personnel at the State Council

In connection with the bombardment of the economic departments by the Chinese Communist newspapers, we might as well make an estimate as to what personnel changes are likely to be made on the State Council at the Third Session of the Fifth National People's Congress.

The First Session of the Fifth National People's Congress was held in February 1978. At that time a premier and 13 vice premiers were elected. Of these 14 persons, 11 continued or were promoted from their term established by the Fourth National People's Congress in 1975; 3 were new in their office. The namelist of these 14 is as follows: Hua Guofeng (promoted), Deng Xiaoping (continuation), Li Xiannian (continuation), Xu Xiangqian (new in office), Ji Dengkuei (continuation), Yu Qiuli (continuation), Chen Xilian (continuation), Geng Biao (new in office), Chen Yongguei (continuation), Fang Yi (promoted, serving as minister for economic relations with foreign countries during the Fourth National People's Congress), Wang Zhen (continuation), Gu Mu (continuation), Kang Shi'en (promoted, serving as petroleum minister during the Fourth National People's Congress), and Chen Muhua (new in office).

This State Council group basically maintained its original shape of 1975, especially in the economic departments. Absent were only Zhang Chunqiao, Wu Gueixian, and Sun Jian, the three who were involved with the "gang of four."

Among these 14 persons, Yu Qiuli served concurrently as chairman of the State Planning Commission; Kang Shi'en, concurrently as chairman of the State Economic Commission; Fang Yi, concurrently as chairman of the State Science and Technology Commission; and Chen Muhua, concurrently as minister of economic relations with foreign countries. The importation by the state of large-type foreign technical equipment and the undertaking of capital construction and economic planning were held basically in the hands of these people. The huge economic plan presented by Hua Guofeng at the First Session of the Fifth National People's Congress, which deviated from realities, was formulated by this very group.

A conceptualization at the time was to exploit and export petroleum in large quantity in exchange for the world's most advanced technologies and equipment. But it appears that the Petroleum Ministry has rather great problems, and the most advanced equipment purchased with foreign exchange has also proved to be unsuitable to China's actual conditions. Therefore, the economic plan proposed at the First Session of the Fifth National People's Congress was basically an adventurous plan. Hua Guofeng proposed to employ the mode of great joint battles to work on 120 large-type construction projects, and also thought of achieving 10 or so Daqings; conceptualizations of this sort partook especially the color of "coveting greatness and demanding speed" of the Great Leap Forward period. The Chinese Communist cadres and people who had learned all necessary lessons could no longer bear another Great Leap Forward.

In agriculture, Hua Guofeng presided over two conferences under the theme "In Agriculture, Learn From Dazhai" respectively at the end of 1975 and 1976. Those who were in charge of agricultural work after the 1978 Fifth National People's Congress reportedly included Ji Dengkuei, Wang Zhen, Chen Yonggui and others. Very obviously, promotion of agricultural growth by the method of spreading the Dazhai experience not only failed to attain anticipated results but also sabotaged the productive forces.

Agricultural and industrial targets proposed at the First Session of the Fifth National People's Congress in 1978 still placed emphasis on the production of foodgrain and steel; that is to say, the principle of Mao Zedong's "taking foodgrain as the key link" and "taking steel as the key link" was still to be implemented.

A situation of serious disproportionate development began to appear less than 1 year after the plan with its "high targets" proposed by the Fifth National People's Congress in 1978 was put into operation. The Third Plenary Session of the 11th Chinese Communist Party Central Committee at the end of 1978 proposed the principle of readjustment, restructuring, consolidation and improvement. The Second Session of the Fifth National People's Congress held in July 1979 appointed three new vice premiers, Chen Yun, Bo Yibo, and Yao Yilin; it also established the Financial and Economic Commission, with Chen Yun as its chairman, Li Xiannian as its vice chairman, and Yao Yilin as its general secretary; its members included Yu Qiuli, Wang Zhen, Gu Mu, Fang Yi, Wang Renzhorg, Chen Guodong, Kang Shi'en, Zhang Jinghu, and Jin Ming. The three seniors, Chen Yun, Bo Yibo, and Yao Yilin, were all fairly good at managing economic affairs. In 1979, the national economy of the China mainland was thus subject to readjustment under the leadership of the Financial and Economic Commission headed by Chen Yun, and it also obtained fairly conspicuous results.

The readjustment policy of Chen Yun and others was to suppress certain large-type construction projects at key points, slow down industrial development, and put emphasis on the agriculture and light industries which are related to people's livelihood so as to improve it. These measures were beneficial to the people, but they affected the growth rate of the industries. From figures, no growth rate of a high speed can be derived; nor are there any magnificent, large-type construction projects launched into operation to satisfy the vain glory of "modernization." One cannot imagine that the moderate economy of Chen, Bo and Yao was to be smoothly implemented. Among the members of the Financial and Economic Commission were included financial and economic leaders appointed by the Fourth National People's Congress (1975); it was precisely they who formulated the magnificent economic plan that deviated from realities. Hence, it was impossible for them to agree completely with the readjustment policy of Chen Yun and others. In the period of more than 1 year from the latter half of 1979 up to the present, one can believe that argument between different opinions on the part of the Chinese Communist leading strata in the economic realm must have been quite vehement.

From the nationwide point of view, what was implemented by Chen, Bo, and Yao was mainly the readjustment policy. From the point of view of individual provinces, there was also a restructuring of the economic system respectively carried out in Sichuan and Anhui with an expansion of enterprise autonomy as its characteristic. Under the condition of good results obtained, the Fifth Plenary Session of the 11th Chinese Communist Party Central Committee decided early this year to transfer the first secretary of the Sichuan party committee Zhao Ziyang and the first secretary of the Anhui party committee Wan Li to the Central Headquarters. The Standing Committee of the National People's Congress meeting in April appointed the two as vice premiers, and Zhao Ziyang was named vice premier for standing affairs. It appears that their restructuring policy is going to be implemented across the country.

In 1978 there were altogether 14, with the premier counted with the vice premiers; last year the Second Session of the Fifth National People's Congress added three; later on, Ji Pengfei was also added. This year, two more were added, making the total 20. With Chen Xilian and Ji Dengkuei dismissed from their office as vice premiers in April this year, the premier and the vice premiers now number 18. It has already become known that Hua Guofeng, Deng Xiaoping, Li Xiannian, Chen Yun, Xu Xianqian and Wang Zhen will all resign at the Third Session of the Fifth National People's Congress because of old age. Thus, at least 8 of the 14 first appointed in 1978 are going to leave the office of the premier and vice premiers.

When Zhao Ziyang becomes premier, the list of cabinet officials is bound to be suggested by him. That will be a good time to have certain vice premiers derelict in their duties replaced. Because, if they are dismissed before then, it would suggest that, like Chen Xilian and Ji Dengkuei, they have committed serious errors; but if the new premier is allowed to provide a new cabinet list, then those excluded would not feel that there is anything unsavory involved, since they are then not dismissed but just not selected into the cabinet. Chen Yonggui, who originally served as vice premier, is for sure not going to be on the list. Whether or not another few vice premiers who had become obstacles on the road to progress in the course of the implementation of the principle of readjustment, restructuring, consolidation and improvement in the economy are also going to be excluded from the new cabinet list is not yet known at this time. On the other hand, Yang Dezhi, Hu Qiaomu and others who were elected into the Secretariat during the Fifth Plenary Session of the 11th Party Central Committee seem very likely to become members of the forthcoming cabinet.

Because the premier is replaced and a new cabinet list is proposed, the State Planning Commission, Economic Commission, Capital Construction Commission, and the Petroleum Ministry are also likely to change their responsible personnel. Thus, a great change is likely to take place in the group of premier and vice premiers appointed by the First Session of the Fifth National People's Congress in 1978. Among the premier and vice premiers appointed in 1978, at best five are going to be included in the new cabinet. Genuine power in the forthcoming State Council is believed likely to fall on Vice Premiers Zhao Ziyang, Yao Yilin, Bo Yibo, Wan Li, and Ji Pengfei, who were not appointed unitl after 1978.

Administrative Achievements in Sichuan Cause Zhao Ziyang's Promotion

No doubt, Zhao Ziyang is going to become one of those attracting the greatest Attention in the Chinese Communist political arena. (Another such person is believed to be Hu Yaobang.) Many people are interested in his background and experience. It is a pity that materials on him personally have been rarely reported.

Zhao Ziyang is a native of Henan; born in 1919, he is now 61 years old. In 1948 he served as secretary of the party committee of the Henan-Hubei-Anhui region; in 1950, he served as secretary of the district party committee of Nanyang, Henan Province. In 1951, he was transferred to Guangdong to work. In 1955, he served as deputy secretary of the Guangdong Provincial Party Committee and was promoted to third secretary of the provincial committee in the same year; in 1962, he became second secretary of the provincial committee, and in 1965 he became first secretary of the provincial committee and secretary of the party's Central-South Bureau. At that time, 46-year-old Zhao Ziyang was the youngest among the provinces of the whole country. After 1 year as first secretary, the Cultural Revolution broke out. In January 1967, Tao Zhu fell; Zhao Ziyang was also designated as "the biggest capitalist roader under Tao Zhu" and subject to open criticism and struggle; he was also purged.

In 1971, Zhao Ziyang was "liberated" and transferred to Inner Mongolia, where he worked as secretary of the party committee and deputy director of the revolutionary committee of the Inner Mongolia Autonomous Region. In April 1972, he was transferred to the post of secretary of the provincial party committee and deputy director of the revolutionary committee of Guangdong. In 1974, he became first secretary of the Guangdong Provincial Party Committee. In December 1975, he was transferred to the post of first secretary of the Provincial Party Committee of Sichuan, where he served until early this year. Zhao Ziyang was then transferred upward to the Central Headquarters, and elected to membership on the Standing Committee of the Political Bureau by the Fifth Plenary Session of the 11th Chinese Communist Party Central Committee.

Since the founding of the state by the Chinese Communist Party, Zhao Ziyang has worked most of the time in Guangdong. His administrative achievements in Guangdong were not particularly outstanding; but there are reasons for this. First of all, before 1965 he was not No. 1 in command in Guangdong, and Tao Zhu, as No. 1 in command, was a rather sharp fellow. Under such circumstances, according to the Chinese Communist system, it was very hard for Zhao Ziyang to demonstrate any outstanding performances. Secondly, in Guangdong Tao Zhu erroneously belabored "localism" and ejected indigenous cadres; although Zhao was not a native of Guangdong, it was not appropriate for him to adopt greater independence toward the Central Headquarters. But it so happened that from 1957 on, the Chinese Communist Party Central Committee promoted a Left erroneous line; under the premise of an emphasis on the unified leadership of the Central Headquarters, it was also hard for local cadres to aim at creative achievements. Thirdly, after Zhao Ziyang was "liberated" in 1971, his stay in Inner Mongolia lasted only 1 short year; in Guangdong he stayed from 1972 to 1975. At that time, the Cultural Revolution did not yet come to a close, and his work was hamstrung in many ways; in addition, the influence of Huang Yongsheng and Ding Sheng still remained in Guangdong, it was hard even for someone determined to do good work to demonstrate anything.

At the end of 1975, Zhao Ziynag was transferred to Sichuan. The eventful 1976 immediately followed. At that time, it was hard for a cadre like Zhao Ziyang even to preserve himself, let alone to go against the intent of the central authorities upon "grasping revolution" and do any good job on production.

Therefore, the period in which Zhao Ziyang really fully devoted himself to the work on provincial affairs and did so relatively independently without too many handicaps began only after the smashing of the "gang of four" at the end of 1976.

What Zhao Ziyang had to begin to put together was a messy stall. At this time in 1976, this "Heavenly Kingdom of Abundance" traditionally known for its rich products actually became a province suffering serious foodgrain shortage. Beggars could be seen wandering in the street everywhere in cities such as Chongqing and Chengdu. In the countryside, peasants were selling their children in order to avoid starving to death. The shelves of department stores in the cities and in the countryside alike were regularly empty. Production at factories and in the fields fell to a state of semi-inactivity. At the time, provinces of the whole country were overshadowed by an atmosphere of confusion, slowdown, minimum efficiency, and distrust between people, but the situation was even more serious in Sichuan because Sichuan had a population of 960 million, which made up 10 percent of the nation's total, and factional warfare during the Cultural Revolution had also been staged in a most drastic manner: Rival groups had confronted each other on either shore of the Jialing River and attacked each other with such heavy weapons as tanks.

After the fall of the "gang of four," an ambitious Zhao Ziyang immediately proposed: Sichuan, in an area of heavy disaster during the Cultural Revolution, now was prepared to issue its challenge to Shandong, the most advanced province of the whole country, as a response to the call for "Preliminary Results in 1 Year, Great Results in 3 Years." Insofar as this call was concerned, in terms of the economy of the whole country, most areas failed to achieve the expected results. But Sichuan basically achieved them, and Shandong, because of the serious "internal wound" it suffered during the Cultural Revolution, was soundly defeated.

In order to understand the people's conditions and win the support of the masses, Zhao Ziyang conducted an inspection of more than 60 counties like a hurricane. He went to factories, the fields, and listened to the complaints of the workers and peasants and immediately, honestly and practically discussed the problems with the people and the methods to solve them.

For example, in the countryside, Zhao Ziyang witnessed the peasants complaining that three seasons of farming work each year made them too busy and that their life was also harsh, and he came to realize that the reason harvests of these places left so much to be desired had to do with intervals of draught and lack of sufficient irrigation. Zhao Ziyang therefore suggested that, if irrigation fell short when there were three seasons of work each year, then why did they not try only two seasons a year but at the same time improve their irrigation, select good seeds, and increase their fertilizers? If the three seasons were thus changed into two seasons, and if harvests of the two seasons turned out to be plentiful whereas harvests of three seasons would remain meager, then the result would be like that of 2 multiplied by 5, which is larger than that of 3 multiplied by 3. Even if the absolute figure should not show any increase, so long as the reduction turns out to be minimum, labor power can at least be spared to attend to sideline enterprises and other kinds of production. After the peasants adopted his suggestion and went through practice, it was proved that this actually augmented the absolute figure of foodgrain production.

Besides, when Zhao Ziyang saw that some places had poor harvests because of draught, he also encouraged the peasants to plant dry season crops such as wheat, corn, potato, etc.

In the course of his inspection of the countryside, he saw that the question of agricultural mechanization all along emphasized by the central authorities actually was by no means anything urgently needed because "the greatest benefit of mechanization itself is to save labor power, but it does not necessarily increase production very much, and especially in areas of plenty of land and very few people, its effect on production increase is very limited." "If a great deal of labor power is saved from mechanization, and such surplus labor power cannot be arranged well, then there will be even additional social problems." "Therefore, on the question of agricultural modernization, we should first of all emphasize and study the application of modern science and technology in agriculture." In the past, in order to work on mechanization we often only cared about the production of tractors, thinking that this was namely to provide support to agriculture. But, "why were many tractors driven on highways and seldom into the fields? This shows that transportation is more important than ploughing the fields. In so many years of the past, no study was done on the reason why tractors were driven on highways." "This illustrates that tractors are needed, but mechanization of transportation is even more needed" (article quoted is published in HONGQI, No. 1, 1980).

Zhao Ziyang saw that the reason the peasants exhibited no great enthusiasm in production was mainly because they had no power to make their own decisions; production plans, distribution questions, and management questions were all decided and sent down from above and not brought about on the basis of democracy. He proposed to put emphasis on a production team's autonomy, to readjust and increase the peasants' reserved lots to an appropriate extent, to let a production brigade operate enterprises and readjust the deployment of crop planting according to local conditions (that is, decide the planting of certain kinds of crops on the basis of natural conditions such as soil, source of water, etc., and not entirely on "Taking Foodgrain as the Key Link"). He also proposed to fix output quotas based on the production group, and to have pigs raised by specialty groups and specialty households. For example, Zhao Ziyang many times asked certain responsible cadres in Chengdu who were working on agriculture as to why, with so many ponds in the Chengdu area, people did not raise fish? They repeatedly answered that there were still many problems, such as lack of feed, need to provide food for those who raise such fish, etc. Zhao Ziyang then said: Why don't you just fix some quotas based on the household, so that whoever knows how to raise fish would get to do so; let the output quotas be fixed, but not so high. These cadres replied that, so long as you say so, fish can certainly be raised. They never mentioned the question of feed again.

Under such countryside policies, the agriculture in Sichuan developed rapidly. Grain production increased from the 50 billion jin in 1976 to 55 billion jin in 1977, and 60 billion jin in 1978. In 1979, Sichuan suffered serious draught; but grain production still increased by 2 billion jin. More importantly, the peasants' livelihood showed conspicuous improvement.

Thus, from the state of half-starvation in 1976, Sichuan has developed to the present point of having surplus grain to supply to the state. It is no wonder that there came to be a current saying in the Sichuan countryside: "If you want food to eat, look for zhao, [in Sichuanese, pronounced the same as Zhao] Ziyang."

As Zhao Ziyang looked up workers at factories to chat with, he came to understand that what they had been most concerned with over the years was the "three zis": erzi [son], fangzi [house], and piaozi [money]. The question of erzi was that a son or the sons of the family happened to have been sent into the mountains and the countryside and could not find work upon his or their return. The question of fangzi was that they had been for long years living in shacks built with loose lumber pieces and bricks without recourse. The question of piaozi was that the appraisal of reward money was not fair. Zhao Ziyang then proposed that since many old factories had some abandoned or dilapidated workshops and useless old machines, they could very well run some collective enterprises to absorb the workers' children. Thus, children who were sent into the mountains and the countryside could all return. For the sake of their own children, old workers thereby took it upon themselves to repair the workshops and the machines; the supply and sales offices also started as a matter of convenience in their work to find raw materials and sell products for such a collective enterprise. As the workers' children were now put to work, they themselves also concentrated on learning some techniques in order to strive in the interest of the collective. On the fangzi question, apart from suggesting that enterprises should have some funds under their own control so that they could build dormitories by themselves, Zhao Ziyang also stopped large-type capital construction projects that had dragged on for a long time without completion and built houses for the common people first. In the year 1979 alone, 21,000 housing units were built in Sichuan; this was a construction tide of the greatest magnitude since 1957. As for the piaozi question, Zhao Ziyang was of the opinion that there should not be any "appraisal of reward money" but "calculation of reward money," so that quantity of production, quality of products, frequency of work, etc., could all be calculated, with each item being very concrete, and each worker could also calculate them by himself without waiting until the end of the month. And even how much the state could increase its profits, how much an enterprise could retain funds for itself, and how much an individual might receive his reward money could all also be calculated. This would be called "calculation of reward money." "Calculation of reward money" was thus fairer than "appraisal of reward money," and it also would not arouse so many comments.

In order to have interests of the direct producers--enterprises and their cadres, workers--and interests of the state combined together, beginning in 1978 and with the support of Deng Xiaoping, Zhao Ziyang carried out an experiment in Sichuan on the expansion of enterprise autonomy. When the experiment was first started, only six experimental units were selected. After the Third Plenary Session of the 11th Party Central Committee was held at the end of 1978, these experimental units were expanded from 6 to 100; by 1980, they have been expanded to 300.

In the so-called expansion of enterprise autonomy, principal reform has been reflected in the following aspects:

1. In the past, what an enterprise was to produce, how much to produce, and how to produce constituted a task to be entirely assigned by the state from above, and the enterprise involved had no room for flexible operation whatsoever. Now, an experimental unit may arrange the production of part of its products on the basis of its own surplus productive capability or capability that can be tapped beyond the state plan. So long as such products can meet the needs of society, they can help increase the unit's revenue too.

2. The equipment, raw materials and fuels and power required by an enterprise in the past were uniformly supplied by the state; products of the enterprise were also uniformly purchased and sold by the state. What the state was to supply, how much to supply and at what price, and the quantity and price according to which the state was to purchase the products of the enterprise were all rigidly fixed, and no room was left for flexible operation. Now, an experimental unit may itself buy raw materials from various places and also sell part of its products on its own. Thus, profits of the experimental enterprise have greatly increased. For example, profits of the Zhongnan Rubber Plant in Changqing doubled those of the state plan last year.

3. Originally, revenues of an enterprise were all turned over to the state; not only expenses for reproduction were allocated by the state uniformly, but wages and reward money were also subject to uniform state control. Among an enterprise's revenues today, except those parts used on expenditures such as wages and welfare, pure profits may be proportionately distributed between the state and the enterprise, and this is called "proportionate sharing of profits." Thus, an enterprise is enabled to have some funds under its own control, which may be used on the development of production, improving welfare facilities for the staff and workers, and enhancing the reward money. Chongqing's knitted goods plant No. 2 bought 20 stocking-knitting machines in February last year with the 60,000 yuan it retained as enterprise funds; after these machines were put into production, the enterprise earned 130,000 yuan of profits in the first half of the year. Later on, 60 more stocking-knitting machines were purchased, and by the end of the year total profits earned amounted to 630,000 yuan. At the same time, 15,000 yuan were also taken from the enterprise funds to build 1,500 square meters of housing.

Production equipment which the plant had for 5 years continued to report and apply for in the past was solved in a single year by reliance on its own capability. Dormitories longed for in the past decades by the staff and workers could now also be counted on.

In order to earn as much profits as possible, the enterprise is bound to do its best to lower its cost and reduce its waste. In order to have its products sold in the market, such products must also be produced with a good quality and sold at a reasonable price. In October last year, an electronic products ordering conference was held in the Wenjiang district in Sichuan, which was described as a miniature "Guangzhou Trade Fair." At this marketing conference, various enterprises competed with their products to let users buy them selectively. Such a very common phenomenon of competition in a capitalist society was still rare in socialist China. Not a few enterprise units discovered that their products were of an inferior quality but priced too high, so that nobody cared to buy them; they were thus forced to hurry back to their plants to study how to raise the quality of their products and to lower their cost. Not until then did responsible persons of these plants realize that uniform purchase of products by the state in the past really constituted an obstacle to the improvement of their productive capabilities.

The outlook of the units selected for experiment has also greatly changed. From the director of a plant to leaders at all levels now all calculate their accounts: They calculate the quantity of production, the quality of their products, their cost, and profits for the state and for the enterprise, and they also calculate their individual reward money. In the past, all these enterprises "ate from a common pot"; accounts of the whole country were calculated only by the Ministry of Finance.

After about a year's experiment on such restructuring of the economic system, Zhao Ziyang brought forward his view about the socialist system at a conference in Sichuan in November last year. According to him, "we had many muddle-headed concepts in the past as to what is socialism, we had too many conventions to follow, and we added many things not intrinsic in socialism in the first place, and yet we regarded them all as principles sacred and inviolable, lying prostrate before them and unable to emancipate our thinking." He pointed out: of socialism, both Marx and Engels proposed only two principles, "public ownership of the means of production" and "to each according to his work." They did not, nor could, formulate concrete schemes of implementation in advance. He maintained that socialism must insist on the abovementioned two principles. But public ownership is only the mainstay of the national economy, and not its entirety. "Under the premise of adhering to these two principles, whatever structure, system, policy or measure that can best promote the development of our productive power, that can give full scope to the superiority of the socialist system, should be adopted; we must not bind ourselves as silkworms do within cocoons. On this questions, we truly need a great emancipation of our thinking" (RENMIN RIBAO, 10 November 1979). In January and March this year, Zhao Ziyang also published two articles to discuss the new situations and new problems which had emerged in the course of the economic readjustment and restructuring. Such situations and problems have been generally reflected in two aspects. First, the most important is the contradiction between enterprises and places wherein preliminary reforms have already been in progress and the overall economic system and prevailing codes and conventions which are not yet subject to reform. Second, besides this, there are also certain secondary consequences, such as the improper approaches pursued after the expansion of enterprise autonomy and achievement of economic revitalization, which appeared in the form of working on devious projects, speculation and double-dealing, striving for sudden profits, undermining undertakings of the state, passing on liabilities to others, etc. In response to the above new problems, Zhao Ziyang brought forward his preliminary program of solutions. He was also of the opinion that reforms must be pursued step by step; if the overall economic system was basically untouched, the realm of reform initiated by the expansion of enterprise autonomy could not be very extensive either.

In July this year, the Standing Committee of the National Committee of the Chinese People's Political Consultative Conference affirmed the path of expansion of enterprise autonomy followed by Sichuan.

When Zhao Ziyang received the World Bank delegation on 16 July, he indicated that the approach of expanding enterprise autonomy had already proved that it was able to promote production; therefore,the Chinese Communist Party was now determined to carry out the reform. He also suggested that the emphasis of such reform was to be placed on enabling the enterprises of direct producers to achieve relative independence, so that each enterprise unit would have its own interest, power and responsibility. Another aspect was to make full use of economic leverages to give scope to the market's role of adjustment and therefore influence the economy in a desirable way.

Concluding Words

The principal characteristic of the economic reforms conducted by Zhao Ziyang in Sichuan was to put the interests of direct producers--factories, enterprises, production teams, and down to the common peasants and workers--in a central position, and, under the condition of the economy still subscribing in the main (but not entirely) to public ownership and collective ownership, take advantage of the market's role of adjustment so as to stimulate competition by the direct producers. Some regard free competition as a characteristic of the capitalist economy. Zhao Ziyang emphasized that competition must be injected into the socialist economic system.

Zhao Ziyang's experiment in Sichuan achieved good results. In the past year, all travelers to China from abroad were presented with the recommendation to visit Dazhai in the past. This situation reflected the fact that the economic reforms being carried out in Sichuan had the support of certain principal leaders of the Chinese Communist Party, and the results they had achieved were also genuine and not like those of Dazhai, which turned out to be but a soap bubble.

Zhao Ziyang's administrative achievements in Sichuan made it possible for him to jump three grades in 2 or 3 short years from a candidate member of the Political Bureau to premier of the State Council, thus virtually wielding the greatest power.

Looking at the arrangements made by the Fifth Plenary Session of the 11th Chinese Communist Party Central Committee and the propaganda in Chinese Communist newspapers in the past half year, it appears that from now on the Chinese Communists are likely to adopt some appropriate way of separating the party from the government in general. On the side of the party, the party chairman and vice chairmen will basically discuss certain cardinal principles and orientations; the Central Secretariat will hold real power in politics and carry out "ideological leadership." On the side of the government, the chairman and vice chairmen of the Standing Committee of the National People's Congress, it is believed, will remain nominal, rubber-stamping administrative leaders, and the State Council will hold real power in administration, the economy, and diplomacy. Party chairman and vice chairmen correspond to government chairman and vice chairmen, and party general secretary and Secretariat correspond to government premier and vice premiers. Real power basically falls on the Secretariat and the State Council. And the State Council will continue to play a controlling role in the various economic departments. What differs from the past is that in its economic work the State Council, it is believed, will suffer less interference from the party.

Along with Zhao Ziyang's promotion, the reform he carried out in Sichuan on the expansion of autonomy is likely to gradually spread to the whole country. Hua Guofeng indicated on 13 August: "The reforms already being carried out at present are only preliminary; we must continue to study, continue to sum up our experience, and carry forward such reforms. We have 400,000 public enterprises; if the reforms are well executed, their potential is going to be very great" (NEW CHINA NEWS AGENCY despatch, 13 August).

If reforms of this kind are really carried forward, not a few confusions are bound to rise. From situations that can be observed from overseas, it appears that in many localities and many departments the so-called "free competition" has often turned into "internecene duel." Not a few such examples have already presented themselves. But reforms of this kind will surely also bring about profound changes in the society on the China mainland. Calling this "capitalist restoration" may be unfair, but it has at least adopted a great many capitalist methods.

A designation appropriate and acceptable to the Chinese Communist leaders should perhaps be "socialism of the free-competition style."

If adhered to and if its "internecene duel" factors can be gradually eliminated, the practice of "socialism of the free-competition style" may possibly turn a new leaf in the history of the international communist movement. But in the long and difficult course of its implementation, we can believe that a great many theoretical questions will still be waiting for experts in social science to study and solve them.

Let us wait and see.

BEIJING CALLS FOR LEARNING FROM YOUNG COOK CHEN AIWU

HK241034 Beijing City Service in Mandarin 2300 GMT 17 Oct 80

[Text] According to BEIJING RIBAO, the Beijing Municipal CYL Committee yesterday passed a decision which called on CYL members and youths throughout the municipality to learn from Comrade Chen Aiwu and to play active roles in upholding party discipline and promoting party style.

The decision said: ZHONG-GUO-QING-NIAN-BAO [CHINA YOUTH NEWS] has published a newsletter about Chen Aiwu, who dared to challenge privileges and who was bold in exposing commerce minister Wang Lei's mistake in seeking personal privileges. His action has evoked strong repercussions among CYL members and youths throughout the municipality. To commend Chen Aiwu's revolutionary spirit in being brave in struggling against unhealthy tendencies, the municipal CYL committee calls on CYL members and youths throughout the municipality to learn from Chen Aiwu: 1) to learn from his upholding of the proletarian party style, from the high degree of his sense of political responsibility toward the party and people and from his spirit of being a master of the society; 2) to learn from his upholding of principle, from his style of giving no thought to personal gain or loss in the face of cardinal questions of right and wrong, from his courage and resourcefulness in showing no fear of retaliatory blows and from his style of being bold in struggling against unhealthy tendencies and challenging privileges; 3) to learn from his fine qualities, namely, setting high and strict demands on himself, continuously making progress without slackening and constantly making new contributions to the four modernizations.

The municipal CYL committee called on CYL organizations at all levels to conscientiously organize the masses of CYL members and youths to learn from Chen Aiwu's advanced deeds, to take a clear-cut stand on enertegically supporting those CYL members and youths who are brave in struggling against unhealthy tendencies and bureaucratism, to give publicity to the advanced deeds of such CYL members and youths, to safeguard their democratic rights and to give full play to their active roles in upholding party discipline and promoting party style.

BEIJING RESTAURANTS INSTRUCTED TO BILL OFFICIALS

OW241228 Beijing XINHUA in English 1205 GMT 24 Oct 80

[Text] Beijing, October 24 (XINHUA)--Beijing restaurant authorities have instructed city restaurants to make sure that all customers--including high officials--pay their way. The decision comes in the wake of a revelation that China's minister of commerce was paying only token sums for extravagant meals in one of Beijing's fanciest restaurants.

The Beijing No 1 Service Bureau, which manages the city's large hotels and restaurants, has declared that "all those who come to a restaurant, irrespective of their positions, are ordinary customers. Prices should be the same for everyone," the bureau says, "Whoever permits cheating at the state's expense for private dinners should cover the balance out of their own purse."

A bureau spokesman said that the practise of allowing high officials to eat costly meals but pay little originated during the 1960's. When government leaders dined in high-grade restaurants, their bills were kept artificially low--in some cases expensive dishes priced the same as snack-bar food. The 16 hotels and restaurants under the bureau have now worked out regulations eliminating this practise.

The case of Commerce Minister Wang Lei became public a week ago, when the newspaper CHINA YOUTH carried an article praising a model worker who exposed the problem. The worker, a cook at the Fengzeyuan restaurant, had written to the Discipline Inspection Commission under the Central Committee of the Chinese Communist Party, reporting that Wang Lei had paid only a fraction of the cost of meals he had had at the Fengzeyuan. The Discipline Inspection Commission subsequently issued a circular criticizing officials who take advantage of their position in this way.

The Service Bureau spokesman said Minister Wang Lei had admitted his mistakes and paid the balance he owed to the restaurant from dining there over the last two years. The minister also wrote to the worker who complained about him, Chen Aiwu, expressing gratitude for the exposure of his wrong-doing.

BUREAUCRACY BLAMED FOR DELAYING KEROSENE SHIPMENT

Beijing RENMIN RIBAO in Chinese 17 Sep 80 p 1

[News Report: "Wang Ce [3769 4595] and Li Damin [2621 6671 3046] Receive Commendation for Struggling Against Bureaucracy"]

[Text] On 15 July, Comrade Wang Ce and Li Damin of the credit department of the Fushun branch of the People's Bank of China wrote a letter to the Central Commission for Inspecting Discipline, accusing some cadres of practicing bureaucracy and evading responsibility, thus delaying the shipment of aviation kerosene for military use from the oil refineries in Fushun and causing a loss of nearly 1 million yuan to the state. Since receiving this letter, the commission has issued a circular on this matter. Leading members and comrades Wang Ce and Li Damin of the Fushun branch of the People's Bank of China have been commended by the commission for showing concern for the interests of the state, and for displaying a daring spirit against bureaucracy. The commission has also ordered the units mentioned by the letter to investigate the case and to punish those who are found guilty of serious mistakes. In Fushun, there are three oil refineries, which produce aviation kerosene for military use. Each day when such aviation kerosene is ready for shipment out of the refineries, a paper indicating the number of railway carriers must be filled out and signed by railway representatives stationed there. On 1 July 1980, the Shenyang Railway Bureau unilaterally turned this job over to the military representatives stationed in the refineries after withdrawing its own representatives from there in accordance with an agreement it reached with the Fushun Mining Bureau (without the knowledge of the military authorities). But after the agreement was put into effect, the military representatives refused to be bound by it, thus touching off a debate over who should sign the aforementioned paper. This debate eventually caused a delay in the shipment of nearly 20,000 tons of aviation kerosene and a great financial loss to the state.

The shipment of aviation kerosene was suspended for 10 days. During this period, the three refineries in Fushun suffered a loss of 9.4 million yuan in sales while the state lost 4 million yuan in excise taxes; two of the three refineries were forced to reduce the output of kerosene, sustaining an economic loss of 560,000 yuan; the Daguandun railway station lost 410,000 yuan in terms of income caused by the traffic jam and the reduction in the shipment of coal.

Furthermore, the stoppage in petroleum production disrupted the schedule for supplying aviation kerosene to the PLA units; banks were forced to grant an additional 3 million yuan in loans to factories affected by the inadequate supply of kerosene. On 8

July, the problem remained unsolved when the railway bureau rejected the Fushen Municipal Party Committee's resolution calling on the former's representatives to sign the aforementioned paper so that kerosene production could be resumed without further delay.

On 9 July, the Liaoning Provincial Economic Committee advised the Fushun Municipal Economic Committee to persuade the oil refineries to sign the paper. The problem remained unsettled because the Fushun Municipal Economic Committee refused to act according to the provincial economic committee's instruction. In their letter to the Central Commission for Inspecting Discipline, Comrades Wang Ce and Li Damin said: "In the face of this situation, we had no alternative but to call this case to the attention of all units concerned. We first reported this to the Shenyang Railway Bureau and the leading organ of the logistics department of the Shenyang PLA units, advising them of the serious nature of this problem in hopes of getting their help in solving it. But they all decided to pass the buck to the higher authorities, indicating that it was beyond their power to handle. Finally, we had no choice but to pack for an urgent trip to Beijing, where we first reported this case to the head office of the People's Bank of China. With its support, we briefed the State Economic Commission and the Ministry of Railways on the problem. Unfortunately, wherever we went, we were told that this matter was too trifling to be worthy of their attention. Our suggestions were also ignored and rejected."

Finally, Wang Ce and Li Damin reported this case to the Central Commission for Inspecting Discipline, which took action immediately after listening to this report. At present, the problem has been initially solved and the transportation has been resumed.

In addition, the discipline inspection organs and other departments concerned have conducted an investigation into the case, preparing to take necessary disciplinary actions against those directly responsible for this incident.

PARTY AND STATE

XING COUNTY, XHANXI, PROMOTES YOUNG, MIDDLE-AGED CADRES

Beijing RENMIN RIBAO in Chinese 6 Sep 80 p 1

[Article based on a report in SHANXI RIBAO: "Xing County Boldy Breaks With Convention and Promotes Young and Middle-Aged Cadres to Leadership Positions"]

[Text] Since the smashing of the "gang of four," the Xing County Party Committee in Shanxi Province has broken convention by boldly promoting 216 young and middle-aged cadres whose education and specialized knowledge were above the high school level to positions of leadership in communes, county-controlled departments, committees, bureaus, and units in industrial enterprises. Included in this number were 35 graduates of technical institutes and 34 graduates of vocational middle schools. This young group of cadres who have taken up leadership posts has caused leading groups at all levels to be imbued with vitality, has strengthened party leadership, and has promoted industrial and agricultural production. For the past 3 consecutive years, agricultural production has increased progressively 35 percent per year; in industry, the amount of profits turned over to the state every year has come to 1 million yuan a year.

In choosing young and middle-aged cadres, the Xing County Party Committee encountered and solved the following problems:

1. Are outstanding young and middle-aged cadres available? In the beginning, county party committee members always had their eyes on the small group from the party's political departments. They made selections, but they always felt that there really were no outstanding young and middle-aged cadres to choose from. Afterward, the party committee received inspiration from the changes brought about in Luoyukou Commune. In the 1960's, after Niu Wenhua [3662 2429 5478], a graduate of an agricultural school, took up the position of secretary of the party committee in the commune, he used the professional knowledge he had learned to direct production according to local conditions. This enabled the commune to come from being "The Foot-Dragging Commune" to being "The Up-and-Coming Commune," and in 1979 it became an advanced agricultural unit of the province. The success of Luoyukou Commune helped to widen the field of vision of the county party committee's "squad."

2. Are university students able to assume command? Last year, when the county party committee was discussing the selection of a person to become director of the industry and communications political department, they decided to appoint a

college student, Lui Zhengbin [0491 2973 2430], as secretary of the general party branch at the chemical fertilizer factory. Some people felt that Liu lacked all-around leadership experience, and that he was qualified to be appointed a deputy secretary but not to assume command. In 1977, the county party committee appointed Liu secretary of the general party branch and appointed a middle vocational school graduate, Li Zaochen [2621 2483 2525], deputy secretary of the general party branch and concurrently factory director. Of the eight general party branch committee members, six were skilled cadres. Because they knew their jobs and were able managers, the situation of the enterprises was quickly changed, going from a yearly deficit of 200,000 yuan to an average profit of 200,000 yuan.

3. How should an individual's class origin and political history be treated? The Xing County Party Committee has clearly proposed that in treating these cadres, the following be accomplished: Do not allow family background to influence the utilization of people, but more importantly look at the individual's political behavior; with regard to a person's political history, just be clear about it and don't get entangled. Most important, look at the individual's real ability and the size of his contribution.

4. What should be done if young and middle-aged cadres have shortcomings or make errors? A young cadre, Jia Din [6328 2430], used to work in the county party committee's propaganda department as an instructor in theory. In 1976 he became party committee secretary for the Watang Commune. In 3 short years he had united and led the entire masses of cadres in quickly casting off the label of "supply house." Because of some problems that arose in his work, someone took the opportunity to lodge a complaint against him and demanded that he be dismissed. The county party committee, however, felt that his thought was good, that he was educated, and that he had achieved remarkable results. The committee has asked leading party groups at all levels and older cadres to strongly support the work of young and middle-aged cadres and to sincerely lend a helping hand to them.

VIOLATIONS OF PARTY DISCIPLINE DEALT WITH IN TIANJIN

Beijing RENMIN RIBAO in Chinese 12 Sep 80 p 5

[Text] Article by reporters Shi Bo [0670 0590] and Du Duanchang [2629 4949 2490]: "Tianjin Municipal Party Committee Deals Severely With Violators of Party Discipline"]

[Text] Recently, the Tianjin Municipal Party Committee dealt severely with the leading party group of the Tianjin Bureau of Agricultural Machinery for not following party regulations on admitting new party members. Guo Zhishi [6753 1807 1395], a member of the leading party group, bore major responsibility for this incident and so was removed from his post and disciplined. At the same time, it was announced that acceptance of new members to the party by the party group, based on the conditions of the 10th Party Congress, was null and void.

In August 1976, Zuo Pude [1563 2528 1795], a labor and capital cadre in the Bureau of Agricultural Machinery, had his application to join the party approved by the general membership meeting of the party group. This was then submitted to the party group for examination and approval. Owing to the fact that the party group members could not reach a consensus, membership was not approved for the time being. In March 1979, the party group of the Bureau of Agricultural Machinery allowed Zuo Pude to become an official party member with standing retroactive to August 1976, the date the membership committee made its initial approval.

This violation of party discipline and regulations caused responsible cadres from the Tianjin Municipal Party Committee of the CCP and concerned departments to pay serious attention to the matter. The Municipal Party Committee decided to send a factfinding group to conduct an investigation. After the investigation, a discussion was held on whether or not to permit Zuo Pude to enter the party, but two of the six members of the party group were absent. At the meeting the deputy leader of the bureau, party group member Guo Zhisi, said: "The admittance of Zuo Pude to the party is a problem of history and carries with it the nature of policy implementation and, in the political line, the bringing of order out of chaos. We can start from actual conditions and be flexible in dealing with the problem." After Guo's speech, the four members attending the meeting unanimously agreed to accept Zuo as an official party member, with party standing starting from the date of the original approval by the membership committee. After the meeting, the two members who had failed to attend the meeting raised the following points: "The 11th Party Congress convened over a year ago, and membership should be determined in accordance with the constitution of the 11th Party Congress. There should be a probationary period." The main responsible personnel from the party group and responsible personnel from the Political Work Department did not heed their opinions, however, but demanded that they obey the "decision" of the party group. Zhang Pule [1728 2528 2867], head of the municipal agricultural committee organization, also supported the opinion of the party group of the Bureau of Agricultural Machinery and Guo Zhishi. In addition, on 21 July 1979, he wrote on Zuo's letter of appeal: "It is permissible for him to become an official party member." People were once again sent to the municipal party committee organization department to make inquiries. The municipal party committee organization department and the municipal agricultural committee party committee both clearly expressed disagreement with those mistaken ways and emphasized that the constitution of the 11th Party Congress must be adhered to. Zhang Pule was unwilling, however, and on 8 August 1979 he asked for instructions from the organization department of the CCP Central Committee. They made an official written reply on 10 August: "The question of this comrade's admittance to the party should be determined in accordance with the constitution of the 11th Party Congress. He should start procedures for joining the party all over again, resubmit an application for party membership, and reseek approval by the general membership meeting of the party group, and then resubmit a request examination and approval from the higher level party committee. The date of membership will be calculated from the day of approval by the higher level party committee, and there will be a probationary period." After receiving this written reply, Zhang Pule failed to pass it on to the party group of the Bureau of Agricultural Machinery, and he also failed to make a report to the agricultural committee. Instead, without authorization, he withheld the reply of the organization department of the Central Committee for 8 months.

According to the masses, the reason for the party group's flagrant violation of party regulations and laws was not accidental. The subjection of some of the members of the party group to the poison of the ultraleftist line of Lin Biao and the "gang of four" was rather serious. Guo Zhishi and Zhang Pule used Zuo Pude's authority as the responsible person for capital and labor in order to arrange job transfers for relatives and to open convenient doors.

The Tianjin Municipal Party Committee made the following decision in early August of this year: Dismissal of Guo Zhishi from his post as a member of the party group; in addition, it was suggested that he be dismissed from his post as deputy bureau director. Zhang Pule, head of the agricultural committee organization, is to await handling of his case. In accordance with the constitution of the 10th Party Congress [as published], ratification of Zuo Pude as a party member was wrong and so has been declared null and void.

YE JIANYING CRITICIZED FOR NOT RESIGNING

OW260611 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 25 Oct 80

[Text] An old proverb goes: "[words indistinct], and leadership is rendered ineffectual by recalcitrant subordinates." It implies that influential officials holding high posts and great powers in the government will support only those policies of the state that are of advantage to them and oppose or resist those policies that are not.

It is exactly such an obstacle that hinders the efforts to reduce the average age of cadres. Many leaders who are over 70 and who are holding their jobs without doing a stroke of work refuse to hand over their powers. A question is now frequently raised: why has not Marshal Ye resigned?

It is true that our revered Comrade Ye is one of the founders of our country with great contributions and that he played an important role in the smashing of the "gang of four." However, he is now not only old in age but poor in health. He should take the interests of the party and state into consideration and ask for an honorable retirement. Comrade Deng Xiaoping has tried every possible means to persuade and admonish him in this concern, but to no avail. Sometimes in his talks with others, our revered Comrade Ye himself mentions that it is about time he should retire. However, he [words indistinct] continued to drag on. When he met the speaker of the Malaysian parliament not long ago, Marshal Ye said that he had submitted his (?resignation) to the CCP Central Committee but it was not (?approved).

In fact, Marshal Ye had not formally submitted his resignation to the CCP Central Committee. The CCP Central Committee had received resignations from five founding members of the party and state, including Liu Bocheng. Marshal Ye's resignation was not among the 11 resignations submitted after the convocation of the third session of the Fifth NPC. This is because Comrade Ye Jianying is not at all ready to resign or retire. It is said that he has the intention of carrying on a tit-for-tat struggle against Vice Chairman Deng to the last.

Leaders at the current central authorities are divided into two groups over the issue of Marshal Ye's resignation. Zhao Ziyang, Hu Yaobang and Peng Chong who support Vice Chairman Deng say that our revered Comrade Ye is holding the position without doing his job and that stepped in remnant feudalist ideology, he refuses to yield his post to the wise. On the other hand, many leading comrades of the party, state and army of the older generation, including many leaders of military regions and provincial military districts, have (?persistently) supported Marshal Ye in remaining in his original position for various reasons. To put it bluntly, many of these leaders are afraid that once Marshal Ye leaves his post, someone at the central authorities will [words indistinct] go in for conspiracy and launch mass criticism for (?cadres at lower levels).

As is known to all, the fifth plenary session of the CCP Central Committee adopted a resolution concerning the retirement of the old cadres and many comrades including Li Xiannian and Nie Rongzhen have officially retired and yielded their posts to the wise. Comrade Ye Jiangying alone has refused to abide by this resolution.

No matter what the personal relationship between Marshal Ye and Vice Chairman Deng is, everyone--no matter who he is--should absolutely submit himself to the party's resolution. Unless a proper solution to this issue is worked out within a short time, it is quite possible that this issue will cause a new split at the 6th plenary session of the CCP Central Committee or at the 12th National CCP Congress.

PARTY AND STATE

INNER-PARTY PEACE CALLED INDISPENSABLE

Xian XIBEI DAXUE XUEBAO [JOURNAL OF NORTHWEST UNIVERSITY] in Chinese No 2,1980 pp 3-9

[Article by Li Zhenmin [621 2182 3046]: "'Inner-Party Peace' Is Indispensable--Re-Reading of Comrade Liu Shaoqi's 'On Inner-Party Struggle'"]

[Text] At a time when, after passing through 10 years of turmoil on an unprecedented scale, the party and the nation have once again embarked upon a course of a great [new] order of stability and unity, rereading Comrade Liu Shaoqu's "On Inner-Party Struggle" cannot but cause one to be affected by many emotions, and deeply inspired by the brilliant thought and broad spirit of righteousness of that work.

"On Inner-Party Struggle" was a speech given by Comrade Liu Shaoqi on 2 July 1941 at the CCP Central China Bureau Party School. At the time, the entire party's large-scale rectification movement was about to begin and Comrade Liu Shaoqi, as a great Marxist and proletariat revolutionary, was sorely grieved by the long-continuing "left" and right-leaning opportunistic lines (in particular the serious danger created for the enterprise of the party by Wang Ming's "left-" leaning opportunistic line, and the erroneous policy of "cruel conflict and heartless attacks" that they put into effect in the course of their inner-party struggles, which resulted in the bitter lesson of a large number of excellent party members' tragically being "framed", strongly critized this excessive inner-party struggle, and incisively elucidated a correct guiding principle for inner-party struggle. This doubtless had important guiding significance for the successful launching of the rectification movement. This speech of Comrade Liu Shaoqi's was telegraphed at the time to Yanan, where it was considered extremely significant by the leaders of the Party Central Committee; in 1943, when the rectification movement was well underway, Comrade Liu Shaoqi made a word-by-word correction and revision of the speech, and issued it again. The note appended by the leading bodies of the rectification [movement] in issuing this speech pointed out: Comrade Liu Shaoqi's speech "both theoretically and realistically solved this serious problem of inner-party struggle, and should be read by every party member." (1) Afterwards, this speech was included in "Documents on Rectification," becoming what for a long time has been an important document relating to the construction of our party. What is strange is that a Marxist-Leninist work that has had such a great effect on the construction of the party suddenly became, after the beginning of the Cultural, Revolution, a "bad example of the revisionist line for party building," and the "doctrine of inner-party peace" was publicized as being one of the "poisonous weeds." Is this [a case of] history playing games with people? No it isn't! It is precisely the cruel manifestation of excessive inner-party struggle carried to an extreme. Because this work incisively and vividly flogged those "struggle-mongers" who were fond of constant struggle, and with awe-inspiring righteousness elucidated a correct guiding policy for inner-party struggle, the article was strongly worded throughout with the force of justice, and really struck home. For those ambitious persons who had the vain hope of usurping power within the party by means of causing trouble with inner-party struggle, this naturally was a serious obstacle. For this reason, its being attacked and suppressed on a large scale was inevitable under the circumstances. Today, even though Lin Biao and the "gang of four" have long since fallen from power, and Comrade Liu Shaoqi has been exonerated of the wrongs done him, nevertheless, thoroughly eliminating the confusion they created regarding the question of inner-party struggle, and [carrying out] a radical, thoroughgoing reform still have extremely important actual meaning for correctly launching inner-party struggle and strengthening the building of the party. The content of this work of Comrade Liu Shaoqi's is extremely incisive and broad; this [present] work will merely discuss a bit of superficial understanding of questions relating to the "inner-party peace" aspect.

1. We cannot categorically oppose [the concept of] inner-party peace.

In this work, Comrade Liu Shaoqi completely expounded a guiding principle for inner-party struggle, clearly pointing out: in order to develop the enterprise of the party, not only is strict inner-party struggle needed; at the same time, "inner-party peace" based on unanimity of principles is also needed. He criticized the "left-" leaning opportunistic viewpoints of [those who] "deny democracy within the party, deny inner-party peace [based on] unanimity of principles," (2) and consider that "any peace, even inner-party peace [based on] complete unanimity of principles, is intolerable," (3) sternly pointing out that this is "an erroneous tendency within inner-party struggle," and [result from] an incorrect, mechanical understanding of Lenin's principles regarding inner-party struggle.

In the building of the party is it not so that when inner-party struggle is mentioned, only then is it Marxism, while as soon as "inner-party peace" is brought up, then it is revisionism? If this way of looking at things is not the absolute end in absurdity, then it is a perversion of ill will.

Marxism considers that all things contain contradictions within themselves and, like them, the party is also a unity of contradictions. The enterprise of the party has all along been carried out in a movement unifying the contradiction of both struggling and uniting at the same time; there is certain to be a lot of struggle within the party, so that "inner-party peace" is all the more indispensable. What is meant by "inner-party peace," first of all is inner-party unity based on unanimity of [basic] principles. Inner-party unity is the life of the party; if a proletarian political party does not have this inner-party unity [based on] unanimity of principles, exists for a long time in a state of ceaseless, unprincipled quarrel and conflict, with "campaigning" here and engaging in "movements" there so that one is in a constant state of anxiety, then the enterprise of such a party cannot possibly develop, and there is no way for the life of such a party to continue. Therefore, inner-party struggle engaged in to arrive at unanimity on principles, fundamentally is for the sake of the inner-party peace that is based on this unanimity on principles; this is foremost and of the greatest consequence. Secondly, "inner-party peace" also means that on questions that are not questions of principle, the comrades in the party must have the necessary compromise. For the sake of the long-term and fundamental advantage of the proletarian class, Marxism has never been categorically opposed to compromise, recognizing that compromise, not only in inner-party struggle, but even in struggle against the enemy, so long as it is not compromise that is a betrayal of principles, is not only advisable, but necessary. It is exactly as Lenin pointed out: "'In principle' to oppose compromise, and to be categorically opposed to compromise no matter what the compromise is, this is simply childishness that is hard to take seriously."(4) This remark of Lenin's referred to struggle against the enemy, and struggle against the enemy and inner-party struggle are two completely different things; since in the life-and-death struggle against the enemy it can still be like this [that some compromise is advisable] then in inner-party conflict it is all the more inadvisable to talk only of struggle and not of compromise. Inner-party conflict on questions of principle is necessary, and also unavoidable, but "that is definitely not to say that the party should become a debating club." (5) In order to realize the common objectives, the party members' mutual yielding to each other on questions that are not questions of principle, in the same manner is also necessary. The phrase "Harmony is precious" is definitely applicable here, and one should not simply reject such ideas as being rotten Confucianism. Comrade Mao Zedong also instructed us over and again: towards the enemy one must be fierce, (but) "with one's own people, with the people, with the comrades, officials, with subordinates one must be harmonious, one must unite." (6) Harmony expresses the vast open-mindedness of Communist Party members, and only with harmony can things be done well. Otherwise, one might suppose that the more fierce inner-party struggle is, the better; the more serious problems are presented as being, the better; the more of other people's mistakes collected together, the better; the more terminology used, the better; the bigger the dunce caps people are made to wear, the better; the more cutting the words of criticism, the better; the more severe and brutal the style and manner of criticism and struggle, the better--the louder the tone of voice, the fiercer the facial expression, the further the teeth protrude, the better and absolutely the most revolutionary, and this kind of thing can only result in everything being ruined. One particularly recalls Lin Biao and the "gang of four" who, in order to realize their own political ambition, completely denied "inner-party peace," fanned the flames of "inner-party struggle," and wantonly drummed up the so-called "philosophy of struggle," of "not to struggle is to deviate; not to struggle is to fall from power; not to struggle is to commit revisionism," with the result that the more struggle there was, the more confused everything became, the more struggle there was the more messed up everything was, and our party was nearly destroyed [by it]; the lesson we learned from all this was really painful.

From this one can see that Comrade Liu Shaoqi in protesting against "left-" leaning opportunism had a definite object in mind in bringing up "inner-party peace," which was entirely blameless and, moreover, extremely correct and timely. Not to mention the fact that Comrade Liu Shaoqi, in bringing up the question of "inner-party peace,: firstly, definitely did not deny inner-party struggle and moreover fully proved the necessity of inner-party struggle; secondly, he accurately pointed out that "inner-party peace is an inner-party peace [based on] unanimity on principles, and not an unprincipled accommodation of others; thirdly, his basic aim was to preserve the unity of the party. Since this kind of "inner-party peace" was opposed both to the right-leaning opportunism that adopts a compromising attitude towards contradictions within the party, and to the "left-" leaning opportunism that adopts an attitude of absolutism, not only is this no crime, it is no revisionism and, moreover, completely correct Marxism. Is there anything wrong with this kind of "inner-party peace?" This kind of "inner-party peace" is really too precious, too necessary for us! All party members should conscientiously and resolutely seize and guard this "inner-party peace" and hold it to be something as precious as their own eyes, [for] only by "on the basis of Marxism-Leninism, uniting the entire party like one harmonious family, like a single, firm piece of iron or steel" (7) will we overcome the attacks of any enemy, and our enterprise be invincible.

2. Excessive inner-party conflict is the greatest obstacle to inner-party peace.

Accomplishing this kind of "inner-party peace" is no easy task, and our party has paid a great price and made great sacrifices in this regard already. The experience of history tells us: the greatest obstacle to realizing "inner-party peace" is excessive inner-party conflict.

Of the frequent serious obstruction and damage caused our party in the 28 years since the democratic revolution by "left-" and right-leaning opportunism, though the losses caused our party by right-leaning opportunism were certainly great, nevertheless "left-" leaning opportunism has been the most dangerous and of the longest duration. As for the basic characteristics of its organizational line, "left-" leaning opportunism, under the resounding slogan of revolution, engaged in excessive inner-party conflict. This circumstance was particularly prominent during the period of the government of Wang Ming's line; Wang Ming considered himself a supersovereign; placing himself above the party and the people. In order to carry through their own personal program, Wang Ming and his followers "within the party punished all comrades who, because of the infeasibility of Wang Ming's line, started doubting, disagreeing, being dissatisfied, and refusing to support and carry out that line. This was done in disregard to the actual circumstances. As a result, all these comrades were erroneously labeled as belonging to 'right-leaning opportunism,' 'rich peasant line,' 'Lo Ming's line,' and 'double dealing faction," subjecting them to "cruel struggle" and "heartless attack," to the extent that this "inner-party struggle" was carried out in the same manner as struggling against criminals or enemies." (8) In the central Soviet area, they heartlessly attacked Comrade Mao Zedong, expelled him from his posts as Secretary of CCP Central Bureau governing the Soviet areas, member of the Red Army's General Political Committee, and Secretary of the General Front Committee, forced him to leave the army, and stripped him of his right to speak at the Party Central Committee [meetings]. Cruel oppression was also enacted against other comrades in the central Soviet area who persevered in maintaining a correct line; a so-called struggle was erroneously launched against Deng (Xiaoping), Mao (Zetan), Xie (Weijun), and Gu (Bo) and, under the erroneous policy of eliminating counterrevolutionaries, they caused many excellent party members to suffer unrighted wrongs, and even lose their lives. They also, in the name of "remaking the party" and "remaking the Red Army," with "imperial envoys" flying hither and thither, went to every base area to force into effect their erroneous line; after the failure of the fifth attempt at resisting the 'encirclement and harassment' the only base area left in the country--the Soviet area in northern Shanxi, was also placed in grave danger by them so that of Liu Zhidan and the large number of other party leaders (who had created this base area), nearly all either wound up in prison or were executed. Is not this extremely painful loss precisely to be traced to this unprincipled, excessive inner-party struggle? Only after incisively observing this abnormal phenomenon in the inner life of the party did Comrade Liu Shaoqi place importance on bringing up for the entire party the question of opposing "left-" leaning opportunism.

Placing importance on the question of opposing "left-" leaning opportunism was completely in accord with the historical realities of our party.

"Left-" leaning opportunism's having such a great influence and such a great market in our party, it's being difficult to control, and hard to overcome, are not only because they generally all hang out the outer garb and impressive gold-character signboard of Marxism-Leninism, so that people can be more easily deceived, and unconsciously given the confused notion that "left" is better than right, right-leaning is dangerous, and "left-" leaning is safe; at the same time, it is also inseparable from the particular conditions of the formation of our party. Comrade Liu Shaoqi compares in detail the historical conditions of the formation of our party and of the Russian party, pointing out that at the time the Russian party was formed, owing to the unchecked spread of opportunism at the Second International, Lenin mainly established the party in the course of struggle against right-leaning opportunism in the party organization; the situation before the October Revolution really was like that; at that time a "left-" leaning opportunism in the party organization had not yet developed, or had not yet developed into an organized opportunism; therefore, Lenin's theory for party building is completely filled with struggle against right-leaning opportunism. Many comrades ignore this circumstance and mechanically and erroneously apply Lenin's principles, absolutize them, and unavoidably go to extremes. But the historical conditions of the formation of our party were completely different. Comrade Liu Shaoqi's analysis of the points of difference is:

"Firstly, the formation of China's party was after the October Revolution, after the Russian bolsheviks were already victorious, after there was already a living example; therefore, as soon as it began it was under the direction of the Communist International, and construction was carried out in accordance with Lenin's principles.

"Secondly, China's party from the beginning until now has not been influenced either in its thinking or in its organization by the European Social Democratic Party's Second International.

"Thirdly, China did not have Europe's period of development during capitalist "peace," that permitted the laboring class peaceful verbal conflict, and also did not have Europe's aristocracy of workers.

"Fourth, within China's party there is a comparatively greater proportion of small-propertied class and peasants, and there is also a certain vagabond element; this is the social basis of "left-" and right opportunism within the Chinese party."

Owing precisely to these special conditions and circumstances, two different influences were then produced: "One was good, enabling us to found from the very beginning a Leninist, Chinese Communist Party that subjectively and strictly follows Lenin's principles; as soon as this party began it was accompanied by strict self-criticism and inner-party struggle; this enabled our party to progress very rapidly, and was a kind of motive power promoting the progress of our party. From another aspect, however, it also frequently caused our comrades to go to another extreme, and commit a different error, frequently causing our inner-party struggle to be taken to excess, so that struggle is too fierce, and goes on without any limit, leading to yet another erroneous tendency, the erroneous tendency of the "left."

This circumstance clearly indicates that "left-" leaning develops and grows particularly well within our party, and as the result of its development of necessity there will be produced a number of "hatchet men" who have no [particular] standpoint in inner-party struggle, unprincipled "strugglers," and "fighters" fond of a struggle.

These people struggle as a profession, "struggle for the sake of struggling," and, moreover, have a tendency "at times when there is no division of principle at all in the party, they will insist on going to 'hunt for' and object for struggle, considering certain comrades to be 'opportunists,' and using them as 'straw men' to shoot at during inner-party struggle," (9) striking out with their unfounded accusations. It is exactly this kind of extremely perverse and violent, wanton struggle, which does not consider the facts, that has harmed our party and made it insecure for a long time; within, ruining inner-party unity; without, spoiling the relationship between the party and the masses. Just think, how can a party which itself is not secure lead the party members and the masses, marching in unison and concentrating their forces to engage in struggle with the enemy outside the party, and build socialism? People who advocate acting this way [engaging in struggle] generally consider that only this way is "most, most revolutionary," is "100 percent bolshevik;" actually, it is exactly as Comrade [Liu] Shaoqi pointed out: "people who advocate acting this way, are certainly not 'bolshevik,' but are almost hopelessly incurable, or else they are opportunists making use of the name 'bolshevik'." (10)

What affords food for thought is that not only in the period [since] the democratic revolution, [but] the situation in the socialist period is also startlingly similar. Looking back over the past 30 years of inner-party struggle, wasn't the most dangerous, the longest lasting still the "left-" leaning line? Lin Biao and the "gang of four" that bunch, though clearly they were already as left as left could be, they still risked their lives to drum up the slogan that "right-leaning is the main danger" and, moreover, used every means possible to mobilize public opinion in the vain hope of proving that anti-rightism is a universal rule for the socialist period. This method of taking one's own political ambition as a theoretical basis was really remarkably absurd.

What is worthy of study is, having already had the painful lesson of the "left-" leaning line during the period of the democratic revolution, how is it that this "left-" leaning line of the socialist period has reappeared, and even worse than before? This naturally is a very great question for study that we must conscientiously explore, and we must look for causes from many angles. However, if we look at it from the point of view of the origins of society, a comparatively clear point is that it is due to the deep influence of feudalism. Our country existed as a feudal autocracy for thousands of years, and did not pass through a "peaceful" capitalist development, but evolved all at once from a semi-colonized, semi-feudal society into socialism; the influences of feudal society's family elder system and personal dependency, the circumstances of a small-production economy, as well as the fanaticism and force of habit produced by these, can very easily become a hotbed of autocracy and excessive struggle. On this point, Comrade Hua Guofeng has pointed out: "Our country has a very long history of feudalism, the economy and culture are comparatively backward, and also in the past our correct propaganda and correct practice of democracy were not sufficient and in system were not very perfect either, and under these circumstances autocracy, bureaucratism, thinking that favors special privileges, family-elder ways and anarchism spring up and develop very quickly. It was because of this very circumstance that our country was taken in by plotters like Lin Biao and the 'gang of four'." (11) A review of this important exposition is very enlightening towards an understanding of this question.

In sum, one can see that either for the period since the democratic revolution, and also for the period of the socialist revolution, excessive inner-party conflict has always been the greatest obstacle ruining "inner-party peace," particularly due to the "left-" leaning line that produces this kind of excessive inner-party conflict, which has very deep social roots, and this cannot but arouse our serious attention. Practice proves that, whenever we come to take the trouble to correct this circumstance, then "inner-party peace" will be assured, and the development of the party's enterprise will flourish; otherwise, it will definitely come to harm. For as long as the party has ben in existence, hasn't this twisted path of development we have gone through incisively told us, how tragic the loss brought upon the enterprise of the party by excessive inner-party conflict, and how important "inner-party peace" also is for the development of the party's enterprise?

3. Only by correctly launching inner-party struggle can we guarantee "inner-party peace."

If we want to guarantee "inner-party peace," then it is necessary to launch inner-party struggle correctly. The correct carrying out of inner-party struggle is an important question for solving the internal contradiction of the proletarian class, and is a fundamental guarantee of the prospering and flourishing of the enterprise of our party. How can we correctly launch inner-party struggle, after all? Comrade Liu Shaoqi, on the basis of his long and rich experience in party leadership work and high Marxist-Leninist theoretical level, made an exhaustive exposition and elucidation of this.

Rereading Comrade Liu Shaoqi's exposition, I was very impressed with the importance of the following several points, which must be emphasized over and again:

First, one must definitely correctly recognize the nature of inner-party struggle.

Comrade Liu Shaoqi pointed out: "Inner-party struggle basically is a kind of division and conflict on ideology and principles." At the same time, it is also "the reflection within the party of class contradictions in society, and the opposition between old and new things." It included struggle carried out against all kinds of enemies within the party and against non-proletarian influences," as well as struggle against "left-" and right-leaning opportunism, etc.. However, he emphasized that "inner-party struggle is mainly ideological; its content is division and opposition in ideology and principles. Within the party, owing to divisions and antagonisms among the comrades on principles, although they can develop into political divisions, in a certain situation, even an unavoidable development into a division in party organization, nevertheless its real nature, its content, basically is still a kind of ideological conflict." This exposition is a totally accurate Marxist-Leninist explanation of inner-party struggle, since it has pointed out the class nature of inner-party struggle, and has also emphasized that it is mainly a kind of ideological conflict; only by correctly understanding inner-party struggle in this way can the correct carrying out of inner-party struggle be assured.

Lin Biao and the "gang of four" took passages in this exposition of Comrade Liu Shaoqi's out of context, and distorted them as they saw fit. Clearly, Comrade Liu Shaoqi pointed out that inner-party struggle is "mainly" a kind of ideological conflict, but in their judgements they had a tendency to accuse him of saying that it was "merely" ideological conflict, and moreover because Comrade Liu Shaoqi did not categorize inner-party struggle simply as being class conflict or conflict between [political] lines, he was attacked for obliterating the class nature of inner-party struggle, which was the same as engaging in "revisionism" in party-

party-building, etc.. This kind of trumping up of charges and pinning them on someone, and afterwards endlessly raising them to a higher level of seriousness and, added to this, base methods of attack, aside from revealing their impatient ambition to usurp control of the party, were absolutely without foundation.

It is completely clear that Comrade Liu Shaoqi definitely did not deny the class nature of inner-party conflict; on the contrary, he emphasized that inner-party struggle "is mainly ideological conflict," precisely pointing out the basic characteristic of inner-party struggle. Since inner-party struggle consists of divisions and oppositions among the comrades on ideology and principles, in that case one can only use the method of presenting the facts and reasoning things out to solve them, and one absolutely cannot adopt murderous, suppressive methods. For those ambitious persons who had the vain hope of creating turmoil with inner-party struggle, this could not but be a serious threat.

It is correct that inner-party struggle, class struggle and the conflict between political lines are connected, but one absolutely cannot simply write an equal sign to indicate that relationship. First of all, looking at it from the point of view of the relationship between inner-party struggle and class struggle, the main connection between the two lies in the origin of classes; inner-party struggle is only the reflection of class struggle, which is not the same as being class struggle. From the point of view of the origin of knowledge, inner-party struggle is the reflection within the party of subjective and objective contradictions, which is even further from simply being class struggle. Secondly, from the point of view of the relationship between inner-party struggle and the conflict between political lines, the two are both connected and distinct from each other, and in the same manner one cannot simply equate them. Struggle between two political lines is the highest form of inner-party struggle and its [most] important content, but it is definitely not its only form or its entire content. Inner-party conflict is usually for the most part manifested in divisions and oppositions among the party comrades on various aspects of ideology, ways of doing things, work methods, etc., including certain divisions and oppositions on principle, but these do not constitute struggle between political lines. Only when divisions on principle develop to the point where there can be no compromise, when erroneous ideology, erroneous tendencies develop into erroneous political and organizational lines, only then is there struggle between political lines, which is not to say that conflict between political lines exists at all times within the party. Those false theories, endlessly rising to new levels of error, are not only theoretically a great distortion of the nature of inner-party struggle, at the same time they are also the greatest disaster ruining "inner-party peace."

Secondly, we must definitely distinguish strictly, and correctly deal with, questions of principle and questions that are not questions of principle.

Comrade Liu Shaoqi points out: "Inner-party struggle is a conflict of principles." This requires that we definitely must strictly and clearly distinguish the dividing line between questions of principle and non-questions of principle, and hence accurately determine the different attitudes for dealing with them. What are principles? Comrade Liu Shaoqi tells us: "What are called principles are general laws for the development of things." Speaking concretely, questions that have to do with "the aim of our struggle and the methods of struggle to attain this aim," as well as questions of strategy and tactics; all everyday government affairs or purely practical questions that do not have to do with these principles are questions that are not questions of principle.

Communists, "on questions of principle, cannot be vague." We must resolutely oppose all tendencies that are in violation of principles. And questions that are not questions of principle "are not [cases where] one must die rather than compromise" and, moreover, one must be "good at compromise, good at yielding, good at accepting and agreeing with other people's ideas, 'good at going along with others,' and only after this can matters be transacted freely, can problems be solved readily. But one must not simply always want to hold fast to one's own ideas and always want others to give up theirs; always want other people to tolerate one and want others to handle things according to one's own ideas; this way will have the contrary effect of delaying the solution of problems, interfering with the progress of work, increasing inner-party disputes and the tendency towards idle talk, and harm unity among the comrades." Here, since we cannot degrade questions of principle into questions unrelated to principle, we also cannot elevate questions unrelated to principle into questions of principle, and we particularly cannot "carry out an unprincipled conflict under the cover of the great banner of a principled conflict."

In order to safeguard the highest advantage of the proletarian class and the unity of the party, even on questions of principle one must be good at comparing, good at making distinctions, use the rule of "small principles are subordinate to large principles; the part is subordinate to the whole" to decide whether a question is one that one must be resolute on or one where one should "yield temporarily," combining the steadfastness of the principle and the flexibility of the tactics--only in this way will matters not end up with both sides refusing to budge, and be advantageous for the enterprise of the proletariat class. In matters of principle we cannot be careless; this is to say that we definitely must struggle sternly; we cannot be apathetic; we cannot be evasive; but stern struggle is decidedly not cruel struggle, but can only be struggle by reasoning things out; that attitude of using power to suppress others without using reason is absolutely intolerable. It should be like this whether we are talking about questions of principle or questions that are not questions of principle, all must be solved through a process of presenting the facts and reasoning things out, criticism and self-criticism. The formula of "unite--criticize--unite" that Comrade Mao Zedong instructed us is a basic principle for resolving inner-party conflict. We must definitely obey this principle, and use a high level of proletarian party spirit and the motive and aim of "being good at getting along with others" to resolve inner-party contradictions and divisions. It is exactly as Comrade Zhang Wentian incisively points out: "ideological conflict that has this kind of motive and aim must of necessity be honest and upright, because here, aside from the benefit of the party, there is no other personal advantage to be gained." Conversely, that so-called ideological conflict that issues from individualism, factionalism, or some other ulterior motive, and makes use of all kinds of improper methods to accomplish its aim of framing, attacking or overthrowing revolutionary comrades, deviates from the basic principles of the party, and of necessity must contain within itself some degree of plotting. These so-called judgments can only give rise to disputes within the party, create factional division, and create oppositions and rifts." (12)

Thirdly, we definitely must cherish a highly responsible attitude towards the party and towards the revolution.

Comrade Liu Shaoqi points out: "Inner-party struggle is a most serious, most responsible thing; in engaging in it we must have a most serious, most responsible attitude, and absolutely cannot engage in matters carelessly." If we want to reach this point, it is required that we must be completely on the party's side, in everything start from the basis of the benefit of the party, selflessly, without plotting for private advantage. It is true that "only when one first has a correct standpoint can one correct others' incorrect standpoints; only when one is completely upright, can one correct other people's not being upright; it is a case of 'One must first correct oneself; only then can one correct others'." This requires that we definitely must persevere in the principle of seeking truth from facts; at all times and under all circumstances we must respect objective facts, speak the truth and not falsehood; one is one; two is two; don't exaggerate; don't minimize; don't use one's own subjective wishes and likes and dislikes to decide on right and wrong. Those base methods of disregarding facts, doing whatever one pleases, bragging and sowing lies, and resorting to fraud and trickery, created during the period when Lin Biao and the "gang of four" were on the rampage, must be thoroughly eliminated. This, then, requires that we definitely must be daring in persevering in the truth, correct our mistakes, be daring in engaging in struggle against all evil forces, live for the truth, die for the truth; but we cannot "steer our boat according to the wind," or traffic in principles. We must be brave in accepting and correcting our mistakes, and absolutely cannot conceal our faults and wrongs, attribute merit to oneself and push blame onto others. In short, it requires that we definitely must have a high level of party principle, "not to be subdued by force," "not to be corrupted by wealth and honors," increase our cultivation in the theoretical, ideological, moral, work-style and organizational discipline areas, take the overall situation into account, have the cardinal principles in mind, and cause oneself to really become a Communist Party member made of "special materials;" only in this way will the party's style be correct, will people's hearts be in agreement; only then can all kinds of improper tendencies in the party be overcome, and only then can the "inner-party peace" we are talking about--that is, the unity of the party--be guaranteed.

In sum, this work, "On Inner-Party Struggle" incisively summarizes many valuable experiences in inner-party struggle, and is the crystallization of Comrade Liu Shaoqi's heart's blood through many years of party work; it is an extremely precious legacy he has left us, [and though it is] separated from us by a space of 39 years, rereading it today still makes a deep impression on one. We should treasure this legacy very highly and, like that year in Yanan during the rectification period, study it conscientiously.

"Daring to bear morality and justice with an iron shoulder; always to leave a brilliant reflection among men." Comrade Liu Shaoqi struggled vehemently to the end of his life for the enterprise of the party, and not only made an important contribution theoretically, but also in practice established a shining example for us. All his life he was honest, open and upright, hated evil like an enemy, and carried out an untiring struggle to uphold the unity of the party and to be steadfast in the basic principles of Marxist-Leninist-Mao Zedone ideology. After 1959, the "left-" leaning tendency in the party raised its head, and he immediately called attention to it and resolutely opposed it. In 1962, at an enlarged meeting of the Central Committee he, directly aiming at the erroneous tendency existing in party work, severely criticized the erroneous view that "left" is better than right, correctly pointing out: "Right is not better than 'left;' 'left' is also not better than right;" either of these deviations should be opposed, "during the last few years some party organizations on three occasions repeated the error of excessive conflict of the kind that occurred during the periof of the 'left-' leaning opportunistic line," emphasizing that "all party organizations that committed the error must quickly correct it, not allow this kind of excessive conflict to be repeated, and manage affairs in accordance with the methods for normal inner-party struggle that were formulated in our party long ago." (13) Regrettably, Comrade Liu Shaoqi's word was definitely not carried out; on the contrary, it afterwards became the basis for Lin Biao and the "gang of four" to fix a charge against him, causing the enterprise of the party again to meet with even more serious harm. Does not this historical tragedy precisely prove, through being a counterexample, the truth of Comrade Liu Shaoqi's theory?

Our party has already passed through a period of nearly 60 years of conflict, and rich experience of inner-party conflict, both positive and negative, enables our party to be more mature than at any other time previously. A series of historically significant important resolutions including "Concerning Certain Standards in the Political Life of the Party," passed the Fifth Plenary Session of the 11th CCP Central Committee are certain to produce a great effect on the building of our party. Let us unite more closely around the party's Central Committee, quickly revive the excellent traditions of the party ruined by Lin Biao and the "gang of our," "be in favor of righteousness, and opposed to wickedness," bestir our revolutionary spirit, in order, in the [new] phase of stability and unity, to realize the four modernizations and race on towards a communist tomorrow and the brave struggle ahead!

EGALITARIANISM, PEASANT WARS IN HISTORY DISCUSSED

Beijing LISHI YANJIU [HISTORICAL RESEARCH] in Chinese No 1, Jan 80 pp 11-20

[Article by Dong Chuping [5516 2806 1627]: "On the Merits and Demerits of Egalitarianism and the Successes and Failures of Peasant Wars"]

[Text] The concept of equality and egalitarianism has been the ideological yeast of the peasants when they were engaged in fermenting a revolution. Without an elementary ideology of equality, there would have been no peasant wars. The egalitarian ideology of the peasants has often been reflected through religious heresies, such as the Taiping Taoist Sect and Five-dou-of-Rice Sect of the last years of the Eastern Han Dynasty, the Manichaeism in the Fangla area and Zhong Xiang's [6945 4161] Heretical Taoist Sect of the Song Dynasty, the White Lotus Sect of the Yuan and Qing Dynasty, the God-worshiping Sect of the Heavenly Kingdom of Peace, etc.

The concepts of equality, egalitarianism, and religious heresies with such concept of equality and egalitarianism as their content have played a tremendous mobilizing and organizational role during the preparatory and outbreak stages of peasant wars. But it [sic] was not the ideological weapon for the power seizure and the eventual establishment of revolutionary regimes after the overthrow of the existing ruling houses that took place. Along with the deepening development of the revolutions, it became more and more of a burden, so that the sooner it was abandoned, the better the situations for those concerned would have been. It is not by accident that in Chinese history there has never been a peasant uprising which was able to win victory with egalitarianism or a religious heresy with egalitarianism as its content as its ideological weapon. Today, everybody praises without limit Wang Xianzhi's [3769 0103 5347] call for "equalization," Huang Cao's [7806 1560] call for "leveling," and especially Li Zicheng's [2621 5261 2052] slogans on "land equalization" and "grain tax exemption"; the "Land System of the Celestial Dynasty" of the Heavenly Kingdon of Peace is especially exalted to the skies. But few care to mention how this kind of egalitarian ideology led these three large-scale revolutionary movements to their eventual failure.

As everybody knows, the failure of Huang Cao and Li Zicheng was inseparable from the fact that they were for long periods of time bogged down in the practice of roving banditry. The root source of the ideology of such roving banditry was no other than egalitarianism. Bankrupt peasants furnished the mass foundation of roving banditry, and it was very easy for such bankrupt peasants to breed an egalitarian ideology. Only by "swashbuckling across the country," "robbing the rich to aid the poor" and "opening up public granaries to relieve the hungry" everywhere could such egalitarianism be temporarily brought into reality. It was always easy to equalize existing wealth; but existing wealth was limited. After "equalizing" the wealth here today, it was necessary to "equalize" the wealth elsewhere tomorrow. Li Zicheng's subordinate commander Lo Rucai [5012 3067 2088] said: "Swashbuckling across the country alone affords us great pleasure; why do we need to occupy some territory and establish a kingdom?" (Li Wenzhi [2621 2429 3112], "Plebian Uprisings of the Late Ming Dynasty," Zhonghua Book Company, 1948 edition, p 115). Of course, "opening up public granaries to relieve the hungry" and "robbing the rich to aid the poor" carried out in the process of peasant uprisings constituted revolutionary actions, and they were beneficial to, and necessary for, the development of the revolutionary situations. But these actions, after all, did not constitute any long-range plans; if they really wanted to overthrow the existing ruling authorities and establish their own regimes, they would have to set up relatively stable bases, organize productive activities, and establish normal systems of public finance. It was in these regards that egalitarianism proved helpless; on the contrary, it tended to have a sabotaging effect.

Egalitarianism left the uprisings of Huang Cao and Li Zicheng bogged down in the practice of roving banditry for long periods of time; they had no bases, nor regular financial revenues. When the troops of Huang Cao entered Chang'an, they did not even have anything to eat. After Li Zicheng's troops entered Beijing, they still did not have a system of public finance and relied only on torturing officials and rich merchants under the Ming House and exacting their spoils in order to sustain the expenditures of the state; they also especially established an "Office for Provisions Collection and Pacification" to launch a campaign of unprecedented scale to "exact spoils and replenish provisions." "Cabinet officials were required to submit 100,000 [taels of silver?]; officials of ministerial agencies in the capital and the palace guard commander, 70,000; secondary officials of bureaus and regional offices of the civil service ministry, 50,000 and 30,000 respectively; Hanlin scholars, 10,000; military officers, one to several thousand; royal relatives, flexible figures" ("Northern Expeditions [0554 3970] of the Ming Period," Vol 20). The foremost task of local officials dispatched from Beijing to Hebei, Shandong, Henan and other regions was still not to organize production but to "exact spoils and replenish provisions"; hence the area of attack was expanded, and this was unpropitious for establishing any united front against the Qing House.

On the eve of the occupation of Beijing by the uprising forces, in early April 1644, Grand Secretary Fan Wencheng [5400 2429 4453] of the Qing House pointed out to Prince-Regent Duoergun the evolution of the principal contradiction at the time. He said: "As the roving bandits are now running rampant in China Proper, they are like the deer lost to the erstwhile Qin Dynasty pursued by the kingdoms of Zhu and Han: although our state is contesting the throne with the Ming regime, we are in reality fighting only roving bandits" ("East China Records," The Reign of Shunzhi, Section 1). After the uprising troops occupied Beijing, the Qing forces immediately launched a propaganda offensive in the direction of the landlord class of the Han nationality, declaring: "The uprising soldiers are here to avenge the grievances of your ruler and your fathers" ("Biographies in the History of the Qing Dynasty," Vol 5). Between the two sides of this principal contradiction, the uprising forces and the Qing forces, there stood a huge intermediary force, which was namely the landlord class of the Han nationality; whoever won this intermediary force would probably be victorious. The uprising forces were not necessarily unaware of this truism; they therefore "let the good officials in office still work at their former posts" ("Northern Expeditions of the Ming Period," Vol 23). But, compelled by financial reasons, they could not but launch a vociferous movement to "exact spoils and replenish provisions" and thereby push this intermediary force toward the enemy. The soldiers and civilians of the Manchu nationality numbered not much more than 200,000; yet, after they entered China Proper, they became irristible. Why? Apart from the corruption of the peasant soldiers after their entry into the capital, the fact that landlords of the Han nationality leaned to the Qing forces in great numbers was an important reason. Li Zicheng's "grain tax exemption" and "levy exemption" helped him a great deal in the beginning, but in the end also undermined his strength; this was reason No. 1. Next, egalitarianism led them to indulge in the practice of roving banditry for a long time, and they thus established no solid base. Once they retreated from Beijing, their whole line collapsed, lacking even a foothold to stand on. This was the ill consequence of taking "swashbuckling across the country" as their "pleasure." To sum up, egalitarianism made Li Zecheng fail to acquire a solid base in the first place, and to establish a regular system of public finance in the second place; these two points were directly related to his subsequent rapid defeat.

In more than 2,000 years of the history of peasant wars, the egalitarianism of the Heavenly Kingdom of Peace, among others, developed to the highest level. No other egalitarianism than that of the Heavenly Kingdom of Peace played a greater, more positive role in respect to the revolution at the preparatory and initial stages of that peasant war. From the first uprising at Jintian, and especially from the breakthrough against encirclement at Yong'an onward, to the establishment of the Heavenly Capital, the speed and vigor of the development of the revolutionary situation were not only beyond the expectation of the Qing Government but also unanticipated by Hong Xiuchuan [3163 4423 0356] and others in the first place. If we ascertain the reason in this regard, we cannot but attribute the meritorious outcome to the propagation of the ideals of the "Heavenly Kingdom" and the strict application of military communism within the ranks of the Army of Peace. But the effect of the ideological system of egalitarianism could not last forever; it could only excite people temporarily, but not sustain them to the very end. Once the revolution entered into the period of its hightide, the sooner it was abandoned, the better. But the egalitarianism of the Heavenly Kingdom of Peace proved to be too great; it became a heavy burden. Later on, there was not only no willingness to abandon it, but it even became regarded as precious treasure. This situation was given further development after the Heavenly Capital was established.

After the Heavenly Capital was established in 1853, two urgent tasks were on hand: one was to dispatch the main forces in a northern expedition without stop so as not to give the Qing Government any breathing spell. Leaders of the Heavenly Kingdom of Peace did not pay enough attention to this; as a result, partial forces were sent in deep pursuit, but the northern expedition was a failure, and the most advantageous opportunity for a decisive war was lost. The other was to build up the base, establish normal social order, and organize social production. To this, leaders of the Heavenly Kingdom of Peace paid full attention, and they took it very seriously. unlike Huang Cao, Li Zicheng and most other leaders of peasant uprisings; but their approach to solving this task was somehow completely wrong.

After the Heavenly Kingdom of Peace settled down in the Heavenly Capital, it promulgated a "Land System of the Celestial Dynasty" as the blueprint for building the "Heavenly Kingdom" amongst men. This "Land System of the Celestial Dynasty" was not only a law for land reform, but also a general program of social system and social life. Policies and measures in the city of the Heavenly Capital were based on, and in accord with, this "Land System of the Celestial Dynasty." We cannot say that simply because land was not equally distributed the "Land System of the Celestial Dynasty" was therefore not at all carried out. That would be taking up one single point to cover up the whole area. On the basis of the "Land System of the Celestial Dynasty" concerning the spirit of "No one is given any private property, everything belongs to the Lord Above," the city of the Heavenly Capital thoroughly eliminated private ownership and also eliminated private industrial and commercial activities; all handicrafts workers were concentrated and organized into various camps of workmen and offices of artisans, commercial activities were entirely stopped, and the people's daily means of livelihood were distributed uniformly by the Government. The families were divided up, and men and women lived respectively together in the various camps and hostels. In a word, the internal practices of the imperial treasury system, the supply system, and the system of separate barracks for men and women of the Army of Peace were extended to the whole society. Hong Xiuchuan and others overlooked economic laws and believed blindly in administrative power. What was the result? They were punished by economic laws. The economically prosperous city of Nanjin suddenly became a quiet and cold military barrack; large numbers of handicrafts workers fled; production decreased sharply; and several thousand "machine workers" (predecessors of the proletariat) connived with the Qing army to plot a rebellion. The "Heavenly Kingdom" idealized for the people was opposed by the people themselves. This was the tragedy of egalitarianism (the foregoing being based on "Summary of Events in Nanjin, 1858-1854," "Nanjin Miscellaneous Recordings," "A Compilation on Rebel Conditions," "The Little History of Fenglu," etc.).

Because of the frequency of fighting, areas under occupation changed from time to time; hence the "Land System of the Celestial Dynasty" was not entirely carried out in the countryside. Today, we have many good-hearted comrades who still regret this very much; but in reality, this was the greatest fortune out of misfortune, for, were it not for this, peasant uprisings would have certainly broken out in the countryside of the "Heavenly Kingdom." To say this is definitely not making a sensational statement to attract attention. After April 1853, the Army of Peace recovered the upper stream region [of the Changjiang River]; the people in the vast area of Anhui "resisted the imperial edict" as they were opposed to the public ownership of the Heavenly Kingdom of Peace. Hong Xiuchuan sent Shi Dakai [4258 6671 7030] to Anqing to "pacify the people." Shi Dakai's thinking and working style were relatively more realistic and "did not pay much attention to folk religions and heretical theories" (Zuo Zongtang [1563 1350 2768]: "Letter to Wang [illegible]shan [3769 3877 1472]"); after he arrived in Anqing, he "often made changes in His Majesty's official institutions, etiqette, and documents" ("Memorial to the Heavenly King Submitted by Jie Chuangyuan [0679 1643 0337] and Zhu Yidian [2612 5902 78[illegible]5]," "followed all the old systems regarding the silver currency and grain transport" ("Mr Tao Lou's [7118 2869] Diary," and "Thinking-of-the-North Recordings"), and "let the people submit grain tax and pay levies as usual" ("A Compilation on Rebel Conditions"). As a result, "provisions for military use were abundant, the people enjoyed peace, and praise was sung everywhere" ("Unauthorized History of the Heavenly Kingdom of Peace"). Shi Dakai's measures in the upper stream region [of the Changjiang River] have been called "feudal restoration"; but we can say affirmatively that without these measures there would have been no triumph for the western expedition of the Army of Peace. Zeng Guofan [2582 0948 5672] was not afraid of your working on egalitarianism, but he was afraid of your working on feudalism. The military communism in the Heavenly Capital became also partly repealed after 1855 because of the punishment of economic laws and opposition by the masses of the people. If "restoration" was in question, Hong Xiuchuan also carried it out in the Heavenly Capital. Without such cases of "restoration," the Heavenly Capital would have fallen into the hands of the Qing army much earlier; how could it have lasted for more than 10 years as it did?

When the revolution first got started, egalitarianism played the role of "destruction" as it was used to cope with the old order of feudal rule, and it also enjoyed the people's support. When the revolution entered the period of its hightide, it became more harmful than feudalism as it was applied among the people to solve the problem of social production. The practice of the Heavenly Kingdom of Peace proved that the masses of the people would rather suffer fairly normal, relatively reduced feudal exploitation and capitalist exploitation than to accommodate egalitarianism, because egalitarianism violated the demand for development of the productive forces, violated economic laws, and could only bring greater sufferings to the people. This is why in the history of mankind there have been the "sinister" slave society, feudal society, capitalist society, but not the "ideal" egalitarian society.

To judge whether or not a policy is correct does not depend just on how much "idealistic brilliance" its descriptive articles might seem to represent and how entertaining they might sound when they are read today, but must be combined with concrete conditions at the time and the results of practice. If the "Land System of the Celestial Dynasty" had been promulgated at the time of the initial uprising at Jintian, it would have been a rather revolutionary document. Since it was promulgated after the founding of the Heavenly Capital, after the revolution had entered the period of its hightide, however, it was used not for "destruction" but for "construction"; this is point No. 1. Next, the middle stream and lower stream regions of the Changjiang River centered around Nanjing were the most developed regions at the time when commodity economy and capitalism were just beginning to rise in China; the contradiction between these advanced economic factors and egalitarianism was even greater and especially could not possibly tolerate the destruction by egalitarianism. At such a time and in such an environment, the promulgation of the "Land System of the Celestial Dynasty" should well be called reactionary rather than revolutionary. From the results of practice, it can be seen that the role it played in behalf of the revolutionary cause of the Heavenly Kingdom of Peace was negative. Today, we exalt the "Land System of the Celestial Dynasty" to the skies, although we are still somewhat critical toward the God-worshiping Sect. Of course, stubbornly adhering to the God-worshiping Sect was one of the reasons for the debacle of the Heavenly Kingdom of Peace. But, the God-worshiping Sect was founded before the start of the revolution; without the

God-worshiping Sect, whence would come the revolution of the Heavenly Kingdom of Peace? It therefore did play a meritorious role in behalf of the revolution. The "Land System of the Celestial Dynasty," on the other hand, was promulgated after the founding of the Heavenly Capital; how did it play the role that the God-worshiping Sect played in behalf of the revolution? Yet, because our view of the question has deviated from concrete conditions of time and space, we have therefore played this one up and the other down, attaching praise and blame irrelevantly.

The time in which Li Zicheng and Hong Xiuchuan lived was slightly different from that of previous peasant revolutionary leaders; but what they led was, or basically was, old-fashioned peasant wars which did not undertake to overthrow the feudal system.

Although in Li Zicheng's time the capitalist economy had already started to rise, this new born economic force was still rather weak and small; the time was still far, far away for it to overthrow the feudal system. If, like Zhu Yuanzhang [2612 0337 4545], Li Zicheng had been able to establish a relatively liberal feudal dynasty with emphasis on agriculture, handicrafts, and commerce to promote economic development and provide more fertile soil for the further growth of the budding capitalism then, he would have made an outstanding contribution to history. This was something possible for a simple peasant war to achieve, and, insofar as the strength of the then uprising peasant soldiers was concerned, this also should have been achieved. But, because of the error he committed on egalitarianism and also in other aspects, Li Zicheng failed to achieve this task; this cannot but be a highly regrettable thing.

In a word, the highest task of old-fashioned peasant wars was no other than overthrowing a rotten dynasty, establishing an enlightened new dynasty, and sweeping away some obstacles for the development of the productive forces and for social progress. Both Liu Bang [0491 6721] and Zhu Yuanzhang achieved this task, whereas Li Zicheng and Hong Xiuchuan failed to accomplish a task which they could have accomplished. After the 17th century, when the world entered the capitalist era and at the crucial moment of drastic competition between various nations, they failed to make the contribution they should have to the Chinese nation; this cannot but make generations of posterity feel regretful. Yet, today--when the people of the whole country are tasting the profound, bitter feeling of being backward and beaten because of the slowness of their nation's historical development, we somehow choose to exalt Li Zicheng and Hong Xiuchuan to very great heights while they have been responsible to a definite extent for the very fact that the Chinese nation developed too slowly and came to be subject to beating; correspondingly, we somehow choose to vehemently belabor Zhu Yuanzhang, who made an outstanding contribution to the acceleration of the development of China's feudal economy and the provision of relevant soil for capitalism to sprout; this cannot but make one feel astonished, indeed!

Comrade Wu Han's [0702 2498] "Biography of Zhu Yuanzhang" is a masterpiece with wide influence. When revised in 1964, it absorbed the viewpoint then in vogue; this caused this masterpiece to be covered with a coat of extreme-Left dust.

At the concluding part of this outstanding biography, the author provided a summary on the life of Zhu Yuanzhang. He first of all listed Zhu Yuanzhang's

10 great "merits." For example, he "unified China, put to an end the situation of war and chaos in the last 20 years of the Yuan Dynasty, and enabled the people to lead a peaceful and stable life"; he "energetically encouraged agricultural production," "let the peasants do their best to open up virgin land and make it their own property"; he "liberated the slaves"; he "energetically measured the acreage of the land under cultivation"; he "strictly punished corrupt officials"; . . . and, the author also pointed out, "these measures" "are all beneficial to the advancement of society" and "should be affirmed." Immediately after this, the author also listed five "defects" on Zhu Yuanzhang's part, and the "foremost" among these was that he "underwent a gradual qualitative change" and "ultimately reneged on the peasant revolution," "becoming the head of the landlord class." "This serious crime is one for which no one can exonerate him whatsoever." But we cannot help asking: if Zhu Yuanzhang had not committed "this serious crime" or did not have this "defect," how could he have achieved those 10 great "merits"? Had not "crime" and "defect" become the causes of his "merits"? Had he been able to follow our political standards today and not committed this "crime," would it not have become impossible for him to achieve those 10 "merits"? And if so, would his measures have become not "beneficial to the advancement of society"?

After Zhu Yuanzhang unified China, he had already completely changed from a leader of peasant revolution into a representative of the landlord class; this was a change of his class status in essence. Insofar as leaders of peasant revolutions in a feudal society were concerned, this transformation was a normal phenomenon in accord with prevailing laws, and could not be viewed the same as a renegade emerging ultimately from the revolutionary ranks; the former can hardly be blamed, whereas the latter should be criticized. Yet we often measure the ancients with today's political standards, attach today's political labels to the heads of the ancients, and criticize Zhu Yuanzhang as if he were a renegade of today as to his "betrayal," "surrender," "metamorphosis," "revolt," etc. Perhaps this can be said to be a case of historical misunderstanding!

If we criticize a certain mistake, we must at the same time point out the correct direction. If we criticize Zhu Yuanzhang for having turned into an emperor through "metamorphosis," we must point out: if not emperor, what would he have turned into? Even standing on the height of today, we still cannot clearly direct him to another outlet, let alone in a situation in which he found himself at that time. In the case of a leader of a peasant uprising then, he would either fail, or succeed and become an emperor; there was no third road for him. Of course, things like Zhu Yuanzhang's mistakes and defects in other aspects, whether he was a good or a bad emperor, may all be subject to analysis and criticism. But the fact of becoming an emperor is not itself to be blamed. On the contrary, the fact that Li Zicheng and Hong Xiuchuan should but did not become emperors really deserves criticism.

Why was it that Zhu Yuanzhang could succeed and become emperor? In a nutshell, he operated according to objective laws, as he worked on feudalism, and not on egalitarianism, after he occupied Nanjing. At that time, this was the only correct road, and all other roads were erroneous.

"After Emperor Taizu [of the Ming Dynasty, i.e., Zhu Yuanzhang] conquered Jiankang [Nanjing], he told the military officers: 'Let the peasants open up virgin land

and make it their own property.' He gave the civilian officials their fiefs, so that they could engage tenant farmers to cultivate them and pay a tax in kind as their salaries" ("Events in the Early Days After the Founding of the State").

In his proclamation as he initiated operations against Zhang Shicheng [1728 1102 6134] in 1366, it was said: "As long as all of you common people can really stay calmly at your trades without moving away, you will remain my good subjects. Of your old land properties and houses, you will remain the owners and pay grain tax according to the established rate; I will not exact harsh levies from you, so that you can forever keep your communities and your families intact."

He fostered new landlords on the one hand, and protected old ones on the other hand. But he also declared: "In the case of old measures which cause inconvenience to you, I shall remove them for you" ("Authentic Records of Emperor Taizu of the Ming Dynasty," Vol 4). In those tense years of warfare, he actually exerted himself energetically to build irrigation works, appointing General Kang Moucai [1660 5399 2088] as his Irrigation and Land Management Commissioner in charge of farming and water conservancy projects and asking him to cultivate the land under the jurisdiction of his military units so as to achieve self-sufficiency in military provisions without having to collect extra grain taxes from the peasants. He also "imposed taxes through an examination of capacities of production in order to achieve equality" ("Events About Various Warriors in the Early Days After the Founding of the State," Vol 1, quoting Ye Ziqi's [5509 1311 1142] "Collected Writings of Quiet Study"), and thereby made the feudal exploitation inherited by the peasants relatively reasonable. His troops followed strict discipline, which enabled the people to produce in calm. In a word, under the premise of preserving the feudal production relations, he proceeded to do away with certain social ills, energetically organize production, protect the small farm economy, so as to give scope to the potential of such feudal production relations in respect to the development of productive forces.

Among all the leaders of peasant revolution, Zhu Yuanzhang was the one most inclined to make important use of intellectuals. After he conquered Jiqing, he declared: "I shall courteously employ those talented people and educated gentlemen who are willing to follow me and establish their own careers" ("Authentic Records of Emperor Taizu of the Ming Dynasty," Vol 4). After the conquest of every place, in fact, he always proceeded to visit and seek out scholars, applying both soft and hard methods to make sure that they would come; hence he always had crowds of strategists on his staff. With the original background of a herdsman, Zhu Yuanzhang was a novice in operationalizing his feudal rule; but there were plenty of experts among his subordinates. Only with these people behind him did he give up the superstitious, backward White Lotus Sect and adopt the realistic and useful Confusian learning. There are therefore many today who criticize him for "gathering capitulators and accommodating renegades," for his "metamorphosis" and his "betrayal"; this is also measuring the ancients with today's political standards and attaching today's political labels to the heads of the ancients. But at that time, Zhu Yuanzhang could only, and also should only, establish a feudal system; and at that time, only the Confucian scholars had the historical experience and theoretical knowledge on feudal rule: if he had not used them, who else could he have used? If he had not used Confucian learning, what else could he have used? Perhaps even standing on the height of today, all we can do is to make some high-sounding remarks, to "criticize" and "criticize," and still find ourselves incapable of pointing out another approach to him! Making important use of Confucian scholars and the adoption of Confucian learning were important reasons why Zhu Yuanzhang was able to unify China.

Zhu Yuanzhang's proclamation on his northern expedition is a target many critical articles of today like to select. Just as these many critical articles point out, this proclamation "mentioned no class struggle" but merely grasped national contradictions and indulged in making a distinction between the Chinese and the barbarians; it put forward the fighting program of "driving out the barbarians, restoring China, establishing rules and discipline, and delivering this people," which was fraught with Great Han Nationalism and feudalism. Great Han Nationalism is of course erroneous today; but under the specific conditions then, it was not only understandable but, more importantly, it even constituted a powerful ideological weapon. It would have been strange, indeed, if he had failed to make use of such a self-evident spiritual atom-bomb. This proclamation made the rule of the Yuan House in China Proper almost collapse without a fight, and the role it played was no less important than Xu Da's [1776 6671] 200,000 select soldiers. Later on, Sun Zhongshan's United League learned the experience of success from Zhu Yuanzhang and also put forward the revolutionary program of "driving out the barbarians, restoring China. . . ." The fact that the Revolution of 1911 had a heavy anti-Manchu coloration was its shortcoming but also its asset; the fact that the Qing Government quickly collapsed was not necessarily unrelated to the propagation of this strategy.

Comrade Fan Wenlan [5400 2429 3482], historian of the older generation who was eminently representative of the scholarly style of seeking truth from facts, once wrote:

"When the Army of Peace entered the territory of Hunan, if . . . the anti-Manchu revolutionary theory had been stressed and Heavenly Father, Heavenly Brother and other Christian superstitions of the like had been mentioned less often, the power of its call would have been enhanced innumerable times . . . According to relatively believable hearsay, when the Army of Peace laid siege to Changsha, Zuo Zongtang [1563 1350 2768] went to see Hong Xiuchuan to discuss the strategy and tactics of attack and defense and national construction, and thereby advised him to abandon the Heavenly Father Jesus and honor only Confucianism; Xiuchuan did not listen to him; and Zongtang escaped in the night. Whether or not this ~~was~~ really a fact about Zuo Zongtang, the suggestion of opposition to the Manchus but not to Confucius genuinely represented the thinking of a part of the scholars; these people were unlike the bureaucrats who were both corrupt and inept on the one hand, and capable of deceiving the backward masses of the people on the other hand: they were a force not to be underestimated" ("The Modern History of China," p 121).

Comrade Fan Wenlan was of the opinion that the Army of Peace should later have expressed "opposition to the Manchus but not to Confucius"; this was possibly because he was aware of the precedent of Zhu Yuanzhang who opposed the Yuan House but respected Confucianism. Practice has proven that this was an approach beneficial to the revolution and to the people. Of course, according to the political standards of certain comrades, this represented "metamorphosis" and "revolt." But under the historical conditions at the time, did this not have a more positive meaning to the people, to society, and to the Chinese nation than clutching the legs of a "revolutionary God"?

History is really too impersonal; measured by today's political standards, those peasant wars whose level of struggle seemed relatively higher and whose banner of anti-feudalism seemed brighter all failed, and those whose revolutionary character seemed not high enough all succeeded. History really did not depend on man's will hundreds of years afterward for its development, but was determined by the conditions of the time and by its own laws.

Zhu Yuanzhang's contribution in history was far greater than that of Liu Futong [0491 4395 6639] and Li Zicheng.

Liu Futong's Red-Turban Army shook the rule of Yuan, but still fell short of thoroughly overthrowing it; if the revolution had been carried forward only up to this point, history would have staged again the tragedies of the last years of the Eastern Han Dynasty and the last years of the Tang Dynasty, when the country was ensnared in a situation of confusing battles between the warlords, and the people suffered profoundly as a result. Luckily, Zhu Yuanzhang adopted a series of correct measures, so that he not only thoroughly overthrew the tyrannical Yuan Dynasty but also established a strong and prosperous Ming Dynasty. The great development of production in the early period of the Ming Dynasty reached an unprecedented peak and provided fertile soil for the rise of capitalism in the middle and late periods. But we are used to praising Liu and depreciating Zhu, taking Liu Futong as the overall representative of peasant revolutions at the end of the Yuan period while viewing Zhu Yuanzhang merely as a clown who stole the fruits of victory. This is extremely unfair. The historical task of peasant revolutions at the end of the Yuan period awaited Zhu Yuanzhang for its ultimate accomplishment. When Comrade Mao Zedong listed leaders of the peasant revolutions in Chinese history, among so many warriors at the end of the Yuan period he only singled out Zhu Yuanzhang; this shows singular insight, and is worthy of our deep reflection. Many of our comrades are used to praising Liu and depreciating Zhu, the alleged reason being that Liu Futong adhered stubbornly to the White Lotus Sect until his very death, whereas Zhu Yuanzhang later changed to Confucianism. This is a salient example of people using ideology and not practice as the criterion for testing truth.

Among all the leaders of peasant revolutions, we often take Li Zichang as the most outstanding representative, but take Zhu Yuanzhang as the typical model of degenerates from the revolutionary ranks.

There are two reasons why Li Zichang gains so many votes today: The first has to do with his "land equalization" and "grain tax exemption" slogans, since the egalitarianism reflected by them made him fail in his lifetime but triumph after his death. The second is his defeat. If Li Zichang had succeeded and, like Zhu Yuanzhang, "unified China," and had been "beneficial to the advancement of society," would he not have been subject to our criticism today like Zhu Yuanzhang?

If Zhu Yuanzhang had insisted on the White Lotus Sect and insisted on egalitarianism or, as some comrades have demanded, had he "put up a bloody fight against the feudal system through to the end," then, he naturally would have been defeated and China would have been split and fallen victim to a period of confused fighting. Then, our appraisal of him could be very high, at least as high as that of Li Zichang! In order for him to reach the height of Li Zichang, he should not have established a base but, like Li Zicheng, carried on his fighting like a roving bandit; he should not have paid so much attention to production, so energetically organized production, established his normal system of public finance but, like Li Zicheng, should have entered the capital with pride and complacency, and become numbed by peace; he should not have established a broad united front in opposition to the Yuan House but, like Li Zicheng, should have failed to issue the call for the establishment of a united front to resist the Qing forces in time in the face of the danger of the Manchu-based Qing regime entering China Proper or to adopt relevant positive measures . . . Had he done that, he would have failed just like Li Zicheng, and would have become likewise as outstanding and great as Li Zicheng!

I have no intention of downgrading the position Li Zicheng deserves in history. Among the leaders of peasant revolutions, Li Zicheng was no doubt relatively more outstanding, and the mistakes he made happened to be universal among the leaders of peasant revolutions. I merely wish to use this commonly recognized hero as my yardstick to measure the height of Zhu Yuanzhang and take up the cudgels in his behalf against an injustice. Even more importantly, I wish to take this opportunity to explain: when we appraise the leaders of peasant revolutions, we cannot use the slogan of egalitarianism as our highest standard, thinking that whosoever sang the highest tune of egalitarianism was also automatically the most outstanding; instead, we should base ourselves on their actual contributions to social development, so that whosoever made the greatest contribution would also receive the highest appraisal. When the masses of the people ventured to follow a dangerous path, give up their lives and shed their blood, their goal was to solve the problems in society that needed urgently to be solved at the time, but not to establish some embellished theory or entertaining slogan for posterity to appreciate. Revolution requires the most our seeking truth from facts; in the case of an empty theory, the higher its tune, the greater would be its harm to revolution.

As my article proceeds up to this point, providing answers to three thorny questions can no longer be avoided.

1. After a peasant revolution entered its hightide period, and egalitarianism was abandoned and feudalism was adopted, did not the peasants' political power, then, become converted toward a feudal political power? Was this not restoration and retrogression?

Answer: it was convertion, but not restoration and retrogression.

"Restoration and retrogression" means turning history backward in violation of the laws of social development. For example, when Hong Xiuchuan eliminated workshop handicrafts and strangled the budding of the newborn capitalist economy in the Heavenly Capital, his measures in this regard should at least be said to represent retrogression, even if not restoration. When feudal production relations were still the necessary form for the development of productive forces, when conditions for the overthrow of the feudal system were still not ripe, then, after a peasant revolution shook up and disturbed the old, corrupt feudal order it started to establish a normal feudal order, protect the feudal, small-farm economy, and correctly give scope to the potential of feudal production relations: This was in accord with the demand for the development of productive forces, following the laws of social development, and carrying history forward; how could it be called "restoration"? As the peasants' revolutionary political power adopted these timely, correct measures, along with the development of the revolutionary situation it naturally also became itself converted toward its opposite--a feudal political power. As we look at it today, this historical dialectics, revolutionary dialectics, may seem too impersonal. But once we take a bird's-eye view of this process from the height of history, we feel that it is very natural, very normal. From egalitarianism to feudalism, from the peasants' political power to feudal political power, these are the two stages through which all successful peasant revolutions are bound to go. /The transition from the former stage to the latter stage was neither retrogression, nor detour, but forward movement;/ [in italics] such a transition /was not a bad thing, but a good thing;/ [in italics] in the case of such a transition, the speedier, the better. However, there were two premises involved here; that is, the peasants' political power during this transition should protect the small farm economy and correctly give scope to the potential of feudal production relations so as to promote the development of productive forces. /Zhu Yuanzhang's secret of success was no other than effecting this transition early, effecting it well. The key was effecting it well:/ [in italics] that is, within the realm of the feudal system, adjusting well the interrelationship between productive forces and production relations, and between the economic base and the upper structure. When Zhu Yuanzhang made the transition has been a question of contention in the academic circles. Certain good-hearted comrades have tried their best to let him serve a few more years as the leader of the peasants and therefore have pushed the time limit of the transition toward as late a date as possible. But this is unnecessary. Because there was no way to resist the effect of objective laws, Li Zicheng's Dashun political power and Hong Xiuchuan's Heavenly Kingdom of Peace were later both converted toward a feudal political power. But because the burden of egalitarianism was too heavy for them, they were therefore converted only very slowly, and converted not very well. Otherwise, they could have triumphed.

2. When the peasants' political power went through a transition toward a feudal political power, abandoned egalitarianism, and adopted feudalism, did this not violate the peasants' interests and face their opposition?

The answer is negative.

The people's interests and demands do not transcend over time and space; they are subject to the limitation of historical conditions. At the level of productive power of that time, the people would desire equality but would not unconditionally resist all exploitation. "The officialdom forced the people to revolt," "people were forced to escape to Liangshan"; in traditional sayings of this sort the word "forced" indicates that the peasants would only become adventuristic when feudal exploitation exceeded the capacity of the small-farm economy to shoulder its burden, and then eventually take up revolution. For 2,000 years, feudal exploitation existed all the time, but there were peasant uprisings sometimes and there would be none at other times. Support or opposition can only be relative. The practice of the Heavenly Kingdom of Peace already proved: the people would accept the exploitation of feudalism rather than the "idealistic brilliance" of egalitarianism. Egalitarianism merely reflected the desire of the toiling people to pursue equality, but it could not really represent their interest. Although feudalism was a system of exploitation and did not represent the peasants' interest, it was nonetheless better than the fancy of small producers. Even a most coarse piece of steamed dough is more useful than the most beautiful painted cake. When Zhu Yuanzhang established a normal feudal order in his base area and abandoned egalitarianism, this was, relatively speaking, in accord with the peasants' interest at the time. He not only was upheld by landlords but also received the support of peasants; otherwise, he could not have won victory. It is hard to imagine that, in that hightide period of the great revolution, in those days of unsettling upheavals when "princes resigned to sustained humiliation, slaves all strove to rise" ("Collected Works of Bei Qingjiang [6296 3237 3068]," 8th poem: "Thoughts at Huangwan Expressed in 22 Rhymes Sent to Qian Sifu [6929 1835 1788]"), if Zhu Yuanzhang's policies were upheld only by those of the landlord class who "resigned to sustained humiliation" but encountered the opposition of the just then proud and elated peasantry, he could still maintain his solid base and ultimately pacify all the other contenders to unify China. If we view this matter that way, we would be underestimating the peasants' strength too much and also overestimating the landlords' role too much.

3. Since egalitarianism seems so harmful and played such a destructive role in respect to peasant wars, and our revolutionary preceptor also regularly criticized the reactionary character of egalitarianism, then why it is still able to enjoy such great luck in the circles of historiography in our country and to be exalted as the highest standard for appraising peasant wars?

This is a question worthy of our profound reflection. I think there are probably four causes.

One is that a Left trend of thought may possibly be playing a trick. For a period, especially during the time when the four pests held sway, we tended to have a radical attitude toward both realities and history at variance with the actual situation. In thinking, we seemed to try to become as far to the Left as possible and in our expressions we seemed to try to make them as lofty as possible irrespective of objective conditions. Egalitarianism is an extreme-Left fever, so it suited our taste.

The second is that we have become used to use a priori ideas as the yardstick for distinguishing right from wrong, but not practice as the criterion for testing truth. When appraising peasant wars, therefore, we paid attention to slogans, theories, but overlooked the results of their practice.

The third is the lack of political democracy and academic freedom. Marx said in "Louie Bonaparte's 18th of the Cloudy Month" that the proletariat must "constantly criticize itself," "relentlessly laugh at the lack of thoroughness, the weaknesses and inappropriateness of its preliminary attempts." Even the proletariat still had weaknesses and needed to "constantly" and "relentlessly" criticize itself, let alone the peasantry in history. For a long period, however, we have indulged in glossing over the deficiencies and playing up the strong points of peasant wars, trying to be cautious and prudent on even the minutest details for fear that the political labels of "slandering the toiling people" and "slandering revolution" might be attached to us. Our unprincipled exaltation of egalitarianism had really to do also with such political worries.

The fourth is that the force of habit of small production may possibly be playing a trick. This one is principal, fundamental.

Stalin said: "The root source of egalitarianism is the individual peasant's thinking mode, the desire to have an equal share of all wealth, and the psychology of primitive peasant 'communism'" ("Complete Works of Stalin," book 13, p 105). Comrade Mao Zedong said: "Absolute egalitarianism, like ultra-democracy in political matters, is the product of a handicraft and small peasant economy" ("Selected Works of Mao Zedong," Vol 1, p 89). Our country has more than 2,000 years of history of a feudal society based on small production which was even up to modern times still not subject to the overall impact of capitalist large-scale production; on the eve of Liberation, China was still a boundless ocean of small production. Till the very present, many departments still have not fundamentally changed the state of their production, which is mainly based on manual labor. Such historical tradition and realistic state have provided a deep soil and a wide market in our country for the egalitarian ideology.

For the past 20 to 30 years, our socialist construction has constantly suffered the sabotage of egalitarianism. The superiority of our socialist system was given a great discount by egalitarianism; otherwise, we would have most surely enjoyed a far greater rate of growth. The "Communist wind" of 1958 was a salient example. During the Cultural Revolution, Lin Biao and the "gang of four" took advantage of the petty bourgeois trend of egalitarian thought to instigate an extreme-Left fever and blow a vicious wind of so-called "limiting the legal rights of the bourgeoisie"; they took high wages as the economic criterion to classify people as "capitalist-roaders"; among the workers, they energetically criticized material incentives, and eliminated the reward system; in the countryside, they unrestrainedly aroused the so-called "picking the tip" activities by which peasants who became wealthy through their labor were subject to liquidation and struggle. Egalitarianism flooded and became a havoc in various economic realms, pushing the national economy toward the brink of collapse. The social trend of egalitarian thought was bound to be reflected in the realm of historiography. Our partial enchantment with historical egalitarianism started from no other than 1958, and it reached its peak during the period when the four pests held sway.

Egalitarianism is capable of casting a spell over people; it has an extreme Left vocal cord, a fancy suit of "revolutionary" costume, and diamond-like brilliance--"idealistic brilliance." Precisely because of this, it is extremely harmful. In history, it led three large-scale peasant wars, those of Huang Cao, Li Zicheng, and the Heavenly Kingdom of Peace, to defeat; after Liberation, it resulted in great destruction twice in our economy, in 1958 and in the period of the Cultural Revolution. If we may say that in the process of peasant wars the function of egalitarianism was at the beginning that of a stimulant and, later, that of a corrosive, then, to today's socialist construction, it has only the function of a corrosive. People of our generation have all witnessed how egalitarianism began to spread like a flood, how it became a havoc, and how it turned "men sometimes into fish and turtles." We have a right to appraise its long-range merits and demerits.

The wind of egalitarianism has made many people fall victim to influenza. This author has also once caught the high fever. This article reflects my own recent self-reflection, my return to order from disorder. Because of a lack of sufficient deliberation, it is likely to exhibit instances of commission and/or omission. It is hoped that experts and readers will not be stingy in favoring me with their corrections.

IDEOLOGICAL, POLITICAL WORK SHOULD BE TREATED AS SCIENCE

Shanghai GUANGMING RIBAO in Chinese 11 Aug 80 pp 1, 2

[Article by Yan Qiushi [0917 3061 1395]: "Ideological and Political Work Is a Science"]

> [Text] Editor's note: This article first appeared in a periodical of the First Machine Building Industry Ministry's Policy Research Office. We asked the comrade who wrote it to let us publish it here for reference in order to promote discussion about making ideological and political work a science. We have made only a few editorial changes.

When the emphasis of the party's work shifted to the construction of modernization, some comrades thought that political and ideological work was not very important. Some also thought that science and technology and economic management were sciences, but that ideological and political work was something anyone could do. Is this correct? Of course not. Ideological and political work is a science, and what is more, it is an indispensable science for uniting the people of the nation to march toward the four modernizations. When we speak of modernized management, if we think only of the application of mathematics and computers but ignore the use of vigorous ideological and political work to mobilize the initiative of the masses, then we are not being comprehensive.

Our party has always thought highly of ideological and political work, and through decades of practice it has formed fine traditions and accumulated a wealth of experience. However, over the past dozen years these were destroyed and trampled by Lin Biao and the "gang of four," so that confidence in the party's ideological and political work has been greatly lowered. The urgent mission facing us today is, on the one hand, to continue to eliminate the evil influence of the ultra-leftist line of Lin Biao and the "gang of four" and rapidly restore the fine traditions of the party's ideological and political work; and on the other hand to vigorously strengthen theoretical research work and, with a high degree of science, comprehensively and systematically summarize both positive and negative experiences in political and ideological work, study how to develop ideological and political work under new historical conditions so that in the four modernizations, ideological and political work will be more scientific, be more effective and truly develop its enormous role. Thus, it is extremely important to make ideological and political work a science for research and investigation in order to guide people to understand correctly and control this science and to eliminate the evil influence of Lin Biao and the "gang of four."

Proletarian ideological and political work is a science. Its research object is the people's ideological and political state and its patterns of change, to study how to apply these laws in social practice and bring people's initiative into full play, adjust the relations between people, and develop people's abilities to create a new man for the realization of communism.

Proletarian ideological and political work is a science and has an independent research area. It is concerned with the science of people and has a different division of labor from other sciences concerned with people. What it studies are the methods and laws of the ideological and political education of people in actual society.

Proletarian ideological and political work is a science. Its theoretical foundation is Marxist dialectical materialism and historical materialism and Marxist political economy, psychology, sociology, and education.

Proletarian ideological and political work is a science. It has its own laws. Some of these laws are already known to us and some still are not. If these laws are applied, ideological and political work will be successful; if they are violated, ideological and political work will fail. What are these laws? Some wait for everyone, especially ideological and political workers and theoretical research workers, to carry out systematic summarization and scientific generalization. Below, we propose views which may or may not be laws of ideological and political work and discuss them.

Originating in matter and returning to matter constitute the starting point and the end point of ideological and political work. Existence determines consciousness. All thought originates in the objective material world and is influenced and restricted by it. Although ideology can produce an important reaction toward reforming society and reforming the world, ultimately it has to be determined by economics and serve the material interests of the class itself. Ideological and political work cannot depart from the people's material interests when analyzing ideological questions, nor can it depart from the people's material interests when resolving ideological questions. Otherwise, it will lose its basis and its aim. Powerful ideological and political work does not seduce people with religious and supernatural forces which are divorced from reality, but is closely allied with real life and with the material interests of the people. It uses the Marxist world view to guide people to know their own material interests correctly and to unite to struggle for their own interests. It reflects the hopes and will of the masses of the people, represents the fundamental interests of that class, and therefore can give rise to enormous material strength. In the years of revolutionary struggle, could the peasants have been mobilized to strike down the landlords and local tyrants, separated from the division of land? Could the masses of the people have been mobilized to strike down the Guomindang reactionaries and liberate China, divorced from the laboring people emancipating themselves and achieving liberation? Similarly, if today we are divorced from raising the material and cultural standard of living of all the people, there is no way we can mobilize the masses of people to engage in the four modernizations. Ideological and political work can play a progressive, revolutionary role, but it can also play a retrogressive and reactionary role; and the determining factors here depend on the material interests of the class that is being supported. The "omnipotent ideology" and "spiritual atomic bomb" of Lin Biao and the "gang of four" was divorced from socioeconomic conditions and did not deal with the material interests of the broad masses of the people in a fundamental way. Such political work can only feed on illusions, and the result is a drastic loss of prestige. Our ideological and political work definitely cannot overlook the actual economic and material interests of the masses of people. It must intimately combine the advancing of ideological and political work with the resolving of the material interests of the people, and it must combine political and material incentives.

Seeking truth from facts and using reason to win over people is a fundamental principle of ideological and political work. Ideological and political work should resolve problems of people's ideological awareness. Resolving problems of ideological awareness must adopt the methods of democratic discussion, education by persuasion, rallying together and criticism and self-criticism to conduct inculcation, inspiration, guiding and waiting. Study and observation, heart-to-heart talks and discussion, criticism and condemnation, encouragement and persuasion, investigation and appraisal, comparison and analysis--these are all concrete forms of these methods. Any attempt to use overly impatient practices such as repression, simple administrative orders, and "ideological questions don't last overnight" all violate the laws of development of ideological awareness, and thus will not get us anywhere. The political work done when Lin Biao and the "gang of four" were running rampant was discussing struggle every day, analyzing everything, and making the question of ideological awareness among the people a matter of principle and a two-line struggle without end, with the result that it seriously repressed and ruined the initiative of the broad cadres and masses, so how could they talk of resolving any question of awareness? The persuasiveness of ideological and political work lies in seeking truth from facts. No matter what the question, it can be resolved by uniting the major principles of revolution with the question of the ideological situation of the employees and discussing revolutionary principles in the light of specific conditions. It is impossible to be effective by looking to higher levels for instruction and going by the book, rather than conscientiously studying theory and engaging in hard actual investigation.

Teaching by words and actions and showing by example are important methods of ideological and political work. Ideological and political work--i.e., making people understand principles and, even more, getting them to conduct themselves in accordance with these principles; the unity of theory and practice--is the inherent seriousness of proletarian ideological and political work. Divorced from this point, ideological and political work loses all of its significance and thus also loses its vitality.

The strength of examples is inexhaustible, because through certain models people can feel definitely and formally that the goal advocated by the educator is real, believable and beneficial, and they will then actively struggle for it. Thus the exemplary role of the party leadership cadres at all levels and of the ideological and political work cadres, who are educators in practicing what they preach, is very important. The masses judge the level of ideological and political work not only by what you say but also by what you do. Being as good as your word and practicing what you preach constitute the most powerful ideological and political work; the hypocritical workstyle of deeds not matching words (talking a good line but not living up to it in work) can lead to a loss of prestige for ideological and political work. Now the greatest obstacle keeping ideological and political work from developing is an incorrect party style. Therefore, rectifying the party's workstyle is the key to strengthening ideological and political work and raising the level of this work.

Calculate motives, guide behavior, and make ideological and political work have foresight and initiative. People's behavior is controlled by ideological motives, and ideological motives come from need. People's needs are multifaceted, such as the need to survive, the need for security, the need for love, the need for respect, the need to achieve, the need for faith, etc. These are products of actual socioeconomic conditions and have their own laws of change. Thus, motives can be predicted. Study the interrelations of change between people's needs, motives and behavior and their laws of change, and then it is possible to control ideological conditions more thoroughly, promptly discover ideological trends, and take the initiative to start work. The more this work is done promptly and with initiative, the better it is for resolving questions of ideological awareness and the more effectively evil tendencies can be prevented; even after some questions are revealed, it will be possible to guide in a purposeful way and to reduce negative influences to the smallest degree.

This key will open the lock and make ideological and political work have direction. Because each person is at a different point in socioeconomic activity and political activity, because family economic conditions are different, and because social experience, degree of culture, and individual characteristics and interests are different, the content and characteristics of ideological activity are very varied and complex. If ideological and political work cannot be different because people are different, and cannot adopt different ways and methods according to different characteristics, but must use inflexible, ossified methods of "generality" and "formulism," then it will necessarily meet with a rebuff and fail. The most numerous and most usual type of ideological education is the individual work of one person, and one event, and this is the basic achievement of ideological and political work. The most enormous and difficult task is transforming the backward, and this is a key point of ideological and political work. To do a good job of this work, one must not depart from the basic principle, "Use different methods to solve different contradictions." Only by carrying out a careful analysis of the nature, degree of development, and generating factors of different questions, and only by finding the pulse, adopting methods which are suited to it, and treating the disease, can we let go the arrow, open the lock of people's hearts, and uncover the hidden potential there.

Its permeating of everything causes ideological and political work to have a relationship to other work. Man's ideological activity processes penetrate the processes of all productive and life activities, and thus ideological education cannot be separated from productive work, nor can work be separated from ideological education. Ideological and political work is interdependent with all other work, influences it, and is influenced by it. Ideological and political work must be done together with all productive work and penetrate all people's activity, including productive labor, scientific research, management, social work, cultural and artistic activity, and even domestic and individual life, and only thus can it develop its appropriate role. For example, if one wants to have people maintain exuberant health and spirit in their work and raise their interests in and efficiency at work, then one should study how better to guarantee the material conditions for consumer needs and improve the material environment of their activity (termperature, color, sound, light and smell) to suit the people's psychological characteristics in work. To make people gradually form good ideological character in their practical activity, one should start from a great quantity of detailed and common work and activity to develop fully the people's strongpoints, respect their creative spirit, encourage them to engage in rational competition under a unified goal, and implement rewards according to merit. To nurture a sense of belonging and honor with regard to the collectives, organizations and nation to which they be-ong, one should make people recognize, from an observation of the actual benefits derived, the intimate relationship that develops between the whole and the individual. In short, an important link in ideological education work which permeates everything is to make the individual and the collective capable of constantly guaranteeing an internal motive force and to do their utmost to make this individual motive force and the collective motive force fuse in the struggle for a unified goal.

Self-education and mutual influences give ideological and political work a mass character. The important object of ideological and political work is the people, and it is the people who are the masters of society. In a socialist society, each citizen is both the educator and the student. The fact that the masses of people are in the position of masters determines that ideological and political work must uphold the direction of self-education of the masses. The masses have a vast reservoir of enthusiasm for socialism, the ability to tell right from wrong, and the psychology of not being willing to lag behind and delighting in forging ahead, and these are the basic conditions for the masses to be able to accept and carry out education. Only if the entire party, both above and below, is mobilized, and not only a few cadres do ideological work but administrative and technical cadres also work, and not only leadership cadres at all levels work but the working masses also work, then ideological and political work can create a vital and lively new situation. In the self-education of the masses, broadly encouraging heart-to-heart talks is a good form and method of mass creation. If the leaders and the led are to have heart-to-heart talks, they can exchange opinions, eliminate barriers, increase trust, and strengthen unity; with heart-to-heart talks, comrades can get across ideas, exchange feelings, unify knowledge, and advance hand in hand. In short, through the mutual influences of help and promotion among the masses, there can be extensive and profound educational effectiveness.

Ideological and political work is a science, and we only raise this topic to set forth a superficial way of looking at it. We have not thought this through very well, and we hope we can discuss it and study it with everyone. We expect that proletarian ideological and political work will become a science, and that a treatise will be published quickly and systematically. We also hope that, on the basis of the demands of the scientific nature of ideological and political work, concerned sections will be able quickly as possible to formulate rules and methods for examining and training ideological and political work cadres, encourage ideological and political work personnel to study hard, gain professional proficiency, conscientiously practice, and courageously probe to contribute their own talents and abilities to the realization of the four modernizations.

BRIEFS

FEAST PRICES INVESTIGATED--According to BEIJING RIBAO, in order to check the unhealthy tendencies of some leading cadres and some so-called "related" cadres who have gone to restaurants for extravagant eating and drinking, the preparatory group for the discipline inspection committee under the Beijing Municipal CCP Committee has ordered the No 1 Municipal Service Bureau to carry out a general check in accordance with the "guiding principles for inner-party political life of Chinese communists." The check will focus on problems caused by restaurants under its jurisdiction which serve specially prepared meals. According to the group's orders, the service bureau should handle every problem as it sees fit and adopt relevant measures to eliminate loopholes and to check such evil tendencies. The preparatory group for the discipline inspection committee under the municipal CCP committee gave this order after examining the erroneous behavior of Wang Lei and other leading cadres who feasted at the Feng-ze-yuan Restaurant at nominal prices. The erroneous behavior was exposed by Chen Aiwu, a young cook at the Feng-ze-yuan Restaurant. [Text] [HK241032 Beijing City Service in Mandarin 2300 GMT 17 Oct 80]

GOOD BEHAVIOR PRAISED, BAD PRACTICES CRITICIZED

OW261425 Beijing XINHUA Domestic Service in Chinese 1547 GMT 25 Oct 80

[Excerpts] Beijing, 25 Oct (XINHUA)--WEN HUI BAO on 24 October published three letters from readers which commended three cadres and policemen of Jiading County's Public Security Bureau in Shanghai who performed their duty properly and refused to accept gifts, and criticized some personnel of a coal gas company, the Shanghai beer factory and other factories for their bad practices of demanding from fraternal units treat in exchange for services done. WEN HUI BAO carried an editor's note while publishing the letters.

One of the letters said: In last mid-June, a resident of Nanxiang town in Jiading County arrived at the home of Hou Quanfu, deputy head of the Nanxiang town's police station, taking with him two cartons of Phoenix brand cigarettes, some canned food and more than 10 jin of peanuts. He requested Hou Quanfu to change the registered permanent residence of his two sons from the countryside to the town. Hou Quanfu rejected his request outright and criticized this resident.

WEN HUI BAO editor's note says: Nowadays, a bad practice of getting service by providing treat and presenting gifts, a practice known as "skinning the wild goose when it flies by," exists in some departments, some units and some working personnel. This type of bad practice shows that the pernicious influence of the "gang of four" has not been thoroughly eliminated and that it seriously harms our party, state and revolutionary ranks. We must be resolved to improve our party's work style and lead social practice to a correct path. On the one hand, we must commend good people and good deeds that dare to oppose evil practices and noxious tendencies; on the other hand, we must expose evil practices and noxious tendencies, arouse strong public opinion against them and give this warning to those comrades who till today follow those bad practices: "Comrades, it is dangerous to engage in bad practices. The faster you correct your ways, the better."

NAVAL SCHOOL COMMANDANT WORKS TO MASTER MODERN TECHNOLOGY

HK270441 Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 26 Oct 80

[Text] (Zeng Qiansheng), commandant of the navy's No 2 Surface Warships School, has scored good achievements in his efforts to master modern technology. The cadres and fighters have praised his efforts. (Zeng Qiansheng) is an old comrade who joined the revolution in 1938. When new China was established, he switched from the army to the people's navy, which was just in the process of growth. Ever since that time, he has assiduously studied to acquire specialized naval knowledge. His study has been deep and extensive. He has seriously studied everything that a large navy needs to know, such as naval tactics, warship construction, warship operation, astronomy, geography, navigation and so on. In the past 20 and more years he has filled over 10 thick notebooks. Since being appointed commandant of the No 2 Surface Warships School in 1978, he has studied in a relatively systematic way radar, radio, electronic countermeasures, and some material on foreign navies.

(Zeng Qiansheng) is a devoted student. A few years ago he read in some foreign material that during World War II the Germans hid two strategic ships in the Port of Brest, France. The British and U.S. air forces searched for and bombed them for nearly 1 year, but in the end the two ships safely escaped. For several years, (Zeng Qiansheng) diligently sought the reason why the German ships could be hidden. In 1978 he accompanied a naval delegation on a visit to France, during which he went to Brest. The port presented a peaceful scene. (Zeng Qiansheng) took the chance to ask those accompanying his party where the German ships had been concealed at that time. They pointed and said, "Over there." (Zeng Qiansheng) hurried to look through a telescope. He could only see two big pillars erected under a cliff. He suddenly saw the light. He had found the way to conceal big warships.

During this visit (Zeng Qiansheng) studied assiduously everywhere he went, and wrote a 20,000-word account of the visit after he returned. This was published in installments in the magazine RENMIN HAIJUN [PEOPLE'S NAVY].

(Zeng Qiansheng) is an assiduous student. In order to master modern naval knowledge, he has persistently studied English over the past 30 years.

Back in 1949, when he was appointed captain of the defector warship "Changzhi," he had little interest in the various odds and ends he saw when taking inventory; instead he set his eyes on a two-volume English book about navigation. (Zeng Qiansheng) only knew a little English. Could he understand such thick volumes? He summoned up the spirit of charging at the front in battle, got hold of a dictionary, and worked hard to master the thick English books in the manner of an ant gnawing a bone. He wrote 200 pages of notes when reading a 400-page book. Through this study he acquired a firm foundation for mastering navigational techniques.

Although (Zeng Qiansheng's) hairs are now gray, he is still continuing to study foreign languages for the purpose of introducing the latest knowledge about world navies to his students. He never misses an opportunity to learn. Once when he went away to attend a conference, he saw two unfamiliar English phrases written on a door of the airport waiting room. He immediately copied them down and asked the service personnel what they meant. As a result of devoted study, his standard of English is ceaselessly improving. This year he translated material on U.S. naval computers, which was serialized in RENMIN HAIJUN.

FINE ARTS MAGAZINE INTRODUCES TAIWAN PAINTER'S WORKS

OW280608 Beijing XINHUA Domestic Service in Chinese 1154 GMT 27 Oct 80

[Text] The recently published October issue of the 1980 magazine FINE ARTS carried on its front page a painting completed in 1971 by China's famous painter Zhang Daqian who now lives in Taiwan. The painting was entitled: "Danshan Mountains in Early Spring." The magazine also used five pages to print a portion of the painting entitled "The 10,000 Li Yangtze River" which he did in 1968. The magazine also carried an article by China's famous painter Ye Qianyu commenting on and introducing Zhang Daqian's achievements in fine arts. This issue of FINE ARTS magazine also carried an article written by Zhang Daqian's daughter Zhang Xinrui and his son-in-law Xiao Jianchu, giving Zhang's resume of his professional work.

Zhang Daqian was born in Neijiang County, Sichuan Province, in 1899. He was the first professional painter who went to the Dunhuang Grottoes to copy the wall paintings there. With the Yangtze River, the Huangshan, Huashan and Emei mountains and the three gorges and other famous mountains and rivers as themes, he portrayed, in all kinds of forms, the magnificent mountains and rivers of the motherland. His works were often exhibited in Tokyo, Argentina, Paris, Cologne, New York and other localities and were well praised throughout the world.

At the beginning of the article by Xiao Jianchu and Zhang Xinrui, there was also a recent picture of Zhang Daqian taken in 1980.

'WENYI BAO' CRITIC DISCUSSES SUCCESS OF YUE FEI RADIO PROGRAM

OW260749 Beijing XINHUA in English 0719 GMT 26 Oct 80

[Text] Beijing, October 26 (XINHUA)--Life virtually comes to a standstill for half an hour at lunch and supper time every day as people tune in to the radio special, "The Story of Yue Fei," narrated by a 36-year-old woman from Anshan, northeast China.

Listening to the saga of the hero of the Song Dynasty eight centires ago, who was a symbol of Chinese patriotism, has become homework for many schoolchildren.

Since the story began being broadcast by the Anshan Radio Station in September last year, some 60 radio stations, central and local, have followed suit. With each installment lasting half an hour a day, the whole program runs for three months.

Liu Lanfang, a storyteller with more than 20 years of experience, adapted the story from various versions of Yue Fei's military career, which ended in his death as a result of a frame-up by treacherous court officials.

A critic in the national literary gazette WENYI BAO describes Liu Lanfang's work as "suitable for people of all ages and all tastes."

Apart from people's traditional interest in heroes like Yue Fei, her success also comes from her technique, which borrows from the dialogue of traditional operas as well as everyday language. The critic says she has made a breakthrough in the art of storytelling, originally rooted among urban working people, and reached intellectuals, many of whom are following the "Yue Fei" program regularly.

The popularity of the program among young people has helped allay concerns that modern cinema and popular music are attracting the young away from the traditional art forms, such as Beijing opera, storytelling and ballad singing. In discussions in the Chinese press and in cultural circles, people have observed that different art forms may exist side by side and supplement each other, and that modern influences on culture have not squeezed out conventional art forms.

It appears that as long as new content is brought in and innovations carried out in the form, storytelling and ballad singing will continue to hold their ground In fact, in its thousand years of existence, Chinese storytelling has undergone constant changes, from a medium for conveying Buddhist tales into one of folklore.

The new interest in storytelling, which has derived much from Beijing opera, should help win back youthful audiences, according to an administrator of the China Traditional Opera Institute, where the best young Beijing opera actors and actresses are trained. Storytelling will also acquaint the younger generation with the historical background of traditional operas, and literature and art as well, according to the spokesman.

SOCIOLOGICAL, EDUCATION AND CULTURE

'FOOLISH OLD MAN WHO REMOVED MOUNTAINS' REALLY WAS FOOLISH

Shanghai WEN HUI BAO in Chinese 13 Aug 80 p 3

[Article by Liu Maoyin [0491 5399 6892]: "A New Explanation of 'The Foolish Old Man Who Removed the Mountains'"]

[Text] Since Comrade Mao Zedong invested the parable "The Foolish Old Man Who Removed the Mountains" with new meaning, those whom people have for years considered models for being victorious through hard work and surmounting every obstacle have played an enormous role in both revolution and construction. However, there have also been some people who have suffered metaphysically because of a distorted understanding. Because of this, on rereading this parable, we are compelled to get down to its original meaning.

Previously, we used to think that the foolish old man wasn't foolish, and we respected him because of his spirit of hard work in keeping on digging up the mountains, and [we used to think] that the wise old man was not wise because he did not understand that the foolish old man was employing the principle of inexhaustible labor by having his sons and grandsons dig up the mountains. Now it is felt that it is not a rational explanation to praise the foolish old man and conceal his foolishness and to deprecate the wise old man by removing his wisdom. Can you imagine the foolish old man's descendants and the 7-year-old orphan of the neighbor Mr Jingcheng, using shovels and baskets to move the dirt from the 700 cubic li and lofty Taihang and Wangwu mountains and throwing it into the tail of Bohai, a roundtrip which takes a year? How could the mountains be moved this way? Furthermore, the foolish old man and his helpers still had to eat and dress, and if they put all their energy into moving the mountains, would they eat dirt and drink the northwest wind? The wise old man saw the foolishness of the foolish old man, and with good intentions pointed it out to him; moving mountains this way is fruitless labor. But before the wise old man had finished speaking, the foolish old man cursed him for being so stubborn and for having less experience than a child. Obviously, the foolish old man was very stubborn himself. If the foolish old man had humbly listened to the wise old man's proposal, I think the wise old man would probably have had some very good advice. The reason the foolish old man was moving the mountains was because the Taihang and Wangwu mountains blocked the road to his home. The wise old man might have advised him to move his home from the back of the mountains to the front of the mountains; or he might have lived happily where he was if, in the spirit with which he was moving the mountains, he had changed the environment where he lived and planted trees on Taihang and Wuwang mountains and gone in for forestry; or if he had raised cows and sheep and developed an animal husbandry business; or, if he liked the fish in the ponds and streams at the foot of the mountains and in the ravines, if he had spent some effort in raising fish he could have had more fish than he could eat. All this without having to move the mountains or travel a thousand li to Bohai to catch fish. The foolish old man suffered from not having listened to the wise old man's suggestion. If it hadn't been for divine help, the Taihang and Wuwang mountains might remain as before. Yet spirits don't exist, and everything still has to be done by oneself. When the author wrote this parable, he called the man who moved the mountains a "foolish old man" and finally brought gods in to help by carrying the mountains away on their backs to show that it was unrealistic for the foolish old man to move mountains. His aim in writing the story was to explain the spirit of persistence and hard work.

If in studying the foolish old man who removed the mountains we study certain methods only in terms of their form and are divorced from objective reality in using sea-of-people tactics and act rashly on the basis of physical strength alone, then we will not be able to get results. You could say that a few years ago there was a great deal of this kind of suffering. Suppose there was a brigade of over 100 households that decided in 1975 to imitate the foolish old man who removed the mountains and started to move a mountain to create 14 mu of land. If they worked for 4 full years, day and night, spending over 16,000 man-days and about 2 or 3 tons of dynamite, they still would not have cleared 1 mu. To move the mountain would take another 4 years' work. If commune members worked and worked for only a few cents a day, not to mention the hard life, it would really be hard on the people and on their finances. This is probably what comes from not listening to the opinions of the "wise old man."

Exposing the foolish old man's foolishness is not being disrespectful to him. His kind of spirit of persistence and hard work should always be developed. It is impossible to succeed at any great enterprise without this spirit of hard work, but this alone is not enough; to succeed at a great undertaking, working ingeniously must be added to working hard. Therefore, at the same time that I respect the foolish old man, I am filled with veneration for the wise old man. He used his intelligence to come up with a plan for the foolish old man, his spirit is invaluable, and his role is inestimable. If the foolish old man had respected the wise old man as his teacher and had guided his actions by the wisdom of the wise old man, then the foolish old man's strength would have been multiplied several times, dozens of times, even hundreds and thousands of times, and he could have accomplished something earthshaking.

In the new long march to build the four modernizations, we must by all means dare to work hard and be good at being new "foolish old men" who have learned from the wise old man. Since they have both the hardworking strength of the foolish old man and the level of knowledge of the wise old man, they could do anything and were very versatile. If everyone were to strive in this direction, why shouldn't the four modernizations be completed?

BEER LABEL EXCHANGE DELAY SEEN AS EXAMPLE OF BUREAUCRATIC TIMIDITY

Shanghai JIEFANG RIBAO in Chinese 24 Aug 80 p 3

[Excerpts from XI'AN RIBAO article: "Brand Label Wanted Abroad, But Relayed Requests for Instructions Take Nearly a Year; An Obvious Example of the Rate of Ideological Ossification"]

[Text] One day in August of last year, the Xi'an Brewery received a letter from a foreign beer lover asking for a brand-name label from that brewery. Along with the letter he sent several labels from foreign beers, wanting to exchange them. After the brewery received the letter, the party's general branch secretary and plant managers could not figure out what to do, so they decided to ask the upper echelons for instructions. They sent the letter to the technical section of the Municipal First Bureau of Light Industry, but the engineers in that section could not figure out what to do, either, so they asked the deputy bureau chief for instructions. The deputy bureau chief also could not give them an answer, so they asked the relevant upper level department for instructions. They phoned the Provincial Foreign Affairs Office and received the reply: "We have never run into this sort of thing before, so we can't give you an answer." Then a copy of the letter was sent to the Provincial Bureau of Light Industry and Textiles, and before long it came back, but without any opinion.

Since they hadn't answered the first letter from abroad, they kept getting letter after letter. One day a cadre in the brewery said to the manager: "Sending a label isn't all that important; surely we can agree to that!" The brewery manager replied: "Young fellow, you didn't suffer enough in the Great Cultural Revolution! You say now that it's not important, but after a few years it will catch up with you and I won't be able to plead for mercy." So the matter was put off until the end of May, when the seventh letter arrived from abroad, accompanied by 34 foreign beer labels, and yet the man hadn't been sent even one label. Finally, on 2 June, with the prodding of the comrades, the brewery leadership had the secretary send a formal written request to the Municipal First Bureau of Light Industry asking for instructions. The report finally came into the hands of the bureau chief, who wrote on the report: "We don't know about this sort of thing. Have the office go to the relevant sections for explanation and instructions and tell the brewery to take care of it." From the looks of things, the "football" was about to be kicked back downstairs. Unexpectedly, the Bureau Supply and Marketing Office received the letter, and after calling the comrade responsible for brand labels in the Municipal Bureau of Commerce and Industry, the matter was quickly relayed down and the answer was direct: "Go ahead and send them! It's so silly. And please send us the foreign beer labels so we can have a look at them." The above instructions were telephoned to the brewery on 17 June, but the brewery leadership still had misgivings: our report was a formal written one; why did the bureau inform us by telephone and not by formal letter? There was "nothing in writing," so they were still uncertain. So the matter of the letter from abroad asking for a beer label dragged on for 11 months before being wrapped up.

Xi'an beer is rated as a good domestic beer, and by rights we should make an effort to move into the international market. But if we don't even dare send brand-name labels to people, then how can we talk about sending products to compete for their attention?

BUREAUCRATIC STALLING BLAMED FOR DEPARTURE OF SPECIALISTS

Shanghai JIEFANG RIBAO in Chinese 28 Aug 80 p 1

[Article: "Why Did Refrigeration Specialist Chan Yanxiang Leave?"]

[Text] On 27 July, Chen Yanxiang [7115 1693 7534], a Chinese refrigeration specialist and member of the International Association of Refrigeration Specialists, took his wife and two children and left Shanghai to return to the United States because the relevant department had delayed and refused to make a decision on the matter of his work assignment. This matter provoked a great deal of discussion in the relevant unit, because severe bureaucratism and the "pass the buck" workstyle in the work of that unit let an experienced technician committed to the four modernizations leave!

Chen Yanxiang, who was 63 this year, graduated from the National Sino-French Industrial College in 1939. He worked in the Shanghai branch of the U.S. Beiji [0554 2817--Norge?] Company and as an engineer for the China Tonghui Machine Company. He was elected a member of the International Refrigeration Association and the French Refrigeration Alliance, and he was a member of the editorial board of the Shanghai branch of the Chinese Mechanical Engineering Association. In 1950 he returned to China and became an engineer and acting manager of the Shanghai Ice Works. In 1955 he was arrested because of his political background. After investigation, no serious political difficulties were found in his background. After his release in 1956, he was assigned to work in the Shanghai refrigeration engineering team of the Central Municipal Service unit's Design and Installation Company. In 1957 he left his job and was unemployed for a long time. After 1960, through an introduction from the Municipal Committee's United Front Department, he got a position as a translator for the Foreign Languages Press and the Shanghai Scientific and Technical Information Research Unit.

After the smashing of the "gang of four," on two occasions, November 1978 and September 1979, out of enthusiasm for the four modernizations, Chen wrote to the leadership comrades of the Central Committee asking for work. In his letter, Chen said, "I have studied refrigeration technology for over 30 years and have both theoretical knowledge and practical experience in the design and manufacture of refrigeration equipment and management and control of refrigeration technology. In the last 20-odd years in particular, I have never abandoned the theoretical investigation of my refrigeration specialty and have continued to edit and translate materials sent from foreign associations. Now the situation is both exciting and urgent, and although I am nearing 60, still the heart of the old horse put out to pasture doesn't want to lag behind." This showed that he wanted to make a contribution to refrigeration technology. On 24 September 1979, the relevant leadership comrades of the Central Committee responded to his letter. The relevant leadership comrades of Shanghai also regarded the situation very carefully and on two occasions asked the Second Bureau of Commerce to find technical work for this socially idle Chen in order to take advantage of his specialty. The Municipal Committee's United Front Department also pointed out that Chen had a certain level of expertise in refrigeration work and proposed that he be given work to mobilize his initiative.

On the basis of investigation and study, the Scientific and Technical Cadre Office of the Municipal People's Government repeatedly discussed the matter with the Organization Office of the Second Bureau of Commerce, and they expressed a willingness to accept him. On 17 December 1979, the Second Bureau of Commerce formally issued a "Notice Concerning a Work Assignment for Comrade Chen Yanxiang." But not long after the notice was issued, the Organization Office of the Second Bureau of Commerce suddenly added, "Too old," and "Bureau agency strength is frozen," as pretexts to evade the issue and announced, "If agreement of the Municipal Workstrength Committee can be secured, Chen can be given work in an agency under our bureau and draw a salary from an agency of our bureau." This pushed the work arrangements for Chen onto the Municipal Workstrength Committee.

After receiving a letter from the comrades of the Municipal Scientific and Technical Cadre Office, Chen repeatedly went to the Organization Office of the Second Bureau of Commerce to work, and again and again he put forth reasons why he hoped that they would be able to consider the question from the perspective of implementing the party's policy on intellectuals and the talent necessary for working for the four modernizations and developing expertise, and that they would find him a job. The Organization Office of the Second Bureau of Commerce has said that "companies of this bureau do not want to accept him." As understood by the Municipal Workstrength Committee, the workstrength freeze applied to agencies above bureau level, but the assignment of scientific and technical personnel below company level was basically not within the scope of the restrictions. Although the comrades of the Municipal Scientific and Technical Cadre Office made numerous attempts, they had no effect and the football was kicked back again.

It was not until 16 June, after 7 months of chasing around by comrades of the Municipal Scientific and Technical Cadre Office over work for Chen Yanxiang, that the Second Bureau of Commerce got a relatively satisfactory answer: "We agree to accept him, and we can place him." But just when things were getting under way for Chen Yanxiang's job, Chen had already made arrangements to emigrate and was prepared to leave the country.

Chen's departure demonstrates that many sections and units have not paid sufficient attention to implementing the party's policy with regard to intellectuals and fully developing the role of intellectuals in the four modernizations. Because of delays and failure to find him a job, this refrigeration specialist, who had a level of specialization and influence, was forced to leave. This shows how serious bureaucratism is in these sections.

KEY UNIVERSITIES MUST TRAIN GRADUATE STUDENTS IN SCIENCE

Shanghai WEN HUI BAO in Chinese 13 Aug 80 p 3

[Article by Tang Zhixiao [0781 0037 2427], Shen Huanming [3088 3562 2494], Wang Zhibin [3769 3112 1755] and Duan Lin [3008 2651]: "Key Universities Should Train Science and Technology 'Mountaineers'--Some Views on Graduate Training"]

[Text] Relatively speaking, key universities have strong faculties, good library facilities, and a wealth of educational experience. How can their superiority be brought into play to do a better job of training qualified personnel for the nation? We think they should put more effort into training qualified personnel who can climb the peaks of science and technology and can resolve independently the latest questions of science and technology in China's modernization construction and can undertake the task of creating "mountaineers." Key universities should also employ a variety of educational techniques, but when concerned sections make arrangements for educational missions, they should discriminate between the special features of different schools, divide the labor and the emphasis, and not share the tasks equally. In addition to teaching basic science classes, key universities should emphasize the recruiting and training of graduate students so as to train a large group of qualified personnel up to the international level of master's degrees and Ph.D's. Those with the proper qualifications should also run graduate schools.

I. Various means should be used to select graduate students, and the starting point for training should be raised.

To train high-quality graduate students, well-prepared candidates should be selected. In selecting candidates, a variety of methods should be used, and all avenues should be opened for people with talent. In addition to recruiting the best from among this year's graduating class and currently employed cadres, graduate students can be chosen from among students at first-rate universities and from among young people who have reached the level of college graduate through self-study. Regulations now prohibit recruiting graduate students from among students currently in school, but this seems overly restrictive. Can this be changed to permit a few topnotch students to be recommended by their teachers and the school leadership to approve their taking the entrance examinations? Actually, there are some talented young people in schools or in society who through self-study have achieved or surpassed the level of graduate school entrance. They have a very bright future, and they should not be restricted. To train "mountaineers," risks should be permitted and encouraged.

II. It is necessary to grasp scientific research and raise the level of science in the schools

Scientific "mountaineers" develop only by scaling the peaks of science. Teachers should raise their level of science and technology through scientific research, and graduate students should participate in scientific research and develop their own abilities for scientific research. Key universities should be teaching centers and research centers. This is demanded by the nature of the development of modern productive forces. The role of science and technology in the development of production is becoming increasingly larger, and the length of time it takes science to turn into a productive force is growing ever shorter. This situation demands that the training of qualified personnel be changed from purely the transmission of knowledge to a training which emphasizes intelligence and creative ability. The transmission of knowledge should make every effort to catch up with the even faster pace of new knowledge. This demands that key universities be at the cutting edge of scientific developments. The quality of a school's graduate training is to a considerable degree determined by the improvement in the school's scientific level.

We should not oppose the demand that the main function of schools is to teach, and that the goal of key universities is to be centers of teaching and scientific research, for the two are intended to train high-quality scientific and technical personnel. Teachers at key universities certainly should improve both their teaching and their scientific research. Of course, as far as balance is concerned, there should for a time be priorities. At present, some teachers want to emphasize scientific research and deemphasize teaching. We should look for the reasons for this in the guiding ideology and policy measures in education and find a solution in guidance from positive aspects through rational arrangements.

III. Fully develop the superiority of faculties

The superiority of key universities is that they have strong teaching faculties. This superiority should be well developed to train more and higher quality graduate students for the needs of the nation. The potential of the faculty of key universities still has not been fully developed, and the potential of many capable faculty members is definitely still being "concealed." The reasons for this are varied. We feel that this power should be better mobilized to train graduate students. The view that only a few old professors should train graduate students should be changed. The training of graduate students should be made a task for the entire faculty of key universities. In fact, faculty members who graduated before the early 1960's already have the general ability to pursue independent teaching and scientific research, and they could be completely brought into play in training graduate students. The training of graduate students could adopt a variety of forms. Some could be taught by professors and assistant professors alone, while some who have the ability to work independently could be trained by being grouped together in directed classes under the guidance of professors and assistant professors who have specialized knowledge. This would be advantageous for increasing the scale of graduate student enrollment as well as for raising the quality of graduate training. When educational leadership sections determine how many graduate students a school or a specialty can absorb, they should look not only at the number of professors but also at the strength of the middle-aged faculty. Some specialties, especially some newer specialties, have few old teachers but great strength in middle-aged teachers, whose work is outstanding and who could take on more students.

To better develop faculty members' potential, we should give them more autonomy in teaching and research. For example, they should be permitted and encouraged to set up unique graduate courses based on their own specialties so that there will be competition among faculties. They should also support the development of a creative spirit in their scientific research and freely combine and choose topics in accordance with national needs and the direction of scientific developments. Purely administrative arrangement methods should not be used to resolve questions of planning and managing scientific research, but methods of investigation by specialists, demonstrations of proposals, and selection of the best proposals for support to carry out organized guidance in choosing topics should be used more.

IV. Employ more disciplines to walk new paths

One characteristic of modern science and technology is that the synthesis of many disciplines is constantly producing new disciplines and frontier disciplines. Graduate training should adapt to this trend of development. In this regard, because key institutions of higher learning are comprehensive and have many disciplines, conditions are more favorable than in scientific research sections.

As far as the individual teacher is concerned, there are, after all, limitations to specialized knowledge. For example, teachers in biology want to develop a new biological science, especially if it is a frontier science, but they also sense that their own mathematical foundation is deficient. The graduate students we train should have good foundations in both biological sciences and in mathematics. This problem can be resolved in the following ways: 1. By recruiting students from outside the specialty and from outside the school, and not limiting the recruiting effort to graduates of that school or specialty. 2. By recruiting students from different departments within the school or from combinations of different disciplines, and even by recruiting students in conjunction with other schools and research sections, such as the graduate students in the history of physics recruited by the theoretical physics laboratory at Fudan University in conjunction with the Research Institute of History of Natural Sciences at the Chinese Academy of Sciences. 3. By giving students leeway for free development, by offering more graduate courses, by implementing a system of academic credit, and by permitting graduate students to attend classes in other disciplines on the basis of their own interests and their specialties, as well as by permitting them to participate in scientific research outside their specialties.

To conform better to the development of science and the need to train qualified personnel, we should study how to reform the system of organization of teaching and research at key universities. At present the system of organization of research agencies and the organization of teaching and research, which has been set up vertically along specialty lines, is not favorable to horizontal alliances between disciplines. The separate establishment of teaching and research groupings mainly responsible for teaching basic courses and teaching and research groupings for specialties is not favorable for the combination of teaching and research. The question of how to set up teaching and research organizations which will be suited to the needs of interdisciplinary ties should be studied better and resolved. We propose that the Ministry of Education undertake tests, summarize experiences, and make proposals on the basis of the actual situation in China.

V. Provide more support for funds and equipment

If we are to turn key universities into teaching and research centers of international advanced level to train first-class qualified personnel, we should be given more support funds and equipment. Teaching and research at institutions of higher education still do not have special national allocations, but have only supplementary funds which must be requested from appropriate agencies. Furthermore, funds for graduate students cannot meet the needs of these graduate students who are engaged in independent scientific research. Because of poor management of instruments and equipment at higher schools, many have never really been fully utilized; this demands our highest concern for a solution. It should also be noted, however, that in terms of the demand that key universities train first-class qualified personnel and produce first-class scientific research results, present instruments and equipment are a long way from modernized levels. The general level is still much lower than that of domestic industrial sections and research sections. We hope that the nation's concerned sections can provide key universities with greater support in terms of funds and equipment, so that key universities can make greater contributions to training scientific and technical "mountaineers."

SOCIOLOGICAL, EDUCATION AND CULTURE

BRIEFS

VOCATIONAL EDUCATION DEVELOPMENT--Shijiazhuang, October 27 (XINHUA)--More than 30,000 young people have enrolled this year in 415 technical schools newly set up in Hebei Province, the Provincial Education Bureau said today. A spokesman for the bureau said: "This is just the beginning. The demand for early vocational training is pressing." Hebei plans to turn half its 3,471 highschools into vocational schools by 1985, as part of the nationwide reform in secondary education to enable more middle-school graduates to join the workforce with some special training. Nearly half a million people graduated from highschool in Hebei this year but only eight percent of them went on to colleges and other higher-learning establishments. Of the newly-converted schools, 25 are in cities and 390 have been set up in rural areas. The 34 subjects taught in the city technical schools include electronics, machinery, radio, coal mining, sewing, pottery and the tourism business. Agrotechnical schools, run by counties, communes and villages, give classes suited to local needs. The Wenquantun Commune, which is going to set up a 1,000-hectare grape production center and will need 700 technicians, is running a class on viticulture. Qianxi County, a major chestnut producer, now runs a course to train students in the skills of farming chestnuts. The classes cover culture, management, storage, soil preparation and pest control. The provincial institute of education helps compile the technical textbooks. [Text] [OW270312 Beijing XINHUA in English 0258 GMT 27 Oct 80]

VOYAGE OF GLORY FOR THE NATION

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 9, 1980 pp 2-7

[Text] During China's South Pacific carrier rocket launch test, two brand-new "Yuanwang" survey ships were especially spectacular. This ship has a high multideck silhouette, and the electric power it uses could supply the needs of a city of several hundred thousand people, while its store of fuel and water would enable it to sail to the far corners of the earth. Giant antennas tower on the decks, looking like silver platters, golden hairpins, plum blossoms and xylophones. Their emissions can probe the secrets of the universe. The motherland put the newest scientific and technological results of the 1980's into the ship and made it an electronic world. People praise this ship as a floating maritime science city.

Although what the "residents" here eat is ordinary, what they see are the stars, sun and moon and what they talk about are the universe, the earth, the ionosphere and man-made satellites. The old-timers and the newcomers aboard the ship form a combat collective, and they are doing something which none of our predecessors have done before. In the central control unit, the various instruments accurately indicate, record and process the various signs, indications and data; the meteorological departments pick up cloud sightings from satellites and probe for information beyond the highest heavens; the communications antennas send out powerful signals to create a liaison net between the fleet and the motherland; and the radar revolves and the optical instruments open their eyes. All this is like an orchestra conducted in unison playing a symphony of modern science.

On the vast Pacific, the "Yuanwang" moves ahead at a speed of 15 or more knots an hour. The typhoon roars outside the portholes, and huge avalanche-like waves buffer the ship. The scientific and technical workers fighting here are using their skilled arms and hands and sharp minds to probe the secrets of nature to bring glory to the motherland through a spirit of selflessness, and the people will cherish the memory of their merits and achievements forever.

The appearance of this maritime science city is the pride of the Chinese nation, and it is also a symbol of our country courageously forging ahead towards modernization.

BATTALION EMPLOYS SELF-PROPELLED ROCKET LAUNCHERS

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 9, 1980 pp 18-19

[Article: "Swift and Awesome Rocket Launchers"]

[Text] The self-propelled rocket launcher is a type of weapon that is highly mobile, awesome in forepower and has a tremendous capacity to destroy a target area. To use this type of weapon, it is necessary to have skills in driving a vehicle, using artillery and making radio contacts. After the 3d battalion of a certain unit had been armed with the weapon, the commanders and fighters raced against every minute and second to rigorously train, and they quickly mastered the methods of using the self-propelled rocket launcher. During a particular mission, this battalion was in charge of mounting a swift breakthrough. While passing through an area of varied terrain, they came across mud water that came up above the vehicle tracks. But by virtue of quality training during peacetime, the drivers calmly and boldly opened up the throttle, kept the running speed under control and passed the dangerous area to timely reache the firing position. With concentrated firing attacks, the various companies zeroed in with precision, loaded the rocket launchers quickly and fired without a single round missing the target. By following reports from the forward observation post, the firings turned the target area into a sea of fire. Up and down the entire battalion, the units successfully advanced, made precision firings, effectively carried out joint operations and worked well together to outstandingly complete the mission, thereby winning a collective meritorious award, second class.

UNIDENTIFIED UNIT CARRIES OUT TRAINING IN MINIMUM ALTITUDE FLYING

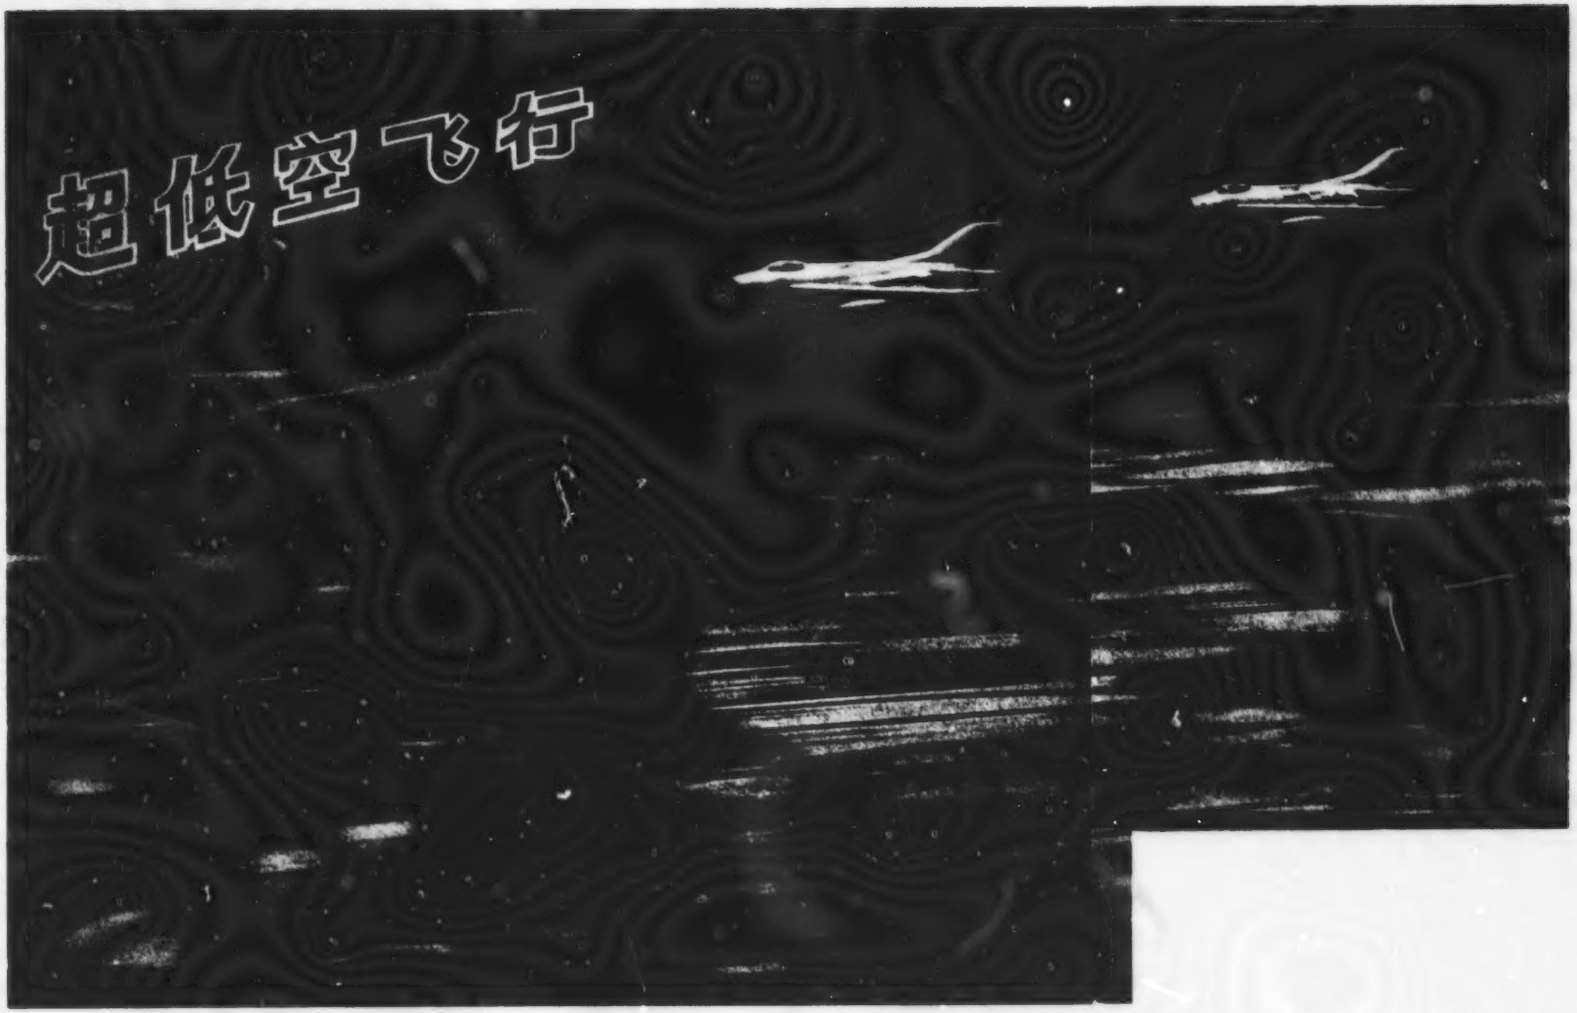
Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 9, 1980 pp 20-21

[Article: "Minimum Altitude Flying"]

[Text] An unidentified air unit has conscientiously studied the characteristics of a future war to meet the needs of modern warfare and has actively carried out tactical training for minimum-altitude flying to fully bring into play our aircraft's minimum-altitude flying capabilities to attain the aim of conquering and defeating the enemy by concealment and surprise.

This unit is stationed in a mountain region where complicated terrain features and changeable weather conditions exist, and carrying out minimum-altitude flying can often run into difficulties. But since they have proceeded from the needs of actual combat, carried out work based on a scientific attitude, stressed the importance of "strictness" in setting about doing things--that is, theories strictly examined, aircraft strictly checked, weather conditions strictly ascertained, sound physical condition strictly maintained and commands strictly issued--as well as having devoted attention to summing up experiences and gathering materials, they were able to successfully carry out minimum-altitude flying.

Not long ago, the upper level conducted an evaluation of this unit. Under the situation of complicated terrain features and changeable weather conditions, the unit launched a surprise attack by flying at minimum altitude. They flew an air route which passed through mountain valleys and then they broke out of the cloud cover over the target. Based on requirements, they had successfully completed the mission. By the time the other side discovered them, it was too late to take countermeasures for the unit was already on its way back to the base like a flash of lightning.



Smart, composed and highly skilled pilots flying their planes through mountain valleys and triumphantly returning to base

Doing everything possible to overcome difficulties, a signal unit makes full use of existing equipment to ensure smooth flight control contacts

Learning from experience where veterans lead new recruits, and veteran comrades tell new pilots their own experiences by using sand tables

Devoting full effort to repeated drills, a pilot grasps the essentials of minimum-altitude flying under low altitude atmospheric conditions

XIZANG DEVELOPS GEOTHERMAL ENERGY

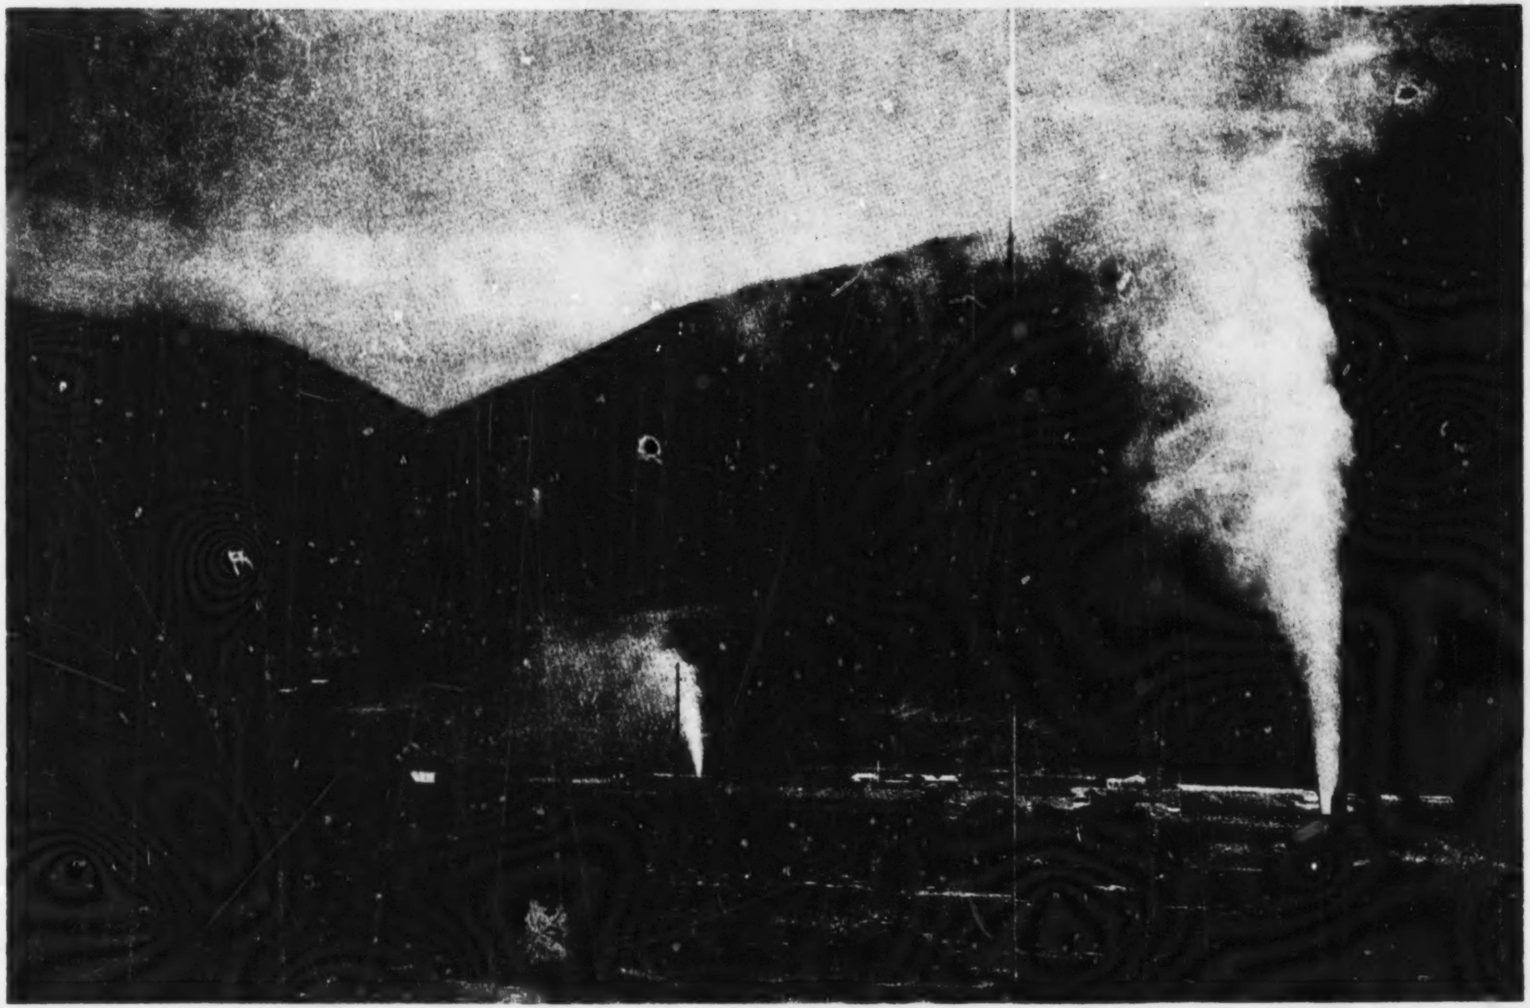
Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 10, Oct 80 pp 2, 4, 5

[Excerpts] At the edge of the foothills of Mt Nyainqentanglha, which is snow covered year-round, and approximately 90 kilometers northwest of the city of Lhasa, is the broad and flat expanse of the Yangbajain Basin. In the middle of the basin is the famous Yangbajain thermal field.

Legend had it that long, long ago the mist would spread out like a vast expanse of gossamer every morning over the broad hot-water lake in the eastern part of the thermal field. At this time, the beautiful wife and daughters of the god of Mt Nyainqentanglha would come to the lake to bathe. It was also said that the god of the mountain had a golden lantern, and if he was happy he would hang it high over the lake, so the light from the lantern would illuminate the lake, the thermal field, and the snowy mountain, whereupon Yangbajain would be transformed into an earthly paradise, with fresh flowers blooming everywhere and myriad birds singing in chorus. However, in the eternal dark age that was ancient Xizang, the god of the mountain was never happy, and the herdsmen of the Yangbajain Basin were forever bemoaning their bitter lot.

In 1951 Xizang's history turned over a new page. The party Central Committee sent a geological survey team along with the advancing PLA. Led and motivated by China's eminent geologist Li Siguang, the geological workers carried out a number of extensive scientific surveys of the Yangbajain thermal field. In March of 1975, the first thermal well on the Chinese mainland was completed here. Surveys have shown that the natural flow of Yangbajain is 107,300 kilocalories/second, and the heat emitted every year is equivalent to burning 470,000 tons of standard coal. In addition to power generation, this geothermal energy can be widely used in industry, agricultural sidelines and in the people's lives. In September of 1975, Comrade Hua Guofeng led a Central Committee delegation to Xizang and gave instructions to "complete the Yangbajain geothermal power station as quickly as possible." Group after group of Chinese and Tibetan technical personnel and workers came here from Beijing, Qingdao, Sichuan and various places in Xizang, and dozens of retired PLA soldiers volunteered to come to Yangbajain. They cooperated closely and strove selflessly for the early completion of the geothermal power station.

The thousand-year-old myth has finally become a reality. In October 1977 a trial geothermal power station with an installed capacity of 1 megawatt was completed and went into operation. The "golden lantern" that people had dreamed of was finally hanging over the thermal field.



Bursting from the earth, steam columns shoot several meters skyward to form rainbows in the sunlight--a splendid sight

ARTILLERY MANUFACTURING INDUSTRY DESCRIBED

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 10, 1980 pp 6-7

[Article: "Let the Artillery Roar"]

[Text] Artillery has played an important role in previous wars and thus has been referred to as the "God of War."

China's artillery manufacturing industry was established on the basis of the needs of the revolutionary war and was expanded in step with the war's development. Early on during the period of the anti-Japanese war, our ordnance factories based behind enemy lines produced such things as mortars, mortar shells and land mines and had a certain production capacity. During the liberation war period, the artillery industry was further expanded. After the founding of the country, an effort was begun to establish our own fairly comprehensive artillery manufacturing industry and corresponding departments for artillery research and design. During the early 1960's, our country's production capability and technology for many types of artillery attained a certain capacity and standard. However, the artillery industry suffered extremely serious damage during the 10 years of catastrophe in which the pace of development was hindered. As a result, the gap between us and the advanced world level widened. After the smashing of the "gang of four," the broad masses of staff members and workers of the artillery industry struggled head-on to catch up with advanced world levels and to speed up even more advancing the modernization of national defense. They exerted unremitting efforts and achieved marked successes. We believe that the artillery manufacturing industry will soon be able to equip the units with the best artillery so that the heroic PLA will be a like a tiger that has grown wings and be victorious in every battle, and so that our artillery will continue to give play to its power as the "God of War" in a future war against aggression.

VISIT TO A GUIDED MISSILE TECHNICAL SCHOOL

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 10, 1980 pp 10-11

[Article by Zhang Jucheng [1728 1565 2052], Li Shuliang [2621 2579 5328] and Luo Chunrong [5012 2504 2837]: "A Visit to a Guided Missile Technical School"]

[Text] An unidentified guided missile technical school has been established and developed along with the growth of guided missile units. The school has set up many types of special courses and has trained personnel who are up to engineering-college levels, are familiar with weapons and equipment of guided missile units and are able to use, maintain and manage such weapons and equipment. In order to produce more results and turn out a greater number of personnel, they have used every possible means to improve the quality of teaching. Leadership cadres have often gone into teaching and research sections and classes to help resolve teaching problems. The instructors have made nothing of hardships to conscientiously teach and patiently give guidance in study. Administrative personnel and units in charge of training bore in mind the interest in teaching to make certain that teaching tasks were fulfilled. After its founding, the school trained a large number of specialized technical personnel and basic-level command cadres and provided them to the missile units.

ORGANIZE TRAINING FROM THE NEEDS OF ACTUAL COMBAT

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 10, 1980 p 12

[Article by Wang Limin [3769 0448 3046] et. al.]

[Text] On extended rising and falling mountain terrain, Luo Xingyuan [5012 5281 0337], deputy commander of an antichemical warfare company in an unidentified unit, was leading the unit in training with flamethrowers. As one "fire dragon" after another laced into the mountain targets, the red glow lit up the darkened faces of the fighters.

The fighters are all familiar with Deputy Company Commander Luo Xingyuan's heroic character. In a fierce battle during the counterattack in self-defense against Vietnam, our fighters faced an enemy fire point in a concealed emplacement on a cliff. Luo Xingyuan had the assistant gunner support the flamethrower on his shoulder as Luo calmly fired, put the enemy out of action and ensured the victorious assault of the infantry. During that campaign, Luo Xingyuan at one time or another took out of action nine enemy fire points with his flamethrower. After training began, he told the fighters, "Don't fear fatigue or difficulties during peacetime and train in several more skills. Only in this way will you be resourceful and skilled in fighting when you arrive on the battlefield."

Disregarding his injured leg, he has clambered up one mountain after another with the fighters and through tough training developed skills in using flamethrowers against such targets as fire points halfway up mountains and on cliffs, trenches and bunkers. Under his leadership and influence, the antichemical warfare company's training has achieved good results. Once in a joint exercise with infantry, theirs were the first weapons to score hits in firing at 12 targets, including some in thick stands of grass, halfway up mountains and in trenches. The infantry comrades humorously said, The "Lord Fire God" is really something!

Explaining to fighters the essentials of using someone's shoulder as a rest for the flamethrower when firing at a target

FIRST TRIP TO PACIFIC

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 10, Oct 80 pp 20-22

[Excerpt] It was the first spring of the 1980's when new China's naval force first rode the waves into the South Pacific as the hot equatorial sea breezes fluttered the bright-colored ensigns.

The huge waves of the Pacific billowed and the ships shook violently, sometimes listing more than 30 degrees.

The blazing sun was directly overhead, the decks were scorching hot and the temperature in the engine room reached more than 40°C. Faced with various tasks, the commanders were cool and calm in analyzing sea conditions and setting course correctly. Dedicated body and soul, the navigation cadres made careful observations and did their job conscientiously. The engine room crew braved high temperatures to stick to their posts in the heart of the vessels. Supply ships designed and built by China promptly provided the warships with fuel and water. The heroic people's navy feared no hardship or danger and went ahead proudly. It passed through straits, crossed the equator and left the first traces of the new China's fleet on the boundless Pacific.

The view out on the Pacific is so beautiful and so enchanting! There is the magnificent glow of sunset blazing with color. There are rare cloud formations in countless forms. Dolphins frolic, green turtles swim by playfully and startled flying fish skim over the surface of the water leaving ripples behind.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PRC ECONOMIC JOURNAL ON U.S. MILITARY-INDUSTRIAL COMPLEX

HK310520 Beijing SHIJIE JINGJI No 8 in Chinese 10 Aug 80 pp 23-29

[Article by Cui Wei (1508 4850): "The U.S. Military-Industrial Complex and State Monopoly Capitalism"]

[Text] The term military-industrial complex was first used by former U.S. President Dwight Eisenhower. In his outgoing speech on 7 January 1961, [date as published] he said: "The United States of America has never before experienced such a combination of huge military organs and military industry. All the influences of this combination can be felt economically, politically and spiritually in every city, at meetings in every state and in every office of the Federal Government." (Collected Presidential Papers No. 1035, 1960-1961). Apparently, the military-industrial complex was sufficiently developed at that time to attract people's attention. Yet it has to be pointed out here that Mr. Eisenhower, who was then representing the interests of the long-standing consortia in the eastern part of the country, in no way opposed the existence of such a complex; yet he worried that the consortia in the west and the south that arose from arms dealings might get the upper hand. Consequently he warned the next government, saying, "we must prevent the military-industrial complex from influencing government organs intentionally or unintentionally. There exists and there will continue to exist the possibility that unjust authority will come into power, which could incur disastrous results." (Ibid). His warning had widespread repercussions in U.S. political, military, business and academic circles. Americans in various circles discussed from different angles this phenomenon that had "never been experienced before." Some said that the military-industrial complex brought disaster to the country while some others said that it brought security. In short, they regarded the military-industrial complex as a phenomenon that could be eliminated or retained. They could not and dared not touch upon the essence of this phenomenon.

The military-industrial complex is a product of modern monopoly capitalism. Therefore, in studying modern imperialism, it is important for us to study the formation, structure, essence and influence of the military-industrial complex. A profound study in this respect is of great significance in understanding the extent of U.S. national economic militarization and the features of U.S. monopoly capitalism.

I

Lenin said: "Modern militarism is the product of capitalism while its two forms are the 'living manifestation' of capitalism. One form is the military power that is used by capitalist countries in external conflicts and the other is various arms that are used by the ruling classes to suppress various movements of the proletariat." (Collected Works of Lenin, vol 15 p 166) Because of definite historical conditions, the U.S. military bureaucratic organs in the 1870's were still not as advanced as those of the old capitalist countries in Europe. However, this situation changed in the era of imperialism. As the United States actively took part in dividing the world, its military organs developed rapidly. Lenin said in his "The State and Revolution": "It is 1917, the period of the first imperialist war. The limitation referred to by Marx is no longer viable. The Britain and the United States that are the biggest and the last representatives of the Anglo-Saxon 'system of freedom,' (speaking from the point of view that these countries have no warlord system nor bureaucratic system), have slid into the dirty and bloody mire of the European-style bureaucratic military organs that control and suppress everything." (Selected Works of Lenin, vol 3 p 203) Nevertheless, the extent of militarization of the U.S. national economy before World War II was still lagging far behind that of other European capitalist countries. Statistics show that during World War 1, U.S. direct military expenditures made up only 15 percent of the national revenue, but they increased to 43.4 percent during World War II. The figures for Britain were, respectively, 36.9 percent and 55.1 percent, and for Germany, 31.6 percent and 67.8 percent. (B. Wa-xin) [3907 6580]: "Militarism of Imperialist Countries", Moscow, 1974, vol 169). However, following World War II, the military power of Germany and Japan began to collapse while that of Britain and France began to weaken; only the United States strengthened its military power. In order to defend and extend its interests, the U.S. monopoly capitalist group, which acquired exorbitant ill-gotten wealth, began to expand abroad. In the 1960's in particular, the U.S. monopoly capitalist group began to contend with the Soviet Union for world hegemony, and it indulged heavily in an arms race. It suppressed the people internally and stimulated production to insure its big monopoly profits, to slow down an economic crisis and to maintain enormous military expenditures. As a result, the United States has become the capitalist country with the highest degree of national economic militarization (see Table I).

Table I

Military Expenditures of Major Capitalist Countries After the War
as a Percentage of GNP

	1955		1960		1970		1976	
Country	(Million US$	Percent)	(Million US$	Percent)	(Million US$	Percent)	(Million US$	Percent)
U.S.	589	10.0	596	8.9	779	7.9	1,027	5.9
U.K.	64	8.2	59	6.5	59	4.9	107	4.9
France	40	6.4	52	6.4	59	4.2	129	3.9
Germany	30	4.1	40	4.0	62	3.3	125	3.7
Italy	14	3.7	17	3.3	25	2.7	38	2.6

Note: The figures for 1976 are based on prices in that year; the rest are based on 1970 prices.

Sources: The International Strategic Studies Institute (Britain) and Stockholm International Peace Research Institute (Sweden): "World Arms and Disarmament Yearbook."

Including its indirect military expenditures, the U.S. military expenditures in 1975 totaled over $96.479 billion (based on 1959 fixed prices), 15 times the figures for 1973--US$6,228.70 million. (The U.S. Historical Statistics, 188901945, pp 718-719, published in 1949 and calculated according to the statistics from the annual report on the Defense Department Fiscal Year 1977, pp B-1 and A-7). The number of people employed in the U.S. armed forces increased from 300,000 in 1937 to 2,250,000 in 1975, a sixfold increase. The national defense expenditures for the whole 1930's made up only 10 to 15 percent of the federal budget, but in the second half of the 1960's they increased to between 55 and 60 percent (J. K. Galbraith "New Industrialized Countries," London, 1967, p 22). After the war, about 50 percent of the national defense expenditures were for military orders. During the 1960's the defense department signed contracts with an average of 22,000 general contractors per year. (The NEW YORK TIMES, 22 June 1969) However, most contracts fell into the hands of the 100 major arms companies. Of these the 50 biggest military industrial companies got most of the contracts (see Table II)

Table II

The Percentage of Total Military Orders Received by the 100 Major Arms Dealers and the 50 Biggest Dealers

Period or Years	Percentage of the 100 Major Contractors	Percentage of the 50 Biggest Contractors
June 1940 to September 1944	62.7	57.6
July 1950 to June 1953 (the U.S. launched war in Korea	64.0	53.6
1966 fiscal year	63.8	55.1
1967 fiscal year	65.5	56.1
1968 fiscal year	67.4	57.1
1969 fiscal year	68.2	56.9

Source: (Baldwin) "The Structure of the Defense Market," 1955-1964, p 9, and "Letters on Missiles and Arms," 15 Nov 1969, p 1)

These big companies made tremendous profits through their contracts with the Defense Department. According to the calculations made by U.S. Military Economist Professor (Moray L. Wedermo) between 1961 and 1965, the rate of actual net profits of the six big arms manufacturing companies was 17.5 percent, while the rate for six other arms companies of the same size which received no arms contracts was only 10.6 percent. U.S. Economic Review, no 5, 1968, pp 434-435) U.S. arms contracts have basically been signed through consultations. This encourages arms contractors to bargain over prices, and it encourages government officials and private companies to gang up with each other in committing bribery and fraud. The introduction of "package" purchase since 1960 has especially made it more convenient for arms dealers to seek exorbitant profits. This form of military procurement includes practices such as the one whereby the Defense Department or its subsidiaries sign contracts with a big company for the research and design. production and experimentation involving various types of arms. This big contractor then hands over some production tasks or experimentation to other companies. The prices quoted by the big contractor include production costs and the profits defined by the government. If unexpected situations come up during the ordering procedure, the contractor is permitted by the departments concerned of the Defense Department to increase prices. Therefore, in order to get military orders, the general contractor usually intentionally lowers his bids. But once he wins a contract, he resorts to various pretexts to downgrade specifications and to alter designs so as to seek additional costs and still higher profits. Thus there is very intense rivalry among big monopoly companies over the military orders. The size of the shares of the orders wrested by these companies depends on the extent of their collaboration with the military departments. Such collaborations are effected through the exchange of staff by both sides. It is during this process that big industrial monopoly companies form close alliances with the military departments. Such alliances constitute the principal part of the military-industrial complex. Starting from this point, we can give a narrow definition of this "complex," that is, the military-industrial complex is an alliance which is formed on the basis of huge orders which flow between military departments and monopoly organizations. It can be said that the U.S. military-industrial complex is formed along the lines of the development of militarization in the U.S. national economy; that is to say, it is formed in a situation in which the contracts on tremendous orders for munitions are signed in a fixed form while military production is highly concentrated and monopolized.

It must also be pointed out that scientific and technological development has tremendously influenced the development of the U.S. military-industrial complex. Since World War II, the technological revolution has penetrated every sector of production in the United States, with the result that social productivity has greatly increased this situation has enabled the United States to use tremendous manpower, capital and materials for military purposes. The influence of the revolution in U.S. military power has been manifested in both the quantity and quality of the U.S. weapons. The use of technological achievements for military purposes has resulted in a profound revolution in U.S. military technology; that is to say, the old and traditional weapons have been gradually replaced by modern ones. While the traditional military industrial departments have been declining, some sophisticated military industrial departments producing modern weapons have begun to emerge. Such new departments producing modern weapons have begun to emerge. Such new departments include the aerospace industry which is manufacturing supersonic military aircraft and missiles, the nuclear energy industry which is producing nuclear weapons, the electronics industry which is producing modern weapons systems, and the shipbuilding industry which is making modern aircraft carriers. (The products of these departments make up 85 percent of the total military purchases by the Pentagon). These sophisticated military industrial departments have become major production departments of the U.S. military-industrial complex today. Thus, with sophisticated science and technology the U.S. has embarked on the path of militarization. Since the war, most of the U.S. Government's research funds have been spent for military purposes. An article written by Professor (Seymour Meyerman) of Columbia University in 1972 stated that "over the past 25 years, the military departments of the Federal Government have always controlled research work in the United States. Since World War II, the funds allocated by the Federal Government for research and development have come to $200 billion, of which 80 percent has been used by the defense, space and nuclear energy sectors." "One-half to one-third of the scientists, engineers and researchers throughout the country have been concentrated in the military industry and the related technological departments." (U.S. "The Nation," 20 Nov 1972)

Since the war, U.S. science and technology has, to a certain extent, directly served the making of modern weapons. Since the results of the scientific and technological revolution have been used in military production, the structure of modern weapons has become complicated and their manufacturing costs continue to climb. (For example, during the post-war period, the tonnage of newly-built naval vessels was on the average 4,500 tons, with building costs ranging from $95 million to $115 million; but the aircraft carrier "Enterprise," which was built in 1961 with a tonnage of 75,700 tons, cost as high as $444 million). In addition, more and more of the existing weapons have been discarded as useless (in the space of 10 to 15 years, U.S. missiles and other military equipment have been replaced by second and third generation equipment) a phenomenon which has tremendously increased military expenditures. These huge expenditures are the material base for the existence of the military-industrial complex. Apparently, without the scientific and technological revolution after the war, the U.S. military-industrial complex would not have been able to develop as tremendously as it has up to now.

II

The U.S. military-industrial complex is not just a simple combination of military and industrial circles. It is a very complicated system with a structure divided into five main parts.

First, there are the leading military and management departments. Such departments include the Defense Department, the defense committee, the defense management committee and the national military scientific research committee. The Defense Department is the leading department. It manages staff, distributes military purchases, oversees the production and development of weapons, takes part in formulating external military strategy and in coordinating diplomatic activities. It also commands the armed forces and determines strategic orientation and the principles of the combined operations of the three forces.

Second, there are the big arms monopoly on the one hand, which contract with the departments of the three forces under the Defense Department on military goods, and on the other hand the banking consortia which are closely linked with these companies. Of the 100 biggest arms companies mentioned above, 15 are purely monopoly companies. These companies are: Lockheed Aircraft, General Dynamics, United Aircraft, McDonnell Douglas, Boeing, North American Rockwell, Martin Marietta, Grumman, Raytheon, Lim-Temco-Vought, Newport News Shipbuilding, (Tai-ao-ke-er) [1132 1159 2688 1422], (A-fu-ke) [7093 5346 2688], Collins Radio and Northrop Aircraft. From 1961 to 1967, the military production of these companies made up 55 to 96 percent of their total production, of which Lockheed Aircraft, Newport News Shipbuilding and (Tai-ao-ke-er) respectively accounted for 88, 90 and 96 percent. (R.E. Lai-pu) [5490 2528]: "The Civilization of Weapons," New York, 1968, pp 186-187]

There are also nine semimilitary industrial companies. From 1961 to 1967, the military production of these companies made up 25 to 50 percent of their total production. These companies include: Sperry Rand, Bendix Aircraft, Textron, Kaiser Industries, GTE, Litton Industries, Pan American Airlines and Hercules Munitions Company. For some other companies production of military products accounts for a small percentage of their total production, but the value of their military products is very high. For example, during the 1961-1967 period, the military products of the General Electric Company made up only 19 percent of its total production; but this company ranks fifth among all the contractors of the national defense industry. Such companies include International Telephone and Telegraph, Ford Motor Company, General Motors and New Jersey Mobil Oil. The banks that maintain close relations with these military-industrial monopoly companies include Bank of America, Security Pacific Corp., Chase Manhattan, First City Bank, Chemical Bank, First National Bank, Zhou-jie [1558 5894] Bank, Bankers Trust, Morgan Guaranty Trust Bank and Mellon National Bank.

Third, there are the specialized research organs that are responsible for formulating military strategy and designing strategic weapons. Among such organs, 16 research institutions get subsidies from the Defense Department. They include the so-called "brain trust" of the Rand Corporation, Hudson Research Institute and Georgetown Center for Strategic and International Research, as well as the National Defense Analytical Research Institute which is composed of 12 universities. They also include the Trilateral Commission, the Hoover War, Revolution and Peace Research Institute and the Brookings Institution. The military technological research laboratories belonging to universities include the Jet Propulsion Laboratory of the California Institute of Technology, the Wireless Laboratory of Harvard University, the Ballistics Laboratory of Princeton University and Aerofire Power Control Systems Laboratory of Franklin University.

Fourth, there are the mass organizations that support the militarization of the national economy. They include the U.S. Artillery [as published] Association that serves as liaison between military and industrial departments, the Society for the Promotion of National Security Industries, the Association of Military Space Industries, veterans organizations. the trade management bureaus which are connected with the sales of munitions, and some branches of the AFL-CIO.

Fifth, there are various publications that are related to military theories, strategic ideologies and military technology. Such publications provide spiritual support for the military-industrial complex.

Structurally, the U.S. military-industrial complex does not have a fixed form of organization comparable to that of the worker-peasant alliance. However, it is a complex system composed of government military organizations, big monopoly military companies, research institutes that are responsible for developing military technology, and mass organizations that are related to military activities. (The first two parts are the core of the complex.) Through this complex the U.S. Government is able to acquire material equipment for its armed forces, to regulate the size, structure and geographic locations of the military industry, to stimulate the development of military technology and to take serious measures during emergency periods of war and economic mobilization. The activities of the U.S. military-industrial complex directly and indirectly influence the lives of many Americans at home. The book "War Economy Turned Into Peace Economy," which is written by U.S.

economist (Seymour Meyerman) and published in 1970, speculates that "20 percent of the U.S. workers depend economically on the Defense Department." Within the complex these workers have been plundered and controlled while the activities of the complex are decided by a few military and industrial magnates.

III

Lenin said: As capitalism has developed into monopoly, "there exists, in addition to the individual alliance between banks and industry, the individual alliance between these two types of companies and government." (Collected Works of Lenin, vol 25, p 371) The military-industrial complex is based on this latter "individual alliance" which is concretely shown in broad "exchanges" of staff between the state military organizations and big military industrial monopoly companies. The monopoly companies producing munitions usually employ a number of retired officers as senior executives while the state military departments also employ a number of senior staff members from such companies. According to the statistics of the U.S. Defense Department, in the 4 and 1/2 years from July 1967 to December 1971, such companies employed 1,101 senior officers from the Defense Department. The figure also includes retired general grade officers and field officers and officers of the same grade in the reserve army. At the same time, the Defense Department also employed 232 senior staff members from such companies as senior officers. The defense secretaries of the postwar administrations all came from big companies. For example, the defense secretary in the Truman administration, Mr G. Marshall, was a former director of Pan American Airlines. Mr C. Wilson, defense secretary in the Eisenhower administration, was former general manager of General Motors; Mr R. McNamara, defense secretary in the Johnson administration, was former general manager of Ford Motors; David Packard, defense secretary in the Nixon administration [as published], is general manager of Hewlett-Packard; the defense secretary of the current administration H. Brown was an IBM director. Exchanges of senior staff was described by Lenin when he said in his book "Bankers and Investors": "Today they are ministers but tomorrow they will become bankers; today they are bankers and tomorrow, ministers." (Collected Works of Lenin, vol 24, p 97)

Needless to say, such personnel exchanges make it convenient for munitions monopoly companies to get arms contracts and thus to make big profits. Take Lockheed Aircraft Company, the leader of the munitions monopoly companies, as an example. Before this company developed the U-2 reconnaissance plane (1954-1955), it was informed that the U.S. intelligence departments were interested in reconnaissance planes and it hurriedly hired Mr (Alyward Kessada), a lieutenant general of an intelligence department, as deputy general manager. Soon after Mr (Kessada) took up his new post, Lockheed Aircraft was awarded an urgent order for a U-2 reconnaissance plane. Over the past years, most retired officers employed by Lockheed have come from the navy because it was apparent that during that period the company was developing a marine specialization. The Orion and Corsair (S-3A) anti-submarine aircraft and Polaris and Neptune [as published] missiles developed by Lockheed were supplied to the U.S. Naval departments through the contracts won by its ex-servicemen staff. The company's "military liaison" committee has more than 200 retired servicemen above the rank of colonel. Thus, by relying on such "servicemen-salesmen," Lockheed Company no longer needs to worry about its sales. Furthermore, the company has been able to improve contract conditions and to increase arms prices. Since the 1970's, Lockheed has produced $1.5 to $2 billion worth of arms every year, with profits increased by at least $300 million even if we base this figure on the average rate of increases in U.S. arms prices. (G. M. Kusimin): "Military Concern," Moscow, 1974, p 135) The situation of other munitions companies is the same. It is precisely this "individual alliance" which makes it very easy for big monopoly organizations to use the state apparatus to make big monopoly profits. At the same time, the state, which is the "general capitalist," also helps monopoly capital through this "individual alliance" to make tremendous profits. Secretary of Defense under Eisenhower Mr C. Wilson said: "What is good for General Motors is good for America." (U.S. Labor Research Association: "The Billion-Dollar U.S. Corporations," New York, 1954, p 20) Such situations are just what Lenin said: "The alliance between the state and the most powerful capitalists is becoming closer and closer." (Collected Works of Lenin, vol 25, p 371) Such is the nature of the military-industrial complex.

The nature of the U.S military-industrial complex can be seen more clearly through some measures taken by the state in adjusting the economy. U.S. Government investments in enterprises have continued to increase since the war. Statistics show that up to the early 1970's, U.S. Government assets (including development properties) had already reached as high as $400 billion. As most government investments are concentrated in military enterprises, most of the government's assets belong to the Defense Department. "The military-industrial complex," which was published by (Luns) in 1970 estimated that the actual assets of the Defense Department reached as high as over $300 billion, surpassing any U.S. monopoly group. The government also invests in sophisticated munitions industrial departments financed by private monopoly funds. For example, nuclear power enterprises are mainly operated by private capitalists. But the raw materials, equipment, factory buildings and laboratories are financed by the government. Government investments in other advanced munitions departments are also quite enormous.

The nature of the military-industrial complex is even clearer in a nation where consumption is mainly concentrated in purchasing military goods. In order to stimulate production, the U.S. Government has since the war constantly increased the purchases of commodities and manpower. From 1946 to 1970, the U.S. Federal Government spent $1,365 billion (calculated on the prices at that time [as published]) on purchasing commodities and manpower, of which $1,108 billion was spent on military goods--about 80 percent of the total purchases of commodities and manpower. ("Presidential Economic Reports," 1971, p 19)

It can be seen from the above-mentioned two measures that in order to defend the political and economic interests of financial magnates, the U.S. Government since the war has worked hard to stimulate economic growth and to ease the antagonistic contradictions in capitalist reproduction through militarizing the national economy. This practice is an important feature of modern day state monopoly capitalism.

The existence and development of the military-industrial complex has deeply influenced the U.S. political, economic and other sectors. Economically, military expenditures mean that the results of the work of scores of millions of laborers are used for destructive purposes.

Even U.S. military circles cannot but acknowledge such purposes. Former U.S. Assistant Secretary of Defense Richard Morse estimated that "if the result of the production of each U.S. dollar used in the U.S. space program (military) was the same as that used in civil industrial research and development, then economically, the United States would have additional income of $100 billion per year." ("U.S. NEWS & WORLD REPORT," 7 June 1971, p 24) Of course, during a certain period, the activities of the military-industrial complex can temporarily stimulate economic growth. Through orders for military goods, the total demand by the government can be intentionally expanded to temporarily ease the contradictions of reproduction and to delay the outbreak of economic crisis. For example, during the period when the U.S. launched a war of aggression in Korea, the state's total orders for military goods jumped from $20.7 billion in 1950 to $65 billion in 1953 (an increase of 210 percent). The Gorss National Product also increased by 20 percent. ("Presidential Economic Reports," January, 1964) The U.S. industrial output in 1960 was 9 percent higher than in 1965. ("Basic Economic Handbook," 16 Sep 1968, p 79) But such increases were mainly due to increases in orders for military goods during the war of aggression against Indochina. In 1967, total orders for military goods began to decline and it was followed by the U.S. economic recession. In 1969, a new economic crisis broke out.

We must also understand that the activities of the military-industrial complex to a certain extent influence U.S. foreign policies. For example, the big arms companies that sign contracts on strategic weapons usually coordinate their programs for developing weapons with those of the related government military departments. Thus, these companies in fact take part in formulating official programs for developing weapons, and to some extent they influence the formulation of foreign policy.

The formation and development of the military-industrial complex also influence the comparative economic strength of the old and the new consortia. Most of the important production departments of the U.S. military-industrial complex that are producing sophisticated weapons are concentrated in the sunbelt of the southern part of the country. That is why over the past 20 years more and more orders for military goods have been won by contractors in the south. The percentage of military contracts won by monopoly munitions companies in the 14 states of the northeast dropped from 60 percent in 1952 to 37.5 percent in 1972. But the figures for the 21 states in the central-south, the Pacific coast and the Atlantic coast (of these 21 states, 12 are in the sunbelt) rise from 32 percent in 1952 to 50.1 percent in 1972. (Calculated according to the figures appearing in diagrams 2 and 3 of "the regional locations of principal military contractors" in the book "Economic Results of Cutting Down Military Expenditures" by (Bernard Youds) The "Defense Space Daily" stated in 18 April 1977 that the principal military contracts signed by the Defense Department in 1976 were for $12.849 billion, of which $3.363 billion were won by the sunbelt states of California [as published] and Texas, about 22 percent of the total. In 1977, these two states won principal military contracts to the tune of $3.999 billion, about 30 percent of the total. Thus the new emerging consortia of the western part of the country that are led by the Bank of America consortium and the Texas consortium have rapidly strengthened their economic power to oppose that of the old consortia of the northeast. The "worry" expressed by Eisenhower over the growth of the military-industrial complex actually reflects the clash of interests between the old and new consortia in the United States.

The formation and development of the military-industrial complex shows that demilitarization of the national economy is related to the development of state monopoly capitalism. The formation of state monopoly capitalism provides conditions for the national economic militarization which in turn promotes the development of state monopoly capitalism. The feature of monopoly capitalism is that the state apparatus belongs to monopoly capital, and this feature is shown in the activities of the military-industrial complex. It is in such activities that a few financial tycoons make use of the state apparatus (military budget) to exploit the people and to make big profits. Therefore, the U.S. military-industrial complex also reflects that since the war, the United States has found itself facing various contradictions politically, economically and socially.

'XINHUA' REPORTS ON INDICTMENT OF FORMER CIA EMPLOYEE

OW281031 Beijing XINHUA Domestic Service in Chinese 0306 GMT 26 Oct 80

[Text] Beijing, 25 Oct (XINHUA)--According to reports from Washington, the U.S. Justice Department on 24 October announced that former U.S. CIA employee David Barnett had been charged with being a Soviet spy.

A federal grand jury in Baltimore indicted the 47-year-old Barnett with giving Soviet secret agents (KGB) classified information involving a secret CIA operation known as "Ha-brink." The purpose of the operation was to collect relevant Soviet manuals and information on Soviet military equipment.

The indictment said: Barnett turned the classified information over to Soviet agents in Vienna and Djakarta between October 1976 and February 1977.

Barnett worked for the CIA for 12 years. At the direction of Soviet agents, Barnett tried to obtain employment with the Senate Intelligence Committee but he did not succeed.

BRIEFS

U.S. ENGINEERS IN SHANGHAI--The San Francisco engineering and technical group headed by (Li Wen Hui), director of the Public Works Bureau and Waste Water Planning Bureau of San Francisco, United States, has been visiting places in Shanghai and carrying out technological exchanges with related departments in the past few days. [OW270841 Shanghai City Service in Mandarin 0000 GMT 23 Oct 80 OW]

U.S. AUDIO-VIDEO DELEGATION--The technological exchange meeting, sponsored by the Ampex Company of the United States, on professional video and audio equipment ended in Nanjing, Jiangsu, on 22 October. Several hundred professional workers from radio, television and motion picture circles all over the country viewed Ampex products on display and exchanged technological information and discussed trade with the Americans. The Ampex Company sold advanced equipment at most preferential prices to the Jiangsu television station. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 23 Oct 80 OW]

U.S. MUSEUM'S ASIAN HALL--Beijing, 24 Oct (XINHUA)--A newly built Asian Hall at the U.S. Museum of Natural History in New York was recently opened to the public. An opening ceremony was held on 16 October. Many UN delegates from Asian countries, including Chinese delegate Ling Qing, attended the ceremony. UN Secretary General Waldheim spoke at the ceremony, expressing his hope that the Asian Hall will become a tool in promoting peace through mutual understanding. On display in this exhibition hall are some 3,000 works of art and handicraft from various Asian countries, including China, Japan, Korea and India. A concert will be held to introduce Chinese music, and films introducing Beijing, Suzhou and Xian will be shown at the hall in November. [Beijing XINHUA Domestic Service in Chinese 0352 GMT 24 Oct 80 OW]

TIANJIN RECRUITS--The Tianjin Municipal People's Government and the Tianjin garrison district jointly issued a circular saying that the city would begin this year's winter enlistment work on 20 October. The order issued by the Central Military Commission and the State Council requests our city to draft a number of recruits to reinforce the PLA ranks. Rural youths with a middle school background whose families have enough manpower and educated youths who have been sent to the countryside will be drafted. In urban areas, this year's high school graduates, aged 18 and 19, will be drafted. [SK271229 Tianjin City Service in Mandarin 0030 GMT 22 Oct 80 SK]

JILIN DELEGATION TO DPRK--The people's governments of Jian, Changbai and Hunjiang counties and Tumen Municipality dispatched friendship delegations to Chunggang, Manpo and Ponsong counties and Hyesan City of the DPRK, which are adjacent to our territory, on 24 October. The delegations will attend the celebrations of the 30th anniversary of the Chinese people's volunteers' entry into the Korean War. They are mainly composed of principal responsible comrades of the respective county and municipal people's governments. On leaving our country, the delegations were seen off by responsible persons from departments concerned of the respective counties and municipalities. [SK250725 Changchun Jilin Provincial Service in Mandarin 2200 GMT 24 Oct 80 SK]

JAPAN MUNICIPAL ASSEMBLY DELEGATION--Di Jingxiang, vice chairman of the standing committee of the Shanghai Municipal People's Congress, met with the visiting Japanese delegation of Municipal Assembly Speakers on 22 October. [OW270841 Shanghai City Service in Mandarin 0000 GMT 23 Oct 80 OW]

PARTY AND STATE

OBSERVATIONS ON 5TH NPC THIRD PLENARY SESSION

Hong Kong DONG XI FANG [EAST AND WEST] in Chinese No 21, 10 Sep 80 pp 12-13

[Article by Commentator: "Preliminary Observations on the Third Plenary Session of the 5th NPC"]

[Text] At the time of writing, the Third Plenary Session of the Fifth National People's Congress and the session of the People's Political Consultative Conference are still in progress, and Hua Guofeng's important speech has not yet been published. Nevertheless, Hua has already intimated to Japanese reporters that Zhao Ziyang will soon take over his post as premier, but the People's Congress has not yet officially announced this. Under these circumstances it is very difficult to write an analysis of the 5th NPC, but if the report is further delayed, the present issue of this magazine may fail to come out in time, thus herewith merely some observations on what has been learned so far:

The People's Congress Created a Good Democratic Atmosphere

In our opinion the Third Plenary Session of the Fifth National People's Congress was basically a successful meeting. Its greatest success was not the peaceful changes in the high levels of the central government's leadership, but rather that it created very successfully an atmosphere and spirit of "democracy." In the past, People's Congresses and Political Consultative Conferences appeared merely as machinery with hand-raising robots. Whatever proposals the communist leadership submitted, the assembled delegates would raise their hands as a kind of ceremonial function and approve the proposals without giving them a thought. But the present NPC gives everyone a new impression. The majority of its delegates are men capable of independent critical thinking. They are no more hand-raising robots. This is very good, it is the beginning of a "people's democratic government." Only under the conditions of giving free rein to independent critical thinking of the people's delegates and only by giving free rein to the NPC to fulfill its functions can the political control of bureaucrats and of the party be restricted and democratic politics be developed.

At the present NPC, delegates asked for an explanation of the "Bohai No 2" incident; Tang Ke, minister of metallurgical industry, was questioned about problems of investment and industrial pollution at the Baoshan Iron and Steel Works; Zhou Huamin, vice minister of foreign trade, was questioned on the waste of foreign exchange in building the Beijing Foreign Trade Center. The delegates also demanded an investigation into the criminal responsibilities of Song Zhenming, former minister of petroleum industry, and Chen Yonggui, former Da Zhai leader and vice-premier. The delegates furthermore did not merely clap hands and pass the administrative reports, plans and programs presented by the state leadership but dared present varying viewpoints.

The delegate from Guangdong Province publicly criticized Yao Yilin, chairman of the state planning commission and vice-premier, claiming that Yao's economic report placed too much emphasis on industry and too little on agriculture, that it still placed main emphasis in the country's economic construction on the development of heavy industry and neglected light industry and agriculture, and that his report contained no concrete measures for the development of light industry and agriculture.

On the question of foreign exchange certificates, the Hongkong-Macao delegate raised objections, claiming that the existence of foreign exchange certificates creates the situation of having two currencies in one country, with much unnecessary confusion resulting. He also pointed out that the issue of these foreign exchange certificates has never had the approval of the country's highest authority, namely of the NPC. The delegates of the NPC furthermore aired their views on bureaucratism, on the system of economic management, on the "four freedoms," and on problems in education and in the publishing industry. They truly reached a stage of free and uninhibited expression.

Laws Guaranteeing Personal Freedom Urgently Needed

Even though we may not be quite satisfied with the way the delegations to the NPC and the Consultative Conference had come about, and although we may consider the "democracy" displayed at the NPC not to be very abundant, we must concede that the Chinese mainland, ruled for such a long time by "feudal fascism," cannot be expected to jump with one leap right up into the lofty region of democracy. We, who are a small particle of the Chinese nation, must wait patiently and must enthusiastically offer our assistance. At present the Chinese communists have just made a start in the reform of their political and economic system, and this is very important since a good beginning is half success. It is our hope that the Chinese communist reform party continues to exert its efforts, and we hope that the delegates to the NPC and the Consultative Conference continue to promote and apply supervision over this kind of welcome reforms.

It has been repeatedly emphasized in the past that throughout history people have developed from slaves to masters, a development along the road from bondage to thorough liberation, even though for short periods reactionary movements may make their appearances, such as the Lin Biao and "gang of four" style "revolutions" in China or the Khomeni type "revolution" in Iran. However, the people's general trend and general direction toward liberation is never changing and cannot be diverted at will by any man. A clear proof of it is the way that China has moved from the dictatorship of Lin Biao and "gang of four" type of feudal fascism to the present "socialist democracy" of limited scale.

The people's democracy are eternal and boundless and will compel rulers again and again to make concessions to the people. We predict that the "democracy" on the Chinese mainland will be continuously expanding because without such expansion the people will not respond. However, the result of democratic expansion will of necessity clash directly with the bureaucratic structure and might quite possibly provoke repressive countermeasures by the bureaucracy. The Chinese communist reform party must foresee this possibility and for that reason found it urgently necessary to draw up a "law on safeguarding personal freedom." Only under the guaranty of fullest "personal freedom" can the people exercise effective supervision over the bureaucracy of the government. It is only regrettable that the present NPC and Consultative Conference neglected this question. Someone merely proposed to abolish the "four great freedoms," but no one dealt with the protection of personal freedom and protection of basic human rights. It seems that the pioneers of the democratic movement will still have to pay a price to achieve that.

Temporary Compromise Between Deng Faction and Non-Deng Factions

Up to the time that this draft has to be sent in, the personal shifts in the state council and the NPC have not yet been officially announced, but news that has so far filtered out indicates:

1. Zhao Ziyang will become premier; Hua Guofeng will resign as premier and continue solely as chairman of the CCP Central Committee.

2. Deng Xiaoping, Li Xiannian, Chen Yun, Xu Xiangqian, Wang Zhen and Wang Renzhong will resign as vice premiers and continue solely as members of the Central Committee or Central Military Affairs Commission.

3. Nie Rongzhen, Liu Bocheng, Zhang Dingcheng and Cai Chang will resign as vice chairmen of the Standing Committee of the NPC.

The three kinds of personnel changes do not come as a surprise because several months ago the communists have let this news filter out through various channels. The only items that do not agree with what had been revealed previously is the resignation of Ye Jianying and the appointment of Peng Zhen as chairman of the NPC Standing Committee.

Ye Jianying was born 1897 and is now 83 years old. The only one older among this group of retiring veterans is Liu Bocheng, who has not been seen in public for a long time. The fact that Ye Jianying, despite his high age, still does not want to resign and retire indicates that opinions are not at all uniform at the leadership level on the question of "abdicating to make room for worthy ones" and on the question of criticizing Mao Zedong.

For Ye Jianying to continue in his position of chairman of the standing committee of the NPC is significant on four points:

1. To keep the highest leadership position in the NPC in his hands will prevent the Deng faction from snapping it up.

2. Ye Jianying's position, chairman of the standing committee of the NPC, is still in name the position of head of state. By holding on to it, he may prevent the Deng faction from changing the constitution and reestablishing the office of state president.

3. Ye Jianying's holding on to his position may be a guarantee against any change in Hua Guofeng's position. It may also be a protection for the opposition faction of Xu Shihyou, Yang Changwu and others.

4. It can prevent an intensification of the movement for a criticism of Mao Zedong and prevent the radical anti-Mao elements from undertaking a "whipping of the corpse."

Just because Ye's retention of his position has such great significance, politically, we must not dismiss Ye's proposal of a "revolution to the end" merely as a mischievous feudal ideology. It is quite possible that Ye himself would like to retire and relinquish his position to be occupied by a "worthy one," but the people around Ye, such as Hua Guofeng, Xu Shiyou, Yang Chengwu and others do not want Ye to resign. The retention of Ye Jianying of his position has to some extent the effect of balancing out the various factions, it keeps the factional struggle in the high level of the leadership from sharpening and intensifying. The delay in the public trial of the "gang of four" and the low key in "criticism of Mao" are, we believe, the result of Ye's vigorous contention of these moves.

Any ruling class is highly averse to disclosing in front of the public its internal differences. Mao Zedong, Lin Biao and their four Central Committees were like this; Hua Guofeng, Ye Jianying, Deng Xiaoping and their Central Committees were also like this. The special report by the Beijing propaganda machine about such high-ranking military leaders as Xu Shiyou, Yang Chengwu and others attending the NPC is just to cover up such a contradiction and difference among them.

In as big a country as China and as large a party as the CCP, it is no wonder that there are internal factions and contradictions in the leadership level, the question is only how such contradictions and struggles are being dealt with. Judging from the Third Plenary Session of the 5th NPC, there has already been some arrangement between the Deng faction and the non-Deng factions. Both sides have made some concessions. Any problems that could not be solved have been left over for the 12th National Party Congress to decide.

CPPCC MEMBERS' SPEECHES AT GROUP DISCUSSION SESSIONS EXCERPTED

Beijing RENMIN RIBAO in Chinese 6 Sep 80 p 2

> [Text] Editor's note: For days in a row the CPPCC members attending the Third Session of the Fifth Congress of the CPPCC have been discussing in small group sessions the opening statement of Comrade Deng Xiaoping and the work report of Comrade Xu Deheng [6079 1795 3801], the representative of the CPPCC's Standing Committee. They also discussed Comrade Ye Jianying's [0673 0494 9351] opening statement at the People's Congress and the two reports delivered, respectively, by Comrades Yao Yilin [1202 0181 2651] and Wang Binggan [3769 0014 0040] on behalf of the State Council. These members were in unanimous agreement with and offered their full support to the reports. In their talks during the group sessions, these members also presented many suggestions and opinions. Following are excerpts of some of the talks given by them.

CPPCC members Yue Xixin [1471 1585 2450] and Jiang Zemin [3068 3419 3046] advocated, "The Work Toward Economic Construction Must Enhance Democracy, and Truth Must Be Sought from Facts."

CPPCC member Yue Xixin said "The work toward economic construction must enhance democracy. All investigations and research must be practical and realistic. The principle of having 10 or more Da Qing [model plant] is good. But there is no investigation or research to support this principle. Thus, it is only a slogan. What is its basis? There are no 10 model plants. As a matter of fact, all the 9 newly introduced fiber plants have been experiencing a shortage of natural gas, the basic raw material. Plans have been drawn up to double the size of the capital construction for coal production in Shansi Province, and to increase within 10 years, coal production by 100 million tons. Aside from this, a 2,000 kilowatt generating station has been planned, to be built at the mouth of the pit. However, these plans are difficult to execute because Shansi is short in water supply. Plans of such magnitude must be decided democratically--the opinions of the various departments concerned must be heard and decisions should not be made unilaterally.

CPPCC member Jiang Zemin [3068 3419 3046] said, "In the past, the method of 'three-front construction' was emphatically acclaimed; but now the pendulum has swung to the other extreme and the method has been totally abandoned. A thorough study must be made to see how the first front can be made to help the second and third fronts. To realize the four modernizations, progress must be made gradually. Don't be afraid that the progress is slow. It is the standing-still or the change of course that should be feared. We must work realistically and practically. Fantasies must be avoided; and, instead of giving a sweepingly general treatment to all the problems, each problem must be addressed individually, realistically, and practically."

CPPCC member Zhu Dixin [2612 3321 2450] said, "The Industrial System Must be Changed."

CPPCC member Zhu Dixin said, "The general guiding principle, policy, and task, as stated currently by the central authorities are clear and correct. The most prominent problem faced by the industrial sector in carrying out the tasks laid out by the central authorities is the industrial system itself. The government is immense--there are over 100 departments, committees and central bureaus. When there are many temples, naturally there are many Buddhas as well. There is much red-tape, dispute over trivia, passing the buck, and low efficiency. All the industrial sector and their affiliated units, regardless of size, take the attitude of being all-powerful. There are layers upon layers of governmental organizations, duplication of tasks, fragmented division of labor and scattered man-power as well as material and financial resources. These have hindered cooperation and increased cost while lowering efficiency and earnings. To correct this situation and to meet the needs of modernized construction, the industrial system must be reformed.

CPPCC member Wu Zhichao [0702 1807 6389] hoped, "To Conquer the Chaotic Condition of Blindly Introducing New Technology and Foreign Trade."

CPPCC member Wu Zhichao said, "There is a certain amount of blindness in our introducing new technology to the country. Last year, I accompanied four German engineers to Tongling County of Anhui Province. There, they saw two new steel mills standing idle. Reportedly, one mill was not in operation because of pollution; and the other failed to pass a technical inspection. The German engineers said that problems like these should have been solved before hand because a prolonged delay in operation would lead to heavy losses. Later, the German engineers looked over two mine installations which were standing idle. They remarked, 'Your machinery is modern enough, but the mines are not in operation.' In a subsequent symposium, the German engineers first posed a few questions for us to answer. But by the end of August, when the German engineers had completed their reports, the answers still did not come from the affected departments. This year, when I inquired about this matter at the affected departments, I was told that that particular individual in charge had resigned his position. I think we should have been informed of his resignation long ago.

"Concerning foreign trade, a system of centralized management was practiced last year. This year, each province conducts its own sales. As a result, merchants from Hong Kong and Macao swarm into the country and there is free competition everywhere. The problem is, there is confusion in pricing--merchandise of the same brand is priced differently. As a result, some old customers do not come for return business. Now the foreign merchants are here to discuss business, and the success of a business deal relies much on personal relationship. People have demanded from foreign merchants all kinds of gifts, from cigarette lighters to trucks; some even demand that the foreign business men invite them for visits abroad. This is not a good way to conduct foreign trade.

CPPCC member Zhu Mei expressed much concern and anxiety over the supply of beer. He said, "Our country has plenty of material for making beer, which sells well both domestically and abroad. Although the construction of a brewery involves a large one-time investment, it can be recovered within 1 to 2 years. The municipal government of Beijing has not given it much attention. The current brewery has an annual capacity of only 50,000 tons. To meet the market demand, the brewery must be expanded so that an additional 50,000 tons can be produced annually. To accomplish this, an investment of $9,500,000 yuan is needed, of which $6,500,000 yuan must be invested this year. Besides, the Chamber of Commerce of a certain Central American country has expressed its willingness to help our country build breweries. But the Beijing authorities have so far not responded. If the investment is not made this year, it is certain that there won't be enough beer to drink next year. It is hoped that the City of Beijing gives some attention to this matter."

CPPCC member Ly Dingyi [7120 1353 0001] said, "Emphasis Must Be Given to the Training and Promotion of Young Cadres."

Ly Dingyi said, "Chairman Deng Xiaoping's talk is very important. He urges us to discover, train, and promote as many of our talented young as possible to meet the needs of modern construction. In other words, to open all avenues for people of talent and to allow everyone to develop his talent to the fullest. Now that all the Marxists and patriots of the older generation have been promoted, it is time to promote the young people. During the Cultural Revolution, Lin Biao and the 'gang of four' promoted a group of 'rebels.' One half of the members of the Communist Party joined the party during that period. Now that the 'gang of four' has been crushed, we must promote those who hold inveterate hatred toward the 'gang of four,' who have genuine talent, and are truly educated and are capable of independent thinking. There are such young people among the new members added during this congress. Kuo Weibing [6753 4850 1755] of Harbin is one of them. I hope that the Communist Party and the organizing departments of the other governmental agencies pay attention to this question and promote more young people like him.

"The 'gang of four' was crushed 4 years ago. Since then, various government departments have been busy handling cases of injustice, false accusations, and other residual problems. We hope that the government will now turn its emphasis to promoting those young cadres who have had 10 years of training in Marxism-Leninism. They were in their 20's and 30's when the 'gang of four' appeared on the stage, and are between 30 and 40 today. They never had a chance to be promoted because during the time of the 'gang of four' there was, in fact, no genuine communism. There was only the 'communism' that was controlled by Lin Biao and the 'gang of four.' They violently opposed the promotion of cadres, and attacked anybody who joined the party. They only promoted those they liked, while persecuting those who opposed them but upheld Marxism-Leninism-Mao Zedong Thought. Many were shot, cruelly put to death by other methods, or persecuted to such a degree that they lost their working ability. Wang Hongwen [3769 3163 2429] said, 'we will see, 10 years from now.' We should never forget this. Now that we have the party of Marxism-Leninism once again, we must seriously promote good people, let them join the party and become cadres (however, not let them rise like helicopters). There are good people among the opportunists and it is all right to let them join in the task. However, primary leadership should be put into the hands of those who have been tested in the Marxism-Leninism-Mao Zedong Thought. Only in this way--and no other way--can we be at ease."

CPPCC member Yan Zhongpin [0917 0022 1627] stated: "There Is Chaos in the Way the Sending of People Abroad Is Managed. Thoughts of Worshipping Things Foreign Have Again Appeared."

CPPCC member Yan Zhongping said, "Today the worship of things foreign is on the rise again. In the eyes of some people, everything that is foreign is good. However, they learn about foreign things only superficially, without knowing the fundamentals. This could develop into a school of the 'Westernist.'" He also said, "Nowadays many people are trying to find an opportunity to go abroad, go sightseeing, and waste foreign exchange. And there is no coordinated plan for sending people abroad. Once at the airport, I saw two separate delegations of color television experts going abroad simultaneously on tours of inspection. Many experts who should go abroad to inspect and to study cannot go; while those who should not are going."

Some CPPCC members pointed out that some students have been sent abroad for further studies before they learned the language of the particular country they went to; and there are other who, once abroad, accept all kinds of gifts. They want everything and anything and are a disgrace for the Chinese people.

CPPCC member Hu Tsuying [5170 1311 1305], Xia Xingshih [1115 5887 2514] and Liu Jinzhe [0491 2516 0772] believed, "The Effectiveness of Intellectuals Must Be Developed to the Fullest so That All Qualified Personnel May Contribute to the Best of Their Ability."

CPPCC member Hu Tsuying said, "In his opening statement, Chairman Deng Xiaoping emphasized the importance of opening all avenues for people of talent and letting qualified individuals contribute their very best. In the progress toward the four modernizations, the questions of developing the broad mass of intellectuals and of the active participation of scientific and technical personnel bear great importance. According to a report of the Economic Research Institute of the National Academy of Social Sciences, the scientific and technical workers in our nation's industrial and communications systems in 1965 amounted to 5.7 percent of the total work force in these systems, but it decreased to 3.9 percent by 1979--an indication that the number of plants has increased without a proportionate increase of scientific and technical personnel. The statistics of numerous major nations show that the ratios of college graduates for each 10,000 persons are as follows: Japan, 205; France, 190; West Germany, 135; the Soviet Union, 106; India, 40; and China, 10.5. These figures show that the ratio of our country's college graduates is very low. However, the party attaches great importance to the intellectuals and considers them a part of the working class, the best part, in fact. Therefore, the question right now is the implementation of the party's policies toward the intellectuals. Among the members of the China Democratic Construction Association and the All-China Federation of Commerce and Industry, there are quite a few scientific and technical workers and other individuals who have experience in business management. Their effectiveness has yet to be actively developed. For example, some members of the Federation of Commerce and Industry have long been discriminated against by the business world. This attitude has yet to be corrected. And in the society at large, situations where intellectuals suffer discrimination still exist. Our country does not have many scientific and technical workers; we should not squander these talents anymore. We must let them develop, and utilize their talents, to the fullest."

CPPCC member Xia Xingshih said, "40 to 60 percent of the graduates of Shanghai's University of Science and Technology want to change their professions. This is a problem of not utilizing what one has learned and also a problem of not utilizing what has been taught. Some 80 percent of the graduates of the Foreign Language Institute in Arabic languages have not yet been assigned. Similarly, for 3 years in a row, many graduates of the Institute of Oceanography have not found jobs. So the problem lies in not utilizing the many talented people who have had many years of training. Therefore, the task of education must be seriously assessed. The Japanese pay very much attention to education, which results in high efficiency in production. In the past, the work of education has never been put on our regular agenda."

CPPCC member Liu Jinzhue said, "It is important to open all avenues to qualified people and let the talents develop to the fullest. We have the talents but some organizations still hold them back instead of letting them develop. It was only 5 days ago that I heard the story of a college graduate who had majored in astronomy who has been assigned to selling meal tickets. How can we utilize talents this way? What we have now, is a situation where we have many talents who are never called, where we have 'winged-steeds' whom no one appreciates."

CPPCC member Qian Waichang [6929 0251 7022] said, "The Importance Lies in the Discovery and Protection of Talents."

CPPCC member Qian Waichang said, "Chairman Deng, in his opening statement, has pointed out the tasks for the three areas of economy, politics and government in the new 'long march.' This is very important. In the last year we have accomplished much toward fully developing and utilizing the talents. In our country there are plenty of talents. When papers written by some of the middle-aged people, those between ages 40 and 50, are read in international conference they are found outstanding. We must discover our own talents, instead of letting people in other countries discover them. But the discovery of talents involves a difficult process; and, once they are discovered, they should not be made to attend meetings all over the world. They should be given real scholarly work to do. There was a middle-aged expert in modular mathematics in Shanghai who had some real accomplishments to his credit. But once he had gained recognition, he began to attend meetings everywhere. What good could this do? A scientist is no longer a scientist when he does not work in science. Therefore, when talents are discovered, they must also be conserved."

CPPCC members Qian Fuxing [6929 4395 2505] and Zheng Zhengren [6774 2973 0088] appealed, "To Scholars and People With Special Qualifications Not To Take On Too Much Administrative Responsibility."

CPPCC member Qian Fuxing said, "It is important to utilize people according to their talents. People in the position of ministers and vice-ministers should be able to comprehend information in science and technology, but they don't have to be experts themselves. It is most important that they have organizational ability, and can organize various individuals and coordinate their opinions and ideas."

CPPCC member Zheng Zhengren said, "The CPPCC must concern itself with determining the policies for the thorough utilization of the intellectuals. So far this work has been carried out well with the upper echelons, but with the middle and lower echelons, it is another matter. There still exists factionalism in some organizations and, in others, the leadership still does not trust the intellectuals. These organizations still give the highest rank to the laborers, next to the farmers, and only then to the intellectuals. Although the intellectuals are no longer placed on the bottom of the ladder, they are not yet given their proper positions."

CPPCC members Su Yuanfu [5865 0337 1778] and Chen Mingshan [7115 0900 3790] said, "It Is Very Important To Open All Avenues to Talented People and Let Everyone Develop His Talent to the Fullest."

CPPCC member Su Yuanfu said, "We must open all avenues to talented individuals and let everyone develop his talent to the fullest, if we want to build our nation into a socialist power that is modern, highly democratic, and highly civilized. Some time ago, people were encouraged to go out to identify individuals and those individuals with such special qualifications and skills were encouraged to volunteer their servies. However, not many people with special skills, volunteered their services and likewise, not many people went out to serve as 'talent scouts.' The following must be done if people with special qualifications are truly to be discovered: (1) Everybody should be a talent scout. Only in this way can individuals with special qualifications feel that their talents are appreciated; (2) A talent scout must be realistic and knowledgeable so that he can identify special skills and qualifications; (3) The merits, short-comings, and problems of people with special qualifications must be properly handled; (4) A talent scout must look for qualified individuals not only among those he knows, likes, and has contact with but also among those he does not know or like, because the skills and talents of all people can truly be utilized."

CPPCC member Chen Mingshan said, "During the past year, various policies adopted by the City of Shanghai have been implemented very quickly--the technical personnel who worked previously in the industries of the raw and semi-finished materials and businesses have been placed in technical positions. Without counting the 'three small's' (small merchants, small craftsmen, small business owners) there are 4,724 workers employed in the industries and businesses of raw and semi-finished materials, 6 of these are rated as municipal worker-models, and 433 others as first class advanced productive workers. There are 539 who have joined the labor union. Of the 13,848 retirees, 10 to 20 percent have come out to help develop street collectives, give training to the young people, and actively contribute to the realization of the four modernizations. The problem is that there are not many real talent scouts. Much has to be done toward the identification and promotion of individuals with special qualifications and toward opening all avenues to the full development of talented individuals.

CPPCC member Han Ying [7281 5391] suggested that "the Investment in the Training of Individuals With Special Qualifications Be Increased."

CPPCC member Han Ying said, "To realize the four modernizations, much capital has to be invested in economic construction. Although it is important to introduce the much needed modern technical facilities, the investment in personnel training should not be ignored. The latter is of greater importance, in some sense, because the advanced technical facilities have to be manned by people who have modern technical skills. At present, conditions in our country are lagging far behind those of other countries. In education, the number of college admissions in any particular year is not quite 4 percent of that year's middle school graduates, leaving an absolute majority of middle school graduates without the opportunity for higher learning. This situation is the result of inadequate funds for education on the one hand, and, on the other, the incomplete development (due to many objective reasons) of manpower and facilities for education. Teaching methods in the colleges should be changed--it is inappropriate to teach college students as if they were students in primary schools. At the same time, while the regular day schools are being strengthened, spare time educational facilities must be built, so that the scientific and cultural levels of those youths who are employed, or are awaiting employment, can be promoted. It is also helpful to open vocational schools, providing the young people with technical training before actual employment. This type of work should be vigorously supported. Of course, this requires a certain amount of capital. During recent years, there has been much progress in this area. If we can carry out this task well, our efforts in discovering and training qualified individuals can be actively enhanced."

CPPCC members Zheng Zhong [6774 6850], Shang Dejun [1424 1795 0193], Shang Guorong [0948 4141 2837] and Xiong Jiguang [3574 1323 0342] said "The Most Pressing Task for Now Is the Training of All Kinds of Professionals."

CPPCC member Zheng Zhong said, "I work in the field of education. The current question is how to train qualified individuals. There are more than 3,000 students at the Xiamen University, and 5,000 more will be admitted. Although there is quite a number of teachers, very few are capable of real teaching. The quality of the teaching staff is another question. How can a subject be taught well by a number of teachers collectively? And there is the question of equipment--for example, there is not even a modern electronic microscope or an electronic calculator in our department of oceanography. The instruments and facilities are very old. Whenever foreign visitors come, it is always a dilemma whether they should be shown these outdated facilities. And there are not enough books in the library, a result mainly of not having enough foreign exchange. Furthermore, whenever there is a small amount of foreign exchange it is always distributed evenly among the departments, without giving special consideration to the major departments. These problems should be solved as soon as possible. Besides, today the graduate school students have only 2 or 4 years to complete their studies toward a master's or doctor's degree, respectively. However, most students do not have a good foundation, and a 2-year period is only enough to provide them with training in the basic subjects. Therefore, I suggest that 3 years should be allowed for master's degree, devoting 2 years to basic subjects and 1 additional year to research. Today, some students get into graduate school based on sheer luck. Their academic record is not that good. I suggest that before admitting a student into graduate school, the entire record of his 4 years in college should be reviewed."

CPPCC member Shang Dejun said, "In the area of traditional Chinese medicine, there is an even more acute temporary shortage of qualified personnel. Some of the current systems are not conducive to the training of talented individuals. For instance, the health department does not have the power of personnel deployment. As a result, the much needed teaching staff is not supplied; while those not in need come, through the back door, by 'pulling strings.' Some have even gotten into the teaching and research group. How can the quality of teaching be promoted this way! Furthermore, there is the unresolved argument about the equipment at the college of traditional Chinese medicine. Some take the position that for teaching traditional Chinese medicine, all you need is three fingers and a small cushion, and that when modern equipment and facilities are used, it is no longer the traditional Chinese medicine. Some even believe that it is against the policy of traditional Chinese medicine to use modern equipment. As far as I am concerned, it will not work this way. In a college of traditional Chinese medicine, a combination of Chinese and western methods should be used. By using modern instruments, better diagnosis can be made, which will lead to better results for the traditional Chinese medical treatments."

CPPCC member Sheng Guorong said, "There were 78 traditional Chinese medical doctors before the Cultural Revolution. Now there are only eight left. Therefore, there is a pressing need to train new talents. Our academy has admitted over 400 new students. But there is no dormitory space for the students or the teachers. So, they all have to live in the inn. Besides, there are not enough teachers. Originally, it was hoped to attract a group of skilled traditional herb doctors to help out with the teaching; but because of organizational limitations, it could not be done." In view of the fact that many overseas Swator people, fellow-countrymen from Taiwan, and people from other nations frequently come to the mainland asking for assistance in traditional Chinese medicine, CPPCC member Sheng Guorong suggested that a traditional Chinese medical clinic be opened in Hong Kong. Such a clinic does not need to be elaborately equipped. It will be a place where much foreign exchange can be earned, contacts can be established with overseas Chinese and with our fellow-countrymen on Taiwan. It will also be helpful to these people in their work."

CPPCC member Xiong Jiguang said, "A very important question today is the training and selecting of qualified individuals who can meet the needs of building a modern country. The silkworm industry is very well developed in the Sichuan Province. This is because Comrade Zhao Tzuyang [6392 1311 2254] has attached great importance to it, and the province has adopted a series of policies and measures which resulted in the rapid development of that industry during the last 2 to 3 years. The production of last year reached 1,400,000 dan [a unit of 50 kilograms] a 40 percent increase from the year before; and this year's production is another 20 percent higher than that of last year, with a forecast of as high as 1,800,000 dan. It has been estimated that by 1985, the annual production will reach 3,000,000 dan, and 5,000,000 dan in 1990. Right now, the mulberry saplings are doing very well; therefore, the target will be reached, perhaps even surpassed. However, there is a shortage of technology. This year, the cocoon production of the Sichuan Province will surpass that of Japan, but its quality is inferior. The facilities in our plants are not complete. Last year, there were more than 1,000,000 dan of cocoon that could not be reeled into silk and had to be sold as cocoons. Our technology for printing and dyeing the silk lags far behind that of Japan. Therefore it is imperative that the scientific research work be strengthened; and that technical personnel be trained. At present, there is only one university in the entire Sichuan Province that has a sericulture department. In the past, the central authorities concentrated on assisting provinces such as Jiansu and Xijian. It is hoped that, in the future, the central authorities, in their national planning, will take into consideration the trend in Sichuan realistically, solve the problem of technical personnel, and overcome our equipment shortages. A concerted effort must be made to further improve the quantity and quality of production so that our products may surpass advanced international standards in every way." In the statement, CPPCC member Xiong Jiguang expressed his confidence in the development of the silkworm industry in Sichuan, and his willingness to support these efforts to the best of his ability.

CPPCC members Li Tiezheng [2621 6993 6927] and Ni Zhengyu [0242 1767 0889] "Suggested the Promotion of Grass-roots Diplomacy and the Early Return of Taiwan to the Embrace of the Fatherland."

CPPCC member Li Tiezheng said, "It is very important to strengthen the CPPCC's people to people diplomatic activities. We must actively initiate contacts of friendship with other nations. To carry out this task well, it is suggested that the CPPCC set up a committee for foreign relations. Currently, a presidential campaign is going on in the United States. Reagan has suggested maintaining official relations with Taiwan. We can send some people to the United States for visits among the American people, make our views known to them, make friends everywhere, strengthen the friendly relationship between the two peoples, and gain the good will of the broad masses in the United States.

"The connections that the CPPCC members have abroad through their friends or relatives must be exploited to strengthen the contact between the peoples of all nations. They must be utilized to promote and develop friendly relations between our people and the peoples of the other nations."

CPPCC member Ni Zhengyu said, "One of the CPPCC tasks is to work toward the realization of Taiwan's return to the fatherland. There is a great deal to be done and many channels must be explored. There are many scientific and technical workers from Taiwan who reside in foreign countries. Many diplomatic officials from Taiwan have remained abroad because of the severance of diplomatic relations between Taiwan and those countries. Those people have their own way of thinking. We should work on them, make them understand the fatherland and our policies, so that their thinking may be changed and the unification of the fatherland may be expedited."

CPPCC members Zhang Bilai [1728 3968 0717] and Liu Kaiqu [0491 7030 3255] said, "Scholarly Communications with Taiwan Must Be Actively Developed."

CPPCC member Zhang Bilai said, "The realization of Taiwan's return to the fatherland is a very important task. Mao Duan [5403 4160] said, not too long ago, 'We should open up academic exchanges and communications with the scholars in Taiwan. Exchanges on the studies of "The Dreams of the Red Chamber" are particularly useful! Encouragement must be given now to academic circles toward developing this project. It is very possible to have exchanges and communications with the scholars in Taiwan through the studies of "The Dreams of the Red Chamber." The reasons are: (1) Scholars on both sides take "The Dreams of the Red Chamber" as a great treasure of the Chinese cultural heritage, both from the point of view of nationalism and patriotism; and (2) In this novel, scholars on both sides can find a common language of antifeudalism. In fact, communications between the scholars have already begun."

CPPCC member Liu Kaiqu said, "The comrades in our art and sculpture department can contribute very much toward establishing contacts with the scholars in Taiwan. Last year, while visiting Italy and France, I had broad contacts with artists from Taiwan residing in Milan and Paris, respectively. As a matter of fact, it was through me that contacts were reestablished between a Taiwan artist in Paris and his relatives on the mainland. My contacts with them had good results. The Democratic Alliance has many scholars. Therefore this work can be broadly launched."

CPPCC member Li Xingchuan [2621 2502 1157] said "Emphasis Must Be Given to the Work Among the Overseas Chinese."

CPPCC member Li Xingchuan said, "Although much attention has been given to the propaganda work toward Taiwan, there is not enough emphasis given to the propaganda work among the overseas Chinese. There are more than 20,000,000 overseas Chinese in various countries; among them, there are many scientific and technical talents. From one rural community of Taishan alone, there are 28 scholars with doctoral degrees living in the United States. Last year, there were over 400 overseas Chinese who came to Taishan, visiting relatives or for sightseeing. However, they were mostly ordinary citizens and not many of them were of any influence. Quite a number of people do not dare to return because they believe that only those who are politically neutral can have a place in China. The Taiwan government has been trying to get people to penetrate the An Liang Association, Xie Shen Association and other overseas Chinese organizations in the United States. In the United States, most of the principals of the overseas Chinese schools are sent by the Taiwan government. If our propaganda work toward the overseas Chinese is done well, it would have much influence toward Taiwan's return to the fatherland."

CPPCC member Mai He Siu De [6314 0678 5685 1795], Tie I Bo Fu [6993 5902 3034 1133] said, "There Are Some Problems in the Pastoral Areas."

CPPCC member Mai He Su De. Tie I Bo Fu said, "Not too long ago, on an inspection tour to Northern Xinjiang, I witnessed a few problems in the pastoral areas: (1) The problem of chaotically turning pastoral areas into farmland continues. This seriously damages the cultivation of grassland and greatly affects the development of animal husbandry and the people's livelihood. There is much resentment from the people. This problem should be solved with much attention in the future; (2) Up until now, education in the pastoral areas has been limited--with many problems in the number and quality of schools, particularly those of inadequate funds, teachers, and teaching materials. The Xingiang people have much to say about these problems. It is suggested that the departments concerned study and solve these problems. The people in northern Xinjiang were very happy with our inspection tour this time and said that the CPPCC members should go there regularly, solicit the opinions of the masses and conduct investigations and research, so that the real problems may be solved."

CPPCC members Wu Kequing [0702 0344 3237] and Tien Iping [3944 0001 1627] said, "The Protection of Cultural Relics and Historical Sites Is an Urgent Task."

CPPCC member Wu Kequing said, "The fact that the CPPCC has taken up the question of the protection of the cultural relics and historical sites has caught the attention of many segments of the population. This is a meaningful task. Incidents where cultural relics and historical sites are damaged, still exist; some even sustain serious damages." He analyzed the situation and said, "In some cases it is due to the lack of recognition of the importance of protecting the cultural relics and historical sites on the part of the local leadership. For example, in Ron County of Guangsi Province, the digging of air-raid shelters directly under an ancient historical site resulted in crevices on the grounds of the site. Immediate actions had to be taken to remedy the situation. In another instance, some ancient tombs were leveled by bulldozers to create farmland. Many historical sites in Guilin have also been damaged. It would be helpful to the work on the local levels if the CPPCC members could organize some investigative work, and offer some suggestions."

CPPCC member Tien Iping pointed out, "Situations still exist in Sichuan Province where cultural relics and historical sites suffer serious damages. For instance, the Great Buddha Temple of the Happy Mountain, forests and the temples of Emai should be saved through organized efforts. The restoration of the historical sites at the Emai Mountain should be directly led by the people and government of Sichuan Province. Furthermore, all avenues should be opened to making these sites profitable--that is to say 'to maintain mountains by utilizing mountains,' making use of locally produced materials, increasing revenues, gaining time and bringing the restoration work to completion as soon as possible."

CPPCC member Dan Shihyuan [0830A 1102 0337] maintained, "In the Process of Developing Tourism, the Original Appearance of Historical Buildings and Ancient Gardens Must Be Protected."

CPPCC member Dan Shihyuan noted, "Earning foreign exchange through the development of tourism has been known as the 'smokeless industry.' But the ancient buildings and edifices as well as the ancient gardens and forests are an important form of 'capital' for attracting people from abroad to come to China. The way tourism is being developed today is like 'killing the hen to get the eggs.' Areas for sightseeing and of scenic beauty have been changed beyond recognition. The cablecar tracks that have been added to the Nan Tien Gate at the Tai Mountain have seriously damaged the scenery; restaurants have been built along the seven-mile cooridor of stone-carving of animals and people at the Thirteen Ming Tombs; and there are plans for a 13-storied tall building in Sian competing in height with the Pagoda of the Wild Goose--Suzhou, Hangzhou and Guilin all have similar problems. It is to be hoped that laws concerning the cultural artifacts will be promulgated at the earliest possible date. In relation to architecture, it is suggested that Beijing, Jiansu, Zhejian, Fujian, Shansi, Gansu and other areas preserve some of the residential buildings that have the local or national characteristics; for example, Beijing's residential compound with houses around a yard. Otherwise, the residential buildings and houses would look alike from Heilongjiang in the north all the way to Hai Nan Island in the south."

CPPCC member Ye Qianyu [0673 3239 0056] said, "Improvements Have To Be Made on the Publication, Distribution and Collection of Books and Paintings."

CPPCC member Ye Qianyu said, "Today, the fate of publishing and distributing books and paintings is in the hands of the Sin Hua Book Store. For many books, there are not enough copies for distribution, because the Sin Hua Book Store either did not send in the order or ordered only a limited number. As a result, readers cannot get the books. Is it possible that a system of direct contact between producers and consumers can be adopted, as it has been adopted by the industrial plants, and leave the decision of publication and distribution to the publishers?

"There is a more serious problem: The markets at Liu Li Chang for books, paintings and other cultural items are only open to foreigners; while the Chinese are not allowed to read them or even to browse around. The treasures of the Imperial Palaces are the collections of the Chinese people. It is very important that they be preserved for the people and opened to the people, so that the tradition of collecting books, paintings and other cultural items by the people may be continued. However, fraudulent purchases may appear as a result. How can this problem be solved? It is to be hoped that the concerned sectors make a serious study of this."

HISTORY, CHARACTER OF ZHAO ZIYANG REVIEWED

Hongkong DONG XI FANG [EAST AND WEST] in Chinese No 21, 10 Sep 80 pp 4-8

[Article by Jin Zhiming [0093 0037 7686], "Zhao Ziyang, What Kind of a Person Is He?"]

[Text] Zhao Ziyang was born in 1919 in Huaxian County, Henan Province, into a landlord family. His original name was Zhao Xiusheng, he also had the name Zhao Ye. In 1932, at the age of 13, he joined the Communist Youth League. In 1938, at the age of 18, he became a member of the CCP. During the War of Resistance Against Japan he served as county party secretary and prefectural party secretary in the Hebei-Shandong-Henan Anti-Japanese Base Area. In the early period of the War of Liberation he served as party secretary of the Tongbo area. In 1951, he went south to Guangzhou, following that scholar-type Tao Zhu, and participated in land reform work there. At the conclusion of the land reform, Tao Zhu and Qu Mengjue promoted him to head the Department of Rural Affairs. He then advanced step by step to deputy secretary of the CCP Central Committee's South China Sub-Bureau, secretary of the Guangdong Provincial Party Committee and first secretary of that committee. During the cultural revolution he was criticized and denounced. When the revolutionary rebels gained power, he kept out of their way but continued to wield actual power. When the Revolutionary Committee of Guangdong Province was formed, he was pushed out of his post. In 1971 he was "liberated" and sent to Inner Mongolia as a party secretary in charge of agriculture. Later he was again returned to Guangdong to become provincial party secretary and first secretary. From 1975 on, he has been first secretary of the Sichuan Provincial Party Committee, First Political Commissar of the Chengdu PLA units, Vice-Chairman of the Chinese People's Political Consultative Conference, Member of the 10th and 11th CCP Central Committee, Alternate Member of the Politburo, and in February 1980 he was elected Member of the Politburo and Vice-Premier of the State Council.

A Capable Administrator of Great Adaptability

A good administrator must show adaptability. In changing circumstances and in the changes occurring at his working place he must be able to understand and grasp as quickly as possible the new conditions and the new situation with all its special aspects to realize what is beneficial and what is harmful and also to determine plans of action and measures to be taken. He must also be skillful in selecting personnel, in checking and summarizing work, etc. These are all qualities required in a good administrator. Adaptability is even more distinctly required in an administrator who is engaged in political work. Especially in a country like

China amidst its power struggles and its fickle uncertainties, it is even more important to command the necessary adaptability when dealing with the struggle against opponent parties. In the course of growth and decline of the various mutually opposing parties, he should be able to disregard any scars of the past and adapt to any shifts in power while preserving his own position and pursuing his original policies. Premier Zhou Enlai was a past master in this respect; Zhao Ziyang is also not a bad operator. Let us see how he fared during the past few years: In a political organization that had the overthrow of the landlord class as its revolutionary objective, this young student, coming from a landlord class family, had managed only one or two years after joining the party to hold the top position in this organization's provincial and local committees, namely that of provincial and local party secretary. Although the status principle--in respect to his landlord class origin--was not followed to the extreme in the early days of the War of Resistance, as it was followed later during the cultural revolution, the ideology of the communist party after all regarded the landlord class as enemy. Furthermore, the bases of the communist party were not very extensive in those days, so that becoming local party secretary must have been not easy at all. By changing his class status right at the start, Zhao Ziyang has given an outstanding demonstration of his adaptability to a new political situation.

After moving to Guangdong and participating in the land reform, Zhao was pronounced an expert in land reform. After his handling of rural affairs, he was pronounced an expert in agricultural matters, and again, after sticking it out for 4 or 5 years in Sichuan, he was also given the honorable designation of expert economist. Whatever line he went into, he mastered it well; he has indeed the talent of becoming master in whatever line he goes into. This is due to his ability to recognize and grasp the situation (the true state of the objective conditions). Men who have this ability can fairly easily master new, more elevated and more complex work. This capability is to be highly valued in Zhao Ziyang, now that he has been elected to the position of vice chairman of the standing committee of the state council--in essence premier and head of government.

At all times and in all countries successful politicians have been mainly those who were skillful in recognizing the signs of the time and understanding the political fluctuations on which to base an appropriate strategy, and who, in the course of these fluctuations, were able to preserve or even enhance their own position and power. Rash and straight forward characters or unyielding scholarly types are swallowed up in the political whirlpool; they will certainly have all their bones broken and come to a bad end.

Zhao Ziyang is a past master in achieving success one way or the other, he has an outstanding talent in recognizing the trends of the time. Tao Zhu committed errors of a historical nature by launching with excessive fury into the land reform, the anti-rightist, anti-reactionary, and the anti-localist movements. With his scholarly temperament, Tao Zhu showed respect and solicitude toward the Guangdong intelligentsia. (This writer had the good fortune to have been one of the nine veteran "fragrants" [writers of literature favored by the party] when Guangdong was under Tao Zhu's leadership--in the early sixties Guangdong intellectuals were quite "fragrant," as compared with the rest of the country.) Zhao Ziyang too had done some work placating the intellectuals. These had merely been some of Zhao's rudimentary products of trying to gain advantages in whatever way that offered itself. When the cultural revolution came, Zhao gave a marvellous show; while all streets and lanes in Guangzhou were full of slogans and big-character posters "Down With Guangdong's Biggest Capitalist-Roader Zhao Ziyang," the provincial secretary was still none other than Zhao Ziyang. Zhao was still exercising his powers. The Provincial Revolutionary Rebels' Allied Committee, in which the Zhongshan University Red Flag, the Guangzhou Workers Alliance and similar groups played leading roles, staged the "January 22 seize-power." At that time Zhou Enlai telegraphed his approval of the direction taken in the "January 22 seize-power" by the Provincial Revolutionary Allied Committee. However, in contrast to other provinces, Zhao Ziyang was not divested of his powers. Zhao realized clearly that the Provincial Revolutionary Alliance within the Red Flag Group lacked experience and real power. He also realized the contradictions between the Provincial Revolutionary Alliance and the Triple Alliance Faction, in which Hua Gong and Red Flag Workers groups were leading, on the one hand, and the Allied General Group, in which the Local General group and the "Ism Soldiers" faction were leading, on the other hand. When the revolutionary small generals rushed in at midnight to "seize power," Zhao against all expectations obediently like a good boy handed over the "political power," i.e., the seal of the provincial secretary. Zhao then performed a unique stroke: the provincial party secretary started to perform his duties "collectively" under the guidance of the revolutionary small generals. He thus tricked the students in general, who were under the leadership of Wu Chuanbin. In the big struggle between the three factions, the real power was still in Zhao Ziyang's hands. This situation lasted until the army interfered at the military barracks. The Provincial Revolutionary Allied Committee's "seize-power," being nothing else but a "seize-seal" action, made this affair look like a joke.

Zhao Ziyang gave another superb performance during the cultural revolution. In general, veteran cadres did one of the following three things during the cultural revolution: one was to stay in bed and refuse further responsibilities, like provincial party committee member Lin Jiangyun and others, who declared themselves superannuated and on their own initiative quit their jobs. Even senior party member Zhu De went home to tend to his orchids. Another way was to become opportunistic and change course. This was what Wang Xiaoyu of Shandong, Pan Fusheng of Liaoning, Lin Liming and Zhao Zhuoyun of Guangdong and others did. All these opportunists have by today concluded their political careers. Probably most of them are still in prison writing self-criticisms. Another group were hard-headed unyielding types who would fight back against the red guards. There were Tao Zhu, He Long, Wu Han, all showed backbone and guts, but, alas, they jeopardized their lives. When faced with the three parties in Guangdong, Zhao Ziyang did just the right thing. He did not resist the three groups and also did not support any one of the three groups. All three were somehow disgruntled with him, but none of the three came to hate him. As a consequence, he did not get to suffer much although he was dragged out, criticized, denounced and paraded through the streets. While protecting himself, Zhao firmly stuck to his post. This after all showed that he placed his public responsibilities to the people above his private interests. This praiseworthy trait of character is of important significance for the future advancements in his career and the trust that people put in him.

Yet another thing: at the time when the "gang of four" came into power, Zhao Ziyang had gone to Inner Mongolia as party secretary. In the time of the "gang of four" he had returned to Guangdong like a [illegible] fish come to life again to become first secretary of the provincial party committee, and also during the time of the "gang of four" he had gone to Sichuan to administer that province. Nevertheless, during the years and months of the stormy period of Jiang Qing's "oppose rightist case-reversing wind" and "Criticize Deng" movement, Zhao Ziyang seems to have already been a target of Jiang Qing's attacks against the sinister xiu-cai [anti-Maoist intellectuals]. However, Zhao did not scamper away like the monkeys when their tree is felled, following the downfall of Deng Xiaoping. Thereafter we observe that, although Zhao was not liked by Jiang Qing, he never aroused her hatred to the extent that Deng did, a hatred that could only be assuaged by the destruction of its target. This shows that Zhao could handle the "gang of four" in a perfunctory way, and since Zhao did not fall as Deng did, it also shows that Zhao never tied his own fate to the policies of any other person.

In summary we observe that Zhao had always been able to smoothly cope with the various leftist and ultra-leftist political movements. He would commit the mistakes that were the mistakes of the times, but he would not commit mistakes that could be blamed on him personally. Thus, he could safeguard himself and improve himself. Before Zhao took charge of one department or became head of one faction, he has had the tendency to attach himself to a certain faction, but he never made his attachment to any party a matter of life and death. He therefore always preserved his freedom and free mobility. This is one of the characteristics that Zhao has shown throughout the political struggles of the past.

Steady and Correct Judgment

The above statements demonstrate clearly Zhao's firmness, devoid of rashness in his actions, and his perfect judgment that never let him commit a mistake, but these facts reflect Zhao's actions as one-sidedly conservative and passive. Due to the restrictions of time and place, none of his speeches or actions were of an earthshaking nature. However, he certainly is not a man who merely echoes what others say or a mouthpiece for others, or a machine without ideas and thoughts of his own. At the right opportunity and under conditions that assure success, Zhao can perform amazing actions, you will have to admit that when you meet up with such.

The first example: Although the "Whatever Faction" was "rectified" into a stage of utter dejection at the third plenum of the CCP Central Committee, that party revived in the spring of 1979. Firstly, the expected results have not been forthcoming in the punitive struggle by the Deng party against Guangdong. Then the many problems in the economic adjustment are far from ideal, and finally linking all levels together, there is an evil, anti-Central Committee wind blowing. (According to the report given by Hu Jiwei in September 1979 at the Central Party School, there were the following typical occurrences:

Two county party secretaries, under the guidance of their district party secretary, stated: "The third plenum of the CCP took so far only 90 days. If it proclaimed the cultural revolution to have been one big calamity, the past 90 days are also one big calamity, worse than the 10 years of cultural revolution. What we have now is an adverse wind of a thousand miles." There was also the head of a provincial propaganda department who said: "Where is China going? Where is Deng taking China? What is Hu Yaobang up to? Hu Yaobang is a revisionist of the old order.") In general big-character posters and written slogans have made their appearance proclaiming to be pro-Mao and anti-the two Hu (Hu Yaobang and Hu Qiaomu)--no frantic anti-Deng Xiaoping wind blowing yet. This spring, with its sudden warmth turned cold again, the "Whatever Faction" launched its attacks, with such uncanny calls as "the flag has been struck down" and "things have gone too far," to which the literary circles added their "Ge-de [Goethe], que-de [lack of virtue], xiang-qian-kan [eyes front!]. For one period of time the people on the mainland were nervous, worried and uncertain in their minds as to what was going to happen, whether the cultural revolution was starting up again.

In this situation Deng Xiaoping gave out the "Four Items To Uphold," which got Hu Yaobang, the target of all attacks, into great difficulties. It looked as if the heavens would fall in. At this moment Zhao Ziyang rushed into battle to intervene. On 23 May 1979 the RENMIN RIBAO published an article entitled "Comrade Zhao Ziyang at a Plenary Meeting of the Sichuan Provincial Party Committee Emphatically Urged To Unify Ideology Inside and Outside the Party in the Spirit of the Third Plenary of the CCP Central Committee." Zhao Ziyang firmly pointed out: "There is a small group of people, badly poisoned by Lin Biao and the "gang of four," who with open eyes fail to see the excellent situation that followed the Third Plenary Session of the CCP Central Committee, and who even go so far as to put the blame on the third plenary for problems that arose in preceding periods. This trend of thought is the upshoot of an ultra-leftist tendency, which easily tempts and misleads people. ...The profound historical significance of the third plenary of the CCP Central Committee and its correct stand cannot be explained merely by achievements of only a few months. We must lead the people to a higher platform from which to view farther ahead and have them gain a deeper understanding of the spirit of the third plenary of the CCP Central Committee." Although there is much hackneyed part cliche in this statement, the statement, targeted as it was and issued in the name of the party in full power over an area populated by 100 million people, cannot be dismissed as mere cliche. The bombardment which was thus directed by Zhao Ziyang, the local party in power, against the "Whatever Faction" could not possibly be withstood by Wang Dongxing and the others of that party system which had already begun to crumble. By further repeated attacks soon afterwards by such men as Wan Li and Ren Zhongyi, the situation quickly changed. Wang Dongxing's cold spring turned into the warm spring scene of Deng Xiaoping. Through this battle, Deng Xiaoping's prestige rose high like the sun at noon, and this laid the foundation for his move into the Zhongnanhai, the central government quarters.

The other incident was Zhao Ziyang's courageous statement on the theoretical plane: "The purpose of developing production is to improve the people's livelihood." The formulation over the past years had been: "Production is for the revolution." Zhao was the first to spell out what the people have had in their minds but would not dare say. This was extremely significant, a move to stir up popular enthusiasm for the four modernizations and to reduce mistakes or mishaps in the work of construction. Zhao's statement was followed by articles in the communist press on the theme of "cure poverty, gain prosperity." Now it has even been determined as the party's general line that "to build up high-level material civilization and democracy is the purpose of constructing socialism." In spite of these facts, Zhao never gave the impression of being a great talent in the field of political theory, but he certainly must be credited with no small a share in establishing the new theoretical structure.

The Good Administration of Sichuan Province

Zhao Ziyang's achievements during his administration of Sichuan can be vividly illustrated by the following: a catastrophic disaster area where a coupon for 30 jin of grain could be exchanged for a young girl was turned into a well-adjusted world where a 0.10 yuan bonus was paid with the purchase of every jin of pork. No other concrete measures were employed than to liberate the minds of the people, to show concern for the peasants, to gain an understanding of the conditions and appropriately loosen up political policies; in short: from strangulation to relaxation, from relaxation to revival. Some have expressed the opinion that since Zhao Ziyang could successfully administer Sichuan, he must be able to administer the whole country equally successfully. This, we are afraid, is a somewhat lopsided deduction. The successful administration of Sichuan was an act of revival, just like healing a wounded person and restoring his health. It merely required careful nursing and then was bound to result in the restoration of full health. Zhao was considerably more skillful in the healing process and restoration of health was therefore faster, but that was all. When it comes to "healing" the country, it is not only restoring health to a wounded body but also a case of turning the weak body into a strong body, of developing and of building up. That is quite a different thing from successfully administering the province of Sichuan.

Our confidence that Zhao Ziyang can successfully govern the country is built on the adaptability which he has shown in the past, concretely demonstrated in his capacity for administration, organization and good judgment, as well as in a certain level of theoretical capability and courage.

True Revolutionary Quality

The "revolution" referred to here does not mean at all the stereotype cultural revolution or the "grasp revolution to promote production." It is meant to refer to turning ossified and declining things and thoughts into such full of vitality and progressiveness. Zhao demonstrated revolutionary quality of this kind only after the overthrow of the "gang of four." The reason for this is partly--as already referred to in the above--his character of "treading the middle road," trying to gain successes by whatever means and of taking a steady, unconspicuous course. Another reason is that under the strict ultra-leftist ideological control of Mao Zedong a member of the communist party was just not able to think independently. This was so after the Zunyi Conference, it was very strictly so after the establishment of the communist regime and it reached its climax during the cultural revolution. There is sufficient evidence for this, starting with the period of "unanimity" down to the treatment accorded to Peng Dehuai, Liu Shaoqi and Deng Xiaoping. Much less would a man like Zhao Ziyang show independence, he definitely would not demonstrate it like Peng Dehuai. Following the overthrow of the "gang of four," Mao Zedong's saintliness had ceased to exist for all practical purposes, and the Zhao Ziyang ideology with its sharp observation and clarity of judgment experienced a fairly widespread liberation. The principle of "single decision, single action" was given free play, urging everyone to take the first step in [illegible]. This spirit and courage of "taking the first step" was very important in the CCP leadership. In the past, no one would have dared to step one step ahead of Mao Zedong. Now it has been done; this was an action amounting to rebellion. The very spirit and courage of it increased the people's approval for Zhao Ziyang to move into the Zhongnanhai grounds.

Zhao Ziyang presumably took note of the criticism of the Liu Shaoqi-Deng Xiaoping line by the "gang of four" as contained in their indictment of these men, and then acted in exactly the opposite way, that is by just "taking a first step." The commune members are to have their private plots and are to develop free marketing, even to fix farm output quotas for each household. In industry, autonomy was expanded, management is to be independent and enterprises are to be responsible for their own profits and losses. As a result, production experienced recovery and further development. We wish to point out in particular Zhao Ziyang's revolutionary actions in the state council. For instance he views the political power on the mainland under the separate sectors of party affairs, military affairs, politics and law, administrative affairs, etc. At present the most revolutionary atmosphere prevails in the administrative departments in the state council. There are two things worth noting there, since Zhao Ziyang took charge of the state council: One is that he finally cut down the Da Zhai "red flag," this ultra-leftist model on the agricultural front which Hua Guofeng strongly promoted and protected. Secondly, he got rid of the "petroleum faction" which capitalized on the Da Qing spirit and on all other petroindustrial establishments and which was about to introduce, actively and steadily, ultra-leftist tendencies into the industrial front.

In a previous article, this writer has pointed out that the power struggle among the ranks of the present communist party is still continuing, and that this struggle is not at all epitomized by the struggle between the "All Correct" faction and the empiricists. Today's struggle among the Chinese communists has entered the stage of a struggle between a one-sidedly reformist and a one-sidedly conservative party. The theoretical and practical significance of this struggle is hardly less important than the struggle between the "Whatever Faction" and the leftist extremists. Presently, commentary by the people on the maintland is: "In the past we had a cultural revolution with bloodshed, now we have a cultural revolution without bloodshed." This talk about a "cultural revolution without bloodshed" does not refer to the revolution against the ultra-leftists and against the "Whatever Faction", a revolution that has already been basically concluded, but rather refers to the various new formulations in the field of political theory (democracy is the objective not a means, the ultimate aim of construction is a socialist society with a high degree of democracy and a high degree of culture, the objective of production is to improve the livelihood of the people, emphasis on anti-feudalism, criticism of attributing an exaggerated function to the spiritual, affirmative attitude toward humanitarianism, etc., etc.). As to changes in personnel, there are indications that all conservative and rigid, old men like Hua Guofeng, Ye Jianying, down to Chen Yonggui will all gradually be pushed out from all levels of power. This again is viewed by the people as a "cultural revolution without bloodshed," which indicates the gravity of the matter. In this struggle Zhao Ziyang will be one of the key figures. The struggle has just started and conclusions as to its outcome cannot yet be drawn, but it certainly deserves the close attention by anyone concerned about the affairs of that country. Of course great importance must be attributed to the role of Zhao Ziyang, especially at this time when the main battleground is the state council of which Zhao is now in charge.

Inquiring Into Some Related Questions

Firstly, it is said that Zhao Ziyang is basically an uncouth soldier of the Chinese communist Eighth Route Army; how can a man like that be guide in the four Modernizations? He is unfit to become premier of the state council.

People who raise this question consider the fact that Zhao was only a middle school student, later he was campaigning up and down the country. Although he has had experience in political and administrative work, also in military and military-political work, he lacks knowledge of modern science. How can a man who is so completely ignorant of modern science and technology guide China in realizing the four modernizations?

There is some reason on the side of those questioning in this way. In general, leadership in the work of modernization is not possible without modern know-how. However, looking at this problem from another angle: in the present Chinese communist highest leadership there is indeed one peasant, but is there one with modern scientific and technological knowledge? Don't look, there is none. There is therefore no practical meaning in putting forth this requirement, because it would be unrealistic to ask now for the removal of the Chinese communist leadership or to have the intellectuals share in the highest state power. At present it is already pretty good that the Chinese communists, as a first step, listen to and accept the advice and proposals of experts.

Speaking again of Zhao Ziyang personally, his promotions did not come about as in the case of Wang Hongwen, who shot up like a rocket, also not like Hua Kuofeng's, relying on the good graces of Mao Zedong in ascending to the most venerable position and finally getting there through an arrangement that was a "blunder" of history. Zhao Ziyang had climbed up step by step relying only on his own ability. Toward the end of the fifties all units and agencies of Guangdong Province and Guangzhou Municipality spread the tale that "as Zhao Ziyang became provincial party secretary at 18, he has been the youngest provincial party secretary ever, throughout the whole country." This reveals a kind of acclaim and admiration and shows that Zhao Ziyang's ability was widely acknowledged. Today his talents are even more clearly revealed to us, especially, as we mentioned before, his adaptability. If Zhao Ziyang, now in command of the state council, is able under the new political conditions to heed the opinions of Chinese and foreign experts, if he is able to use correct judgment in assessing capitalist and socialist institutions, being eclectic in selecting their good points and rejecting their shortcomings, and march forward on a Chinese road to building up the country, this already would be a very good fortune for China indeed. However, this is nothing but our subjective wish. Whether Zhao Ziyang, objectively, will conform to our subjective wish, only the future will allow this conclusion.

Secondly, it is said that Zhao Ziyang is a member of the Mao Zedong party, a member of the communist party which is basically acting in the old, rigid ways, the party of Marxism-Leninism and Mao Zodong Thought, which is all incompatible with modernizations. Zhao Ziyang in this sense is also a man of the rigid old ideology.

Let me refer you to recent speeches by Zhao Ziyang: "To uphold the four basic principles, to eliminate interferences from right and left, to progress in the emancipation of our minds, to preserve stability and unity, these are the most important preconditions for the effective realization of the four modernizations to be achieved by dedicating heart and soul to the cause, by going all out in our efforts and by concentrating all our energy on the task." "The great achievements in our socialist revolution and in our socialist construction over the last 30 years have been accomplished by upholding the four basic principles. Now that we can summarize past experiences and lessons in working for the four modernizations, we shall also rely on the strength of the four basic principles." "We must preserve the authority of the party, preserve the trust in the collective leadership of the party committees." "We must resolutely suppress sabotage by all kinds of anti-socialist elements. Social chaos would result if we do not meet out punishment to that small group of bad people who oppose the leadership of the party, who vainly attempt to overthrow the dictatorship of the proletariat and try to destroy the socialist system."

Does this not sound like the typical ultra-leftist stereotype full of the spirit of the "gang of four?"

There is reason in asking this question. Zhao Ziyang is indeed a member of the Chinese communist party, furthermore a typical member of the Chinese communist party Mao Zedong-style. The other Chinese communist leaders are also all this type of party members. They look upon the guidance of the party, the authority of the party, the interests of the party (the exclusive benefits from the one-party system) as their very life, as a holy inviolate dogma. This dogma must not be doubted or disputed. The four basic principles cannot pass the test of practice but they are still to maintain the "correct standpoint." The only possible way therefore is to designate this dogma as a forbidden zone and to turn the dogma into something like a divine revelation and holy bible.

Zhao Ziyang will speak in this manner and the other leaders will also speak in this manner. It expresses the true nature of the party spirit of the communist party member. Mao Zedong, Liu Shaoqi, the "gang of four," Zhou Enlai, Deng Xiaoping... they are all imbued with this "true nature." Party spirit is the common nature of the communist party, but the party members are also human beings, each with his individuality. Due to their differences in historical experiences, backgrounds and ideological conditions, there sprang up a much more vivid and lively political situation, once the mythical fetters of Mao Zedong were thrown off and after the emancipation of minds. As a consequence, new theories (formulations) and new measures of reform were set forth. We have already emphasized Zhao's commendable quality of daring "to take the first step." If Zhao would also be able and willing in future to maintain the spirit and muster the courage of "taking a first step," this would already be an extraordinary achievement. More "first steps forward" will bring more reforms, more progress and probably more improvements in the livelihood of the people.

To Be Considered Conclusions

Our inquiry into Zhao Ziyang can only say: this is what he was, this is what he is now and this is what he will "possibly" be like in future, but there cannot be certainty in our predictions.

If 9 years ago, at the time of the "gang of four," someone would have expressed the hope that the CCP would come up with something like the present political theories (negating the cultural revolution, dedeification of Mao Zedong, democracy as objective, improvement of the livelihood of the people as objective of production development, etc.) or if someone would have predicted the present reforms, it would all have been considered the fantasies of a madman, impossible of realization. In the end, people now regard it as a possibility that originally had been extant and accept it as a natural development. If someone would now suggest that the CCP will institute supervisory controls by the people and a genuine democracy, this would similarly be regarded as the views of a cloistered bookworm who engages in wishful thinking. If tomorrow these ideas would become reality, then of course all those post-factum theoretists will dig out a thousand reasons in proof of the inevitability of these developments.

Be sure not to mistake and not to interpret this writer as believing that the Chinese communists will on their own initiative lay down their butcher knives and immediately turn into Buddhas, or that they will, on their own initiative, hand the government over to the people or relinquish their exclusive benefits from their one-party rule.

The opinion of this writer is that all things in the world are subject to change. Changes may go against the wishes of the people but may also go in conformity with the wishes of the people. The Chinese communists could possibly slide further down along the dictatorial road of Mao Zedong, hostile to the people, or they could possibly advance on the broad road of people's democracy.

In the opinion of this writer, if the Chinese communists would slide down further toward dictatorship this would be a conscious move in conformity with their natural instincts. Any move toward the people could only be a passive move under compulsion.

It cannot be denied that the general tendency of the Chinese communists after the overthrow of the "gang of four" was toward the people. What compelled the Chinese communists to move in the direction of the people? It was an effect of the communist party itself and the great calamity of Mao Zedong and the "gang of four." It was the conservative force that stood in the way of progress. It was the rapid decline witnessed in the various socialist countries of the world. It was the capitalist world that was still full of vitality although Marx had condemned it to death. It was the present high degree of technological achievements in the capitalist world, its high level of material civilization and high degree of democracy. It was pressure from the upsurge of democratic ideology in the world and pressure of foreign press opinion on the Chinese communists. All these factors caused the Chinese communists to sober up somewhat. The Chinese communists had already by themselves turned into a blind alley. To retreat from this alley would be the way toward a people's world. As it looks now it seems the Chinese communists are still wavering undecidedly at the entrance of the blind alley. To induce the Chinese communists to retreat from the blind alley would need strengthening all those factors that would be apt to bring them back to reason and motivate them to reform, particularly strengthening the internal democratic forces, in order to compel the Chinese communists to tend toward the people, to make common cause with the people, to capitualte to the people.

It is from this viewpoint that this writer has analyzed Zhao's characteristics and his trends of thought, adding speculations about his future actions.

In the past there has never been a savior, the people had to rely on their own strength to save themselves. The future of our fatherland and the well-being of its people can be only secured by having the people rely on their own strength. It would be unrealistic to entrust all hopes on a particular individual or a particular party. The country is the people's country, it does not belong to any particular individual or any particular political party!

IMPORTANCE OF PROPER TRAINING FOR YOUNG WORKERS STRESSED

Beijing GUANGMING RIBAO in Chinese 28 Aug 80 p 2

[Article: "Looking at the Mainstream of the Young Generation"]

[Text] In a seminar on political thought work held jointly by the No 1 Bureau of the Machine-Building Industry and the National Machinery Association, a factory in Beijing told of its activities regarding the thinking of its young workers and its incentive program.

The number of young workers (under 28 years old) in the factory is 3,548, comprising 48.3 percent of the factory's total. In a few major production divisions, their proportion is even greater: 60 percent in the mechanical and metallic engineering divisions, and over 70 percent in the steel division. There are a total of 1,045 team members in the factory. They make up about 15 percent of the total number of workers, or 29.4 percent of all young workers in the factory. This means that educating young workers is a very important part of political thought work.

The number of young workers continues to increase. Under the guidance of the party and team organizations of various levels, and having, gone through the training and examination of the programs in the factory, 277 comrades have joined the Chinese Communist Party. This group comprises 8 percent of the factory's young workers. Some 388 comrades have been selected and trained as management cadres in divisions and laboratories; they make up 11 percent of all young factory workers. In addition, 24 comrades have been promoted to middle-level leadership cadres. Last year, 1,151 young workers were named advanced workers; they comprised 46.3 percent of all advance workers in the factory. In addition, 243 comrades (or 7 percent of the total) have successfully gained entrance into universities or the workers' college organized by the factory. There are a total of 646 group and team leaders in all the divisions of the factory, and 23 percent of them (193 persons) are young people who have joined the plant since 1970. Take the steel division, for example: most of the boiler leaders are high school graduates who have joined the factory since 1970.

As the above figures show, young workers occupy a very important role. They not only constitute a major labor force in production, but they have become a main force in the plant as a whole.

Of course, we can see from the survey below that during the 10 years of destruction brought about by Lin Biao and the "gang of four," crimes committed by the young workers in the factory were shocking.

The factory conducted a survey and received 482 unsigned reports. Some of the questionnaires were fully answered, while others were only partially completed. Some respondents gave more than one answer to a question. Hence, it is impossible to calculate percentages. Nevertheless, after some grouping and organization, we can still gage the minds of the young workers in the factory.

Question 1 in the survey was: What are you most concerned about? Some 315 persons replied that they were most concerned about what would become of China. They wanted the four modernizations to be realized, and they wanted their factory to become an advanced organization. Another 141 persons said that they were most concerned about their promotion, salary, and fringe benefits, while 26 replied that they were not concerned about anything at all.

Question 2 in the survey was: What are you most interested in? Some 254 respondents said that they were most interested in science and technology, cultural knowledge, social unity and stability, pragmatism, moral integrity, and altruism. Another 58 said that they were most interested in a quiet life and a satisfactory job; 39 were interested in democracy, freedom, music, travel, free time, life in general, and good friends; 18 were interested in themselves and their sons and daughters; and 57 expressed no interests whatsoever.

Question 3 was: What do you detest most? Some 334 replied that they detested Lin Biao and the "gang of four" for destroying social stability and unity. Another 95 detested incorrect attitudes within the party, special privileges and favors, and the bureaucratic mentality. A total of 32 detested people who live on socialism but do nothing and remain idle. 5 persons said that they detested war, disease, and inflation; while 13 did not care.

Question 4 was: What are your most pressing needs? Question 5 was: What are your major problems? Some 244 replied that they were in need of knowledge and expertise, educational opportunities offered by the factory, strong willpower and perseverance, a nice learning environment, and plenty of time. Another 99 said that they wanted a house, money, and a mate, while 35 respondents expressed no desire for anything. With reference to major problems in life, 237 cited lack of knowledge and leisure time, the housing shortage, crowding on public transportation, the inability to secure adequate furniture, no money and no suitable mate. Another 242 said that their major problems were separation from their spouse owing to different work locations, chronic illness, dissatisfaction with their work, and spiritual emptiness; 78 did not report any problems.

Question 6 was: What do you do during your leisure time? We can see from the answers to this question that 245 make use of their leisure time learning science, technology, culture, foreign languages, and literature. Some 134 spend their leisure time doing housework, laundry, cooking, taking care of their children, and making their own furniture; 52 spend their time watching television and movies; 75 replied that they do not do anything.

Question 7 was: Do you think that the four modernizations can be realized? A total 337 said that they were hopeful and expressed confidence; 55 persons said that there were many difficulties and gaps and that they were not optimistic; while some respondents considered the question poorly devised and said they could not give a definite answer.

Question 8 was: What do you think are the major stumbling blocks for the four modernizations? Some 146 identified problems such as the low level of technology, bad management, and the lack of experts. Another 152 cited problems such as bureaucratic attitudes, work inefficiency, and the inertia of old and undesirable work habits. Still another 46 mentioned the bad influences left behind by Lin Biao and the "gang of four" and the lack of social stability and unity, while 68 said that they were unable to answer the question and did not give any specific answers.

Question 9 was: Are you willing to work at this factory? And why? Some 240 replied in the affirmative, 43 were satisfied with their work assignments, and 122 replied in the negative. Among the latter group, 76 were dissatisfied with long commuting hours and traffic inconvenience, 12 were dissatisfied with the leadership and the latter's inability to adjust to changing conditions, 7 considered their work environment too polluted, and 6 were unable to adjust to working in three shifts.

Question 10 was: Do you wish to join the Communist Party? A total of 314 replied that they strongly desired party membership and were actively seeking this status, while 79 expressed a lack of interest or loss of interest. Some did not give a definite answer to this question.

We can clearly see from the survey that the quality of our young workers as a whole is fine. Their mental outlook is basically stable, and their overall development tendencies are for the good. The overwhelming majority of young workers are deeply fond of the party, socialism, and the country. They demand progress and are concerned about politics, the collective life, and the productivity of the factory. Only a minority are lacking in ambitions or spritual good health or are pursuing the capitalistic way of life.

How do we monitor our activities based on the characteristics of the young workers?

The factory closely coordinates the changing work foci of the party. It holds fast to the goals of educating the majority of team members and young workers on the four basic principles and communist morality. The factory actively mobilizes team members and young people to acquire cultural knowledge and scientific technology, to make innovations, and to offer their youth for realizing the four modernizations. At the same time, the factory sponsors cultural activities for young workers in order to enrich their life during their leisure time.

In a meeting organized by the team committee of the factory to celebrate the "Deeds of the 1980's" and the pursuit of the five goods, an award was presented to team member Niu Linghua [3663 3781 5478], a young worker at the factory and a member of the Chinese Communist Youth League. She was praised for her altruistic behavior in twice donating blood and saving the life of a child at the risk of aggravating her own poor health. She received an honorary citation and was presented with a symbolic red flower.

Since the creation of the incentive program, the overwhelming majority of team members and young workers have been enthusiastically participating in the various activities organized by the teams. Up to this time, 957 team workers have received awards. A total of 1,467 awards have been granted. Based on statistics, by dint of hard work and devotion over the past 6 months, the team members and young workers of the factory have generated 12,000 yuan by recycling used iron and steel and metallic and other raw materials. Their efforts in repair and equipment renewal brought in a total income of 15,543 yuan. They introduced 54 technical programs and carried out into fruition 35 practical proposals.

After receiving the citation for rescuing the life of a child with the blood she donated, Comrade Niu Linghua successfully carried out two technological programs in the refining group and received two additional awards. Although she is only a high school graduate, she studied diligently, learned from the old workers, weathered many difficult problems, and finally resolved the problem of the corrosion of salt baths and flanges. In so doing, she has filled a gap in the production process and quaranteed the quality of products in her group.

While promoting their activities on "Deeds in the 1980's", the factory also pays attention to organizing activities which cater to the cultural life of the young workers. The team committee has sponsored contests in chess, go, and Chinese chess; two technology film shows; sports events and variety shows; and a spring tour to Xi Shan for more than 200 team cadres and workers who had received awards. In mid-July, the factory organized a summer camp at Fang Shan for team members and young workers who had received awards. The various grassroots branch committees have also organized activities such as gala shows, music festivals, film shows, operas, and various ball and chess games. Recently, with the strong support of the union, the factory sponsored the first calligraphy, art, and photography exhibition, which received a favorable response. The development of these activities has furthered enlivened the young workers, increased the attractiveness of the factory, and delighted the team members and young workers.

LEGAL PROVISIONS FOR CHINESE CITIZENSHIP EXPLAINED

Beijing RENMIN RIBAO in Chinese 26 Sep 80 p 5

[Article by Gong Qiuxiang [7895 4428 4382], "The Principal Basis in Handling the Citizenship Question"]

[Text] Citizenship is the legal qualification of an individual to become a citizen of a state. It is a prerequisite to determining whether a citizen is entitled to enjoy rights and to be subject to the responsibilities of that state, and it is the legal basis for a state to afford diplomatic protection to its citizens residing abroad. The citizenship question is in principle a matter that falls within the realm of national sovereignty. Possession, acquisition, loss, and restoration of citizenship are regulated by domestic law. At present, most countries of the world have their own individual laws concerning nationality.

Today, the nationality laws prevailing in every country generally provide two principal rules for the acquisition of citizenship--i.e., citizenship acquired by birth or by naturalization. Citizenship by birth is also called original citizenship of a country. The principles adopted by each country to determine the citizenship of an individual by birth are not in conformity. Some of the countries adopt the rule of "law of blood" [jus sanguinis], whereby a child's citizenship is determined by his parents' nationality, regardless of his place of birth; some other countries adopt the rule of "law of the soil" [jus soli], which provides that any person born within a country's boundaries is a citizen of that country, regardless of the nationality of his parents; and still other countries adopt the principle of combining both "law of blood" and "law of the soil." The trend is for most countries to adopt both "law of blood" and "law of the soil" simultaneously.

In the past, our country has traditionally adopted the principle of "law of blood." Based on the experience of practice over the past years and the situation newly emerged, and in consideration of the trends developed in most countries regarding the handling of the citizenship question, the Nationality Law which our country has laid down at present adopts the principle of combining both "law of blood" and "law of the soil." Articles 4, 5, and 6 of the Nationality Law are concrete reflections of the principle mentioned above.

Article 7 of the "Nationality Law" of our country stipulates: "A foreign national or a stateless individual who is willing to obey the Constitution and laws of China, and who meets one of the conditions below, may apply for Chinese citizenship:

1. He is an immediate relative of a Chinese; 2. He is a resident of China; or 3. He has other justifiable reasons." In general, the nationality laws of every country take the marriage of one of its citizens to a citizen of a foreign nation as an important case for acquisition of citizenship, and a specific stipulation has been provided for it. According to the practice of our country, foreign citizens are not eligible automatically to become citizens of China simply because they are married to Chinese citizens. However, according to our Nationality Law, in such cases they will become "immediate relatives of Chinese nationals," and thereby they are qualified to apply for Chinese citizenship.

Another fundamental principle followed by our Nationality Law is nonrecognition of dual citizenship. This is a consistent position of our government and a very important experience in practice. As early as the 1950's, Premier Zhou Enlai and other leaders stated their position on this principle. This principle has also been reaffirmed many times in communiques on occasions of the establishment of diplomatic relations with countries and in other documents. This principle has provided a strong basis for properly resolving the problem of dual nationality, which is a legacy of history, with countries concerned, and for avoiding the recurrence of the problem of dual nationality. At present, the issue of resolving and preventing dual nationality is still relatively outstanding. For this, the nationality law of the People's Republic of China has, on the basis of past experience, further provided the following specific stipulations: 1. A Chinese citizen residing abroad who voluntarily becomes naturalized in another country will automatically lose his Chinese citizenship. 2. An individual whose parents, or one of whose parents, is a Chinese citizen, and who resides in a foreign country where he is born with citizenship of that country by birth [jus soli], does not have Chinese nationality. 3. One who has gotten approval to take or to restore Chinese citizenship is not allowed to retain his citizenship in a foreign country. Over the past years, we have discovered through practice that some Chinese citizens residing on Chinese territory have secured passports from foreign countries, and have asked for treatment equal to that accorded to foreign nationals, prior to their renouncing their Chinese citizenship. The situation has caused confusion in the handling of the citizenship question. As a result, the "Nationality Law of the People's Republic of China" explicitly stipulates: An individual has "Chinese citizenship if one of his parents is a Chinese citizen and he himself was born in China. Dual nationality of a Chinese citizen is not recognized. Should a Chinese citizen wish to become a foreign national, he has to file a petition to renounce his Chinese citizenship, and the petition must be approved. Such a stipulation helped us abolish dual nationality.

According to the fundamental spirit of the Nationality Law and the persistent policies of our government, we support and encourage overseas Chinese residing abroad to voluntarily acquire citizenship of their country of residence. We hope that they will enjoy the same rights and be subject to the same responsibilities which the country of residence has accorded to their own nationals, and that they may make a contribution to the prosperity and progress of the country of residence. Overseas Chinese who already are citizens of their country of residence automatically lose their Chinese citizenship. Meanwhile, in order to respect the desires of those overseas Chinese who do not become citizens of a foreign country, we do not prefer to force them to change their nationality. As for those overseas Chinese who voluntarily desire to retain their Chinese citizenship, we encourage them to obey the laws and regulations of the government of their country of residence, to respect local customs and practices, and to get along well with local people, in order to make great efforts to promote friendship between China and their country of residence. Of course, the government of the country of residence should also be requested to protect their legitimate rights and interests. The Government of China has the responsibility to afford diplomatic protection of the legitimate rights and interests of overseas Chinese. Such provision is in conformity with the basic interests of the masses of overseas Chinese, is helpful in resolving the problem of dual nationality among overseas Chinese, which is a legacy of history, and is useful in improving and promoting friendly relations between our country and the countries concerned.

Provisions also are provided in the Nationality Law of our country to reduce and abolish statelessness. A stateless individual is a person who is not a citizen of any country. There are some people in our country who are stateless or are of unknown nationality, but they are only a handful. In order to reduce and abolish this phenomenon, so that they may enjoy the same rights and be subject to the same responsibilities as other Chinese citizens, Article 6 of the "Nationality Law" stipulates: "An individual whose parents are stateless or are of undetermined nationality but who reside in China, and he himself is born in China, has Chinese citizenship." It also provides that a stateless person may apply for Chinese citizenship if he meets certain stipulated conditions.

The promulgation of the "Nationality Law of the People's Republic of China" enables us hereafter to have a strong legal basis in carrying on negotiations with foreign countries for the purpose of handling the citizenship question. However, in view of the complexity of the citizenship question itself, which involves relations between one country and another, it is certain that, in the process of handling the citizenship question in a practical manner in the future, a variety of problems will be unavoidable. This situation requires us to do our job by continuously summing up experiences.

NEWSPAPER CORRESPONDENTS HAVE PROPER RIGHT TO FILE NEWS REPORTS

Jinan DAZHONG RIBAO in Chinese 27 Sep 80 p 1

[Article: "Guarantee the Proper Right of Newspaper Correspondents to File News Reports"]

[Text] In XINWEN ZHANXIAN [NEWS FRONT] No 9, just published, there is an article entitled, "Such a Thing Happened." The article states that after Comrade Song Maopang [1345 5399 1690], a cadre of the Production Division of the Shanxi Provincial Agricultural Committee, had given reporters a briefing on the fact that agricultural cadres in the province had studied an editoral of RENMIN RIBAO about moving water from west to east in Xiyang, he was dogged by an invertigation without any reason by some leading personnel of the provincial agricultural committee, with the result that Comrade Song suffered cerebral angiospasm caused by high blood pressure.

The fact is that, after RENMIN RIBAO on 15 June of this year published an editorial, "Never Do Such a Stupid Thing as 'Move Water from West to East' Again," and then a report, "Work of 'Moving Water from West to East' in Xiyang Suspended," a majority of agricultural cadres and workers in Shanxi Province studied and discussed them in earnest. They all said that the editorial had grasped the vital point about paternalistic rule and had spoken out on what the masses of people had intended to say for many years but dared not. In order that everyone will learn a lesson from this "stupid thing," Comrade Song Maopang, who was responsible for collecting information on the discussion and writing briefings, gave the first briefing to reporters of XINHUA's branch office and SHANXI RIBAO. He was following the suggestion of Comrade Zhao Lizhi [6392 0500 0037], director of the Provincial Agricultural Committee. On the basis of the briefing, a news article written by SHANXI RIBAO, and screened and signed by relevant leading personnel of the Provincial Party Committee, was published as the first article on the front page of the newspaper on 2 July. It was beyond all expectation that such a good thing should have offended certain persons on the Provincial Agricultural Committee. On the morning of the same day, after learning the news from a broadcast, a deputy director of the Provincial Agricultural Committee wrote a note to a deputy chief of the Production Division to the effect that this article was a violation of the guiding ideology of the party organization of the agricultural committee, and that it had been [written] "for the purpose of venting one's spleen." The deputy chief called in Comrade Song Maopang twice for talks, once in the morning and once that same afternoon. He persistently asked: "Who leaked the briefing? With whose permission?" He said that this was "an attempt to get the news first," "furtile help for the provincial party committee," "stirring up trouble," "forcing the leading personnel of the Provincial Party Committee to sign," etc., thus applying pressure to Comrade Song Maopang. Comrade Song could not be convinced by the investigation and went to see the deputy chief to voice his opinion the next day. He also requested verification of the contents of the talk of the previous day. The deputy chief erupted into a furious rage and said that Song Maopang had intended to stir up an incident in the Provincial Agricultural Committee.

The article also told how certain leading personnel on the Provincial Agricultural Committee had purposely caused difficulties without any reason for reporters of SHANXI RIBAO because they were doing some related reporting on the matter and had also made a review of the deputy director and deputy chief of the Provincial Agricultural Committee. But it did not make clear the condition of the problem.

At the same time that XINWEN ZHANXIAN published this article, it also published a brief comment entitled, "The Proper Rights of Newspaper Correspondents Are Not To Be Infringed Upon." It pointed out: "Party newspaper correspondents were doggedly investigated because they had filed news reports through proper channels in order to uphold the party's and people's benefits. It is really surprising that this should have happened now, when the Party Central Committee has called over and over again for restoration of the party's fine tradition, and at a time when guiding principles for political life within the party are being carried out thoroughly, and especially that this should have happened in the leading organization at the provincial level and among the responsible cadres themselves! This indicates that certain comrades, even while they are talking about expanding democracy, are suppressing it by their action; while talking about upholding the prestige of the party and party organizations, they are weakening the party's leadership and lowering the prestige of the party by their actions. This is a matter worthy of the people's attention." The comment also pointed out: The fact that cadres and the masses file news reports to party newspapers is one of the important items of democracy within the party and of socialist democracy. It is one of the important rights protected by the party constitution and the laws of the nation, and it is absolutely not to be infringed upon. In this respect, it is the glorious responsibility of our party's news units to give the working personnel and the majority of news correspondents of party newspapers our constant, resolute, and forceful support.

KANG SHENG DEBUNKED AS SELF-SERVING MOUNTEBANK

Beijing BEIJING RIBAO in Chinese 8 Aug 80 p 3

[Article by Wang Tzukai [3739 1311 1956]: "On Kang Sheng's 'The Highest and Ultimate Criterion'"]

[Text] On the question of the standard of truth, the trumpeter of "Liang Ge Fan Shi" [Chairman Mao's collected writings] the touchstone for the standard of truth. After a 2 year debate on this erroneous way of thinking people are beginning to understand the absurdity and danger of that idea. However, there are still those who have yet to realize that the perpetrator of such an outrageous idea is none other than the eminent "master theoretician" Kang Sheng himself.

It was on 4 January 1960 that Kang Sheng first said, "Make the Chairman's thoughts the highest and ultimate criterion," adding: "This in itself is correct, but it is not good to bruit it about." To say that it is "correct" to "make the Chairman's thoughts the highest and ultimate criterion" is to say that Mao Zedong Thought should be made the touchstone for the standard of truth, that it is not only "the highest criterion" but also "the ultimate criterion," and that by inference it is the only criterion. When Kang Sheng said that "it is not good to bruit it about," he was merely resorting to duplicity. What he really meant was that his absurd statement should be treated as an "important order" and that it should be promptly spread around. As expected, his "order" was soon relayed down to the lowest echelons of party members and party cadres at the Central Communist Party School, who forthwith made it a topic for discussion. Thereupon, Kang Sheng, who had said that "it should not be bruited about," not only offered no objection, but made no attempt to head it off. Not only that, but he himself made assiduous efforts to sell the idea by spreading it far and wide. It was he himself who ordered students at the Central Communist Party School to examine their attitude toward Mao Zedong Thought from the "high point" that it "represents the highest and ultimate criterion," and to "study Mao's writings first before studying the writings of Marx and Lenin." He even made it known that in studying the writings of Marx and Lenin, they should "proceed from Mao Zedong Thought." Those who expressed the slightest doubt or opposition were branded seditious or traitorous persons. For instance, when some comrades raised the question--"How can we proceed from Mao Zedong Thought when "Das Kapital" appeared before Mao Zedong Thought?"--they were castigated as being "opposed to Mao Zedong Thought." Since then, such absurd ideas as "Mao Zedong Thought represents the acme of Marxism-Leninism," "the highest truth," "carry out what is understood and also carry out what is not understood," "every sentence represents the truth, and instructions must be carried out to the letter," and everything "must be done according to a set policy," etc., have come tumbling down in rapid succession. It is clear, therefore, that it was Kang Sheng's theory of "the highest and ultimate criterion" which gave rise to all these absurdities.

By espousing "the highest and ultimate criterion" theory, Kang Sheng has shown what kind of "master theoretician" he was. A rudimentary knowledge of Marxism tells us that it is practice and practice alone that is the criterion for arriving at the truth. Apart from that, as Comrade Mao himself pointed out, "There is no other way of arriving at the truth."

Why, then, did Kang Sheng, the so-called "authority on Marxism," have the temerity to cook up the absurd theory of "the highest and ultimate criterion," in contravention of the basic position of Marxism? Why did such absurdities cast a bewitching spell on such a large number of cadres, so much so that even after the "gang of four" had been smashed, there were still those who continued to espouse the "Liang Ge Fan Shi" theory? The main reason is that Kang Sheng, taking advantage of the infinite confidence and deep affection engendered in the Chinese people by Comrade Mao Zedong and his thought during the extended period of Mao Zedong Thought, and their value as guideposts, with the principle for setting up a criterion for determining the truth.

By making Mao Zedong Thought "the highest and ultimate criterion," Kang Sheng not only violated the basic position of Marxism, but he was also guilty of flagrantly distorting and trampling upon Mao Zedong Thought.

First of all, advocating an absurd theory of this kind was tantamount to twisting Mao Zedong Thought in such a way as to turn it into a rigid body of doctrines completely divorced from practice and from what is proven by practice. At first glance, by making Mao Zedong Thought the "criterion" for arriving at the truth, Kang Sheng appeared to be giving Mao Zedong Thought a "high" rating. Actually, however, he did great damage to the tremendous guiding force of Mao Zedong Thought by turning upside-down the relationship between Mao Zedong Thought and what practice tells us. He had, in short, turned Mao Zedong Thought--which originally was based on practice, which exhorted a resort to practice, and which advocated continued supplementation, rectification, enrichment, and development--into something which is unrelated to practice and which takes precedence over practice. Thus, Mao Zedong Thought would cease to be a living body of theories developed in step with developments evolving from practice. It would be twisted into a body of rigid doctrines which has no relationship to practice and which takes precedence over practice. Mao Zedong Thought would cease to relate to reality and practice, once it ceased to be developed through practice by supplementation, rectification, and enrichment. On the contrary, reality and practice would be pared and shaped to fit Mao Zedong Thought.

Secondly, this "highest and ultimate criterion" theory, much like the "acme" theory espoused by Lin Biao, twisted Mao Zedong Thought into the category of "ultimate truth." According to Marxism, since the objective world continues to evolve and practice never ceases to reveal something new, human understanding must of necessity continue to grow, instead of remaining forever where it is. There is no place for the so-called "ultimate nature" idea in the world. True enough, no contemporary thinker can measure up to the stature and profundity of such spiritual guides of the proletarian revolution as Marx, Engels, Lenin, Stalin, and Mao Zedong. However, due to the limitations imposed by historical factors, their understanding cannot be said to have the attributes of the "ultimate." Marxism-Leninism has not exhausted the truth; it has only pointed the way to seek the truth.

Despite the fact that the idea of the "ultimate" has no validity, all philosophers and thinkers who lived before the advent of Marxism, including the great master Hegel himself, who did so much to develop the idea of dialectics on the basis of idealism, considered their bodies of thought "the ultimate truth." As a group, and without exception, they all fell under the spell of metaphysicism and turned their theories into absurdities. Appraised as the legatees of human culture, Marx and Engels established dialectical materialism, thus bringing to fruition a noble revolution in the history of human knowledge and debunking the entire body of "ultimate truths" as worthless. Marx and Engels, in repeatedly and mercilessly flaying the perpetrators of "the ultimate truth," said that "all the creators of the eternal truth in the past were more or less stupid asses or mountebanks." Nevertheless, Kang Sheng, playing deaf and dumb, arbitrarily adjudged Mao Zedong Thought as "the highest and ultimate criterion." By so doing, he denigrated Mao Zedong Thought to the level of the "ultimate truths" denounced and excoriated by Marx and Engels. In short, he put Mao Zedong Thought in the same class as the outmoded theories and effectively divested them of any revolutionary meaning.

Furthermore, by spewing forth "the highest and ultimate criterion" theory, Kang Sheng dismembered Mao Zedong Thought into fragments of words and phrases, making it a protective shield behind which to peddle his own wares. Kang Sheng never tired of calling Mao Zedong Thought the "highest and ultimate criterion," and yet, what does Mao Zedong Thought mean? To Kang Sheng, there was a great deal of flexibility in interpretation, and he felt free to interpret it in a way that best suited his purpose. What he did was to hack at and dismember the body of Mao Zedong's integrated and scientific thought and to reduce it to unrelated words and phrases. By claiming that Mao Zedong Thought is "the highest and ultimate criterion," he made Mao Zedong's every sentence, every phrase, and every word "the highest and ultimate criterion." Thus he was able to make use of every error or unproven theory of Mao Zedong in pursuing his own nefarious ends. At the same time, taking advantage of his status as an "authority," he felt free to interpret Comrade Mao's every sentence, every phrase, and every word in a way best suited to his own political purposes, and thus to make every sentence, every phrase, and every word of his own "the highest and ultimate criterion." Consequently, his every utterance was taken as a yardstick. If Kang Sheng gave the nod to somebody, that person would go to heaven no matter what a low and dastardly character he might be; but if he turned thumbs down on somebody who was a time-tested proletarian revolutionary, that person would be consigned to purgatory. He made it a practice to represent his own utterances as being those of Comrade Mao Zedong, pulling the wool over the eyes of the people wherever he went, so much so that it became a matter of habit.

Finally, by making Mao Zedong Thought "the highest and ultimate criterion," Kang Sheng actually dealt Comrade Mao the supreme insult. By doing that, he was in effect calling Comrade Mao Zedong a "genius" who knew everything the day he was born, an incomparable "deity" set apart from the human race, a "peculiar person" vested with infallibility. It was Kang Sheng's theory of "the highest and ultimate criterion" that gave rise to the modern superstitions and theories created by the likes of Lin Biao and the "gang of four."

From a theoretical point of view, the theory of "the highest and ultimate criterion" promoted by Kang Sheng is patently absurd, politically reactionary, and motivated by extreme malice. At the time he was engaged in a struggle with the Trotskyites, Comrade Stalin made a most profound statement. "It has long been a practice," he said, "for the opposition party to sing the praises of Comrade Lenin as the genius of geniuses. The probability is that such laudatory encomiums do not come from the heart and that they merely serve as a cloak for a plot of strategic nature. By calling Comrade Lenin a genius, they are using this as a shield to dissociate themselves from their acts." By vesting Comrade Mao Zedong's theories with absolute authority and by propagating the idea of the so-called "highest and ultimate criterion," Kang Sheng was resorting to the same strategic device. If there was any difference between Kang Sheng and the Trotskyites, it was that, in resorting to such devious strategic devices, he was infinitely more adept, more crafty, and more deceitful than Trotsky. How did Kang Sheng go about playing such tricks? First, by shouting "the highest and ultimate criterion" to the sky, he was posing as a "booster" and a "staunch follower" of Mao Zedong in order to boost his own political capital. Second, by mouthing such theories, he was seeking to distort the substance of the thoughts of Comrade Mao Zedong, to divest them of their revolutionary spirit, and to peddle his own wares as "Mao Zedong Thought." Third, by bandying such theories about, he was using them as a weapon to eliminate and liquidate a large number of verteran cadres and comrades who opposed him, accusing them of being "opposed to Mao Zedong Thought."

By resorting to such a strategem, Kang Sheng was not without some success for a period of time. Didn't he, by "inventing" and "promoting" the so-called "the highest and ultimate criterion" theory, and later, in connivance with Lin Biao and the "gang of four," by promoting such absurd dictums as the "acme," Da Shu Te Shu" [raise high Chairman Mao's authority], "the absolute authority," "each and every word is the truth," and "instructions must be followed to the letter," earn himself a huge share of political capital and propel himself up the ladder of the party? Wasn't he, even after his death, the recipient of the triple laurel as an "authority on the theories of Marxism," a "proletarian revolutionary," and a "glorious warrior against revisionism?" In the hubbub created by such theories, didn't he succeed in liquidating a large contingent of leadership cadres by accusing them of being "opposed to Mao Zedong Thought?" Didn't he, in the midst of the tumult, create a deification campaign and cause a body of modern superstitions to spread like an epidemic across the face of the nation, the calamitous effects of which have yet to be completely eradicated? For this reason, in order to delve into the absurd theories espoused by Lin Biao and the "gang of four" and to eradicate their poisonous effects, it is absolutely necessary to get at the source of the evil and to rectify their "mentor" and "master theoretician," Kang Sheng, who concocted the theory of "the highest and ultimate criterion."

HUMAN RESOURCES SHOULD BE USED WHERE MOST NEEDED

Beijing BEIJING RIBAO in Chinese 8 Aug 80 p 3

[Article by Chen Ziande [7115 6343 1795]: "Rescue the Ox From the Bottom of the Well"]

[Text] The conundrum "When a grown ox falls into a well, all his strength is to no avail" has been going the rounds for ages. As to whether it is possible for an enormous ox to fall into a well, the probability is that nobody has yet given it serious thought.

In the goings-on of society, however, it is a common occurrence for a "grown ox" to fall into a "well." We don't have to look too far back. According to a recent newspaper report, a certain factory had in its employ over 1,000 intellectuals. From a technical standpoint, it might be said to be adequately staffed. However, because there were not enough jobs of a technical nature to go around, at least 80 of the middle and trade school graduates in its employ since 1958 were still assigned to work in the carbarn, and at a time when there was an acute need for technical workers in other units in the vicinity. Although these factories were located in the same area or in the suburbs, it was almost impossible to make the necessary adjustments to remedy the situation, which may be summed up by the saying, "The large factories will not let go of their competent workers, while the smaller factories cry out in vain for capable personnel." Some technical workers vented their feelings by penning the following poem: "All that we have learned over the years has gone to waste. All our aspirirations have gone up in smoke. There's no lack of ambition, but what can we do? What else but to let our learning rot in our bowels?" As a matter of fact, this state of affairs prevails not only in the factories, but also in the scientific and technical, cultural and educational, as well as financial and commercial fields. According to a survey conducted by the concerned parties, there are still many among the 1.2 million scientific and technical workers who have not been assigned jobs commensurate with their talents and who are still "floundering" in the "well." At a time when the four modernizations are in such dire need of the services of a large herd of "vigorous oxen," isn't if a crying shame that there are still so many "oxen" who have no way of putting their assets to proper use? Hence, we must sound a clarion call for the "ox" to be rescued from the bottom of the "well."

Some leadership cadres tend to belittle the situation by saying, "Why make such a fuss? Why turn a frog into an ox?" It may be true, of course, that not all those who have been cast into the "well" are oxen, but it is patently wrong to regard a live "ox" as a "frog." An illustration is not difficult to find. There was a technical worker at a certain large lathe factory who had difficulty being placed in a suitable job and who, in the eyes of those in leadership positions, was rated no higher than a "frog." Two years ago he was, by chance, taken on by another unit on a loan basis. First he was assigned to a herbal factory to assist in introducing technical renovations. It did not take him long to succeed in establishing an automatic assembly line. When he was later assigned to a vegetable-canning factory, he again succeeded in setting up an automatic assembly line for the production of vinegar. This comrade has now been appointed an engineer. This is not an isolated incidence. If we look at it another way, even if this worker was in fact a "frog," he should not have been put at the bottom of the well. True enough, a frog may not be able to pull a plough or a wagon, but it can still be used to catch insects and mosquitoes instead of being left to stagnate at the bottom of the well. Why hasn't this very simple truth been given some serious thought? Those who justify their action in not releasing their able workers tend to ask, "How do we go about diverting one's interest?" By "interest" is meant presumably the consuming passion on the part of the specialist concerned. It is true that, in the past, a large number of comrades who had to give up their special jobs with which they were familiar in order to take on new jobs to meet the needs of the revolution have acquitted themselves creditably. However, our central mission today is the implementation of the four modernizations, which need large numbers of capable workers. Why, then, must we insist that they forsake their special field with which they are familiar and divert their interest to another area? We too, can see that there are many who do not have jobs best suited to their talents and who are not averse to diverting their interest to another field. However, due to the limitations of objective circumstances, many of them merely bide their time without accomplishing anything. There are also those whose hair has turned gray while learning their new jobs. This example of stupidity is like shortening the neck of the crane and stretching that of the owl. However, under the present existing conditions and the guise of "diverting one's interest," it has become commonplace to force Li Kui [2621 6652] to learn embroidery and sewing, to "mobilize" Lin Daiyu [2651 7818 3768] to shoulder a rifle or wield a club, to order Chen Jingrun [7115 2529 3387] to show his skills on the playing field and to "lead" Mu Tiezhu [4476 6993 2691] to scale the heights of mathematics. Such anomalies are so commonplace that it would be laughable if it were not so tragic. The end result is that many talented persons have neglected what they had learned as they get along in years. It is more correct to say that we misuse our talents rather than to say that we cherish our talents. Why don't some of our comrades try to put people in the jobs best suited to their aptitudes, instead of trying to divert their interest?

"This unit needs that person" has become a high-sounding stock answer to all queries. Armed with this signboard, they would sit on the lid of the well, resolutely refusing to let the "ox" out. Two points need to be clarified. First, is it a real need or not? Facts have borne out that the latter is usually the case with many units. Secondly, even if the need is real, the "greater need" of the nation should take precedence over the "smaller need" of a particular unit. The fact that certain units hold on to their people so tenaciously on the basis of "need" may be explained by certain encrusted feudalistic conceptions. As a matter of fact, both the "well" and the "ox" in the well are the property of the people or are collectively owned. However, in the minds of certain comrades on whom feudalistic ideas have taken a firm hold, the "well" seems to have become their private domain, and so much so that it is easier to soar to the heavens than to retrieve the "ox" from the "well." It can be seen, therefore, that in order to save the "ox" it is first necessary to remove the "well cover" of feudalistic conceptions.

The adequate unearthing and development of human resources constitute an urgent mission in the implementation of the four modernizations. At the present time, in order to remedy the enormous waste of talent, it is of crucial importance to bring about reforms in the system and the organization of managerial cadres, so that the leadership may assign proper jobs to the proper persons. As for the "ox" in the "well," it is still possible to take the initiative and to appeal to higher authorities in a positive manner. There is an old saying, "Inequities cry out for redress." If the fine steed under the yoke of the salt wagon had not reared its head and made itself heard, the probability is that it would not have been discovered by Bo Luo [0130 2867]. In my opinion, when all other methods have failed, this may well be the one that will lead to a solution of the problem.

'BA YI RADIO' RAPS DENG XIAOPING FOR REPRESSING CRITICISM OF BAOSHAN

OW301213 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 29 Oct 80

[Text] We cannot help objecting to Vice Chairman Deng's severe censure of Comrade He Changgong simply for stating his personal views on the Baoshan steel question. First, we hold that Comrade He Changgong, deputy commandant of the PLA Military Academy, as the deputy of our army to the NPC session, has the right to freely express his views and opinions to state affairs. Second, we must point out that what Comrade He Changgong said voiced the aspirations of our party, our army and the broad masses of our people.

Although opinions presented by Comrade He Changgong and others proposing to put off construction of the Baoshan project because the project is a bottomless pit that cannot be filled no matter how much more money we invest are sharp, they are sincere and practical. [Words indistinct] why should Vice Chairman Deng censure such opinions? Why should discussion on the opinions of He Changgong and others be prohibited? How can we say that Comrade He's opinions are absurd? Why should he be reprimanded for paying more attention to economic work than to military training?

Comrade Deng Xiaoping's criticisms cannot help but remind us of someone who in past years flauted that he had absolute authority and acted imperiously according to his own free will. We are all aware of the castrophe he brought to our nation and to our people. [Words indistinct] To learn from past mistakes to avoid future ones, we must conscientiously discuss all complicated and important political and economic issues put forward by the deputies as well as pay attention to listening to the opinions of all comrades, including the deputies of the army.

It is beneficial for us now to recall the struggles of the army deputies in resolutely opposing the erroneous economic line that brought untold misery to the nation and people. More than 20 years ago, in 1959, Marshal Peng Dehua boldly presented his views, pointed out the serious mistakes in economic construction [words indistinct] and proposed to rectify the mistakes and avoid making the same mistakes at the Lusan conference. [Words indistinct] At that time, army deputies like Huang Kecheng [words indistinct] and others also [?supported] Peng. If their opinions had been listened to, the mistake of the great leap forward, which caused heavy losses to the state and unnecessary disasters to the people, could have been averted. Regrettably, those comrades who dared to remonstrate suffered from ruthless attacks and cruel persecution in the years of patriarchal and fascist rule.

Now history has repeated itself, for although the people are allowed to express their views and newspapers carry the readers' letters, excerpts of the criticisms and proposals of the NPC and CPPCC deputies, there are still people who do not respect others' opinions because they are in high positions and possess great power. They even slanderously attack comrades like Deputy Commandant He Changgong who dare to express their views.

BRIEFS

TRIAL TO BEGIN 2 NOV--According to travelers back from Beijing, a rumor has been going in Beijing Municipality in recent days that the trial of the "gang of four" including Jiang Qing will start at zero hour on the morning of 2 November. [Text] [HK290642 Hong Kong HSIN WAN PAO in Chinese 28 Oct 80 p 4]

LIAONING DEMOCRATIC PARTIES' MEETING--The Liaoning Provincial Revolutionary Committee of the Kuomintang, the Provincial Democratic League, the Provincial Democratic National Construction Association, the Provincial Association for Promoting Democracy and the Shenyang Municipal Branch of the Jiusan Society recently held their standing committee meetings or plenary meetings to study ways to implement the guidelines of the third sessions of the Fifth NPC and the Fifth National CPPCC Committee. The participants were inspired by the independent political and organizational rights provided by the constitution. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 29 Oct 80 SK]

LIAONING VISITING DELEGATION--After completing its activities in Xinjiang Autonomous region, the visiting delegation of Liaoning Province for studying the nationality work left Urumqi Municipality by plane on 26 October. The delegation went to Ili, Shihezi, Turpan, Urumqi and other places in the past 15 days, and discussed agricultural production, livestock breeding, and nationality work with people of various nationalities. On the eve of their departure, Vice Chairman A-mu-dong Ni-ya-zi of the Xinjiang Regional People's Government and personnel from other departments concerned paid a visit to all delegation members. [Urumqi Xinjiang Regional Service in Mandarin 1300 GMT 26 Oct 80 OW]

XINJIANG THEATRICAL DELEGATION--The Xinjiang delegation which took part in the National Minority Theatrical Festival in Beijing returned to Urumqi on 26 October. During the festival members of the delegation were cordially received by Comrade Hua Guofeng and other central leading comrades. The organizers of the festival presented the delegation with 14 tape recorders as prizes. Members of the delegation also received citations and souvenirs. [Urumqi Zinjiang Regional Service in Mandarin 1300 GMT 27 Oct 80]

XINJIANG WORKERS CONGRESSES--According to the Xinjiang Autonomous Regional Trade Union Council, 113 industrial enterprises in Xinjiang have restored or established the workers' congress system. Long-standing problems concerning enterprise management and improvement of workers' livelihood have been solved at the congresses. [Urumqi Xinjiang Regional Service in Mandarin 1300 GMT 28 Oct 80 OW]

MILITARY AND PUBLIC SECURITY

'BA YI RADIO' SAYS U.S. GIVES PRC MILITARY SECRETS TO TAIWAN

OW051205 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 4 Nov 80

[Text] Intelligence reports received from Taiwan lately have greatly disturbed our army, commanders and fighters alike. They came as a violent shock to our military security personnel. How can Taiwan have access to such a great number of our army's highly classified documents as indicated by the reports? An investigation by agencies concerned revealed that our army's secrets known to the Kuomintang Party in Taiwan are identical to the military information collected in our country by the military delegations from the United States.

It is known to all that Vice Chairman Deng Xiaoping issued an instruction early this year after concluding a series of talks with U.S. Defense Secretary Harold Brown. In order to develop Sino-American military cooperation, his instruction says in effect, we do not have to keep our secrets inaccessible from our American ally even if we do have to pay the total cost. Since Comrade Deng Xiaoping said this, the gate to our army's important secrets has opened to the United States.

A U.S. military technology delegation led by Dr William J. Perry, undersecretary of defense, visited our country in September. Vice Chairman Deng Xiaoping also took part in the talks with the visiting delegation and authorized them to tour our military-industrial centers. Thus, these Americans had every single detail of our [words indistinct] medium-range guided-missile proving grounds. They also visited our Shenyang Aircraft Manufacturing Plant, Xian Air Force plane engine factory, and the Shanghai Aeronautic and Space Flight Equipment Manufacturing Plant. Each visit lasted several hours. Moreover, the delegation even heard briefings at these military-industrial installations on our new technology, equipment production plans and trial production of a number of new weapons.

The U.S. military technology delegation was given a complete set of reference materials and blueprints of a new type of supersonic intercepter at the Shenyang Aircraft Manufacturing Plant. They were briefed on the instruments and equipment made in Shanghai for our manmade satellites, guided missiles, fighter planes, naval vessels and submarines and personally inspected these items displayed for them during their visit. Occasions like this disclosure of our military secrets were numerous.

People cannot help but ask why Vice Chairman Deng Xiaoping authorized the Americans access to our army's secrets? Was it, perhaps, a necessary move toward the establishment of mutual trust between China and the United States so that the American leaders would authorize sales of their most sophisticated arms, military equipment and technology to our country as they would to their reliable, close friends?

But many developments lately indicate that Vice Chairman Deng Xiaoping's wishful thinking has turned out to be a pipedream. The United States still has refused to sell its new weapons and military technology or equipment to China. Our obsolete military hardware items still remain out of date. At the same time, however, the United States has shipped to Taiwan large quantities of its most up-to-date armaments, equipment and new military technology. Still worse, the Americans have transferred to the Kuomintang the important secret military information they collected in our country. This is an open secret known to all.

Vice Chairman Deng Xiaoping has obstinately pushed the policy of carrying out Sino-American military cooperation at all costs in order to usher in so called "broad vistas" for our army. He has been doing his utmost in peddling friendship with the United States, bringing only bad consequences to our country, consciously or unconsciously, Deng Xiaoping is pursuing a line that betrays the interests of our country, our army and the people of all the nationalities throughout China.

MILITARY AND PUBLIC SECURITY

'RADIO BA YI' CRITICIZES 'UNJUST' PURGES OF PLA CADRES

OW280515 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 27 Oct 80

[Text] Most members of leading bodies of the whole army, including the defense ministry, headquarters, arms of services and military regions and districts are currently old cadres. Very few are middle-aged or young cadres who, because of the limitations of objective conditions in the past, have a rather low cultural level and poor scientific and technical knowledge. This has naturally affected the needs of army building and war preparedness. Therefore, to speed up the pace of promoting middle-aged and young cadres, so that army leading posts will be filled by younger cadres, is indeed the central issue in army building at present.

However, one should not attack or purge in disguised form the older generation of army cadres under the pretext of bringing a younger generation of cadres into the army. Since the downfall of the gang of four, there have been three major purges against army cadres. It has been proved through investigation that 68 percent of those (?purged) are innocent and only (?40) percent of those purged are partially responsible for certain cases. Before the problems involving these comrades are settled, new unjust purges are under way.

Vice Chairman Deng recently stressed that those cadres who were promoted during the cultural revolution should come under careful examination, those who gained their prominence by relying on the rebels or during the "three-support, two-military" campaign cannot return to leading posts, and those who have already been given promotions should be dismissed without delay. Comrade Zhao Ziyang also said that those who do not harbor bitter hatred toward Lin Biao and the gang of four cannot assume important leading posts, not even leading posts in general. At an organizational work conference of the Party Central Committee, Comrade Hu Yaobang said that those who gained their prominence by attacking people, or who ruthlessly attacked people during the cultural revolution must be relieved from their posts without delay. All these remarks have created grave confusion in the army's work on cadres. Cadres departments in many military organizations and PLA units, out of fear that they may once again be charged with providing shelter for [word indistinct] criminals, have (?urged) those army cadres who took part in the "three-support, two-military" campaign to retire, transferred them to civilian jobs, dismissed or even purged them.

What's worse is that some organizations directly under the PLA air force and navy, the Shenyang PLA units and the Beijing PLA units, have, without the approval of the

Party Central Committee's military commission, prepared a public trial of the so-called remnants of the Lin Biao-gang of four clique even before the start of the public trial of the clique. Small wonder, many cadres are worried by the public trial of the Lin Biao-gang of four clique and are overtly and covertly boycotting the trial. All this cannot but undermine stability and unity within the army and adversely affect army building.

It should be pointed out that certain principal leaders of the Party Central Committee regard the army's participation in the past "three-support, two-military" campaign as a grave crime. They have taken to heart the fact that, while they were persecuted by Jiang Qing and Kang Sheng during the cultural revolution, the armymen were basically free from persecution because of Lin Biao's protection. May we ask: Is it the army's fault that the attacks on army cadres were relatively less serious during the cultural revolution? Why is it necessary to purge army cadres time and again? Can these leaders of the Party Central Committee vent their anger by purging army cadres? The total number of army cadres purged in the past 3 years since the downfall of the gang of four is more than 10 times that purged in the 10 chaotic years. Is this a normal phenomenon?

It is a fact that many leading comrades in the Party Central Committee were persecuted by Mao Zedong, Kang Sheng and the gang of four during the cultural revolution. This is the reason why the scheduled public trial of the gang of four has been supported by the whole party and the people of the whole country. However, after one takes power, is he then justified to follow Kang Sheng and the gang of four in persecuting army cadres?

MILITARY AND PUBLIC SECURITY

'RADIO BA YI' CRITICIZES PERSECUTION OF PLA LEADERS

OW020343 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 1 Nov 80

[Text] It is very natural for the masses of commanders and fighters throughout the army to be concerned with the trial of the former leaders of our army. Over the past 50 years since the founding of our army in 1927, this is the first time that high-ranking leaders, chiefs of staff, and commanders of military districts and various services and arms of the Chinese People's Liberation Army have been brought to trial. Fighting south and north at the risk of their own lives, those senior officers of our army indeed devoted themselves completely to the revolutionary cause throughout several decades of fighting. It is very difficult to convince people that these PLA leaders were involved in so-called counterrevolutionary activities some 20 years after victory in revolution. Only a handful of persons in the whole army believe that these leaders of our army represent a counterrevolutionary clique. According to a document submitted to the military commission of the Party Central Committee in December 1979 by the PLA general political department, nearly 98 percent of cadres at and above the army level were not convinced by the charges imposed upon the PLA leaders by the gang of four in 1973 and 1974, as well as other accusations lodged against them at the pretrial that was held after the downfall of the gang of four; some 90 percent of cadres at the divisional level were not convinced; nearly 82 percent of cadres at regimental and battalion levels were not convinced; 68 percent of cadres at company and platoon levels were not convinced; and no more than 60 percent of the fighters in general were convinced.

In view of this situation, all these questions--whether or not the trial of former PLA leaders conforms to the principles of democracy and the legal system, whether or not individual responsibility can be determined in the spirit of seeking truth from facts, whether or not the accused are to be allowed to defend themselves, whether or not the groundless charges imposed upon the PLA leaders by the gang of four can be reversed in accordance with the resolution adopted by the party's third plenary session, and whether or not innocent victims can be rehabilitated--have indeed a direct bearing on the stability and unity within the army, the prestige of the Party Central Committee and the military commission of the Party Central Committee, as well as on the faith of the army's commanders and fighters in the principal leading personnel of the central authorities and the military commission of the Party Central Committee.

However, we must pay attention to the fact that the 16th session of the NPC Standing Committee has appointed Comrade Shi Jinqian, deputy director of the PLA General

Political Department, as deputy director of a special procuratorate, appointed Comrade Wu Xiuquan, deputy chief of general staff of the PLA, as vice president of a special court and concurrently chief judge of the second tribunal, and appointed Comrade Huang Yukun deputy chief judge of the second tribunal. They are responsible for prosecuting and trying the former PLA leaders who are involved in the case of Lin Biao. But this work has encountered a series of deliberate acts or interference. First of all, that principal responsible member of the CCP Central Committee and its military commission has insisted on handling the PLA's leading personnel (?on the same footing) as the gang of four and their company during the trial. Since the NPC Standing Committee has already appointed the personnel for both prosecution and trial, decisions should be made independently by those comrades. But, the fact is that Comrade Wu Xiuquan must report to Vice Chairman Deng on progress in handling the case almost daily and request his supreme instructions. Therefore, the entire case is actually being handled on the basis of individual decisions rather than the legal system.

A correct attitude should be maintained toward Huang Yongsheng, who has denied his original confession. Facts show that many charges against him were fabricated by Kang Sheng and the gang of four, and that his case is the outcome of [words indistinct] by the special investigation group of the central organs. Since we must act in accordance with law, Huang Yongsheng should be allowed to defend himself. Furthermore, it is ridiculous to accuse a man like Huang Yongsheng for plotting an armed rebellion against Chairman Mao, because he has closely followed Chairman Mao for several decades since the (?rebellion in south Anhui).

What truly puzzles people is the fact that Vice Chairman Deng has completely overthrown the views, deeds and conclusions drawn by Chairman Mao after 1957. However, with regard to the various charges against the leaders of our army fabricated by the gang of four, Vice Chairman Deng has tried all possible means to add more charges instead of giving permission to correct and overthrow them.

TYPES OF MINES, DETONATORS DIAGRAMED

Beijing BINGQI ZHISHI (ORDNANCE KNOWLEDGE) in Chinese No 2, 1980 pp 19-21

[Article by Wang Weice (3769 0251 4595): "Mines and Detonators"]

[Text] The Function of Mines

Mines, as a weapon, played an important role in the battlefield very early in history. As far back as the Sung Dynasty, mines were used to kill and wound the enemy. In recent years, our nation's people have utilized mines in many curious ways during several revolutionary wars causing much hardship for the invaders and reactionary elements. The movie "Mine War" vividly describes the history of the heroic civil defense soldiers who coordinated with the main forces and used mines to strike at the Japanese invaders. The mine war was well known throughout East Asia and the Japanese invaders were scared. As military technology developed, the function of mines has become increasingly important. It is a powerful weapon to kill and wound soldiers, it can also destroy and incapacitate the moving fortresses on land--tanks. In the battlefield of the Korean War, the heroic Chinese People's Volunteer Army used anti-tank mines to destroy many American armored vehicles. The squads of military engineers of the People's Liberation Army also scored victoriously by using mines in the battle against social imperialist invasion of Zhen Bao Island.

At present, the world's nations are paying more attention to the development and deployment of mines. This also shows that in modern warfare, mines are a very important weapon. According to statistics, during World War II, almost 1/4 of the tanks lost by the British Army was destroyed by mines. In the Korean War, the number of casualties of the U.S. Armed Forces who died from mines or tricky explosives constituted 4 percent of the total number of casualties. The number of tanks directly destroyed by anti-tank mines constituted over 20 percent of the total loss of tanks. In the Middle East War of 1973, even though anti-tank missiles were used, 20 percent of the tanks of both sides were still destroyed by mines or airplanes. It can be seen that mines are one of the effective weapons that kill and wound personnel and destroy tanks and other vehicles.

Types of Mines

At first, the mine was a defensive weapon, mainly used to kill and wound living forces. As science and technology developed the function of mines also changed.

The mine is already an effective attack weapon. As mentioned above, mines are now a powerful weapon against tanks and armored vehicles. Not only can manual efforts to place mines be used to defend against attacking tanks but mines can also be placed by machines, missiles, cannons and airplanes to prevent the advances of tanks. There are several ways to classify mines. According to use, there are three types:

1. Anti-tank Mines

Their main function is to destroy tanks, armored vehicles and such technological ordnance to deprive them of mobility and combat capabilities. According to the part of the tank to be damaged, this type of mines can be subdivided into anti-tank mines (Figure 1), anti-chassis mines (Figure 2), and anti-side armor mines (Figure 3).

2. Anti-Personnel Mines

These utilize shock waves and broken pieces of the mines produced by explosion of the explosives contained to kill and wound living forces. They can be subdivided into explosive anti-personnel mines (Figure 4) and scatter anti-personnel mines. Jump mines (Figure 5) and directional mines (Figure 6) are scatter mines.

3. Special Purpose Mines

Mines for special purposes belong to this category, such as nuclear mines, chemical mines, flare mines, signal mines.

Based on the ignition principle, mines can be divided into contact mines and non-contact mines and time delay mines.

1. Contact Mines

The target comes into direct contact with the mine and sets off the explosion. These are contact mines. Based on different operating principles, this type of mines can be subdivided into pressure mines, pull (trip) mines, loose ignition mines and compound action mines.

2. Non-Contract Mines

Although the mines do not come into contact with the targets, they are touched off by action of the physical fields (magnetic, sound waves, vibration, light) of the targets. These mines are called non-contact mines. These mines can be exploded at the most beneficial time, therefore they can be more effective.

3. Time Delay Mines

These mines will automatically explode at a certain time after a preset delay. Its timing devices include clock mechanisms and also fluidics and electronics devices.

Structure of Mines

The mine consists mainly of a shell, a detonator, and explosive charge. Some special purpose and special function land mines also have transducers, parachutes and landing mechanisms. We will only introduce the several major components of mines in the following:

1. Explosive Charge

The power of the mine is mainly determined by the type, the amount and the shape of the explosive charge. The uses of mines are different and the structure of the explosive charge is also different. The explosives frequently used by mines are TNT, black powder or their mixtures. Explosive anti-personnel mines generally use TNT. Content of the explosive charge is from several dozen to 100 or 200 grams. Scatter anti-personnel mines use TNT and the content is from several dozen to several hundred grams. Anti-tank mines that are designed to damage the tracks and that contain a flat charge require 5 to 10 kilograms of TNT or TNT and black powder mixture. If the explosives are contained in strips, generally 2 kilograms of explosives are sufficient. Regardless of what type of charge is used they can all break the tracks of a tank. The first type of mines can also severely deform the load bearing wheel at the same time. Mines that damage the chassis of tanks mostly use a packed power charge. A large conical shell (generally over 100°) is a metal container of explosives turned into a "high speed shell" to penetrate the bottom armor of tanks. These mines generally require only 1 to 3 kilograms of mixed explosives of TNT and black powder. Mines that are designed to damage the side armor of tanks also use packed power charge, generally containing about 10 kilograms of mixed TNT and black powder. These mines can penetrate the side armor of tanks at a distance several dozen meters away from the point of explosion.

2. Shell of the Mine

The shell of the mine is used to contain the charge and the detonator. It can be pressed from thin steel plates or made from engineering plastics. The shell of the scatter anti-personnel mine is the basic component that produces scattered pieces. The broken pieces of the mine must possess a definite power: Broken pieces of jump mines generally have a killing or wounding radius of over a dozen meters while the broken pieces of directional mines can kill or wound up to a distance of 50 to 60 meters.

Detonator

The detonator is the important component that assures the mine will explode reliably and on time. The key to whether the mine can effectively function is the detonator, therefore people have compared the detonator to the "brain" of the mine.

Detonators of Mines

1. Contact Detonators

Anti-personnel mines and anti-tank mines mostly use pressure detonation, pull (trip) detonation and loose detonation. The structure of the pressure detonator is shown

Figure 7. When the mine is in a ready-to-detonate state, the cartridge of steel bearings in the detonator prevents the firing pin from dropping by blocking the hole in the inner tube. When the mine is pressed, the cover changes shape and the detonator receives from 10 to 30 kilograms of pressure. At this time, the reverse tube presses against the spring of the firing pin and moves down along the inner tube. When the groove on the outer tube comes into contact with the steel bearings, the bearings are pushed into the groove by the spring of the firing pin and the firing pin is released. The spring of the firing pin activates the firing pin to strike the explosion tube and the mine explodes. The structure of the pull (trip) detonator is shown in Figure 8. The pulling tab is pulled and the firing pin is released when it receives from 1 to 2.5 kilograms of pressure or more. The spring of the firing pin activates the firing pin to strike the explosion tube and the mine explodes. Loose detonation is mostly used for tricky installations (luring mines). Its structure is shown in Figure 9. When the heavy object is removed from the detonator, the release board releases its control of the firing pin. The firing pin is acted upon by the coil spring and turns, thus striking the firing cap and the mine explodes.

In recent years, to use explosions to open pathways for tanks or to detonate tactical nuclear weapons in mine zones and to be still effective against tanks, multiple action and explosion resistant detonators have emerged. Besides the mechanically operated contact detonators, new types of contact detonators such as electromechanic detonators and electronic breaker detonators have been developed.

2. Non-Contact Detonators

At present, non-contact detonators which have a wide application are magnetically sensitive detonators, vibration detonators, infrared detonators and compound detonators. Depending on whether the detonator has or does not have a radiative source, non-contact detonators developed very rapidly and have been used widely in anti-tank mines that damage the chassis and anti-tank mines that damage side armor.

The compound detonator sensitive to magnetism and vibration used in mines that damage tank chassis is a kind of defensive non-contact detonator and its operating principle is illustrated in Figure 10. When the tank enters a predetermined zone, the vibration sensor can receive the ground vibrations caused by the advancing tanks. This signal activates the magnetic sensor of the detonator and the electrical power of the mine is switched on. When the tank enters the most effective range of the mine, the magnetic sensor sends out a signal. After this signal is processed, it is transmitted to the execution device which explodes the electric detonator, causing the mine to explode. The advantage of this compound detonator is that it conserves the use of electric power and it has a higher resistance to interference. The anti-tank mine that penetrates the side armor has a laser detonator which is a kind of offensive non-contact detonator. Its operating principle is illustrated in Figure 11. When the tank enters the active range of the detonator in front, the laser beam emitted by the detonator is reflected back to the detonator by the side armor of the tank. A receiver in the detonator receives the echo wave signal and processes it, then transmits the signal to the execution circuit causing the detonator to explode.

Some special kinds of mines are also equipped with detonators that can receive remote radio signal commands. The mines can be controlled and activated for combat posture, deactivated and exploded.

The Direction of Development of Mines

The direction of development of mines is towards the following trends:

1. Small size, light weight, more power.
2. Reliable operation and higher resistance against explosions.
3. Completely save detonators to assure safety during logistics handling and safety in actual use.

Detonators used in mines laid mechanically and quickly over a large area include those mentioned above and also include delayed safety and self destructive devices to assure safety during the laying of mines and freedom of movement of motorized forces of allied troops. When using packed power charges for mines, non-contact detonators should be used as much as possible so that the power of the explosive charge can be most effective.

MILITARY AND PUBLIC SECURITY

STRUCTURE, OPERATION OF TANK CANNON STABILIZER OUTLINED

Beijing BINGQI ZHISHI [ORDNANCE KNOWLEDGE] in Chinese No 2, 1980 pp 3-7

[Article by Qu Guoshan (1448 0948 0810): "Tank Cannon Stabilizer"]

[Text] In modern warfare, to effectively develop the tank's combat power and reduce the chance of being damaged by the enemy's anti-tank weapons, the mobility of the tank has been increased and correspondingly its travelling speed. A good aim and firing precision of the cannon in motion are needed so that the first shot can hit the target. For this, today's new combat tanks have utilized infrared or night viewing and night aiming equipment or viewing equipment in dim light, laser rangefinders, computers, computers for projectiles for the aiming, viewing and firing control systems. The cannon stabilizer has also been used.

This article is mainly an introduction to the application of a type of electrohydraulic one directional stabilizer, its general structure and basic operating principles.

I. Application of the Stabilizer

Everyone knows that when tanks are travelling on an uneven road surface, the carriage of the tank continuously vibrates and shakes, thus the cannon vibrates with the carriage and deviates from its aiming angle (firing angle), as illustrated in Figure 1.

Because the road is crooked or because of the control of the vehicle, the cannon deviates from its original aim at the target as shown in Figure 2.

Obviously, under this situation, even when the enemy target has been discovered through the periscope, it would be difficult to operate the cannon's elevating mechanism and the aiming device and to rapidly complete accurate aiming and accurate firing within a short time. For this, many people have spent much effort and have taken various measures (such as selecting good vibration reducing equipment of good performance, making short stops or reducing speed during firing and strict training of tank personnel etc). But although these measures increased the firing accuracy of the cannon on tanks, the basic problem of achieving an ideal aim for firing while the tank is travelling has still not been solved. Afterwards, attempts were made to think of a way to install a special kind of automatic adjustment equipment while the tank is travelling so that the cannon can be adjusted against the vibration of the carriage of the tank to effectively assure that the direction of aim will not be distorted by vibration of the carriage, as Figure 3 and Figure 4 show. This type of automatic adjuster (i.e., stabilizer) was first developed and equipped on armored vehicles during the latter part of World War II, and in actual combat, relatively ideal results were achieved.

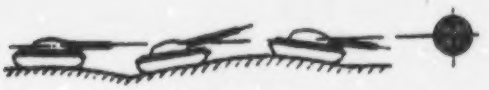

Figure 1. High and low vibration of the cannon without stabilizer

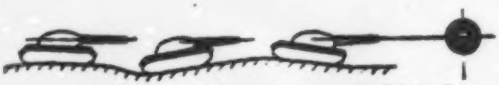

Figure 3. Cannon stabilized in elevation

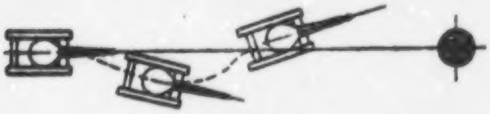

Figure 2. Horizontal vibration of the cannon without stabilizer

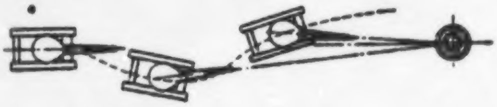

Figure 4. Cannon stabilized in traverse directions

To further explain the application or use of the stabilizer on the cannon of tanks, the following brief introduction talks about the several kinds of vibrations of the tank carriage and their effect upon the accuracy of firing of the cannon.

It can be seen from Figure 5 that when the tank is in motion, the carriage of the tank moves forward at velocity u and at the same time the carriage vibrates vertically at a rate W, at an angular rate of Q on the plane of the vertical cross section, an angular rate ψ on the horizontal plane, a cross angular rate of u on the cross section plane, and possible parallel sliding forward and sideways horizontally on the cross section plane, etc. These vibrations affect the accuracy of firing to varying degrees.

Vertical vibration of the carriage:

The carriage vibrates up and down at the rate W, as shown in Figure 6. This causes the barrel's axial line to shift in a parallel fashion, and thus changing the projectile angle of the shell. But this type of vertical vibration is not large. On medium road surfaces and travelling at medium speed, the vibration is between 100 and 150 millimeters, therefore the shell fired from the gun undergoes a deviation of between 100 and 150 millimeters in the vertical direction. The effect upon the accuracy of firing is not obvious.

Horizontal vibration of the carriage:

The carriage sways back and forth at an angular rate of $\dot{V}$ along the OX axis within the cross section plane causing the flank axial line of the cannot to slant, as illustrated in Figure 7. Under this condition, if the cannon is fired straight and the firing angle is not large, the error of firing is not too obvious. Relatively complete firing control systems have a flank axis slant sensor to correct the slant.

Angular vibration within the horizontal plane of the carriage:

The carriage vibrates in the horizontal plane at an angular rate of $\dot{\psi}$ about the OZ axis, as illustrated in Figure 8. This type of vibration will cause the horizontal sweep of the fired shell to increase and the error will be more pronounced than in the two cases above.

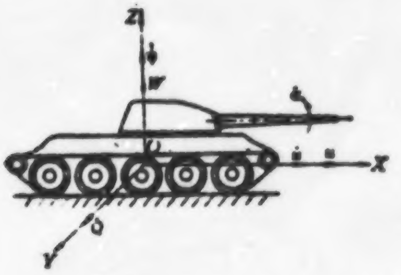

Figure 5. Vibration of the carriage of the tank

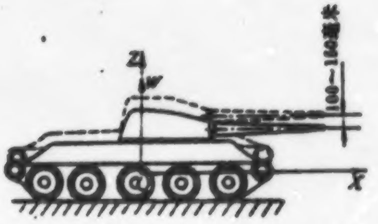

Figure 6. Vertical vibration of the carriage. 100-150 millimeters

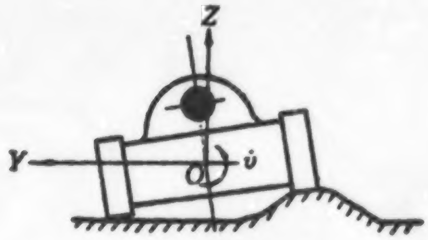

Figure 7. Cross section angular vibration of the carriage

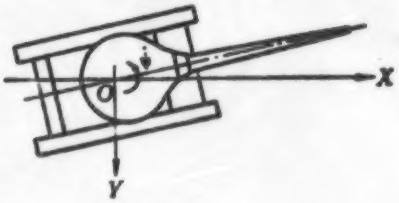

Figure 8. Horizontal angular vibration of the carriage

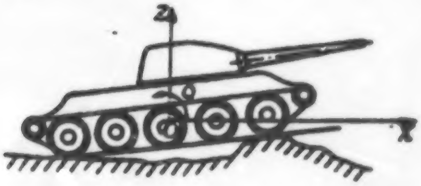

Figure 9. Vertical angular vibration of the carriage in the vertical plane

The carriage vibrates in the vertical angle within the vertical firing plane:

This means the carriage vibrates in a vertical angle from the center of vibration of the carriage (center of elasticity) at an angular rate $\dot{Q}$ within the vertical firing plane. This is mainly caused when both tracks of the tank run over an uneven surface, the front of the vehicle is raised and the back of the vehicle correspondingly is lowered, or because the driver suddenly steps on the throttle and increases the speed of the vehicle or because of unskilled operation of the clutch. This type of vibration will cause a violent change in the axial line of the barrel in the vertical firing plane and a continuous change in the firing angle leading to great deviation in the firing range or the height of firing. The prevision of firing is thus drastically reduced. For example, according to calculations, when the center of vibration of the carriage of the tank is 6 meters from the plane of the muzzle, the initial speed of the shell is 900 meters/second, the delay in firing is 0.16 seconds, the average angular rate of vertical vibration within the vertical firing plane of the tank is 3.7 degrees/second. When the traveling direction of the tank and the aim of the gun are the same and firing at a vertically fixed target at 1,000 meters, the vertical deviation of the shell from the target will reach 10.35 meters.

It can be seen from the above analysis that the vertical angular vibration within the vertical firing plane of the tank exerts the greatest effect upon firing precision, and horizontal angular vibration exerts the second greatest effect. Therefore, the stabilizers equipped on the guns of present-day tanks are mainly to stabilize vibrations in these two directions.

Vertical stabilization within the vertical firing plane of the cannon is also called elevation stabilization. Elevation stabilizers can automatically adjust the cannon so that it will not be affected by the vertical angular vibration of the carriage, thus assuring that the high or low aiming angle of the cannon does not change.

Traverse stabilization of the cannon is also called turret stabilization. The traverse stabilizer can automatically adjust the turret so that it will not be affected by the horizontal angular vibration of the carriage to assure the horizontal aim of the cannon does not change.

Ordinarily, cannon stabilizers with only an elevation stabilization function is called a one directional stabilizer. Stabilizers with both an elevation and traverse stabilization function is called a two directional stabilizer.

Because of the application of the stabilizer on tank cannons, the firing precision of the gun while the tank is in motion has been raised. The basic operating principle of the stabilizer is mainly based on the gyro effect. This means utilizing the gyroscope to exercise automatic control of the cannon. Before introducing the operating principle of the stabilizer, the top and the gyroscope will be briefly described.

II. Gyration and the Gyroscope

(1) Gyration

Everyone knows that all bodies rotating about their spin axis have some common characteristics, for example, a fixed axis and precession under external forces.

These characteristics are only visibly evident when the revolving body is rotating about its axis of rotation at a high speed. Generally the above characteristics of rotating bodies at high speed are called the gyro effect.

Fixed axis of the top: Figure 10 shows an ordinary top for children and it is also an actual toy. When the top rotates about its acis of rotation at high velocities and if the top is not affected by an external force, the direction of the axis of rotation will not change from its original spatial position. This characteristic of the top is called the fixed axis characteristic. The faster the rotation of the top, the greater the quality, the greater the moment of motion and the more stable it is.

Precession of the top: When an external force is applied to a free top rotating at a high angular speed Ω, i.e., when applying force F on the axis of rotation OZ, as shown in Figure 11, the axis of rotation will shift from its original position but the direction of deviation will not be in the direction of the push but at a 90° or 270° angle (depending on the direction of the spin of the top). If the external force is removed as soon as the top shifts, the top will gradually resume its original state. When the external force is applied continually, the top will continue to shift, and the greater the external force, the faster the shift. This characteristic of the top is called precession.

The pattern of precession of the top i.e., the direction of precession is an attempt to make the vector Ω of angular velocity of the spin of the top coincide with the vector M of the moment of the external force that caused the top to shift.

The direction of the vectors of the angular velocity and the moment can be determined by the right hand method. Position the four fingers of the right hand (slightly bent) perpendicular to the thumb, and point the four fingers in the direction of rotation of the angular velocity (or the direction of the moment), then the direction pointed out by the thumb is the direction of the vector of the angular velocity (or moment).

Moment of the top:

To explain the moment of the top, let us first perform an experiment. As shown in Figure 12(a), use a string and tie it to a round plate. When it is not in motion, the plate will hang down due to its own gravitational weight G. When the plate is placed in a horizontal position and is rotated at a high angular velocity of Ω, the plate will not fall from its horizontal position even though it is still under the pull of its own weight. Let us analyze this physical phenomenon. When the plate rotates about its spin axis OX at an angular velocity Ω, and under the pull of its own moment Mg of its weight (the direction of the vector of Mg is the negative direction of the axis OY), the plate will move about the OZ axis at an angular speed w, as shown in Figure 12(b). The plate, under a combination of the two movements, will produce an acceleration called the coriolis acceleration. We know that a substance that has mass and acceleration will produce inertia. This inertia forms a moment Mr on the OY axis (the vector of Mr is in the direction of the OY axis), and this is the inertia moment. Its magnitude and gravitational moment Mg are equal but are in opposite directions. Thus, the plate's falling graviational moment Mg is counterbalanced by the inertia moment Mr. Therefore the plate can rotate on the horizontal plane without falling.

The top is equivalent to a round plate rotating at high speed, as shown in Figure 12(c). When the top rotates about its spin axis AZ at a high angular velocity Ω, an addition of an external moment M (equivalent to the gravitational moment of the round plate), when its vector along the OY axis is in the opposite direction causes a precession about the OX axis at angular speed W. This produces an inertia moment Mr along the positive direction of the OY axis, balancing the external moment M. This inertia moment is also called gyro moment.

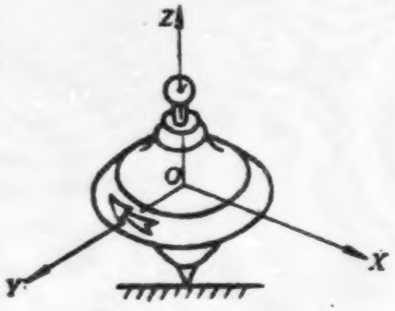

Figure 10. Fixed axis characteristic of the gyro.

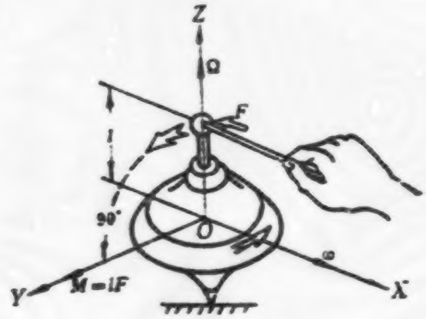

Figure 11. Precession of the gyro

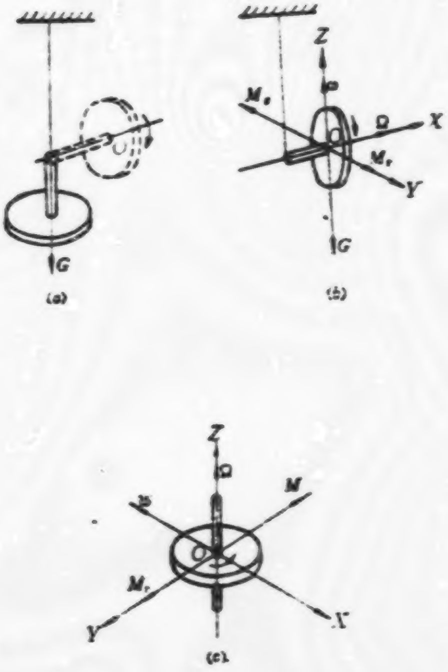

Figure 12. Moment of the gyro

(II) Gyroscope

A gyroscope is an instrument or equipment built on the gyro effect. Based on the number of rotational axis about which the gyro can rotate, there are the free gyroscope and the rate gyroscope. The gyroscope is generally powered electrically, pneumatically or by another form. The electrical gyroscope is actually a micro high speed rotary (generally above 15,000 rotations/minute) triple phase alternating electric motor. The electrical motor's gyro rests outside of its stator for greater momentum. Therefore, the electric gyro is also called a gyro motor.

Structure and Operating Principles of the Free Gyroscope:

The free gyroscope mainly consists of a gyro motor, an inner frame, an outer frame, and a gyro base, as shown in Figure 13. The gyro motor is affixed on the inner frame B by its spin axis AA. The inner frame is affixed to the outer frame C by its two semi-axis BB. The axis CC of the outer frame is affixed on the base K. Between each rotating axis and corresponding holes are high precision ball bearings. In this way, the gyroscope can rotate about three axis i.e., the gyro rotates about its spin axis AA, the gyro and the inner frame rotate about the BB axis together and the gyro, the inner frame and the outer frame rotate about the CC axis of the base together. In structure, the centers of gravity of the gyro, the inner and the outer frames and the intersecting axle centers of the three mutually perpendicular axis (AA, BB, CC) coincide exactly and are kept strictly in this position. The point is called the gyro support. This arrangement gives the gyro a three-dimensional freedom in space, therefore it is called a free gyroscope.

In a free gyroscope, when the gyro motor rotates at angular velocity Ω about its spin axis AA and if the base is rotated about the relative axis CC at angular velocity Wc, as shown in Figure 14, then the direction of the spin axis AA of the gyro will not change and will remain at its original spatial position when the base rotates because of the fixed axis characteristic of the gyro. If a compass is placed on the CC axis of the outer frame and a corresponding graduation is marked on the base, then the slanting and rotating angle between the outer frame and the base, i.e., the angle of the plane M of the base relative to the plane H of the outer frame can be measured.

Now let us look at another situation. Keep the base of the gyroscope stationary and apply an external moment M_B to the BB axis of the inner frame, as shown in Figure 15. At this time, the inner frame does not turn in the direction of the external moment, but the outer frame will rotate about the CC axis at angular velocity Wc, i.e., this is the precession of the gyro (because, when the external moment acts upon the BB axis of the inner frame, the outer frame immediately undergoes a precession, causing the gyro to simultaneously rotate about the two axis AA and CC. Therefore, a gyro moment Mr_B is created on the BB axis of the inner frame. This gyro moment counterbalances the moment of the external force, and the inner frame acted upon by the external force does not rotate). The greater the moment of the external force M_B the greater the angular velocity Wc of the precession of the outer frame. After the moment of the external force ceases, the outer frame immediately stops its precession, and the gyro axis stabilizes at a new spatial position. In this way, the slanting and turning angle of the outer frame relative to the base of the gyroscope acted upon by a definite moment of external force can be measured.

Utilizing the characteristics of the free gyroscope, the angle of the base plane relative to the plane of the outer frame can be measured. Therefore, the free gyroscope is also called the angle gyroscope. Ordinarily in the various stabilizers, it is used to measure (sense) the angle of deviation of the object to be stabilized from the originally stable position under external interference.

The structure and the operating principle of the rate gyroscope:

The free gyroscope becomes the rate gyroscope after one frame is removed so that it loses freedom in one of the dimensions, as shown in Figure 16. Thus, when the gyro motor turns at angular velocity Ω, and when the base rotates about the CC axis at angular velocity Wc, the inner frame will undergo a precession about the BB axis at angular velocity W_B. The greater the angular velocity of the slanting rotation of the base, the greater the angular velocity of the precession of the inner frame becomes. When the base ceases to turn, the gyro and the inner frame will stop at the position after the precession. Thus, when the inner frame undergoes precession, the angular velocity of rotation of the base can be measured at any moment by means of the angle of slanting and rotation of the needle. Therefore the rate gyroscope is also called the velocity gyroscope. In stabilizers it ordinarily serves to measure (sense) the angular velocity of deviation of the object to be stabilized from the stable position.

Since the rate gyroscope has lost freedom in one dimension, the spin axis of the gyro does not possess the characteristics of remaining at its original position, i.e., its fixed axis characteristic. At the same time, for the gyro to rapidly resume its original position after undergoing precession, generally one of the semi-axis of the inner frame is made into a spring torque axis and the other end is affixed to the base. Because of the use of the spring axis, the gyro will vibrate at a certain neutral position. Thus the rate gyroscope has an air to hydraulic damper. (To be continued)

BRIEFS

QINGHAI ENLISTMENT--Departments concerned in Qinghai Province held meetings to make arrangements for 1980 enlistments beginning 1 November. They decided: In rural areas, youths aged 18 and 19 will be drafted if they are educated youths residing in the countryside or mountainous areas or if they are middle school graduates from families having adequate manpower. In urban areas, 1980 high school graduates aged 17, 18 and 19 will be drafted. However, those who are working or continuing studies will not be drafted. In minority areas, education restrictions on draftees can be eased accordingly. [Xining Qinghai Provincial Service in Mandarin 1100 GMT 29 Oct 80 SK]

XINJIANG PLA UNITS MARK CORBAN--Urumqi, 21 Oct (XINHUA)--Cadres and fighters of all nationalities of Urumqi PLA units celebrated the Islamic Festival Corban on 20 October together with the local people in various parts of Xinjiang. UNIVERSITY PROFESSOR URGES ADOPTION OF ACADEMIC CREDIT SYSTEM

Shanghai JIEFANG RIBAO in Chinese 19 Aug 80 p 2

[Article by Li Zhiyuan [2621 1807 6678], assistant professor at Shanghai Academy of Finance and Economics: "Higher Education Should Adopt the Credit System Rather Than the Academic Year System"]

[Text] Institutions of higher education throughout the world use mainly two systems of schooling: one is the credit system under which after matriculation a student is allowed to graduate on completing a specific number of credits, and the other is the academic year system under which after matriculation a student is graduated on completing a specific number of years of schooling. China used both systems in higher education before Liberation, but after Liberation it adopted uniformly the academic year system which is still in force. Which system is better is a question deserving of discussion. I think that the credit system is better than the academic year system.

1. The credit system is better able to fully mobilize the initiative of the students to study and is better for producing qualified personnel faster.

The academic year system currently used is overly restrictive with regard to the years a student can study. The 4-year university arranges the courses of all specialties into 8 semesters over 4 years without regard to the students' level or ability. Every semester they must take a certain number of courses and study for 4 years, then are graduated. Students with more ability cannot take more courses, nor can they shorten their study time. Students with weaker foundations cannot take fewer courses and even though they do not learn as well, also must graduate on time. This "cutting everything with one knife" method is not good for mobilizing the initiative of students to study and is especially bad for those students with good levels and great potential.

If the credit system is adopted these defects will be corrected. The credit system is more flexible. It also arranges the required courses into 8 semesters over 4 years, but each course is assigned a certain amount of credit depending on the time required in class and the degree of difficulty (the amount of credit is roughly the same as the number of class meetings per week, and although there are variations, they are not large ones) and the student can take a greater or lesser number of credits depending on his own ability and time. This way, good students can elect to take more credits each semester and can complete the necessary number of credits in less than 4 years, graduate and go to work ahead of time. Weaker students can take fewer credits each semester. In this way, although they study 6 to 12 months longer than the others, they have a good grounding in their fields, and this is much better than not learning well. If this were done, it would guarantee the quality of students, produce qualified personnel earlier and be better for both the individual and the nation.

2. The credit system is better for teaching students in accordance with their aptitudes.

University professors fear mostly the unevenness of student abilities. It is a great strain in teaching, for if they attend to the good students, they cannot attend to the poorer ones, and finally they can only adopt a compromise method and attend to the large majority in the middle. This is very bad for selecting the best and training qualified personnel. The academic year system produces just such a situation. After students matriculate they are assigned to a class and while in the first year it is all right, after the second the unevenness becomes more and more clear, but because the classes are rigidly assigned, they cannot be revised and the faculty can only adopt methods which cut the feet to fit the shoes, and this has an impact on raising the quality of teaching.

If the credit system is adopted, courses will be chosen by the students themselves, and their interest in study will become greater and their drive to study will also become greater. Faculty will also have some leeway as far as students who elect their courses are concerned and students who have not done as well can be either refused or made to postpone electing a course and in this way it can be guaranteed that the levels of students in the same class is not too disparate, and this will be good for teaching students in accordance with their aptitudes.

3. The credit system can better adapt to new situations in the rapid development of science.

Since the 1970's, some new situations have appeared because of the rapid development of science: in the past the liberal arts and the sciences and engineering were unrelated, but now there is science and engineering in the arts, and arts in the sciences and engineering. In the past a discipline could resolve its own questions, but now many disciplines must be combined to resolve a question. Thus the courses which a student must take are no longer only in his own field, or can even be handled independently by one department. The results of implementing the academic year system necessarily arranges the courses in an overly rigid manner. Although in their upper-class years some advanced courses can be elected, the system is far from able to adapt to the demands of the objective situation, and furthermore, one field or one department cannot offer all courses. If the credit system is used, the situation becomes quite different. A student can choose courses quite freely, especially when he gets to his upperclass years he can go outside his field and department or even school to take related courses in accordance with his own study direction. This is good for the student's learning, and can produce qualified personnel quickly and can create conditions for the development of new sciences.

4. The credit system allows working cadres to participate in afterwork education.

Because of a decade of calamity, the professional level of many working cadres is far from up to the demands of the objective situation, but it is impossible to transfer a great many cadres out of production to study. The best method is to create conditions which permit them to use afterwork time or available time for advanced study. Generally speaking, they demand only relevant knowledge which will help them resolve a certain question, and do not demand longterm systematic and comprehensive study. The academic year system currently in force has little flexibility and cannot adapt to the demands of this kind of special circumstance. If the credit system is adopted, working cadres can go to university and choose courses according to the demands of work and as time permits, and as time goes on they can complete all the credits and through examination qualify as university students. Therefore, if higher education institutions adopt the credit system it will be good for motivating working cadres to participate in afterwork study and further raise their professional and managerial levels.

MASSES URGED TO RESPECT, STRIVE FOR KNOWLEDGE

Nanjing XINHUA RIBAO in Chinese 12 Aug 80 p 2

[Article by Lu Gan [7120 1626]: "On the 'Cultured' and the 'Uncultured'"]

[Text] In social life, people frequently have certain biases toward certain things. The valuing of the "uncultured" and disdain for the "cultured" is one type of bias. People with this type of bias regard the "uncultured" as glorious and valuable, as if the "uncultured person" were a synonym for the "revolutionary." In their eyes, the "cultured" are "sour and stinking things", and cultured, educated intellectuals are the "capitalist class." They have even been categorized as the "old nine" and alienated. Naturally, during the 3 years since the smashing of the "gang of four", there have been fewer and fewer people with this type of bias, yet this type of bias still plays a role in certain units. Some intellectuals have been unable to attain appointments, some have been appointed incorrectly, and some are employed but not trusted. All of this is related to this type of bias.

I have heard that in a certain county there is a high school principal who has not even had one good class in his 20 years of work in the school and yet he does not even have the slightest guilty conscience about this. He hasn't gone out into the fields and worked, and always rolls his pants up high. He runs about inside and outside of school, and after a while people have come to call him "the clodhopper principal." When he heard this, he was very proud. And how did this principal treat the teachers? If their hands had calluses, it was good to roll their pants up high. If their clothes were clean and tidy, they were very polite, and their hands had no calluses, even if the quality of the school was very high, they were not appreciated and he sarcastically ridiculed them for having a "capitalist class ideology" and for "selling quick remedies."
If we value the "uncultured" and disdain the "cultured" to the point of confusing right and wrong, how can we correctly implement party policies concerning intellectuals?

In fact, "uncultured" is not worthy of praise. An "uncultured person" is the strong catastrophic imprint of the old society on the workers and peasants and is not an innate feature of the workers and peasants. On the contrary, "cultured" is worthy of honor. Cultural and scientific knowledge is a sign of human civilization and is the natural indispensable force for improving society. Therefore, our party has consistently promoted the study of cultural and scientific knowledge and has sought the intellectualization of worker and peasant cadres. In 1939, Comrade Mao Zedong personally drew up the resolution "Magnanimously Accept the Intellectuals," in which he clearly pointed out: "Without the participation of the intellectuals, the victory of the revolution is impossible." Now, in our building of the four modernizations, the "cultured" should be increased and not diminished. To mold a society of high-level matter and spirited civilization we must first have these signs and devote ourselves to having people with the necessary cultural and scientific knowledge. Only if we have these kinds of people will we be able to form an effective administrative machine and be able to control modern technological and scientific knowledge. An uneducated person cannot deeply understand the value of culture and science, and those lacking in scientific knowledge cannot control and utilize the laws for building a modernized economy. If this type of person functions as a leader, he will be unable to respect and select able subordinates. Is this principle not clear?

The viewpoint of valuing the "uncultured" and disdaining the "cultured" is intolerable; this is the conclusion reached after people have suffered much. Early, before the Cultural Revolution, the bias of despising culture and looking down on intellectuals had already often emerged to obstruct our line of vision. During the Cultural Revolution, to realize their wild ambitions of seizing party power, Lin Biao and the "gang of four" pushed this bias to the extreme and tried to destroy culture. At the time, the desks and chairs in some schools flew about violently, creating a military battleground. Some scientific research units stood in great numbers with spears, and the precious materialized into ashen butterflies. Several thousand years of meticulously preserved famous historical locations and cultural relics were trampled, and cultural and educational facilities painstakingly built up over several decades were in total disarray. These material losses further caused the cream of the nation and people, the masses of specialists, to suffer injustices and even death. The studies of innumerable students were cast aside and neglected for 10 years, causing a temporary shortage in talented individuals, so that now there are difficult problems in building the four modernizations.

Recently, Comrade Song Renqiong [1345 0117 4522], director of the Central Organization Department, pointed out: "From now on, for the recruiting of cadres not engaged in production, we should pay complete attention to cultural level and specialized knowledge and strictly, according to the requirements for cadres in the new period select young graduates mainly from universities, specialized secondary schools, those of the same level. In general they should not be selected directly from workers and peasants with low cultural levels." I think this important policy decision will have a decisive significance for realizing the four modernizations. Yet, if we want this policy decision to be universally carried out for the people, the bias of "uncultured" and "cultured" must be eliminated. At present, are there not people who say: "If we want to value the use of cultured people, the uncultured will be unpopular," and "Then do we still need worker and peasant cadres?" This type of viewpoint is wrong.

In building the four modernizations, "uncultured people" will be unpopular; as for the worker and peasant cadres, that is another matter. It goes without saying that after the founding of the People's Republic, all intellectuals came basically out of worker and peasant households, and after 30 years of study and training most of the intellectuals from the old society have already become part of the working class. Intellectual cadres are also worker and peasant cadres. Those who have come directly from the workers and peasants originally had no culture or were culturally lower "worker and peasant cadres." Many among them diligently studied and soon shed their "uncultured" hat, becoming useful [persons] with rich practical experience and suitable cultural levels. The problem rests only with those long "uncultured" comrades who should quickly come to realize the truth and seize the opportunity to study hard and strive for early proficiency in specialized knowledge. In this way they can become experts in their work and keep in step with the building of the four modernizations.

JIAOTONG UNIVERSITY EXCHANGE PROGRAM PRAISED

Shanghai JIEFANG RIBAO in Chinese 21 Aug 80 p 1

[Article: "Smash the Rigid Situation of Limiting Personnel Movements; Shanghai's Jiaotong University Implements Personnel Exchange Program; Sends Out Staff To Support Units Outside University and Brings In Small Number of Urgently Needed Teachers."]

[Text] Since early this year, Shanghai's Jioatong University has been carrying on a personnel exchange, with 200 teaching, administrative and working staff happily going to factories, research institutes and other schools to work while another group of personnel are going through the transfer procedures. At the same time, a small group of specialist teachers and technicians urgently needed by Jaiotong University has been transferred to the University. Because of this personnel exchange, Jiaotong University has outside talent for newly established specialties and units and has made preliminary steps to change the rigid situation which has existed heretofore that these people could only be brought in and not sent out, bringing great vitality to the teaching, administrative and working staff.

Over the years, the staff of Jiaotong University has become enormous because of the policy of only bringing in personnel and not sending them out. The ratio of staff to students among the nearly 10,000 present staff and students is nearly 1:1, and there is no way to replenish the strength of mainstay faculty and new students within the stipulations relevent to personnel strength. And the contradiction of insufficient work strength in some areas but the oversupply of talent beyond authorized strength is a rather sharp one. Since the smashing of the "gang of four," the school's party committee has adopted a series of important measures to find suitable work for the broad faculty and constantly improve their working and living conditions, so they could get what they deserved and develop their strengths, but there is still an oversupply of highly trained talent in some areas, while some capable "heroes" have no room to exercise their talents. The overwhelming majority of those of the faculty which have been retained, are graduates of the same school and have become established in the faculty so basically that they are all of the same mold, creating, over a long period of time, the phenomenon of something close to biological "inbreeding" which prevents learning and absorbing the best of other schools. In addition, during the past few years, over 1,000 young workers have been assigned work by the socially adopted methods of "unified arrangement," "group recruiting of workers," and "replacement system." They have been the victims of a decade of disorder, and the cultural level of many is too low for them to be suited to the demands of university work.

After Jiaotong University began personnel exchange work, the University's personnel office organized cadres to go to departments and teaching and research sections to understand thoroughly the personnel level of the basic units and the needs and shortages of specialized personnel. Throughout, the University's party committee conducted numerous specific studies and deployments and repeatedly explained to departments and teaching and research sections the profound significance of this personnel exchange work. Then with the departmental party general branch as the basic unit, they conducted some ideological work among the Jiaotong University comrades who were being transferred so that they would understand that shifting from Jiaotong University to factory, research agency and newly established school work was so that individuals could fully develop their talents, get what they deserved and play an even greater role. At the same time, they thoroughly resolved the actual problems of transferring personnel, mainly that technical cadres needed jobs suited to their specialties without influencing the material treatment of transferred personnel and paying attention to satisfactorily resolving questions on conforming to conditions of promotion so that they would be happy to undertake new work posts.

This exchange of Jiaotong University personnel involved 10 specialties: dynamic mechanics, engineering mechanics, applied physics, applied mathematics, precision instruments, electronic engineering, electrical engineering and computers. Some of the personnel graduated from University in the 1970's, some in the 1950's and 1960's and even some graduated about the time of Liberation. They went to the First Bureau of Electromechanics, the Second Bureau of Electromechanics, the Bureau of Handicrafts, and universities, factories and research institutes subordinate to research agencies. After arriving at their new units, many of the personnel involved did very good work, some became the responsible persons of a technical section, some became teaching mainstays of schools, some independently shouldered important tasks. Faced with these realities, comrades who were transferred out said, with deep feeling, "The Jiaotong University party committee really wanted us to play a role."

Some of the personnel moved out, but some also moved in. In the past two years, Jiaotong University has newly built a science department and an industrial management department and some new frontier specialties, to strengthen the teaching and research in basic theory and sophisticated science, and now has transferred in some mainstay cadres and technicians who have expertise in these specialties. After their arrival at Jiaotong University, some have become mainstays in the new specialties there, some have made contributions to the school by training graduate students to go abroad. After being transferred to Jiaotong University to work, one professor established with the other professors a Light Communications Research Agency and became a leader in this new field. Jiaotong University is still considering the weaknesses in the learning of students at industrial and scientific universities and is preparing to provide electives for them in literature, music and the arts. The necessary faculty is already being recruited, and over 2,000 applications have been received from all over the country. Jiaotong University will either transfer in or hire the best of them.

BRIEFS

XINJIANG JAPANESE LANGUAGE SOCIETY--The Urumqi area Japanese Language Study Society, the first foreign language study mass organization in Xinjiang, was established on 6 October. The society will support teaching of the Japanese language and organize translation of Japanese publications and introduction of advanced science and technology from Japan. [Urumqi Xinjiang Regional Service in Mandarin 1620 GMT 23 Oct 80 OW]

NEI MONGGOL SCHOOL ENROLLMENT--Nei Monggol's 1980 technical school enrollment has concluded, and 9,000 new students have begun their studies. There are 74 technical schools or technical study classes throughout the region with some 16,900 students attending. [Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 30 Oct 80 SK]

JILIN JOINT UNIVERSITY--A joint university was recently established in Jilin Municipality, Jilin Province, under the sponsorship of Jilin Normal University, Jilin Institute of Electrification of Metallurgical Industry and Jilin Engineering Institute. The joint university has departments in Chinese languages, the chemical industry, mathematics, the electrification and automation of industrial enterprises and chemical engineering. Applicants should either be educated youths in urban areas of Jilin Municipality or those settling in the countryside. They should either be educated youths in urban areas of Jilin Municipality or those settling in the countryside. They should pay 10 yuan per person as a monthly tuition fee. Following graduation, they will receive the same treatment accorded those from other universities. [SK300702 Changchun Jilin Provincial Service in Mandarin 1100 GMT 29 Oct 80 SK]

KAZAK LANGUAGE PUBLISHING HOUSE--The Ili People's Publishing House, the first Kazak language publishing house in China, starts operating in Xinjiang's Ili Kazak autonomous prefecture. Among the first 17 books to be published in the Kazak language are some dealing with 4 major inventions in ancient China and other topics. Besides this publishing house, there are at present other Kazak language editorial departments at the Beijing Nationality Publishing House and the Xinjiang People's Publishing House. [Urumqi Xinjiang Regional Service in Mandarin 1620 GMT 30 Oct 80 OW]

XINJIANG PUBLISHING HOUSE--Urumqi, 29 Oct (XINHUA)--China's first Kazakh language publishing house--the Ili People's Publishing House--was recently established in Kuytun City in Ili Kazakh autonomous prefecture, Xinjiang. To be published initially will be "The Four Major Inventions of Ancient China," "Scientists on Mathematics, Physics and Chemistry," long poem "The Stars of Junggar Basin" and 14 other books. In addition to this Kazakh language publishing house, Kazakh language editorial groups have been established in the Beijing Nationalities' Publishing House and the Xinjiang People's Publishing House. [Text] [Beijing XINHUA Domestic Service in Chinese 0116 GMT 29 Oct 80 OW]

SHANDONG ISLAMIC CONGRESS--The second Shandong Provincial Islamic Congress was held 17-23 October in Jinan. Over 140 Muslims of Hui nationality and Islamic patriotic personnel attended. Representatives of Christians, Catholics, Buddhists and Taoists extended congratulations. The congress set forth these tasks for the Shandong Provincial Islamic Association: implementing the policy on religious freedom, organizing Islamic personnel to study, uniting Muslims to contribute to the Four Modernizations, establishing friendship with foreign Muslims, supporting the just struggles of Islamic countries, opposing hegemonism and protecting world peace. [SK251009 Jinan Shandong Provincial Service in Mandarin 2300 GMT 24 Oct 80 SK]

SHANGHAI FAMILY PLANNING--The Shanghai television station recently held a discussion meeting of advanced units and individuals in family planning, preschool education and women's and children's work. Yang Kai, vice mayor of Shanghai, spoke at the meeting on family planning work and encouraged each couple to have only one child. The Shanghai television station announced that it would show a video tape recording of the meeting on Channel 5 on the evening of 23 October. [Shanghai City Service in Mandarin 0000 GMT 23 Oct 80 OW]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

WESTERN PUBLIC OPINION POLLING TECHNIQUES EXPLAINED

Beijing RENMIN RIBAO in Chinese 16 Sep 80 p 5

[Article by Yuan Yuan [0337 0337]: "The Origin of Public Opinion Polls"]

[Text] Public opinion polls, also called public opinion balloting originated in the United States. It is said that the first public opinion polls were conducted by newspapers prior to presidential elections for the purpose of making news attractive. The polls were conducted by asking readers to fill out and mail in simulated ballots in newspapers, called "straw ballots," to ascertain the attitudes of the citizens in order to forecast the outcome of presidential elections. So far as we know, the earliest "public opinion polls" were conducted by the Harrisburg PENNSYLVANIAN and the Raleigh STAR of the United States in 1824. However, the polls at that time exercised very little influence. People began to gradually pay attention to them only as late as the end of the 19th century. Beginning in 1904, public opinion polls of various scales were conducted prior to each presidential election. At first, the public opinion poll conducted by the LITERARY DIGEST magazine was in the limelight because of its scale and the accuracy of its predictions. However, in the 1936 presidential election campaign, the poll conducted by the LITERARY DIGEST predicting that Alfred M Landon would defeat Franklin D. Roosevelt turned out to be staggeringly inaccurate. At that time, LITERARY DIGEST mailed out a total of 10 million questionnaires, of which more than 2,370,000 were returned. Based on the statistical results, the magazine categorically predicted that Alfred M Landon would defeat Franklin D Roosevelt! However, another poll-taker, the "American Public Opinion Poll Institute," which was founded by George H Gallup only in 1935 and was then still unknown to the public, announced a totally different prediction: Franklin D Roosevelt would win by a majority. The result of the voting was 19 million votes for Roosevelt, a margin of 11 million over the total for Landon. This success has helped boost [Gallup's] reputation for accuracy ever since.

After 1936, attracting people's interest was no longer the main concern of public opinion polls; they entered a new era by applying scientific approach to practical research work. The public opinion polls were applied by Gallup not only to forecast the results of presidential elections, but also to political and social surveys, and even to go still further to market surveys and so forth. In 1939, Gallup founded a "Listeners' and Viewers' Survey and Research Institute" to specifically investigate the reactions of the public to broadcasting programs and moving pictures. At the same time, two public opinion poll organizations, respectively established by

Elmo Roper and Archibald M Crossley, also were very active. These are the three big public opinion poll organizations in the United States. In 1937, the American Public Opinion Research Association began to publish a "Report on Public Opinion Polls." In 1941, a "National Survey and Research Center" was set up by the University of Denver, which turned it over to the University of Chicago in 1947. Meanwhile, a number of public opinion poll organizations were set up in principal capitalist countries one after another. In 1970, the World Association of Public Opinion Polls had 300 members from 31 countries, among them members from countries in East Europe, Asia, and Africa, as well as Latin America.

The emphasis of public opinion polls in the beginning was on being fascinating; they made no claim to being scientific. The disastrous defeat of LITERARY DIGEST in 1936 was due chiefly to its wrong approach. No matter how large the scale of "straw ballots" was, its questionnaires were mailed to people chosen from telephone directories and from lists of automobile owners; yet people who did not own telephones or automobiles also cast their votes on election day. Therefore, a great disparity was certain.

The approach which Gallup adopted was "typical sampling." Based on Brown's theory of "typical selection," he classified a cross-section of the total American population into a number of terms under different categories such as sex, age, income, political attitudes, and locality. A certain number of survey targets were then allocated proportionally, thereby completing synthetical statistics. In the 1936 public opinion poll, he selected 1,000 survey targets. Facts have proven that if the proportion of typical sampling is selected correctly, it is usually more representative than nationwide large-scale polling.

However, this is not to say that this method is the acme of perfection. An unusual polling failure by all three big public opinion polling organizations--Gallup, Roper, and Crossley--as well as that of the month-long survey conducted by the NEW YORK TIMES throughout the nation took place in the 1948 presidential election [campaign]. At that time, these public opinion polling organizations, as well as the information media, which depend on public opinion polls, all announced that Thomas Dewey would defeat Harry Truman. The outcome of the election went just the other way. This failure caused public opinion polling institutions to be taunted by the whole nation. People made them "eat crow" (meaning to bow one's head and admit one's guilt). The Gallup Public Opinion Poll Institute and others conducted an investigation of their setbacks and came to a conclusion. They found that when they carried out their typical surveys, they overlooked voters who had only an elementary school education and they set the closing date for the survey too early; the attitude of the American people "changes everyday, and almost every hour." Since then, techniques for conducting public opinion polls have been reformed. A new technicque, which combines both the "typical sampling" and the "random survey" (which is to select the target of survey at random), has been adopted so that the subjective flavor in the technique of typical selection might be attenuated.

In practice, polling was done in the very beginning by "straw ballots" in newspapers which readers were asked to fill out and mail in. This method was called the "card technique." Later, both the methods of "mailing questionnaires" and of "questioning people by interviewers" were separately employed. "Mailing questionnaires" means mailing the contents of questionnaires to the survey targets and then compiling the answers; "questioning people by interviews means hiring canvassers to go out and question people individually (sometimes the telephone is also utilized).

In the West, public opinion polls meet with both praise and censure from the public. When they fail, people criticize them for having "fallen into a trap"; when they succeed, people praise them as being "absolutely reliable." We should say that public opinion polling has its advantages. It is an important technique for understanding society. They key lies in the attitudes and techniques of the pollster. In the capitalist society, wrangling exists among the parties and factions, and their financial groups and they intrigue and maneuver against each other. Their entanglements would certainly influence public opinion polling organizations. Polling also has been much used by politicians as a means of attacking their opponents; furthermore, the outcome of polls is utilized by them to influence public opinion. Therefore, one can hardly blame people who criticize that the "public opinion poll" has changed from an "instrument for testing" to an "instrument for commanding."

MUSKIE HOLDS PRESS CONFERENCE ON HOSTAGE ISSUE

OW020228 Beijing XINHUA in English 0218 GMT 2 Nov 80

[Text] Washington, November 1 (XINHUA)--The U.S. Secretary of State Edmund Muskie said today some "essential circumstances" have been realized for the release of the American hostages, but the United States still has no way of knowing when the release will come to fruition.

Speaking at a press conference held at the State Department, Muskie said there was a "growing awareness" in Iran that it is in Iran's interest to resolve the hostage issue. Iran's parliament has been put in place and a prime minister has been selected. But "we don't really know what terms the Iranians may propose if they take a decision tomorrow." "I have no basis upon which to set a time frame for a final resolution of the hostage question," he added.

Debate in the Iranian parliament on the hostage release began some time ago and a public debate on the terms for the release is scheduled in parliament tomorrow.

Muskie indicated that there probably would have to be some negotiations even if Iran's parliament debate concludes with a decision on the terms, saying such negotiations "are a probability because of the complexity of the issues."

Meanwhile, the administration assured Iran of its acceptance of the regime of Ayatollah Khomeyni. Answering a question at a press briefing yesterday, State Department spokesman John Trattner said, "We have accepted the results of the April 1979 referendum and consider the present government of Iran as the legally constituted government in Iran."

This move by the State Department is noted here as "part of the Carter administration strategy to try to persuade authorities in Iran that it accepts the revolutionary government." One of the conditions set by Khomeyni for the hostage release is a U.S. promise not to interfere in Iran's internal affairs, the others being return of the late shah's property, unfreezing of Iranian assets and dropping of legal claims against Iran.

THAI FOREIGN MINISTER COMMENTS ON UN KAMPUCHEA VOTE

OW241340 Beijing XINHUA in English 1258 GMT 24 Oct 80

[Text] Bangkok, October 24 (XINHUA)--Thai Foreign Minister Sitthi Sawetsila told the press yesterday that the adoption of the ASEAN proposal on Kampuchea by an overwhelming majority vote in the U.N. General Assembly has shown that the proposal is correct and won the support of the people throughout the world, according to press reports here today.

Vietnam and the Soviet Union, he pointed out, should heed the views of the great majority of countries. If they want peace, they should accept ASEAN's proposal. Their rejection of this proposal is unjustified. Past practice has proved what they have done is wrong.

Vietnam has done much to advertise its willingness to enter into direct negotiations with Thailand on the Kampuchean problem. This is an attempt to divert public attention from facts and the root cause of the problem. The Kampuchean problem is not an issue between Thailand and Vietnam but one of foreign troops' invasion and occupation of Kampuchea. Therefore, a dialogue between the two would not possibly bring peace to Kampuchea, he said.

Thailand, the foreign minister noted, has not ignited a war in Kampuchea. The Thai troops are stationed in Thai-Kampuchean border areas for the sole purpose of defending the state sovereignty.

He said that the Vietnamese people are afflicted with untold suffering. The country is faced with many problems. Its grain shortage is expected to reach three to four million tons next year. The Vietnamese authorities should keep the interests of their own people at heart and spend much more time to build their country instead of pursuing war, Sitthi added.

PAKISTAN PRESIDENT DISCUSSES AFGHAN REFUGEE SITUATION

OW030113 Beijing XINHUA in English 0103 GMT 3 Nov 80

[Text] Islamabad, November 2 (XINHUA)--Pakistan President Mohammed Ziaul Haq said this evening that his people felt the pain of the Soviet intervention against the people of Afghanistan, who were their brethren in faith and their next door neighbour.

Speaking at a civic reception held in Peshawar, capital of the North West Frontier Province, he pointed out that due to this intervention, hundreds of thousands of Afghan refugees crossed over to Pakistan, and their number reached from 1.1 to 1.2 million. Their deplorable conditions were a challenge to human conscience. If this challenge was not met and no voice was raised against it, then it would be knocking at the doors of someone else tomorrow, he added.

For this principled stand, he went on to say, Pakistan was being punished with violations of its northern and northwestern borders. Defenceless and innocent refugees were fired upon and the border posts were attacked from air.

The president stressed that these attacks were intended to telling Pakistan that it will have to pay heavily, if it does not abandon its present policy on Afghanistan. But, Pakistan's policy was based on certain moral principles, which it could not abandon at any cost.

The president emphasized, "We cannot sacrifice our principles to please others, nor can we compromise our national prestige due to threats." He added, "Every man, woman and child of Pakistan would be steadfast to foil any designs against the security of Pakistan."

He reiterated that Pakistan wanted a political settlement of the Afghan crisis. "We wish that foreign troops should leave Afghanistan and its Islamic and non-aligned character should be restored." Pakistan also wished to see the Afghan refugees return to their homeland with honour and dignity and the Afghan people allowed to have a government of their own choice, he said.

ARAB MINISTERS URGE END TO IRAN-IRAQ WAR

OW291600 Beijing XINHUA in English 1524 GMT 29 Oct 80

[Text] Amman, October 29 (XINHUA)--The participants in a meeting of the seven-member committee of Arab foreign ministers here expressed the hope that the war between Iraq and Iran would end as soon as possible and that Arab efforts would be focused on the main danger facing the Arab nation--Israeli aggression and occupation.

The foreign ministers of Jordan, Iraq, Syria, Saudi Arabia, Kuwait and Algeria and the head of the political department of the Palestine Liberation Organization (PLO) are meeting here to make preparations for the 11th Arab summit conference to be held here next month.

In a statement on his arrival here yesterday, Saudi Foreign Minister Sa'ud Ibn al-Faysal expressed the hope that "the war between Iraq and Iran would end as soon as possible.

The Palestine question, he said, "will be the foremost among the topics the foreign ministers' committee will discuss in drawing up a strategy for the summit."

In his arrival statement, Kuwaiti Foreign Minister Shaykh Sabah al-Ahmad al-Jabir stressed that it is necessary to tackle inter-Arab problems and confront the major challenges facing the Arab nation.

Meanwhile, Algerian Foreign Minister Ben Yahia said that the aim of the meeting is to draw up a unified Arab strategy for confronting the Zionist enemy and achieving the paramount goals of the Arab nation in liberating Palestine including holy Jerusalem and the occupied areas."

In a statement to the press, PLO spokesman 'Abd al-Muhsin Abu Mayzar said, "PLO hopes that the Iraq-Iran war could be ended."

Speaking at the first session of the meeting, head of the PLO political department Faruq Qaddumi pointed out that the meeting should focus on the main danger confronting the Arab nation, namely, Israeli aggression and occupation.

INTERNATIONAL AFFAIRS

USSR PLUNDERING AFGHANISTAN'S RESOURCES

OW291955 Beijing XINHUA in English 1942 GMT 29 Oct 80

[Text] Beijing, October 29 (XINHUA)--The Soviet Union is milking Afghanistan of natural gas and other resources, according to a UPI report from Peshawar today quoting a group of former Afghan senior officials who fled to the Pakistan border town of Peshawar recently.

The officials said that the Soviets are taking large quantities of natural gas, fertilizer, cement and other Afghan goods but paying only a small part of their real value.

They said that the Soviet occupation troops now take complete hold of Khoja Gogerdak and Jar Qudugh gas fields in Jauze Jang Province, about 18 miles from the Soviet border.

"They (Russians) are treating our resources as if they belonged to Russia," noted a Planning Ministry official. "They do not even let us examine our own records so we don't know exactly how much gas Afghanistan actually produces," complained another official from the Ministry of Mines and Industries. They estimated production of the fields at 2.3 billion cubic meters per year.

The officials said that the Soviet Union purchases the country's total gas production at dlrs 82 per 1,000 cubic meters on credit which they said comes to only half the world market price.

The Soviets also buy fertilizers, cement, cotton seed oil and fruits on a credit/barter basis, with Afghan products calculated at half their commercial value and the Soviet exchange goods overvalued, the officials said.

An economist who used to work at the Planning Ministry disclosed that the Afghans purchase sugar on credit in return for their cement sales and lose dlrs 97 per ton of sugar on the deal in terms of world market standards.

Urea nitrogen fertilizers from the Mazar-i-Sharif plant in Balkh Province fetches only dlrs 120 per ton, or less than half world market price, a former Agriculture Ministry official said.

The Soviets have halted all shipment of olives and citrus fruits from orchards outside Jalalabad to Iran, and pay about 25 per cent of what the Iranians used to pay for the now requisitioned produce, they added.

CSO: 4020

BANGLADESH OFFICIAL DISCUSSES GULF WAR, KAMPUCHEA, DRA

OW032313 Beijing Domestic Service in Mandarin 1100 GMT 3 Nov 80

[From the "Forum on International Affairs" feature--"Recent" interview by Mme (Chen Yunqi) of the UN Broadcasting Department with Bangladesh Foreign Minister Mohammad Shamsul Haq attending the UN General Assembly--recorded in English fading into Mandarin translation]

[Text] [Chen] Mr Foreign Minister, you are aware that the Iran-Iraq conflict has caused very serious concern around the world. The Islamic conference good-will delegation has been trying to mediate the conflict between the two countries. In your opinion, what are the prospects for settling the conflict? What other measures is the Islamic conference prepared to take?

[Haq] The problem that you have mentioned is indeed an extremely distressing one about which all UN member states are concerned. As you know, the two Islamic, developing and nonalined Asian countries must take measures themselves to end the unfortunate, tragic hostilities between them. The delegation sent by the Islamic conference was not a mediation but a good-will delegation. The purpose of the delegation was to convey to the leaders of Iran and Iraq the great concern of the Islamic conference member states for the relations between the two countries. This is what the good-will delegation did. It called on the presidents of the two countries and briefed the conference of foreign ministers of Islamic countries on the situation. After hearing the briefing, those attending the conference of foreign ministers of Islamic countries had their own views on the situation. But they all held that it is neccessary, first of all, to stop the hostilities and to seek a peaceful settlement of the conflict between the two countries. We will further hear the opinions of the two countries and study them. With the UN Security Council's endorsement, positive proposals have been put forward. I have found that all delegates from nonalined countries to the UN Security Council are concerned about this matter. We should make special efforts and ask the UN Security Council to endeavor to have the two countries stop their hostilities and peacefully settle their conflict at a negotiation table. The UN Security Council held a formal meeting and adopted a resolution calling on the two sides to stop their hostilities and settle their conflict through peace talks. We hope that Iran and Iraq will send their representatives to the UN Security Council and the Islamic conference to hear the opinions of other countries. In this way, it will be possible to find a way to stop the very unfortunate hostilities between the two countries. A fair and honorable settlement of the conflict should be sought through peace talks.

As far as Bangladesh's stand is concerned, it is the same as the stand of most other countries. People will be disappointed if any country does anything causing the war to spread or expand. We hope that the two superpowers will remain neutral.

[Chen] We really hope that you will be successful in this. The next question is: What stand does your country take on the question of the Kampuchean seat in the United Nations?

[Haq] I believe you understand that the stand taken by Bangladesh is a principled one. We have taken this stand in line with the principles of the UN Charter--serious respect for the sovereignty of all countries, refraining from using military or other means to interfere in other countries' internal affairs and refraining from using armed force or the threat of force to settle a conflict. We recognize the right of all countries to choose their own political, economic and social systems. But I hold that they should be able to make their own choice without foreign interference. These are the principles on which Bangladesh has based its stand.

The change of government in Kampuchea has been caused by others' interference. Therefore, our stand is that all foreign troops should withdraw from Kampuchea. The Kampuchean people should be allowed to choose their own government freely without any outside interference or military threat. As you know, we support the government of Democratic Kampuchea and its seat in the United Nations.

[Chen] Yes, in this connection, the ASEAN countries have suggested that an international conference be called sometime in 1981 to discuss the Kampuchea issue. What is your opinion on this?

[Haq] I should consider this proposal sympathetically so far as Bangladesh is concerned. I think you understand that the root cause for the clash is unfortunately spreading in Asia and in the developing Third World. All the delegates attending the UN session must join their efforts to eliminate the root cause of the conflict. Just like what you have seen, special conferences have been held on other major issues. Therefore, we cannot find any reason to oppose the holding of such conference.

[Chen] Another disquieting situation in Asia is the Afghanistan issue. The special session of the General Assembly held last January adopted a resolution calling for the withdrawal of all foreign troops from Afghanistan. However, as of now, this resolution has not been carried out. This issue will once again be debated at the UN session. What will be the outcome of the debate?

[Haq] I believe this is a major issue about which all UN member nations are concerned because Afghanistan is located in a very sensitive area. It borders Pakistan and Iran. Therefore, Bangladesh, as an Asian nation and a member of the Security Council and a developing nation, earnestly hopes to step up its efforts to find a political solution for this issue. This calls for the withdrawal of foreign troops and efforts to create conditions to help the Afghan people determine their own destiny and choose their own government. The refugees who continuously pour into Pakistan and Iran have also created another new issue. I believe that the groups concerned are drafting a resolution. We hope that the delegates attending the UN session will support this resolution. This is a proposal put forward by the Islamic conference. I hope that this proposal will be adopted by the majority of the UN member nations at the 35th General Assembly.

INTERNATIONAL AFFAIRS

AFGHAN GUERRILLAS CLAIM SUCCESSFUL ANTI-SOVIET OPERATIONS

OW041602 Beijing XINHUA in English 1519 GMT 4 Nov 80

[Text] Islamabad, November 4 (XINHUA)--Afghan freedom-fighters shot down two Russian helicopter gunships and captured a sub-provincial headquarters in Jawzjan Province bordering the Soviet Union northwest of Kabul, a spokesman of the Islamic Alliance for Liberation of Afghanistan said this in Peshawar today quoting a report from Sang Charak, Jawzjan Province.

The freedom-fighters also claim to have killed 100 Russian and Afghan Government troops, and destroyed ten tanks. In retaliation, Russian planes bombarded the area. In all the attacks, Russian planes came directly from Soviet soil.

He also reported that another fight took place in Khawal sub-province of Jawzjan Province, with the Russians suffering even more casualties in this incident.

According to a spokesman of Hezb-i-Islami (Islamic Party) of Afghanistan in Peshawar today, Afghan freedom-fighters also inflicted very heavy losses on the Russian and Karmal's troops in big clashes in Alishang District of Lagham Province northwest of Kabul on October 29. Over a hundred Russian troops were reported killed and eight tanks and armoured cars destroyed in the fight.

He added that Russian troops had attacked Alishang District several times before in an attempt to gain control over the areas liberated by freedom-fighters but each time they were beaten back.

Freedom-fighters recently attacked the Russian troops stationed in Maqoor District of Ghazni Province southwest of Kabul, destroying two tanks and one armoured car, the same source said.

Guerrilla operations by freedom-fighters were also reported in various parts of Logar Province south of Kabul.

INTERNATIONAL AFFAIRS

AFGHAN GUERRILLAS ACTIVE AGAINST RUSSIANS

OW291520 Beijing XINHUA in English 1505 GMT 29 Oct 80

[Text] Islamabad, October 29 (XINHUA)--Afghan freedom-fighters have been successful in their guerrilla operations in the capital Kabul nearly every night, according to a spokesman of Hezb-i-Islami of Afghanistan in Peshawar today.

He added that the freedom-fighters attacked Soviet forces on October 26 in Shahabuddin Maidan region, about two kilometers west of Kabul. In this surprise attack, an oil tank was burnt down, 30 Russian soldiers were killed and one Russian tank destroyed.

Heavy fighting between freedom-fighters and Soviet troops was reported in various areas in Kunduz Province bordering the Soviet Union, the same source said. In a battle on October 26 in Ajighat village of Imam Sahib District of the province, 10 Russian soldiers were killed by a mine planted by the freedom-fighters. In another fight lasting about three hours early in the morning of October 26 in the same district, 38 Russians were killed and 50 others wounded. In addition, two Russian armoured cars and two personnel carriers were destroyed.

According to the Islamic Alliance for Liberation of Afghanistan in Peshawar today, Afghan freedom-fighters are actively fighting the enemy in the northern provinces along the Afghan-Soviet border and the main roads of these provinces. The freedom-fighters staged a surprise attack on Faizabad airport recently in Badakhshan Province, killing five Russians including one officer, and destroying a tank and a jeep. The source said that in another attack near the Amu River on October 10, 13 Russians including one officer were wiped out. In Baghlan Province, the freedom-fighters attacked the sub-governor headquarters two weeks ago, killing 30 Russians and destroying 7 enemy tanks. They also attacked a militia center in the Rustaq District of Takhar Province, inflicting heavy casualties on the enemy. The Russians had tried to strengthen their positions in Rustaq but failed.

The source said that the freedom-fighters ambushed a Russian convoy last week along the Kabul-Logar road and traffic remained closed for many days there as a result of this encounter. Scattered fighting took place in different areas along the Kabul-Gardez highway. The Kabul-Jalalabad highway was also attacked very often.

The same source added that the freedom-fighters recently attacked the western part of Jalalabad city and killed five Russians.

UGANDAN PAPER DENOUNCES SOVIET 'EXPLOITATION'

OW021643 Beijing XINHUA in English 1643 GMT 2 Nov 80

[Text] Kampala, November 2 (XINHUA)--The Soviet Union has been "camouflaging its imperialist designs of exploitation and plunder with socialist rhetoric of mutual benefit and cooperation" in its economic relations with Third World countries, the Ugandan weekly TOPIC notes in its latest issue.

Referring to Soviet trade with these countries, the weekly says that the trade has been characterized by unequal exchange. In recent years, it adds, the Soviet Union has been raising the prices of its exports. From 1970 to 1974, for instance, it sold its products to Third World countries at prices 70 per cent higher than those of products turned out by Western industrialized countries.

At the same time, the weekly goes on, the Soviet Union has been forcing down the prices of its imports from the Third World. It is estimated that the Soviet Union makes purchases in the Third World 15 per cent cheaper than its rivals.

Furthermore, the weekly points out, the Soviet Union often resells its imports to obtain hard currencies to the detriment of the developing countries.

On the Soviet cooperation with over 50 developing countries in production, the weekly says that instead of helping them realize self-sufficiency and consolidate economic independence, the Soviet Union has been trying by every means to secure raw materials from them. Through building companies for Third World countries on credits and getting part of the products as repayment, the Soviet Union obtains extraordinary opportunities for worldwide economic manipulation and domination.

All this shows the economic aggressiveness of "the natural ally" of liberation movements and anti-imperialist struggles of the Third World, the weekly says in conclusion.

JAPANESE RALLY DEMANDS RETURN OF NORTHERN TERRITORIES

OW251658 Beijing XINHUA in English 1643 GMT 25 Oct 80

[Text] Beijing, October 25 (XINHUA)--Some 1,500 representatives of various circles and strata from all parts of Japan held a mass rally in Tokyo this afternoon to express their determination to push forward the movement of demanding the Soviet Union to return the northern territories, according to [word indistinct] report from Tokyo.

Japanese Foreign Minister Masayochi Ito, who is now in Hokkaido to inspect the northern territories at sea [as received] sent a message from Menuro City to the rally, calling on the various private organizations to enhance still more powerfully the movement of backing the government's efforts in negotiations with the Soviet Union.

Ito said in his message that he had decidedly brought up the demand for the return of the northern territories when he had talks with Soviet Foreign Minister Gromyko in New York this autumn. He added, "the government is resolved to carry on still more tenaciously the negotiations with the Soviet Union to seek an en bloc return of the four islands."

Addressing the rally, Taro Nakayama, director-general of the administrative affairs in the prime minister's office, said: "The Suzuki cabinet agrees to develop Japanese-Soviet friendly relations." "However," he emphasized, "we should make the Soviet Union understand that the return of the northern territories is indispensable for the development of genuine Japanese-Soviet friendly relations." He added that he agreed to the proposal by a woman representative on the establishment of "day of northern territories."

Other speakers at the rally expressed their great indignations at the despotic act of the Soviet Union which has continued illegal occupation of Japan's inherent northern territories and has installed more military bases there. They pointed out that in order to repel the Soviet high-handed attitude, the Japanese masses should unite closely by overcoming t[illegible] differences in political faith and generations, persist tenaciously in the just demand and make still more efforts to arouse international public opinion.

A declaration adopted at the rally criticized the illegal Soviet occupation of the four Japanese northern islands for 35 years and reiterated the demand for their return.

The rally was sponsored jointly by 93 private organizations.

GDR RESTRICTS VISITS BETWEEN GERMANS, POLES

OW291929 Beijing XINHUA in English 1922 GMT 29 Oct 80

[Text] Berlin, October 29 (XINHUA)--The German Democratic Republic (GDR) will, as of October 30, enforce new regulations which restrict private visits between citizens of the country and Poland.

Under the regulations, GDR citizens can visit Poland only at the invitation of their Polish hosts and with the authorisation of the police section charged with issuing passports and handling exit formalities. The frontier checkpoint will examine whether they have gone through all the formalities.

Polish citizens, on the other hand, must have invitations issued by GDR citizens and endorsed by GDR authorities before they are allowed to enter and stay in GDR. GDR citizens, foreign nationals, and those who have settled in GDR without specific nationality can invite Polish people to visit them only with approval by the pertinent police authorities.

Polish workers and their families in GDR must produce certificates issued by the enterprises concerned when they travel to or from the GDR territory.

People of the two countries have been visa-free in mutual visits. A visitor needs only to show his identity card when crossing the border.

The GDR Government stressed that the changes introduced in travel regulations are "temporary."

BRITISH FOREIGN SECRETARY ENDS VISIT TO HUNGARY

OW300150 Beijing XINHUA in English 0113 GMT 30 Oct 80

[Text] Budapest, October 29 (XINHUA)--British Foreign Secretary of State Lord Carrington said here today that what had happened in Poland was a matter of Polish internal affairs and he hoped that all countries would share the same view.

He made the statement at a press conference before leaving for Warsaw at the end of his official visit to Hungary. He was the first British foreign secretary of state to visit the country since 1975.

He told reporters that he was the first minister from the West to visit Poland since the Polish event had taken place. He hoped that his visit would be helpful to a clear understanding of what had happened in Poland.

Talking about his visit to Hungary, he said that his visit was to further develop the bilateral relations and promote confidence in each other.

He said that he had had friendly and constructive talks with his Hungarian counterpart Puja Frigye. Both sides held that there were no problems in the Anglo-Hungarian relations and they expressed their willingness to further the development of the bilateral relations on the basis of mutual benefit and mutual respect, he added.

Carrington and Puja also had an exchange of views on international affairs which, he said, had led to a better understanding of each other's positions.

Hungarian party leader Kadar Janos met Carrington this morning, who arrived here on October 27.

JAMAICA'S POLITICAL TURBULENCE NOTED

OW291846 Beijing XINHUA in English 1830 GMT 29 Oct 80

[Text] Georgetown, October 28 (XINHUA)--With the general election date set for October 30th approaching, the political situation in Jamaica has become more and more turbulent as the struggle between the ruling People's National Party (PNP) and the main opposition party, the Jamaica Labour Party (JLP), turned white-hot, according to a report from Kingston.

As the nation-wide election campaigns carried out by both the PNP led by Prime Minister Michael Manley and the JLP led by Edward Seaga now entered into the final stage, supporters of both parties have held mass rallies in various places of the country and Manley and Seaga outlined their respective election programmes and lashed out at each other on many occasions.

Seaga announced at a rally in the capital of Kingston today that "if the government tries (to win the election) by manipulation, by abuse, by fraud," his party will respond to it with the call for a general strike. At the same time, Manley urged his supporters to refrain from letting themselves be provoked.

The election campaign in Jamaica has been conducted at a time when the political uncertainty and the frequent political-inspired violences prevailed in the country. Over 500 people have been slain in violence since Prime Minister Manley announced the general election earlier this year. The PNP and JLP blamed each other for the violence, especially for the slaying of Roy McGann, assistant national security minister.

Jamaica also faces grave economic difficulties. According to Western news agencies, now unemployment in Jamaica has reached 30 percent, the country's indebtedness is about 1,450 million U.S. dollars and its annual growth rate in 1979 was minus two percent.

Both the ruling and opposition parties hold diametrically opposed views as to the grave social and economic problems facing the country. PNP leader Manley wanted to continue to practice his "democratic socialism" and refused to accept the loans offered by the International Monetary Fund (IMF), while JLP leader Seaga insisted that a free-enterprise economy be restored, the country's relations with both Cuba and the Soviet Union severed and the IMF's loans accepted.

Manley accused JLP of trying to reimplant the power of the moneyed groups with the support of the United States, while the JLP leader charged the ruling PNP leader with "flirting" with Cuba and wanting to transform Jamaica into an "English-speaking Cuba" as well as ruining the country's economy. The JLP leader has recently also exposed the arrival of seven high-ranking Cuban officials in Jamaica and requested that the government closely watch them so as to make the general elections free from any outside interference.

HONG KONG ENTREPRENEUR SETS UP PRIVATE BUSINESS IN SHENZHEN

HK300124 Hong Kong STANDARD in English 30 Oct 80 p 2

[Text] A Hong Kong businessman has opened what he claims is China's first privately owned business--a hamburger bar in the border town of Shenzhen.

And according to Mr Lai Ping-kun, the Chinese are eager to try their first taste of fast food.

But the shop has a more important role to play--as a testing ground for free enterprise in China.

"They want to use us as a guinea pig for how they will adopt the capitalist way of business," said Mr Lai.

He also plans to set up a HK$2 million factory making instant noodles.

The shop, Wang Ming Co-Food Factory, which also sells chips, hot dogs, rice and drinks, will be used for comparing with other forms of business in the country, such as state-owned, collective-owned and joint ventures with foreign countries, he said.

Mr Lai said the business was originally to be a joint venture.

It was later turned into a private-owned business and the decision was approved by the Guangdong Provincial Administration of Special Economic Zones.

Mr Lai said the profit of the business will not be shared and the business has only to pay rents and income tax to the Chinese authorities.

Wing Ming Co-Food Factory is paying 1,000 yuan a month for a shop area of 140 sq meters in liberation road.

The shop pays a 15 percent income tax, is the same for joint ventures in the special economic zones.

"There is no testing period for the business," Mr Lai said, adding that he is confident that the shop will make a profit.

The most striking advantage of a private-owned business is "flexibility," he said.

"We can respond to the changing demands of the market quickly, and we can sack inappropriate workers without consulting the Chinese authorities," he said.

Mr Lai said the equipment and materials for the noodle factory will be imported from places like Japan and Taiwan and the noodles will be sold locally and overseas.

Some of the materials for the fast food are imported from Hong Kong, such as beef, flour and potatoes.

The shop's chefs are all brought from Hong Kong, mainly to ensure that the quality of the food is up to the standard.

However, Mr Lai praised local workers. "They are very hard working and regulation-biding," he said.

PRC, FRENCH GEOLOGISTS COMPLETE PHASE OF HIMALAYAS STUDY

OW300022 Beijing XINHUA in English 1206 GMT 29 Oct 80

[Text] Lhasa, October 29 (XINHUA)--Chinese and French geologists have completed a two-month-long study of the Himalayas in the first phase of a three-year project.

Scientists of the two countries have studied the geological structures and the formation and evolution of the earth's crust and upper mantle of the Himalayas so as to uncover the factors that caused the upthrust.

The joint project is part of a Sino-French agreement on scientific and technological cooperation signed in 1978. It is the first joint project that Chinese scientists have ever undertaken in the Himalayas.

The Chinese scientists participating are scholars from the Chinese Academy of Geological Sciences, the Chinese Academy of Sciences and the Geological Bureau of Tibet, who have been engaged in geological research into the Qinghai-Tibet Plateau for years.

Many of the French scientists have previously participated in field expeditions to the southern slopes of the Himalayas.

Covering a total distance of more than 5,000 kilometres from the southern foot of the Nyainqentanglha Mountains to the Himalayas proper, the scientists have collected nearly 10,000 paleobiological and rock samples and charted a geological map of the area. They studied the ophitic suite, part of a former marine bed and the upper mantle, which was uplifted because of a collision between two tectonic plates. Their findings have provided important clues to the study of the theory of tectonics.

The Chinese and French geologists have found typical tethys rock characteristic of the ancient Mediterranean area. This is an important scientific clue in the study of the paleobiology in the Himalayas. Tethys has been found in the Kashmir area only in the past few years.

French Professor Colohen discovered that the ophitic rock in Dazhuka is covered with a layer of marine sedimentation, a phenomenon he had earlier found on a Mediterranean island. He concluded that a sea environment still existed when the ophitic rock was formed. French Professor Nicolas, through the study of characteristics of rock formations in very deep geological layers, discovered that the marine bed rock dating back more than one hundred million years is of the same type as that found in the middle ridge in the Atlantic.

EEC TO LIMIT STEEL PRODUCTION

OW011702 Beijing XINHUA in English 1649 GMT 1 Nov 80

[Text] Brussels, October 31 (XINHUA)--The European Common Market officially declared last night that the steel industry in Europe was in a state of "manifest crisis" and EEC member countries have approved an emergency plan to put mandatory limits on steel production.

The decision was taken at a meeting of the Council of Ministers of the Common Market in Luxembourg yesterday.

The decision calls for cuts of between 13 and 20 per cent in steel products in the last quarter of this year. It will continue in effect until June 30, 1981.

Since the founding of the Common Market, it was the first time that such a measure was taken in accordance with the European coal and steel community treaty.

EEC steel production has been deteriorating since last June. Shrinking market, reduced production, price cuts and declining finance forced the EEC Commission to ask the Council of Ministers on October 6 to change the situation by imposing mandatory production cuts on the industry.

The steel industry is of great importance to the EEC economy. Over 700,000 employees of the industry are following the decision uneasily. The production cuts will inevitably bring about unemployment. From 1974, the beginning of the steel crisis, to 1980, the industry has 180,000 employees less, one fourth of the total number now employed. The number of unemployed in the steel industry reached 8,816 this month, or 2.5 times that of the previous month.

There is uncertainty about next year's steel production. According to the estimation of the International Iron and Steel Institute, consumption in Europe will drop 4.6 per cent as happened this year. The September issue of the Belgian monthly NOUVEAU COCKERILL said, "People discover today that the real crisis has just begun. No one knows where it will go."

BRIEFS

VIETNAMESE SOLDIER WITHDRAWAL--Beijing, November 1 (XINHUA)--A number of South Vietnamese soldiers stationed in the city of Kompong Chhnang of Kampuchea recently openly demanded the withdrawal of Vietnamese troops, Radio Democratic Kampuchea reports today. The radio said these South Vietnamese soldiers distributed leaflets in the city on October 25 along with Kampuchean puppet troops and self-defence guards, denouncing the Hanoi authorities for launching the war of aggression and demanding that Vietnam implement the related U.N. resolutions by withdrawing its troops from Kampuchea and allowing the Kampuchean people to solve their own problems by themselves. The radio said similar leaflets also appeared in and around the barracks, creating a panic among Vietnamese officers. [Text] [OW010734 Beijing XINHUA in English 0721 GMT 1 Nov 80]

GREATER ASEAN VIGILANCE--Hong Kong, October 31 (XINHUA)--The Malaysian paper SING PING YIT PAO in an editorial yesterday called on the ASEAN countries to be prepared against foreign aggression. The editorial said that Thailand and the other ASEAN countries are opposed to Vietnam's military aggression against Kampuchea. They believed that Vietnam's motive may not confine to the conquest of Kampuchea. It recalled that the Vietnamese occupation troops in Kampuchea had intruded into Thailand's border area but were firmly repulsed by the Thai frontier guards. The editorial pointed out that Thailand is a member of ASEAN and enjoys its full support. ASEAN regards any aggression against Thailand as a challenge to itself, it added. Therefore, it said, the ASEAN countries must be prepared and strengthen their defense capability. [Text] [OW311708 Beijing XINHUA in English 1634 GMT 31 Oct 80]

POLISH OFFICIALS IN MOSCOW--Moscow, October 30 (XINHUA)--First secretary of the Central Committee of the Polish United Workers' Party Stanislaw Kania and chairman of the Polish Council of Ministers Jozef Pinkowski arrived here today on a "friendly working visit" at the invitation of the CPSU Central Committee and the Soviet Government. Polish leaders were greeted at the airport by Leonid Breshnev, Nikolay Tikhonov, Andrey Gromyko and Konstantin Rusakov. It is believed that the talks between the Soviet and Polish leaders will center on the current situation in Poland and the Soviet authorities' attitude towards the Polish event. [Text] [OW301706 Beijing XINHUA in English 1657 GMT 30 Oct 80]

HUNGARIAN OFFICIALS, UNIONISTS MEET--Budapest, November 4 (XINHUA)--The government and representatives of the trade unions called a joint meeting recently to discuss the tasks of the national economy, the new five-year plan, the people's living conditions, employment, social policies and other major problems, according to a Hungarian press report. The report said that the trade unions agreed with the objectives as fixed in the draft of the new five-year plan. The trade union representatives stressed at the meeting that "a major requirement to ensure a wholesome social atmosphere lies in the maintenance of the average real wages of the workers, salaried employees and members of the agricultural cooperatives in 1980. The representatives urged the administrative institutions of the government to pay special attention to the living standards of the working class in the days to come." They also proposed a hike of the real value of family and child care subsidies, social benefits and minimum pensions. Such joint meetings have been held semiannually since 1975. THAI PRIME MINISTER VISITS--Beijing, October 28 (XINHUA)--General Prem Tinsulanon, prime minister of the Kingdom of Thailand, and his party attended the Chinese historical dance drama, "Silk Road Episode" here this evening. Arranged by the Ministry of Culture, the performance was presented by the song and dance ensemble of the art troupe of the Ministry of Coal Industry. Set in the most prosperous period of the Tang Dynasty, the dance drama describes how a Dunhuang muralist, his daughter and a foreign merchant, trading along the silk road, help each other and cement a close friendship. The performance drew enthusiastic applause. At the end of the performance, the prime minister went on stage and presented the dancers with a basket of flowers. Accompanying the distinguished Thai guests were Huang Zhen, minister of culture, Han Nianlong, vice-minister of foreign affairs, and Zhang Weilie, Chinese ambassador to Thailand. This afternoon, Prime Minister Prem and his party toured the temple of heaven. [Text] [OW281508 Beijing XINHUA in English 1459 GMT 28 Oct 80]

CUBA RELEASES AMERICANS--Havana, October 27 (XINHUA)--Thirty Americans released by the Cuban authorities left here for home today. The Cuban Government announced on October 13 the release of all 33 Americans who had been locked up in Cuban territory. An AP report said about 10 of the 33 were alleged hijackers. Most of the rest were convicted on charges of trafficking in drugs. Most of them were arrested in the past two years. It is reported that American officials said most of the returnees would be arrested on some charges when they returned home. A Western diplomatic source said this was "a positive step" towards the Carter administration as "part of a general pattern of attempts at reconciliation." Three other released Americans chose to stay in Cuba. [Text] [OW271837 Beijing XINHUA in English 1830 GMT 27 Oct 80]

JAPANESE OFFICIAL CRITICIZES SOVIETS--Tokyo, October 24 (XINHUA)--Japan will continue to press the demand for the return by the Soviet Union of the Japanese northern territories and persist in its steadfast diplomacy towards that country, stressed Japanese Foreign Minister Masayoshi Ito today. According to a KYODO report, he criticized the Soviet Union for its military buildup in the northern islands and its military intervention in Afghanistan. Speaking before the House of Councillors special committee on security, Okinawa and northern problems this morning, Ito said that the Soviet Union is one of Japan's major neighbours. However, Japan's northern territories are still under the illegal Soviet occupation. He expressed much regret for the recent Soviet military buildup on the northern territories. He said that on the one hand, Japan should stand firm on what it should do in its dealings with the Soviet Union, and on the other hand, it believes major diplomatic tasks is to establish stable relations with the Soviet Union on the basis of mutual understanding." He said that Japan would beef up its defense power because a U.S. military buildup in the Indian Ocean has reduced American military power in Asia and the West Pacific. "Under such circumstances," the foreign minister said, "what our country cna do is to abide by the people's dedication to pure defense and not to be a military power, persevere in replenishing and reinforcing our self-defense forces within the framework of the constitution and to ensure the deterrent effect of the Japan-U.S. security treaty." [Text] [OW241248 Beijing XINHUA in English 1218 GMT 24 Oct 80]

HONG KONG, LONDON FLIGHTS--Beijing, Oct. 28 (AFP)--The Chinese flag carrier CAAC will make its first direct flight from Beijing to Hong Kong next Tuesday and its first flight to London on November 15, it was officially announced here, today. Chinese officials said the civil aviation administration of China (CAAC) would operate three weekly flights from here to the British colony and one weekly flight to London in line with a September 1979 Sino-British air agreement. British Airways will meanwhile inaugurate a weekly London-Bombay-Hong Kong-Beijing flight on November 12. [Text] [OW281134 Hong Kong AFP in English 0953 GMT 28 Oct 80]

CHINESE AMERICANS' ASSOCIATION--Washington, October 25 (XINHUA)--The National Association of Chinese Americans (NACA) held here today its second national convention, which was attended by representatives from various parts of the country. A report on the association's work in the past few years was delivered by its former President Dr. Chen-ning Yang. The convention elected a new executive committee with retired MIT Professor Yao-Tzu Li as the association's president. The association's work for the coming years was discussed at the convention. Chinese Ambassador Chai Zemin gave a reception this evening in honour of the convention's participants. The NACA was founded three years ago for the enhancement of friendship between the American and Chinese peoples as well as among the Chinese Americans. [Text] [OW270926 Beijing XINHUA in English 1215 GMT 26 Oct 80 OW]

THAI OFFICIAL ON KAMPUCHEA--Bangkok, October 28 (XINHUA)--Thanat Khoman, deputy prime minister of Thailand, said yesterday that the Vietnamese aggression against Kampuchea violated international law, according to Thai National Radio. His statement was made in reply to newsmen after presiding over the ASEAN scientific and cultural ministerial conference being held in Thailand's city of Pattaya. He stressed that the Kampuchean problem is not one between Thailand and Vietnam, but is one between Vietnam and Kampuchea. He added that confronted with the condemnation by international public opinion, the Vietnamese authorities are trying to strengthen military operation in Kampuchea. Therefore, Thailand must be more watchful against Vietnam's military moves in Kampuchea. [Text] [OW281528 Beijing XINHUA in English 1517 GMT 28 Oct 80]

POLISH OFFICIAL VISITS USSR--Warsaw, October 29 (XINHUA)--Stanislaw Kania, first secretary of the Polish United Workers' Party, and Jozef Pinkowski, chairman of the Council of Ministers, are going to the Soviet Union tomorrow on a working visit at the invitation of the Central Committee of the Communist Party of the Soviet Union and the Soviet Government, according to a PAP report today. [Text] [OW300846 Beijing XINHUA in English 0709 GMT 30 Oct 80]

BRITISH OFFICIAL IN POLAND--Warsaw, October 20 (XINHUA)--The visiting British Foreign Secretary Lord Carrington said here this evening that events in Poland were "self-evidently an internal affair to be settled by the Polish Government and people without external interference." He made the point in a toast at a dinner given in his honour by Polish Foreign Minister Jozef Czyrek. Before the dinner, he was received by Stanislaw Kania, first secretary of the Central Committee of the Polish United Workers' Party, and they conferred on international problems and ways and means of strengthening Polish-British relations. Chairman Jozef Pinkowski of the Polish Council of Ministers met him later today. They discussed bilateral relations and stronger economic ties in particular. The British secretary of state for foreign and commonwealth affairs came here from Budapest today for a three-day official visit to this country. YUGOSLAVIAN DEFENSE--Belgrade, October 29 (XINHUA)--The need to steadily strengthen the armed forces was stressed at a meeting of the National Defence Council of the presidency of the Socialist Federal Republic of Yugoslavia today, according to a TANJUG report. Cvijetin Mijatovic, president of the presidency of the Federal Republic, chaired the meeting which discussed the present international military and political situation. The meeting pointed out that the further deterioration of the international situation makes it imperative for Yugoslavia to strengthen its defence in all fields, that is, to strengthen economic, social and political stability and the armed forces. The meeting called on the people of all nationalities of the country to do their utmost towards this end. [Text] [OW300851 Beijing XINHUA in English 0735 GMT 30 Oct 80]

INDIAN OCEAN NAVAL FORCES--Paris, October 28 (XINHUA)--Five French minesweepers are en route to the Indian Ocean to join the permanent naval squadron there, the president's office announced here today. They include two 700-ton mine hunters and three 450-ton minesweepers, accompanied by a supply ship. They will be based at Djibouti. The ships left a week after France sent the guided missile frigate Sufren to the Indian Ocean. [Text] [OW291407 Beijing XINHUA in English 1213 GMT 29 Oct 80]

SOVIET INVASION DENOUNCED--Beijing, November 1 (XINHUA)--The Central African and Gabonese presidents "condemn the Soviet troops' invasion of Afghanistan, a non-aligned Islamic country," said a joint communique issued yesterday at the end of the two-day visit to Gabon by President David Dacko of Central Africa, according to a report from Libreville. The communique added that the two heads of state supported the mediation by non-aligned countries in the Iran-Iraq conflict and their call for a cease-fire so as to restore a fair, lasting peace in the region. In the communique, the two presidents reiterated their willingness to continue working for the maintenance of world peace based on mutual respect for state sovereignty and independence, freedom and justice. The two presidents reaffirmed their support to the South-west African People's Organization and expressed their appreciation of the efforts made by the members of the ad hoc committee of the Organization of African Unity for the restoration of peace and a reconciliation in Chad. They also expressed their willingness to help settle the conflict by peaceful means. [Text] [OW011908 Beijing XINHUA in English 1850 GMT 1 Nov 80]

U.S., USSR NEUTRALITY—Baghdad, November 1 (XINHUA)--Iraqi Foreign Minister Sa'dun Hammadi declared today that his country would be "very pleased if the Soviet Union, the United States and other countries adopt a really neutral attitude" towards the Iraqi-Iranian conflict. He told the National Assembly that the United States could not be considered truly neutral if it sent Iran arms "under any guise." Hammadi said Iraq was "defending its national sovereignty and independence." The foreign minister pointed out that Iraq wanted to build a kind of stability and equality in relations with Iran without any intention of expansion or domination. [Text] [OW020726 Beijing XINHUA in English 0714 GMT 2 Nov 80]

PAKISTAN AIR EXERCISE--Islamabad, October 31 (XINHUA)--A major operational exercise of the Pakistan Air Force code-named "Jetstream 1980" started today. The 10-day nation-wide exercise, in which various types of aircraft as well as air and ground defence elements are participating, is designed to test operational concepts and to assess the preparedness of the Pakistan Air Force for its assigned tasks. In his order issued on the commencement of the exercise, the chief of the air staff, Air Chief Marshal Muhamad Anwar Shamim, reminded air force personnel that vigilance and operational preparedness were the key to effective defence of the country. Observers here believed that the current military exercise has special significance after the repeated attacks on Pakistan territory by Afghan helicopter gunships. [Text] [OW311722 Beijing XINHUA in English 1659 GMT 31 Oct 80]

SOVIET OFFENSIVE IN AFGHANISTAN--Islamabad, November 1 (XINHUA)--The foreign troops in Afghanistan have been seen moving towards the borders with Pakistan and Iran to launch a pre-winter offensive against the Afghan freedom-fighters, said a report in the paper THE MUSLIM today quoting an eye-witness. The witness, who visited north Waziristan, the Pak-Afghan border area and crossed over the border recently, said that the situation prevailing in Afghanistan was likely to force the Kabul regime to seal off its borders with the neighbouring countries. The source said that the Kabul authorities would also attempt to prevent the Afghan refugees and other people from crossing the border into Pakistan and Iran. The Kabul government was very unhappy with the Zardan tribesmen of the Paktia Province, where Afghan Minister of Tribal Affairs Fayz Mohammad and his two companions were assassinated by the Afghan freedom fighters last month. The government is reported to have asked the Zardan tribe to hand over the murderers. According to the source, the tribesmen have rejected the order and are continuing their struggle against the Afghan government. The source added that the refugees, mostly belonging to the Zardan tribe, have become main target of government gunship assaults because the tribesmen have been supporting the cause of the freedom fighters. [Text] [OW011300 Beijing XINHUA in English 1249 GMT 1 Nov 80]

AFGHANS ABROAD REFUSE RETURNING--Beijing, November 1 (XINHUA)--The Soviet military intervention in Afghanistan is so disgusting to the Afghan people that many of them who had the chance to go abroad were reluctant to return to the country. An AP dispatch from New Delhi quoted a Western diplomatic source in that city as saying yesterday that some of the hundreds of Afghan pilgrims who went to Mecca last month have asked the Saudi Arabian Government for permission to remain in that country. Several of those who had expressed reluctance to return home were reportedly Afghan officials, the same source said. The Afghans had traveled to Mecca, the holiest city of the Islamic world, during the annual period of pilgrimage. The diplomat also quoted a "qualified Western source" as saying that about two-thirds of the 1,500 doctors in Afghanistan three years ago have fled the country, and about half of the remaining 500 doctors are serving in the Afghan army, the AP report said. A Khalqi official working in the printing department of the Education Ministry in Kabul was taken to a police station by the secret police recently for questioning about a pamphlet protesting the presence of the estimated 85,000 Soviet troops in the country since late last December. The report said several of the official's colleagues went to the station and secured his release. However, the group issued a statement later claiming that although they would remain in their jobs, they would continue to protest against the presence of Soviet troops in their country. [Text] [OW011210 Beijing XINHUA in English 1203 GMT 1 Nov 80]

BANI-SADR APPEALS--Tehran, October 29 (XINHUA)--President of Iran Bani-Sadr in a letter called on countries of the non-aligned movement to condemn the Iraqi aggression on Iran, according to the TEHRAN TIMES today. Bani-Sadr in his letter said that he was making the appeal in consonance with the spirit of the non-aligned movement which respects the integrity and sovereignty of an individual nation and its affirmations of neutrality and impartiality in judging conflicts of this nature. [Text] [OW291530 Beijing XINHUA in English 1516 GMT 29 Oct 80]

EGYPTIAN-SOMALI MILITARY AGREEMENT--Cairo, November 3 (XINHUA)--An agreement to increase military cooperation was signed between Egypt and Somalia, Somali Chief of State of the Armed Forces Omar Haj Mohamed announced here yesterday, according to the Egyptian paper AL-AHRAM. Omar Haj Mohamed made the announcement at the end of a ten-day visit to Egypt. He said that he had successful talks with Egyptian Minister of Defence Ahmad Badawi during his visit. The Somali chief of staff emphasized that policies adopted by Egypt affect Somalia for political, geographic and cultural reasons. Defending the need for the present state of emergency in Somalia, he said that it is necessary in order to fully prepare the country against Ethiopian raids. However, he went on to affirm that Somalia is committed and ready to resolve the conflict with Ethiopia through peaceful means. [Text] [OW031516 Beijing XINHUA in English 1502 GMT 3 Nov 80]

SOVIET AGGRESSION SCORED--Beijing, October 29 (XINHUA)--The Soviet troops must withdraw immediately and restore sovereignty to the Afghan people, declares a reader's letter in today's NATIONAL HERALD. The letter says: "The Russians have committed wanton aggression against Afghanistan and they are trying to justify it by all means. Karmal is their principal stooge and he enjoys no popular support. It is no argument that one needs foreign troops to maintain law and order in one's own country--this is only Russian propaganda." The letter points out: "The Russians are also great enemies of Islam and of religion generally. Now they are trying to take full advantage of the war between Iran and Iraq to consolidate their position in Afghanistan. They think the world will not pay any more attention to their aggression and the continuing atrocities which amount to genocide against the poor and defenceless people of Afghanistan." "It is a pity that the people and government of India have not unequivocally condemned the Soviet action, giving rise to the impression among sections of the Afghan people that we are indifferent to their plight. They are facing the greatest challenge to their freedom and we in India who have a record of support to other countries fighting for independence must not sit still," the letter says. [Text] [OW291355 Beijing XINHUA in English 1235 GMT 29 Oct 80]

PALESTINIANS, U.S. MILITARY FACILITIES--Cairo, 3 Nov (XINHUA)--Mustafa Khalil, vice-president of the Egyptian National Democratic Party for Foreign Affairs, said today that the Palestinians are part of the Arab nation and have their own identity of which they should not be stripped, MENA reports. In an interview with the paper ASH-SHARK AL-AWSAT published in Paris, Khalil declared that peace in the Middle East will not be a comprehensive and lasting one unless it does justice to all the parties concerned. He explained his country's views concerning the issue of Jerusalem, saying that Israel's annexation of the city is null and void and unacceptable as it violates the Geneva conventions prohibiting the acquisition of land by force. He went on to say that the issue, as agreed at Camp David, is subject to negotiation. But this does not mean that Egypt accepts Israel's claim that East Jerusalem can be ceded to it. On Egypt's agreement to give the U.S. military facilities, Khalil said that the facilities, which are not military bases, are temporary arrangements governed and brought about by the circumstances and are under the sovereignty of Egypt. "These facilities are not anti-Soviet positions," he said. [Text] [OW040716 Beijing XINHUA in English 0700 GMT 4 Nov 80]

FRANCE, SAUDI ARABIA SECURITY AGREEMENT--Beijing, November 4 (XINHUA)--Saudi Arabia and France signed an agreement on November 2 for cooperation under which France will help train members of the Saudi security services and set up a center in Saudi Arabia for the study of the French language, according to reports from Riyadh. France will also furnish that Gulf country with equipment for coastal defence. The agreement was signed by Saudi Interior Minister Nayif Ibn 'Abd al-Aziz and visiting French Interior Minister Christian Bonnet. France recently concluded a nearly three billion U.S. dollar arms deal with the world's largest oil-exporting country. The deal described by French papers as "the deal of the century," involves the purchase of naval arms and equipment. [Text] [OW041919 Beijing XINHUA in English 1858 GMT 4 Nov 80]

USSR INVASION SCORED--Ankara, October 27 (XINHUA)--The Turkish paper SON HAVADIS points out in a commentary today that the Soviet invasion of Afghanistan and the lesson drawn from the incident should never be forgotten. The commentary entitled "Afghanistan Is Forgotten" says, "The Soviet invasion of Afghanistan is aimed at driving southward to the Indian Ocean via Afghanistan. Now the Russians are only 300 kilometers awey from the Indian Ocean." It adds that in the past few years, the Russians entered Afghanistan under the cover of giving technical aid. They built roads there, which enabled their tanks and armoured vehicles to roll into Afghanistan easily and turned it into part of the Soviet Union. Today, the commentary says, the Soviet Union is carrying out the power politics as Hitler once did. "The Turkish people," the commentary says in conclusion, "are well aware of what the Soviet Union has done. Therefore, Turkey must make itself powerful as soon as possible." [Text] [OW281518 Beijing XINHUA in English 1508 GMT 28 Oct 80]

WALDHEIM ON IRAN-IRAQ--United Nations, October 28 (XINHUA)--U.N. Secretary-General Kurt Waldheim expressed hope once again today that the Iran-Iraq conflict "may soon be brought to an end" through the efforts of the Security Council. In a personal appeal, the secretary-general "urges in the strongest terms, in accordance with established humanitarian law, that the utmost care be exercised in distinguishing between non-military and military objectives and between the civilian population and combatants to assure that civilians shall enjoy general protection against the dangers arising from military operations." Meanwhile, in a letter addressed to Waldheim yesterday, Iraqi Minister S. Hammadi declared that "no partial or total withdrawal should be practically contemplated" unless it is supported by the achievement of "the recognition by Iran of our sovereignty and rights" and "its reaffirmation of the principle of the inadmissibility of her acquisition by force of Iraqi territories and those of neighbouring Arab states in the Arab Gulf"; and of "practical arrangements" that guarantee the withdrawal. He also declared, "There is no longer any border agreement which delimits the frontiers between the two countries with the exception of the protocol for the delimitation of the Turco-Persian frontiers signed in 1913." [Text] [OW290130 Beijing XINHUA in English 0109 GMT 29 Oct 80]

IRAQI CEASE-FIRE OFFER--Baghdad, October 28 (XINHUA)--Iraqi President Saddam Husayn reiterated Iraq's readiness for a cease-fire and negotiations to solve the problems with Iran peacefully, the press here reported today. He made the statement yesterday in his talks with the visiting special envoy of Indian Prime Minister Indira Gandhi. The settlement of the disputes should guarantee Iraq's sovereignty, independence and its legal rights to its territory and waters, he said. [Text] [OW281714 Beijing XINHUA in English 1644 GMT 28 Oct 80]

ARAB FOREIGN MINISTERS MEETING--Amman, October 28 (XINHUA)--The seven-member committee of Arab foreign ministers began meeting here this evening. The committee was formed and entrusted by the July Arab foreign ministers' conference to prepare a "pan-Arab political strategy" for the forthcoming period, which will be presented to the 11th Arab Summit scheduled for November 25-27 in Amman. The meeting was attended by foreign ministers from Jordan, Iraq, Syria, Saudi Arabia and Kuwait, as well as by PLO's political department director and Arab League secretary general. Speaking at the opening meeting, chairman of the committee and Jordan's foreign minister Marwan al-Qasim said: "There should be no differences among our Arab countries except the differences in terms of time and means in gaining our goals, because any difference among our ranks will pose a threat to Arab nation." "We must strive to deal with the challenges of disintegrating our ranks and undermining our existence," he added. After the opening ceremony, the meeting proceeded to the closed session. The meeting is expected to last three days. [Text] [OW290132 Beijing XINHUA in English 0113 GMT 29 Oct 80]

SECURITY COUNCIL RESOLUTION REJECTED--Tehran, October 27 (XINHUA)--Iranian Prime Minister Mohammad 'Ali Raja'i announced here yesterday that Iran would not accept the U.N. Security Council's resolution on the Iran-Iraq war, ETTELA'AT reported today. He was talking to a correspondent of this evening newspaper. "Our resolution is being issued at Khuninshahr [Khorramshahr] and signed with the blood of our brothers and sisters," he said. Raja'i denied occupation of Abadan and Khuninshahr by Iraq. "The existence of hand-to-hand fighting in the two cities proved itself that they are not in the enemy's hands," he added. [Text] [OW271858 Beijing XINHUA in English 1851 GMT 27 Oct 80]

PAKISTAN PROTESTS AFGHAN ATTACK--Islamabad, October 28 (XINHUA)--The charge d'affaires of the Afghan Embassy to Pakistan was called today to the foreign office of Pakistan and a strong protest was lodged with him regarding the latest Afghan helicopter attack on Pakistan territory. Six Afghan helicopter gunships attacked a refugee camp and adjoining villages in the north Waziristan agency at three places situated between Miran Shah and Datta Khel in North West Frontier Province on October 24. The charge d'affaires was asked to convey to the authorities in Kabul the protest of the government of Pakistan at this unprovoked and deliberate attack well within Pakistan territory which had caused injuries to three civilians including one child. PARTY AND STATE

RESPECT, CONCERN FOR PEOPLE SAID NECESSARY IN IDEOLOGICAL, POLITICAL WORK

Beijing GUANGMING RIBAO in Chinese 19 Aug 80 p 2

[Article by Tan Tao [6223 3325]: "Respect People, Trust People, Show Concern for People"]

[Test] Mao Zedong said in his "On Protacted Warfare": "Many people handle the relations between officers and soldiers and the relations between the army and the people badly. I think that the method is wrong. I always tell them that it is a problem of fundamental attitude (or fundamental purpose). This attitude is to respect the soldiers and respect the people. If they begin with this attitude, then there will be various policies, methods and ways. If they depart from this attitude, the policies, methods and ways will certainly be wrong and the relations between the officers and soldiers and the relations between the army and the people will undoubtedly be handled badly. The three great principles of army political work are: firstly, the unity between officers and soldiers, secondly, the unity between the army and the people and thirdly, the unity to disintegrate the enemy forces. These principles must be carried out effectively and must start from the fundamental attitude of respecting the soldiers, respecting the people and respecting those enemy captives who have already laid down their weapons. Those people who think that it is not a problem of fundamental attitude but is a technical problem have incorrect thinking and should be corrected." Although Comrade Mao Zedong said this during the time of the national-democratic revolution, it does speak of army political work. However, in ideological and political work, it is first necessary to take a correct attitude towards people and respect people and then afterwards we can have correct policies, methods and ways. This basic view still has a guiding significance for us today to do well ideological and political work.

Ideological and political work is work concerning people and is the work of training people. This is general knowledge known by all. However, to understand this general knowledge is one matter but is another matter whether or not they can comprehend the deep significance of this general knowledge, correct their attitudes towards the people and employ correct methods to develop ideological and political work. It goes without saying that people are very complex organisms. Each person has their various attributes: natural attributes, social attributes and in a class society there are also class attributes. Among people there are also various types of relations: biological relations, social relations and in a class society there are also class relations. Within the different attributes and relations of people there are distinctions and connections. Our ideological and political work only goes under the premise that there is comprehensive and unified knowledge of the different attributes and relations of people. Using the attitude of seeking truth from facts and the correct method, then we can attain good results.

In the past the very reason why we achieved outstanding successes in our ideological and political work was because we adopted a correct attitude and correct method in dealing with the targets of our work. The ideological and political workers at that time always viewed the targets of their own work as class brothers, comrades and friends, respected their honor, creative spirit and efforts to forge ahead, and showed great concern for their material and spiritual well-being. There was mutual respect, mutual sympathy and fraternal friendship among the comrades. There was also the sharing of comforts and hardships and feelings of family closeness among all comrades.

Later, however, due to the influence of leftist thought, especially the poison of the ultraleftist line, there appeared a deviation in our views and attitudes towards people. We always considered people as class people and a person's class as his only attribute. We only paid attention to a person's class nature and class relations and overlooked their other attributes and other relations to the point that among the comrades in the party, among teachers and students in the schools and among the masters and apprentices it was always necessary to mention the problem of class relations and it was always necessary to carry out a class analysis of people's words and deeds. Under the guidance of this type of viewpoint the tradition of respecting people, trusting people and showing concern for people in ideological and political work was discarded and no one dared to make inquiries about it. If someone mentioned respecting people, trusting people and showing concern for people they were then denounced as "lacking a strong sense of class stand" or were labeled as "revisionists standing for class conciliation." Today, we need to restore the prestige of ideological and political work, to eliminate the influence and poison of leftist thought and the ultraleftist line and to basically correct the attitude towards people and respect people, trust people and show concern for people. This will bring about, the scientific fulfillment of our socialist ideological and political work.

During the different periods of historical development, relations among people are determined by people's economic relations. In a feudal society, the relations between people are relations of enslavement and dependence. Marx pointed out that the principle of the autocratic system "generally speaking is underestimating people, showing contempt for people and not considering them as people" (see "The Collected Works of Marx and Engels" Vol 1, page 411). In a capitalist society, the relations between people are money relations and "cash transactions" and "it transforms individual respect into exchange value" (quoted from "Communist Manifesto"). In a socialist society, after we eliminate the oppressive system, the relations between people should be that between equal, mutually helping and cooperative comrades. This type of relationship is the economic relationship determined after the elimination of the oppressive system, and only after the oppressive system has been eliminated can there be the potential for its full realization. After the oppressive system was eliminated in China, besides their class natures and class relations, people's other attributes and relations had gradually become prominent. This type of trend should be sharply pointed out and given full attention by ideological and political workers.

Naturally, there still exists in China the struggle of proletarian ideology and non-proletarian ideology (such as the evil legacy of feudalistic thought, capitalist thought and petty bourgeos thought). The neglecting and discarding of this type of ideological struggle is harmful for the proletariat and the great masses. Therefore, if we accord with the viewpoint formed over the past several years and view this type of ideological struggle as a class struggle between people, this is also incorrect. We must appropriately deal with the differences and relations of these certain non-proletariat ideologies and those that are influenced by this type of thought.

We must criticize incorrect thought and yet people must have well intended attitudes and a desire for unity. Only in this way can we adopt a positive ideological struggle and attain new unity on a new foundation.

Marxism has always considered that the masses are the moving force in creating world history and are the practical main body. When we mention the demands of respecting people, trusting people and showing concern for people in ideological and political work, it is the use of this viewpoint as a theoretical basis. It is necessary to criticize them and help them correct their flaws and shortcomings and it is also necessary to first of all respect them, trust them and show concern for them. We cannot injure their moral quality and self respect. People always have self respect, regard for themselves and self confidence. To not respect another person's moral quality, to train them for no reason or to viciously slander them we will then encounter their disdain and dissatisfaction. We have often said that we should transform negative elements into positive elements and actually positive elements exist in these comrades themselves. If we do not see this one point and do not adopt an attitude of respect and trust and show concern towards them, no matter how much ability we have we will not be able to transform and bring out the positiveness of the comrades. Innumerable facts prove that to have others conform to our intentions, our intentions must be correct and for others to be satisfied with our desires, it is necessary that we respect others and trust others.

Some intellectuals and returned overseas Chinese say that: "The greatest worry is that we cannot attain trust." How can this statement not be worthy of our consideration? This is nothing more than saying that the class origins of these comrades are complex, their political histories are complex and their ideological situations are complex. In reality, these views frequently reflect the existing onesidedness in our own mind. We tend to look only at the historical situations of intellectuals and returned overseas Chinese, but not at the real performance of these comrades nor the ardent love for the homeland of these comrades who wholeheartedly contribute their intelligence and wisdom for building and strengthening their socialist homeland. Ideological and political workers must exert themselves to eliminate the influences of ultraleftist thought and ultraleftist lines, constantly, examine themselves, carefully look to see whether or not they have biases and prejudices towards the intellectuals and returned overseas Chinese, widen their field of vision, expand their knowledge and start with correcting the relations between these comrades and themselves.

Marxism always considers that the relationship between the educator and the educated is one of dialectic unity. Comrade Mao Zedong said: "Only by speaking for the masses can we educate them and only by being their pupil can we be their teacher." ("Talks At The Yenan Forum On Art And Literature"). This is a famous saying. It is a commonly existing phenomenon that for some matters the leaders have come to recognition but the masses have still not. But the opposite situation also exists, that the masses have come to recognize some matters when the leaders still have not. When the masses have already recognized it, they should express their opinions. If at this time, the deficient knowledge of the leaders takes the views and opinions of the masses as erroneous opinions and treats them as ideological problems they they will be making the error of subjectivism and bureaucratism. Originally, there was the question of mutual study between the educator and the educated. Looking at it from this angle, it can be seen that respecting people, trusting people and showing concern for the people by the leaders and ideological and political workers is the very least to be done in order to carry out ideological and political work in a scientific manner and on the basis of reality.

In our development of ideological and political work, whether in the form of praising or criticizing, there is one goal, to induce people who have different ideologies, ideals, wishes, feelings and interests to realize the four modernizations so that all of us, inside and outside of the party, will devote wholeheartedly to the four modernizations, pooling our wisdom, efforts and strength. Ideological and political work should take praise as primary which will give the honor of outstanding achievement and high character to those who are praised and also provide a study example for other comrades. Naturally, not carrying out conscientious criticsm and letting drift those who truly need criticism is also incorrect. For the two forms of praise and criticism, neither should be overemphasized at the expense of the other. Whether it is praising people or criticizing them both necessitate understanding people. Only if we understand people can we appropriately praise them or criticize and help them. This will cause ideological and political work to be closely linked with reality and enter the bottoms of their hearts. To establish the work of understanding and knowing well people and situations is the essential technique of ideological and political work.

Ideological and political work is subordinate to the general goal of building the four modernizations. For the one goal of building the four modernizations, it is necessary to continually satisfy the needs of the daily increasing material life and cultural life of the masses. In accord with this, the showing of concern for the people's vital interests should be reflected in the process of ideological and political work. Many of the ideological problems of people are because their own desires or vital interests cannot be realized and properly resolved. No matter how we view our own vital interests, there is the problem of coordinating the individual, collective and national interests. Some comrades only stress individual interests and do not look at the collective interest and the national interest. Naturally, it is necessary to educate these types of comrades, yet we should also show concern for them and present the facts, reason things out and help them. For those comrades who objectively and truly have difficulties, we should show concern for them and make every effort to help them resolve their difficulties. If we do not help them resolve their existing, unresolvable difficulties how can we find fault with these comrades. This type of method is obviously not in accord with the aim of ideological and political work and cannot achieve good results.

The Party Central Committee appeals to us that to successfully carry out the building of the four modernizations, it is necessary to strengthen party leadership, improve party leadership and raise the party's fighting capacity. To do well ideological and political work is an important step toward strengthening and improving party leadership. In view of the many new situations and new problems that appear in building the four modernizations, while restoring the good tradition of ideological and political work it is also necessary to enthusiastically improve and promote creativity so that this work can be carried out scientifically. Only if we respect people, trust people and show concern for people in specific work and, while educating the masses pay attention to their study and ideological and political work will we be welcome to the great masses. The masses will then wholeheartedly praise the ideological and political workers as their own "good teachers and helpful friends" and "close friends."

HONG KONG PAPER REPORTS 'GANG OF FOUR' TRIAL TO BE FILMED

HK291015 Hong Kong SOUTH CHINA MORNING POST in English 29 Oct 80 p 9

[Text] The public trial of the "gang of four" will be filmed and shown in cinemas throughout the country at a later date, according to novelist and movie playwright Chen Canyun.

Mr Chen said this at a recent seminar at the Grantham Training College.

The film may also be shown in Hong Kong in future, he said.

Mr Chen (66) and another prominent Chinese author, Mr Qin Mu, are in Hong Kong for 2 weeks during which they will be engaged in a series of cultural activities here.

In his lecture to 500 young people, Mr Chen said the cultural circles in China were watching the trial closely as three of the people, Jiang Qing, Zhang Chunqiao and Yao Wenyuan, had been involved in cultural matters for a long time and many in the cultural circles were persecuted during the cultural revolution.

Mr Qin (61) presented a rosy picture of the current cultural field on the mainland. Not only are the older cultural workers such as Mao Tun, Bujin and Ye Shentao diligently engaged in their work, but younger authors and novelists are being groomed to take up the mantle of the older people.

Today's writers are no longer the physically weak ones as were so often the case in the past. Many of them are athletes and fighters.

However, there are still inadequacies, Mr Qin said. There is a heavy demand for the printed word but because of shortage of paper the quest of most readers could still not be met.

At present, it was estimated that the billion people spend about one yuan (about HK$3) per head a year on books.

The problems facing today's writers include the need for further development of socialist democracy and limited time for writing because many of the writers have concurrent tasks.

Mr Qin also disclosed that the project of compiling the complete works of Lu Xun was proceeding smoothly and the new set, which would also include more than 1,000 pieces of correspondence, would be published next year, the 100th anniversary of the author's birth.

POSITION OF EUNUCHS IN MING DYNASTY

Lanzhou GANSU XUEBAO (ZHEXUE SHEHUIKEXUE BAN) [JOURNAL OF GANSU TEACHERS' UNIVERSITY (PHILOSOPHY and SOCIAL SCIENCES Edition)] in Chinese No 1 10 Jan 80 pp 60-71

[Article by Guo Houan [6753 0624 1344]: "Flunkeys Acting Tyrannically by Virtue of Imperial Power--on the Eunuchs in the Ming Dynasty"]

[Excerpts] The eunuchs occupied an important position on the political stage all throughout the Ming dynasty, starting with the Yong-le reign and until the fall of the dynasty, enjoying at all times the favor and tolerant indulgence of the emperors. The eunuchs stretched their evil claws into every domain; they established in particular a secret-police terror over the entire populace. Although they did strengthen the ultra-autocratic monarchy, their activities in the end had disastrous consequences in political, economic and military respects.

Even though the Ming eunuchs attained dazzling heights of power, they still remained nothing but slaves to carry out wanton cruelties using and relying on the emperors' power and behaving as if they were the emperor's falcons and hounds let loose to pounce on the people. They on their part did not and also could not pose any threat to the imperial power. This peculiar phenomenon that the Ming eunuchs held great power but remained merely cringing slaves of the emperors was determined by the nature of the then prevailing ultra-autocratic monarchical system.

To have the Ming eunuchs intrude on all politics was an important organic part of that ultra-autocratic monarchical system. This must not be ignored when enquiring into the system of power centralization in the highly developed autocracy of the Ming dynasty.

1. In 1368 Zhu Yuanzhang ascended the throne of the great Ming empire. This "commoner from south of the Huai River" in all his proud self-contentment could not help feeling increasing anxiety and fear at the thought of how to uphold the rule of the landlords and how to consolidate for all generations to come the great unification achieved by the house of Zhu.

History is a mirror, and Zhu Yuanzhang was one who paid great attention to summing up historical experiences. He saw as one of the important reasons for the fall of the Han and Tang dynasties the disastrous intrusion into politics of the female branches of the emperor's family, the rise to power of the eunuchs and the establishment of commanderies in the outlying districts. To preserve his regime in prolonged peace and not to fall into the same pitfalls as the Han and Tang, Zhu Yuanzhang adopted a series of preventive measures. As a result, thoughout the Ming era "all palace cabal had been eliminated" and at no time did any empress attend court and participate in government. Relatives of the wives' and mothers' sides were "without the least power." As to the commanderies in the outlying districts, they also never became so powerful as to appear like "tails too large to be wagged," or start wars or usurp territory by the commanders themselves.

However, the intrusion of eunuchs into politics took a development that Zhu Yuanzhang had not foreseen. Throughout the Ming era the power of the eunuchs had its ups and downs but in summary they became more and more arrogant with increasingly serious consequences.

Of course, this cannot be blamed on any ineffectiveness of Zhu Yuanzhang's measures to prevent eunuch intrusion into politics. He himself was clearly aware that "if the palace eunuchs are day and night at the emperor's side, accompanying him everywhere with a constant cheerfulness, bringing him news that they had espied, these small favors and confidentialities were sufficient to captivate the ruler's mind. To show favoritism and exercise indulgence was in the basic nature of the system. Once the emperor was ensnared and deluded and showed no awakening from the illusion, the eunuchs would use the imperial might and prestige to usurp power and to interfere in political affairs. If continued over a lengthy period, such usurpation of power cannot be restrained and curbed anymore, and this resulted in much confusion and disturbance with regard to the bureaucratic hierarchy."[1] The emperor, therefore, decreed that eunuchs may only perform sprinkling and sweeping work, that they should remain illiterate and not to be used as confidential informants. They were strictly forbidden to take part in government, to take charge of military affairs or to have communications with officers of state. He went even so far as to have an order cast in iron and placed over the gate which proclaimed: "Eunuchs must not interfere in government affairs. Those who disobey this order will be beheaded."[2] In the 10th year of the Hong-wu reign "a eunuch who had served in the inner court for a long time disgressed on court affairs. He was immediately returned to his native place and disqualified for life."[3] We see from these instances that Zhu Yuanzhang took a very firm stand in the matter of keeping eunuchs out of government.

However, it evolved as a natural consequence of the ultra-autocratic Ming rule that the eunuchs did indeed become involved in politics. Regardless of whether the rulers were "astute" or "obtuse," or whether they realized the consequences of eunuch meddling in politics, they all came to use and even to rely on the eunuchs to a greater or smaller degree to help them rule the country. Even Zhu Yuanzhang could not avoid it although he bitterly hated and abhorred eunuch meddling in politics. For example, in the 8th year of the Hong-wu reign he appointed a chamberlain to the office in charge of procuring horses at Hezhou. In the 10th moon of the 11th year the eunuch Wu Cheng was ordered to a border defense post to be in command of overall strategy at the Yuangzhongming military camp. In the 9th moon of the 19th year, the envoys Liu Min and Tang Jing were accompanied by eunuchs on their embassies to Indochina and other countries. Furthermore, the eunuchs were also appointed as councillors. It is, therefore, already in the Hong-wu reign that precedent was established for eunuchs to enter politics, so that for all practical purposes the ban on such activities had already been lifted at that time.

In the Yong-le reign, the fortune of the eunuchs underwent another change for the reason that Zhu Di had received considerable help from the eunuchs when he usurped the throne and became Emperor Cheng-zu. After the "Battle of Pacification" Emperor Jian-wen's fate was unknown and many rumors sprang up, which had Zhu Di guessing and in suspense. More importantly, many meritorious old ministers vigorously opposed Zhu Di for the way he had usurped the throne, which made Zhu Di suspicious of their loyalty. All these were forceful reasons that drove Zhu Di to favor the eunuchs. They were charged with such duties as special missions, acting as purchasing agents, as superintendents of maritime trade, employed in the military directorate, as travelling inspectors and pacification commissioners. In addition, the emperor established the Eastern Depot, a secret-service organization, to let "the eunuchs torture and spy out things that would stop the gaps in the net of Heaven [which was supposed to catch criminals]" and "trusting the eunuchs to elicit the truth and get criminals into prison."

From then on the power of the eunuchs increased incessantly and they never ceased to occupy important positions on the political stage. There was no exception to this even during the reign of so-called "astute" and "enlightened" rulers, or at times when according to histroical records the eunuchs had become somewhat withdrawn from view. For instance:

In the Xuan-cong reign, a short time after Zhu Zhanji had ascended the throne, a Palace School was established and Hanlin compilers and grand secretaries were ordered to teach young eunuchs, to educate them and render them qualified for important missions. He granted his trusted follower and powerful senior eunuch Jin Ying a patent insuring his immunity from the death sentence, "with effusive terminology and much praise." The eunuchs Tan Shun, Wang An, Wang Jin, Xing An and others were on several occasions accompanying military commanders on campaigns. After Wang Jin returned from the campaign against Gao Yu, Prince of Han, Wang participated in military affairs in all directions. In addition to large monetary rewards, the emperor presented Wang with silver mementoes inscribed, "Loyal and Faithful," "Nobel Person of the Golden Marten," [the marten tail being a customary adornment of eunuch attire], "Loyal Conscientious and Man of Great Exertions" and "Pure in Mind and Motive." Wang was also given two palace girls as maids and a government position for his adopted son."[4] This will give some idea to what extent the eunuchs enjoyed imperial favors.

In the Hong-zhi years of Emperor Xiao-zong, the eunuch Jiang Zong "with humble ability met imperial appreciation" and "held the office of Grand Commandant of Nanjing." He was overbearing, licentious and without regard for law. In a case involving some alluvial land over 100 people became affected. The case dragged on for many years. He was retained in office and the accusations declared unfounded."[5] Li Guang "ensnared the emperor with amulets and prayers at the temples and then engaged in villany and corrupt practices. He fabricated edicts conferring ranks and appointing officials like writing fairy tales. He took bribes from every source and appropriated to himself private land of peasants on the imperial domains. He also monopolized the salt trade and from this source embezzled huge sums."[6] A eunuch who in this way "acted overbearing, licentious and without regard for law" in the end was able to "exploit the foibles of the officials" and chase away a large number of officials from their jobs. It was only due to the imperial favor that Li Guang's power could "subvert the metropolitan and provincial officials," and even induce the highest officials to profer bribes to ensure his friendship. This shows us to what extent eunuch power had inflated and that their interferences in government by that time had been serious and could no more be turned back.

Because the eunuchs of the Ming dynasty constantly enjoyed the favor of the emperors, they could acquire extremely wide powers. Their powers mainly included approval of memorials, supervision of the Eastern Depot, control of state prisons, investigation of prisoners together with the three highest judicial officers, superintending army affairs, officiating as grand defenders, grand commandants, travelling inspectors, envoys, be in charge of maritime trade, as mining and tax superintendants, procurement officers, superintendents of public works and equipment, of textile manufacture, etc. As a result of such extensive powers, the eunuchs managed to have the directorate of ceremonial affairs become an organ over and on top of the grand secretariat, because "documents from the grand secretariat had to be approved by the directorate of palace servants, which was in the hands of the eunuchs. In the end the laws of the imperial court, the employment and retirement of worthy men and high officials became all affairs in the hands of the eunuchs, handled by them in a topsy-turvy manner and causing utter confusion. Holders of sinecures claimed they had no time to carry out the imperial will and remained blind to the situation doing nothing about it."[7] The three highest judicial officers were only a sham. All power over life and death rested with the Eastern Depot and the imperial bodyguard. As for instnace Xu Gui, a police commissioner of the board of punishments, memorialized in the 12th moon of the 9th year of Hong-zhi: "I have served under the Board for 3 years. Whenever there was a judicial investigation of banditry it was in the hands of the Eastern Depot and it was said that the officer in charge either vented his hate or received bribes. Even if the truth had leaked out, who would dare take steps on his own to attempt the change of even one single word!"[8] The agents of the superintendent of military affairs and of the grand defender not only impeded command of the army on all occasions but even turned the army completely into a tool for their own ends. Apart from that, the special agents of the Eastern Depot, of course, instilled in the people a fear as of tigers and to the extent of almost not daring to take a breath. Even an ordinary eunuch sent on an errand "ranking so high by imperial grace and mouthing the imperial orders" was, of course, regarded by the people as representing the emperor.

If requests were made to the eunuchs, they were able and apt to respond, but even if no requests were made, they had to be flattered and fawned upon in every way. The people feared only one thing that was to offend them. The eunuchs on their part relied on the "might and prestige of the emperor," to abuse their power tyrannically and to act as they pleased. To sum up: since the eunuchs has brought immense power in politics, military affairs, criminal justice, economics, etc. into their hands, it was unavoidable that they strove to place themselves above the entire bureaucracy to become the most powerful group directly under the emperor.

Allow us to cite some instances to show to what extent eunuch power had expanded:

After the death of the Empress Zhang, Wang Zhen gradually became unrestrained in his power, "whoever aroused his ire was accused of a crime." At that time Emperor Ying-zong "greatly admired him, graciously called him 'my senior,' gave him high official recognition and allowed him increasingly greater powers. The princes called him 'venerable elder.' Those fearful of trouble hastened to get on good terms with him to evade execution. Bribes and presents piled up high."[9] In the Xian-zong reign, Wang Zhi was in charge of the Western Depot "with ultimate powers over metropolitan and provincial officialdom. To join up with him meant honor and prosperity, to arouse his ire meant banishment to the border areas. When the empire prospered, high officials and influential gentry hastened to his door. Wherever he went on his tours of inspection, the metropolitan censors in full armor and military array would prostrate themselves at the sight of the dust raised by his carriage and rise only after he had passed. When Wang would have arrived at his hosteiry, they would change their attire and kotow. The superintendent of the region would come forth half kneeling like a servant."[10] At that time, people would only recognize the power of the Western Depot and take no notice of the court; they only feared Wang Zhi but took no note of the emperor. In the Wu-zong reign there was Liu Jin. "He had monopolized all power in the empire, enjoying great might and prestige and indulging in passions at will.... From princes and noblemen down, none dared aspire to equal ceremonial rank. People vied with each other to pay their respects to Liu, when they would kneel and make obeisance. Memorials were first made out in red and first handed to Liu, therefore, called red copies, and then transmitted to the competent government office in white, called white copies, all in the name of Director Liu Jin and none other."[11] When Wei Zhongxian was at the height of his arrogance in his position of power, "the people throughout the country hardly dared breathe so downcast and frustrated was everybody." "All power at the court and throughout the country was in Wei Zhongxian's hands. From the six departments and the grand secretariat to the viceroys and governors, all were his sworn followers. Everybody sought eagerly for an opportunity to flatter him. Many high officials, such as Yan Mingtai, praised his virtue and erected temples honoring his image. None wanted to stay behind in these things, it had become a popular fashion. All memorials, whether large or small, sang the praises of Wei Zhongxian. On his several outings per year, the highest officials would crowd the roads to pay their respect in obeisances and call out: "Nine thousand years to you!," while Wei hardly deigned to look at them."[12] In his impeachment of Wei Zhongxian, Yang Lian stated that all officials, high and low, only took note of Wei Zhongxian and not of the emperor. "Wei Zhongxian has arrogated to himself all matters, large and small, within the palace and in all government offices. On the other hand, the emperor exists only in name, Wei Zhongxian is the real substance."

The eunuchs of the Ming era were of a very similar nature as those in the Han and Tang dynasties as far as awe-inspiring power and devastating destructiveness are concerned. However, history will not simply repeat itself. Following the constantly increasing strength of the feudal and autocratic centralization of power, the position of the eunuchs began to change, turning them gradually into tools of the tyrannical government of the rulers. In the chapter on eunuchs in the History of the Song Dynasty it is said: "During the Song dynasty the treatment of the eunuchs was very strict." "Since at certain times the ruler was very young, the empress-dowager took charge of the government in three reigns. In past generations would this not have been like harvest time for the machinations of the eunuchs! The laws of our forbears were strict and the power of the prime minister was strong. Any treacherous or wicked eunuch would have been removed in a very short time. The high officers of state were farsighted enough to destroy any evil before it became apparent." In the Ming era, the eunuchs, under the ultra-autocratic tyranny of the rulers, did not and, in fact, could not organize any threat or pressure on the monarchical power. They only could be slaves and servile underlings of the emperor. All their awe-inspiring power was only a manifestation of the much inflated imperial power. Compared with Han and Tang times, the situation of the eunuchs in Ming times, therefore, unavoidably, showed certain peculiarities.

The social position of the Ming eunuchs was actually very low. This is demonstrated by the contempt shown by many officials and the officers of state. Even the emperor who bestowed so many favors on them, looked on them as his slaves. Throughout the Ming dynasty, no eunuch was ever granted the title of nobility, a salary-based income or rank as a government official. The only honors they could obtain consisted in rewards for meritorious service, plaques for their ancestral temples and sacrifices. When Wang Zhen was at the height of his power, Shen Gu, junior vice president of the Board of Revenue on military duty in Yunnan, respectfully submitted: "The inner palace officials who protect the imperial person have greatly promoted the imperial well-being and performed their duties with outstanding merit. It has been requested that honors be bestowed on them by imperial edict, as also on their families, according to the precendent in the case of foreign governors. This is to be disallowed." As we see, Emperor Ying-cong thought these slaves were not qualified to enjoy such honors. This is radically different from the situation in the Han and Tang dynasties. There are many instances when eunuchs were enobled by the Han emperors, and cases in the Tang dynasty are even more conspicuous. For instance, Yang Sixu, "who for meritorious military services was granted the title 'grand commander, succour of the country,' also grand commander of cavalry and enobled as Duke of Guo." In the early period of the Tian-bao reign he was raised to 'illustrious and outstanding grand commander' and 'junior guardian of the gate,' and further enobled to Duke of Bohai. In the 7th year he was made 'grand commander of cavalry.' When the An Lushan and Shi Siming rebellion broke out, he followed Emperor Xuan-zong in his flight to Sichuan and was given the further title of Duke of Qi. After return to the capital, he was made a noble with the title Kai-fu-yi-tong-san-si and enobled to Duke of Cheng, furthermore, granted a feof of 500 households and promoted to president of the board of war. When Emperor Dai-zong ascended the throne, he honored Li with the title 'honorable father,' promoted him to minister of works and granted him a feof of 800 households. All this clearly shows how much more elevated the social status of eunuchs was under the Han and Tang as compared with the situation in the Ming dynasty.

No matter to what heights of power the eunuchs rose in the Ming era, they always remained to be driven on by the scoldings of their boss and hard put to win the emperor's favors, as otherwise they may take a fall from the pinnacle of power that would smash every bone in their body. However, in the Han and Tang dynasties (especially in their later years) the eunuchs not only had might and prestige and freedom to act as they pleased but could also at will replace one emperor with another. The emperor was no more master of his own destiny but completely at the mercy of the eunuchs.

In summing up the above we may say that the eunuchs of the Ming dynasty on the one hand had extensive powers under the favoritism of the emperor, but on the other hand never rose beyond the status of faithful slaves of the emperor, so-to-say the evil "falcons and dogs" that were let loose to pounce on the people. This is the peculiar situation of the eunuchs in the Ming dynasty.

Zhu Di, who became Emperor Cheng-zu, acquired the throne in an act of usurpation and for this reason was opposed by many civil and military officials who had served under Emperor Jian-wen. This situation added complexity and intensity to the existing contradictions. Against these opposing elements Zhu Di employed unprecedented cruel punishments to wipe them out. "Apart from executing the person himself, he had his maternal relatives to the ninth degree arrested too, and if there had been the slightest communication he had their maternal relatives, teachers and friends falsely accused of plotting rebellion, such measures extended to the tenth degree of relationship and whole villages were laid waste."[13] In those days an atmosphere of terror prevailed, just as Tan Qian has stated it: "In the beginning of the drive to eliminate the opposition it was as if falcons and hawks were let loose on the people, men were exiled for military duty at the frontiers or executed, families trembled and whole households were terrified. Old ministers of state and retired officials were beset with fear and misgivings, frustrated and despairing, with no hiding place to escape to."[14] Through one term of wanton massacres the centralized power of the ultra-autocratic system was further advanced and the relationship between ruler and ministers was firmly established as one of master and slaves.

The constant fear of usurpation of power by the ministers of state, of their forming cliques for rebellion, the constant fear of bureaucrats and high officials engaging in conspiratorial activities to overthrow their emperor's rule, this deep suspicion and fear of ministers and officials persisted in all the emperors following the Hong-wu and Yong-le reigns. For instance, in the Chong-zhen reign there were 54 grand secretaries, changes were frequent, they just came and went, one after the other, as in a merry-go-round. Zha Jizuo said: Emperor Zhuang-lie never placed confidence in others. He would punish the slightest misuse of knowledge the way he had dealt with the rebellious Wei. In the end all ministers were unable to save themselves, even worthy ones would rather go into hiding. He persisted in taking eunuchs into his service and discouraged talented people so that they sought retirement."[15] The attitude of Ming Emperor Si-zong towards his ministers and his officials basically reflects the relationship of rulers to ministers in the Ming dynasty.

The distrust of his ministers and high officials naturally made the emperor rely on his so-called trusted followers and to use them to strictly supervise all ministers and officials. As Tan Qian expressed it: "The ruler inside the seclusion of his palace always suspected that his officials and people hated and cursed him and he suspected their mischievous deceit and lawlessness. He deplored having no device to control them. He had officials thoroughly investigate and spread a dense net of spies, not less than making a magic mirror."[16] Zhu Yuanzhang mainly used the officers of the imperial bodyguard, occasionally also dispatching eunuchs. Zhu Di, apart from planting spies among his bodyguard, preferably used eunuchs, as for instance in the 8th year of Yong-le reign "the emperor ordered eunuch Ma Jing to go on an inspection tour of Gansu. If anything was found amiss in the place of the Marquis of Xining and of Song Hu, Ma was to do some secret consultations and arrangements and to report back." The Marquis of Xining was a meritorious minister of the "Pacification" period and Song Hu was Zhu Di's son-in-law, but the emperor would still insist on "placing all his trust in a eunuch."[17] This is again evidence of how eunuchs were favored. In the 18th year of the Yong-le reign the Eastern Depot was established, place of the despot's assassins and scoundrels. From then on the imperial bodyguard and the Eastern Depot (also the Western Depot and the Palace Depot which came into being later) cooperated fully in nefarious activities. They constituted throughout the entire Ming era the spy organization and sinister prisons that were used to oppress the officials and people, acting under the direct control of the emperor.

The rise to political eminence of the eunuchs is inseparably bound up with the absurd behavior and decadence of the emperors. The senior eunuch of the Tang dynasty by the name of Chou Shiliang on retirement due to old age told his colleagues: "We must not have the emperor have leisure. In leisure he will read books, see scholars and ministers, accept remonstances, deepen his knowledge, have concern for the future, reduce playfulness and travel. For us eunuchs that would mean few favors and little power. My advice to you is: amass riches, many good horses, amuse him with ball games, hunting, music and women. With wasteful extravagance, pleasures without end, he will forget classics and arts, withdraw from outside affairs and every plan and scheme will be ours. Favors and power, where would you than wat it to go?"[18] These tricks, one may say, have always been used by eunuchs throughout history, and that does not exclude the Ming eunuchs.

The eunuchs not only profitted from the absurd behavior of the emperors to arrogate the imperial powers to themselves, but utilized also the ingratiating approaches of the bureaucracy and high officials to consolidate and develop their power. In the Ming era there have been a great number of officials and officers of state who with flattery and communications tried to ingratiate themselves with the eunuchs. The reason was that in the renewed struggle for distribution of wealth and power, power was of utmost significance as far as the landlords of the numerous clans and their political representatives were concerned. The measure of power determined the share of property. With sufficient power, things could be acquired by force or trickery and one's wealth could be expanded to the utmost. Otherwise, one could possibly suffer disgrace and ruin and lose one's entire family fortune. This problem is clearly evident in the changes of fame and fortune of such men as Yan Song and Zhang Juzheng. How was one to consolidate one's own power and promote its continuous growth? Under an ultra-autocratic rule, apart from ingratiating oneself with all kinds of tricks with the emperor himself, there was only the other henchmen and loyal slaves--the eunuchs. Speaking of conditions in the Ming dynasty, the latter method was evidently the more important one. In the 8th year of Tian-shun, Wang Hui, a spervising censor of the two capitals, and others, memorialized the Emperor Ying-cong: "The eunuchs attend to your Majesty day and night, and some high civil and military officials without sense of honor or shame are associating with them, sending them gifts of all kinds of valuables. Then those subserviant, slavish creatures will praise the officials whenever they are near you day and night. Then there are upright and honest men without cladestine connections whom the eunuchs consider unworthy and day and night discredit to you... These daily insinuations will unavoidably cause suspicions to arise. Those that have been praised unexpectedly advance to high positions, those that have been discredited are forever stuck in lowly positions."[19] This shows that anyone who wanted to advance in his career and occupy a dominant position in the struggle for power and profit was compelled to fawn upon and ingratiate himself with the eunuchs. In this way the eunuchs gained an opportunity to add as members of their clique those shameless creatures whose mind was only on advancing in their careers as officials and on enriching themselves, which in turn again increased the power of the eunuchs. It is just as we may read in the chapter on eunuchs in the History of the Ming Dynasty:

"The eunuchs were a calamity of serious consequences in the Ming dynasty. But if the various parties would not have associated themselves with them, helped them increase their power, the calamity would not have been so severe... When Liu Jin usurped power, Jiao Fang as head minister associated himself with him, then all ministers vied with each other to flatter Liu, and the power of the Office of Protocol Affairs ranked higher than the grand secretariat. Toward the end of the Shem-cong reign, many political groups formed based on wild talk. Mutual antagonism and factionary fighting became an insoluble entanglement. The eunuchs took advantage of the disorder and usurped power. They were crafty and cruel and full of flattery; they were inside the imperial harem, they carried out excessive punishments and painful persecutions to satisfy their hate of the righteous and proper. They fill the prisons with gentry and good people died at their cutting and maiming. Emperor Zhuang-lie set right the case of treachery by handing the affair over to grand secretary Wei Guang and others. He sighed regretfully: "Wei Zhongxian was only one person. All officials outside the palace supported him, only thus could it happen, no punishment is enough for such crimes!" The intrusion of eunuchs in government, furthermore, added to the corruption in the bureaucracy, which showed itself mainly in the following aspects:

The overstaffing of offices with superfluous personnel grew into a very serious situation. In the feudal society employment was solely based on relationships. It was, therefore, unavoidable that positions became overstaffed with superfluous personnel. With the inflationary increase of eunuch power this evil got constantly worse. For instance in the Cheng-hua reign, the eunuch Liang Fang "obtained a palace decree to employ up to 1,000 officials as what he called messenger officers." On this matter Censor Zhang Ji memoralized: "Recently low-caste thievish characters preposterously push into the ranks of high officials. Dog butchers and silk peddlers occupy honorable and important positions. On the civil side, men who don't know to spell a single word and on the military side men who have never shot an arrow are unjustifiably rising up rapidly and repeatedly promoted within one year. Sometimes father and son sit in the same office or brothers share the same government post. There are even soliders and artisans who abscond, change their names and gain entrance to upper circles. Officials engage in bribery, conceal their crimes and curry for the favor of their superiors. In one day dozens of people are installed as officials and in one office hundreds of people are put on the payroll. Was there ever in our history a governmental order of this kind?!"[20] In the Wu-cong reign, Liu Jin "on checking official records to decide on awards, picked out and promoted over 1,560 people and newly employed several hundereds for the imperial bodyguard." In the Tian-qi reign, when Wei Zhongxian usurped authority and oppressed the people "menials and thievish slaves climbed up the official ladder on the basis of certain connections or by mere sycophancy, climbed up into the highest positions, tarnishing the ranks of high officials and corrupting court and government officials." Even offspring "in their infancy, not yet able to walk" were enobled to marquises and earls and the unnecessary employment of superfluous officials got to a stage where there was simply no more place for more additions.

There was no clear dividing line between right and wrong, rewards and punishments were meted out improperly. The situation of "good men not necessarily reaping any benefits from their good deeds, and evil men not necessarily suffering their deserved disaster" was fairly conspicuous throughout the entire Ming era. The basic reason for this situation was, of course, the ultra-autocratic monarchical rule and the sharpening contradictions within the ruling class. Right or wrong, merit or demerit was always determined by the likes and dislikes of the emperor or the minority group in power; it was decided only on the basis of how beneficial or harmful it would be for this clique. But it is undoubtedly true that the intrusion of eunuchs into politics greatly exacerbated the situation. For instance in the Cheng-hua reign, the eunuch Wei Juan, in charge of maritime trade at Guangzhou, levied heavy taxes and seized property wherever he could, bringing "the Hainan island into a mood for revolt." Chen Xian, a senior municipal administrator of Guangdong, repeatedly reprimanded Wei Juan, who, therefore, hated Chen. In the 22nd year of Cheng-hua "during a famine in Guangdong and Guangxi, Chen Xian provided relief as he saw fit. Wei Juan falsely accused Chen Xian of distributing grain without authority and with the intention of enriching himself and gaining undeserved recognition and rewards for his underlings to pay debts of gratitude." Emperor Xian-cong dispatched Li Xing, a secretary of the board of punishments, and censor Xu Tongai to crossexamine the accused. "All were afraid of Wei Juan and did not dare to go against him. They asked the throne to dispatch a thousand men of the imperial bodyguard to take him into custody. He [Chen Xian] died at the Shiting temple in Nanchang," while Wei Juan stayed on in his post as grand defender.[21] In another instance, the prefect of Jingzhou, Wang Shou, was an exceptionally unscrupulous official but the judicial officials were afraid of him. At an audience in the 9th moon of the 3rd year of Zheng-de, the court of censors commented on his verbal statement: "The two judicial officials feared his power and their written comments would deceive the emperor. The people suffer from his insatiable demands and their cries of grievance shake the world." "This was a realistic reflection of Wang Shou's true features but because he could rely on Liu Jin, Wang could not be removed from office."[22] Since it was a time "when there was no clear distinction between right or wrong and rewards and punishments were meted out improperly," a large number of officials were naturally driven to flatter and ingratiate themselves with the eunuchs and men of power, which would provide their sustenance to the end of their days without having to work hard for it, and which allowed them to forget the hardships of the common people. It was a time when a great number of officials were driven to do evil rather than good.

The custom of flattering and todaying was flourishing to the utmost. The ultra-autocratic system with the additional rule of terror openly practiced by the special organs of the state, unavoidably created a thoroughly corrupt mode of behavior of all officials and high officers of state, namely of currying favors, insincerity, dishonesty and shamelessness, of holding on to lucrative posts and of consolidating all their sources of special favors. As early as in the Hong-wu reign under Zhu Yuanzhang's rule of strict punishments and control of officials, under conditions of wanton murder, there grew up a situation where officials and highest officers of state only paid attention to flattery and would not have the courage to criticize and remonstrate. This corrupt style of work, with its flattery and fawning, holding on to lucrative posts and consolidating all sources of special favors, got worse and truly disgusting with the growing power of the eunuchs. Toward the middle period of the Ming era, they "outdid each other in cruelty, outbid each other in shrewdness and deceptions, outmastered each other in flattery, outperformed each other in servility," "they vilified people while flattering them to their faces and spread a net of lies." All these evil practices became so prevalent that they could no more be suppressed. History records that when Wang Zhen wielded power, Wang You managed, merely by flattery, to jump up from second-class secretary in the board of works to vice-president of the board of works. "Wang You was of good appearance and without whiskers and skillfully flattered Wang Zhen for his good looks. One day Wang Zhen asked: "Vice-President Wang, why don't you have whiskers?" Wang You replied: "Since you, venerable elder, have no whiskers, how would I dare have them."[23] Instances of such contemptible and shameless officials like Wang You were later "extremely common." It is well known that Wei Zhongxian had numerous adopted sons and grandsons, who were not ashamed of this fact but rather boasted of it as an honor. Furthermore, the governor of Zhejiang Province, Pan Ruzhen, was the first to build a temple in honor of Wei Zhongxian. This custom very quickly spread throughout the country. The temples they built were absolutely resplendent, built as palaces with nine principal columns and ceremonials just like those for the emperor. "All hymns of praise were sounding like extolling a saint, calling him virtuous like the heavenly Yao, the saintliest, the most divine." The most despicable was Huang Yuntai, president of the board supervising soldiers' pay and rations. After he had built his temple for Wei, to demonstrate how deeply devoted to Wei he was, at the time when Wei's effigy was to be installed, "he performed five obeisances and three kowtows and had all civil and military officials lined up at the foot of the steps to do the same. After that was done, he stepped before Wei's image and prayed that 'his excellency' may give his support to certain affairs, then again kowtowed to express his gratitude. In a certain month he thanked 'his excellency' for having raised him and expressed his gratitude with further kowtows, also had the whole company again do the same." At that time, even people like Hua Kui, Prince of Chu, and Li Chengming, Marquis of Wuqing, "honoring him as a princely person and of high family status, offered up flattery of auspicious favors received and vied with each other in praying for Wei's well-being."[24] The customs of the Ming officials had reached this extreme state of corruption, a rare phenomenon throughout our history.

Corruption was a widely prevalent custom. Corruption may be said to be a chronic disease of the exploiting classes. Even though Zhu Yuanzhang employed cruel punishments and draconian laws to punish corrupt officials and thereby brought about a slight improvement in officialdom, corruption could not be stamped out completely. As the decay of the landlord class progressed, the general corruption among officials became more and more rampant. Following the middle period of the Ming dynasty, it had gone so far that "men showed no ambition to work hard and bribes were a common practice." Zhang Juzheng once pointed out: "As from the Jia-jing reign on, those in charge of government affairs practiced bribery to achieve their purposes. The bureaucracy exploits the people and use their gains to get into the good graces of those in power."[25] In the Chong-zhen reign, Ming Emperor Si-cong could not but admit in his decrees, that "in recent years officials were laxe in levying taxes and administration deteriorated. Love of writing and honesty have died out. They consider the baton as outdated and take no heed of agriculture and sericulture. They extort heavy taxes and levies merely to feed their gluttonous desires. They increase neighborhood tithing to fill to some extent the needs of fund requirements. Our people's suffering from cruel government is no less serious than floods and conflagrations."[26]

There are, of course, many reasons why there was no letup in the general corruption and one extremely important factor was the exaction of bribes by the eunuchs. To elucidate this problem we may only have to cite the following facts: After Xu Xi managed by flattered Wang Zhen to be selected as grand secretary of the board of war, the high officials of the various offices and bureaus all called on him bringing presents of gold. At the days of audience, it was the rule for a caller to bring at least 100 pieces of gold; those bringing 1,000 pieces could wine and dine at will. People vied with each other to bring bribes, only then were they welcome."[27] In the Zheng-de reign, "all officials of state coming to the capital for an imperial audience, feared Liu Jin's tyrannical temper and were afraid that disaster may befall them, so each collected silver to bribe him, one province up to 20,000 taels. They frequently borrowed it from rich residents of the capital. When they got back to their posts, they took money from the treasury to repay the loans, which were called metropolitan debts. High and low were engaged in this activity, devoid of all sense of shame."[28] In his chapter on the Eastern Depot in his Dong-yu za-ji [Random Notes of Grief] Shi Dun wrote: "The Eastern Depot was originally established for criminal investigations and arrests, but its items of business grew to such an extent that it was more than in the board of civil affairs and the board of war, because they monopolized the selling of civil and military posts as well as of titles of nobility. Finally the two boards arranged with the Eastern Depot: for each high appointment an imposition of several thousand taels, called regular sustenance money. Later an additional several ten thousand was to be added, officials inside and outside the palace to support this without making demands on each other." Examining the property of several eunuchs on the basis of lists of confiscated property, their wealth must have run into many thousands and tens of thousands of taels, truly most frightening sums! The wealth of those eunuchs for whom no lists of confiscated property exist must have been equally large. The greater part of these fortunes originated from bribes, which in the last analysis is really the "fat and blood" of the working people.

Intensifying party struggle. Originally, due to the struggle for power and profits within the ruling class, deep-rooted sectarianism easily developed and took the form of party struggle. However, the intrusion of eunuchs into government rendered these party struggles even more severe. As mentioned before, in order to consolidate and augment their power, the eunuchs had to ingratiate themselves with the emperor, but also had to win control over groups of officials and high officers of state and enlist their services. A corresponding number of officials and high officers of state were ready, for the sake of their future careers, to set aside all scruples and sell their souls and attach themselves slavishly to the eunuchs. Like a pack of rogues they would oppose and keep out anyone of different views and would attack any opposing clique. They would rapaciously plunder and carry out brutal oppression, persecuting the people ruthlessly. However, there were indeed some officials and high officers of state who "did not fear devils and demons." For their own interests, which were also the interests of the entire landlord class, unafraid of prevailing dangers and not hesitating to sacrifice their lives, they launched a blow-for-blow struggle against the all-powerful eunuch clique. For instance, history records "when chief eunuch Wei passed through Wu, Zhou Sunchang treated him cordially for several days ...escorting cavalrymen urged Wei to act, suggesting he attack and appropriate for himself the city of Shunchang. Zhou Shunchang wide-eyed shouted: 'Don't you know that there are men in the world who are not afraid to die? Tell Wei Zhongxian, here I am, Zhou Shunchang, a former official of the Board of Civil Affairs.'"[29] This heroic spirit is heavens apart from the spirit of those who wagged their tails ingratiatingly and curried favor by flattery. It is a pity that the former had never been able to defeat the eunuch clique that was hiding under the protection of the emperor. However, their repeated defeats did not stop the fight, but on the contrary rendered it ever more violent. Between the middle and the latter period of the Ming dynasty with its Donglin party and the eunuch party, the fight developed to a climax and only ended with the fall of the dynasty. Because of the violence of the party struggle there developed in the middle and end periods of the Ming dynasty that turbulent political situation with its endless debates. "The legal and political order fell into decay and high and low disintegrated." The strength of the Ming dynasty rule was also greatly weakened as the party struggle increased in violence.

As the feelers of the eunuchs stretched into the military, the decay and decadence in official and military circles increased rapidly and as a consequence the stability of the Ming dynasty rule was critically shaken.

In the preface to the chapter on officials, the History of the Ming Dynasty states: "The commanders of the five armies were originally veteran generals of distinction, and the military system was one of respect and severity. ...Later more and more eunuchs infiltrated, acting as inspectors of the border defenses, or as military supervisors participating in campaigns in all directions, with the result that the border defense system greatly deteriorated and the Ming throne finally could not be sustained." The main reason why eunuchs serving as military supervisors, grand defenders, inspectors, superintendents or armament, etc., were so detrimental to the border defenses was that they were highly ineffective in the military. The eunuchs came into the military as representatives of the emperor and unavoidably began to act autocratically, and all the generals and defense commanders were, of course, everywhere impeded as if holding nominal posts only. As early as in the early years of the Xuan-de reign, eunuchs at the borders were "holding all power, acting wantonly and recklessly and not capable of controlling the entire military."[30] In the Chong-zhen reign, Wang Zhichen, a superintendent with the army, referred to himself as "superfluous official" and "retained as nominal official" in a memorial addressed to Emperor Si-cong, which is clear evidence of the restraints imposed by the eunuchs. This is one aspect of the problem. Another aspect is that the majority of officials at the borders were happy to have inspectors, because it was then only necessary to satisfy the greed of the supervisors; they would then have someone to rely on who would play up their merits and cover up their faults." The eunuch supervisors were, therefore, either attempting nothing and accomplishing nothing, or helping along the general decay and decadence. In addition, the eunuch military superintendents furthermore made the military camps their bases for the building up of their power and for amassing money and property. They used private people as garrison commanders, employed able-bodied soldiers as servants, embezzled soldiers' pay, cut down the feed for the horses, and used every trick to enrich themselves. They were "haughty because of the power in their hands. They considered as greatest achievement the capture of many prisoners and much loot, and made light of humiliating officers and men." As a consequence, there was increasing disintegration among officers and men. When it came to fight a battle "then only emaciated soldiers were sent to fight, so that decisive victory could not be achieved. When the slightest advantage was gained, this was exeggerated into great triumphs." Due to these malpractices for selfish ends, "men who had not yet left the capital district had their merits already recorded in the official register." This made "those who were killed, die with grievances on their lips, and those who were wounded wailing in pain." This kind of an army had no fighting strength at all, that is only altogether natural. The social economy suffered serious damage, which also rapidly sharpened the class contradiction.

The exploitation by the ruling class increased constantly and reached such a state that the rampant corruption would have the common people scream with pain and despairing of life. In addition the dispatch of a large number of eunuchs charged with every type of extortion and plunder further contributed to the deterioration of the social economy. As from the Yong-le reign on, the demonic claws of the eunuchs extended into every field of the economy. They forcefully seized land on an extensive scale, "they imposed on households in circuits and provinces, they used manpower as corvee, they did not submit to taxation," they were doing great harm to the people. They received mandates to act as purchasing agents, they willfully imposed levies on civil and military men, demanding bribes. On behalf of the emperor they acted as purchasing agents for every kind of goods, "there was the trouble of being rejected or having to stock up, there was the worry of supplying all the needs. If the court's requirements were very limited, the costs to the people was very heavy." The "officially requested to have warehouses, or clandestinely built warehouses and shops, they took in travelers, they engaged in credit business relying on their power and refused to pay up." They requested the salt permits and to have the monopoly of salt sales, the profits of which could be twice or five-fold." They spoiled the government's tax monopolies and stole the profits from the merchants." They took advantage of their "supervisory faculties" for acts of insatiable greed and cruelty." They pretended to send tribute gifts and collected levies and taxes. Every one of these items naturally greatly increased the burden on the people, and the most harmful were the mining commissioners and tax superintendents, the most serious destructive damage to the social economy and a hard to endure calamity for the masses of people.

The large-scale dispatch of mining commissioners and tax superintendents started in the 24th year of the Wan-li reign. Mining commissioners were "to be found everywhere in the empire" and "in all large cities there were tax superintendents." The Lianghuai area had a superintendent of salt and Guangdong had a superintendent of pearls. They were either specially commissioned or acting concurrently. Big and small eunuchs were swarming throughout the country, sucking the marrow and blood of the people in order to collect and deliver up revenue."[31] The alleged opening up of mines and the collection of taxes were only signboards, they actually "did not want mines to be dug or taxes to be negotiated; the people's killocks, river banks and dikes, public roads and highways all were counted as mines; officials, peasants and artisans were all counted as people who had to pay taxes."[32] Because they had the support of the imperial court, the mining commissioners and tax superintendents could afford to be extremely overbearing. They extorted money from the people everywhere they could, going even so far as to "put an arrow on the bow to kill honest people, ruining homes and whole clans with the calamity growing into a ruthless mass slaughter ... destruction of burial mounds and disturbing the bones of the dead, maltreatment of children and leaving good people groaning with grief."[33] A few years after the mining commissioners and tax superintendents had been sent out, the whole country felt "as if dropped into a boiling cauldron with no place to take refuge to. Poor and rich were completely finished and done for, farms and orchards were stripped clean, people ran off their land, sold children and deserted their wives, all roads resounded with crying and lamenting and lanes were left desolate."[34] It truly came about that "even the smallest village had not even one chicken or dog left. There was not a grain of rice or millet in the larger cities."[35] As a result "the individual citizen was unable to survive" and the whole social economy went bankrupt. Faced with this grave danger to their rule, some knowledgable members of the ruling class repeatedly memorialized on the great harm done with regard to mining and taxation, and demanding a recall of all mining commissioners and tax superintendents. In his memorial to put a stop to the mining commissioners and tax superintendents, Li Sancai, governor of Fengbo, indignantly pointed out: "Since the mining and tax affairs were started up on a wide scale, thousands of people have lost their livelihood. Your Majesty are the lord of these people, but you not only do nothing to clothe them, but even steal their clothes. You not only do not feed them, but have even all their food swept up and taken away. The tax officials are extremely pressing, extortionist orders come as thick as hair on a cow's back. ...High and low are being taxed, profit is all that one gets to hear." He also asked reproachingly: "Your Majesty are fond of pearls and jade, the people are also fond of having enough to eat and wear. Your Majesty loves to have generation after generation, the people also love their wives and children. Why do you want to pile up gold sky-high and not leave the people even pints and pecks of chaff and husks? Your Majesty wishes your children and grandchildren many thousand years of life but you allow the common people not even one more day to live?!" This is extremely bitter talk, but you might as well ask a tiger for its skin if you want Ming Emperor Shen-cong, with his out-and-out rotten and bloodthristy nature, to give up "the pearls from Guangnan, cinnebar from Yunnan and Guizhou, precious stones from Kongqing, Honan chinaware, Shaanxi tapestry, cotton from Sichuan and gold and silver mined in Qi and Chu, which he greedily amassed with a thousand tricks and schemes"[37] all these huge exploitations. At the same time, the eunuchs too, who had inflicted wanton persecution and amassed riches under the pretext of official mining and tax business, also would not let go of their loot. All memorials that requested to put a stop to the mining and tax activities were as a rule, therefore, "filed away" or "not reported" to higher authority.

The rapacious acts and wanton persecutions by the mining commissioners and tax superintendents resulted in an intensified class contradiction, which had been extremely sharp even before that. The direct consequences were a series of revolts by the people. The main revolts were: Gao Huai's revolt in Liaodong, Liang Yong's revolt in Shaanxi, Chen Feng's revolt in Jiangxia, Li Feng's revolt in Xinhui, Sun Long's revolt in Suzhou, Yang Rong's revolt in Yunnan, Liu Cheng's revolt in Changzhen, Pan Xiang's revolt in Jiangxi. Gu Yingtai gave as his opinion: Those were days of disintegration and collapse, people scattered and governments dispersed. Lucky those who managed to survive. However, at that time already the seeds were planted for the fall of the dynasty. It took about 30 more years until the rotten reactionary Ming dynasty was swept away by the violent storm of peasant revolution.

The Ming rulers thought to use the eunuchs as a kind of clamp to restrain the bureaucracy and the people, so as to maintain and consolidate their ultra-autocratic monarchical rule, but it turned out exactly contrary to the wishes of the rulers. The perverse acts of the eunuchs hastened the dynasty's demise. One may say that in a certain sense the eunuchs dug the grave for the Ming dynasty. What a stinging and bitter irony of history!

BRIEFS

SHANGHAI FAMILY PLANNING MAGAZINE--Shanghai, 26 Oct (XINHUA)--An exhibition on birth control, maternity and child care has opened at the Shanghai Workers' Cultural Center. Films, slides, charts and drawings illustrate the importance of family planning, its relationship to China's economy and the improvement of living standards. New contraceptive drugs and devices are displayed and specialists from child care centers, hospitals and human reproduction regulation experts answer visitors' questions. China's first magazine on birth control will be put out earlier next month by the Shanghai Science and Technology Publishing House. The first issue of BIRTH AND BIRTH CONTROL will include 20 clinical reports and articles on basic theoretical research as well as on contraceptive drugs and devices and sterilization surgery. The magazine is edited by Shanghai Institute of Family Planning. [Text] [Beijing XINHUA in English 0706 GMT 26 Oct 80 OW]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

REAGAN'S 'ERRONEOUS' VIEWS ON 'TWO CHINAS' SCORNED

Beijing ZHONGGUO QINGNIAN BAO in Chinese 30 Aug 80 p 3

[Article by Zhuang Zong [5445 4844]: "A Question of Principle Leaving No Room for Compromise--Refuting Reagan's Erroneous Statements on the Relationship Between the United States and Taiwan"]

[Text] American Republican Party presidential candidate Reagan sent the party's vice presidential candidate, Bush, to Beijing to "explain" his erroneous statements detrimental to the Chinese people regarding Sino-American relations. Bush stated over and over that Reagan hopes "to improve relations with the People's Republic of China" and will go in for "two Chinas." If there is any difference, it will be only "a question of semantics." However, just at the moment when he was busy making this explanation, Reagan in a speech in Los Angeles on 21 August, once again advocated establishing "official relations" with Taiwan, and "establishing an official liaison office of the U.S. Government" on Taiwan. On 25 August, at a press conference held jointly with Bush, who had just returned home, Reagan again further defended his wrong "two Chinas" position.

Reagan did not begin making such statements from this day. When China and the United States established diplomatic relations, he at once blamed the Carter administration for severing diplomatic and official relations with Taiwan. Moreover, Reagan over and over called Taiwan the "Republic of China." This was still less "carelessness" or a "slip of the tongue."

The relationship between China and the United States was founded on the basis of th political principle that there is only one China, and that Taiwan is a part of China. This principle, already written in the 1972 China-U.S. Shanghai Communique, was reaffirmed in the 1979 communique on the establishment of diplomatic relations between China and the United States. The development of Sino-American relations cannot for one moment depart from this basis. This is a question of principle involving China's territorial integrity and national sovereignty, and is the firm and unshakable stand of the Chinese Government and Chinese people. This principle leaves no room for compromise.

Reagan did not mention one word about the China-U.S. joint communique on the establishment of diplomatic relations between the two countries, but took the so-called U. S. "Taiwan Relations Act" as the basis for establishing "official relations" with Taiwan. The "Taiwan Relations Act" is a domestic law of the United States. Many aspects of this act run counter to the fundamental principle of the communique on the establishment of diplomatic relations between China and the United States. Our government has more than once declared China's solemn stand against this act. Now Reagan is making a big issue of it, trying to force it on China and to turn the clock back in Sino-U.S. diplomatic relations. This is unacceptable to the Chinese people.

Reagan's erroneous stand on U.S.-Taiwan relations not only infuriates the Chinese people but also runs counter to the wishes of the American people. The normalization of relations between China and the United States came from the common wishes of peoples of the two countries, and it is not only in keeping with the interests of peoples of both countries but also related to the world situation. Everyone knows clearly that in the present world, if the United States fails to ally itself with China, West Europe, and Japan and gain support from the Third World, you cannot talk about effectively controlling the Soviet Union in worldwide expansion. The ones who are pleased with the sabotage of Sino-U.S. relations have to be the Soviet hegemonists. The Chinese people approach this problem from the point of view of the total situation of opposing hegemonism and maintaining world peace. It is not a question of China's having to look to the United States for help.

All knowledgeable persons in the world have seen that any action causing damage to Sino-U.S. relations is not a local issue. Reagan's erroneous stand not only has been criticized widely by public opinion in the United States but also has aroused the anxiety of many countries in the world. Reagan has placed himself in a tight corner. Whoever turns back the wheel of history will always run into a stone wall.

SOVIET HEGEMONISM CALLED THREAT TO WORLD PEACE

Beijing BEIJING DAXUE XUEBAO (ZHEXUE SHEHUI KEXUE BAN) [BEIJING UNIVERSITY JOURNAL (PHILOSOPHY AND SOCIAL SCIENCE EDITION)] in Chinese No 4, 20 Aug 80 pp 23-29

[Article by Wei Shihua [7614 0013 5478]: "Oppose Hegemonism and Safeguard World Peace"]

[Text] For 30 years, our government and people have stood at the foremost front of the struggle against imperialism, colonialism, and hegemony and have made our own contribution to the safeguarding of world peace. Today, a great historic turning period has begun. To build our great motherland into a modern socialist power, for the lofty purpose of world security, stability, and human progress, we must continue to hold high the banner of peace and, along with the people of the world, struggle together in opposing hegemonism and safeguarding world peace.

Our Country's Foreign Policy Is a Foreign Policy of Peace

The socialist system ensures that our external policy will advocate peace and oppose aggression. War comes about with the appearance of private ownership of the means of production and the division of society into opposing classes; it is the direct continuation and development of such a private ownership system. Modern wars are brought about by imperialism and social-imperialism. But the goal of the proletarian revolution is to substitute socialism for capitalism, to eliminate the phenomena of man being exploited by man and man being oppressed by man, and thereby to eradicate the root cause of class exploitation and class oppression. Socialist countries have established a dictatorship of the proletariat, have realized public ownership of the means of production, and are equipped with broad domestic markets. They absolutely will not commit aggression against, or enslave, the people of other countries for the sake of seizing the world sales market, the areas of raw material production, and world hegemony. Also, after the proletariat and all the toiling people have seized state power, and especially after they have established a socialist system, they must elevate economic construction to the position of first importance, greatly develop social productive forces, and continue to satisfy the people's increasing needs in their material and cultural life. If a socialist country commits external aggression and contests for world hegemony, this not only violates the interests of other countries and peoples but, in the first place, goes against the very tasks of the proletarian dictatorship, sabotages the cause of its socialist revolution and socialist construction, and fundamentally violates the interests of its own people. For a socialist state under proletarian dictatorship, this is absolutely impermissible. After a socialist state has won victory in its revolution, it must fulfill the duties of internationalism that we undertake, assist the revolutions of various countries of the world, and struggle together to eliminate from this earth the system of exploitation of man by man and to achieve the liberation of all mankind. But the liberation of the people of various countries is the business of the people of those various countries themselves. In any country, if there is no revolutionary situation there and the people there do not demand revolution, no one can create a revolution there. Therefore, while we carry out the principles of Marxist internationalism and sympathize with and support the revolutionary struggles of the people of various countries, we must also be faithful to Marxism-Leninism in the idea that "a revolution can neither be exported nor imported" (the spreading of revolutionary ideas transcends state boundaries). Nor will a socialist state adopt the approach of starting a war as a substitute for the revolutionary struggle of the people of another country. It is precisely the essence and characteristics of the socialist system itself which determine that what socialism demands is peace and not war. Lenin said: "Only the working class can, after the seizure of power, carry out a policy of peace in deeds and not just in words" ("Complete Works of Lenin," Vol 25, p 309). Lenin also said: "Even the smallest nation, without any arms, however weak and small it might be, can and should rest assured: apart from a desire for peace, we have no intention toward it" ("Complete Works of Lenin," Vol 33, p 122).

Our government has carried out a foreign policy of peace since the very first day of its establishment. In February 1953, Premier Zhou pointed out at the Fourth Session of the First National Committee of the Chinese People's Political Consultative Conference: "Our policy of peace is determined by the people's democratic system of our state." According to our people's desire for peace and standpoint on the safeguarding of world peace, our first Constitution in 1954 clearly prescribed: "In international affairs, our firm and consistent policy is to strive for the noble cause of world peace and the progress of humanity." In February 1958, in his speech on the present situation and our foreign policy at the Fifth Session of the First National People's Congress, Premier Zhou once more repeated our firm and consistent policy of peace, saying that our state had since the very first day of its founding regarded the defense of peace as its sacred responsibility. For the past 30 years, we have always adhered to this policy of peace.

Shortly after the founding of New China, U.S. imperialism started an aggressive war against Korea, forcibly occupied our territory Taiwan, and envinced a boisterous attitude and overbearing posture in general.

At this important historic moment, we resolutely decided to aid Korea and resist America in order to protect our own country, and in July 1953 we were able to force U.S. imperialism to sign an armistice and thereby make an important contribution to peace in the Far East and the world. In 1954, Premier Zhou advocated, in response to imperialism's policy of aggression and war, the well-known Five Principles of Peaceful Coexistence: mutual respect for each other's territorial integrity and sovereignty, nonaggression, noninterference in each other's internal affairs, equality and mutual benefit, and peaceful coexistence. These principles became the foundation stone safeguarding world peace. They have exerted a profound and far-reaching influence in the international arena, and they are of great international significance. In 1954, our country participated in the Geneva Conference and made a contribution to the restoration of peace in Indochina. In 1955, Premier

Zhou led the Chinese delegation to attend the Asian-African Conference, which was of important historic significance. Along with delegates of other participating countries, Premier Zhou worked to have the conference pass the "Declaration on Promoting World Peace and Cooperation," or the "Ten Principles" of the Asian-African Conference, which became the fundamental principles for international dealings. From 1963 to 1964, Premier Zhou paid visits to 14 countries in Asia and Africa in order to seek friendship, increase understanding, and learn from each other. He issued the five principles governing mutual relations between our country and African countries as well as Arab countries, and also the eight principles on our aid to foreign countries, which creatively developed the five principles of peaceful coexistence, provided the norms for the establishment of good international relations, fully demonstrated our policy of peace, and enabled us to gain the respect of the world's countries and thus to have friends everywhere. In accordance with our friendship and good-neighbor policy, and on the basis of equitable negotiation and principles of mutual understanding and mutual concessions, we have satisfactorily solved the boundary questions between our country and most of our neighbors and have set an example in international dealings on the basis of the principles of peaceful coexistence. With respect to disputes which exist between nations, including nations of the Third World, because of historical or other reasons our country has also stood, under the premise of facilitating the common [struggle] against imperialism, colonialism, and hegemonism, for peaceful solutions through patient and friendly negotiations, and not for a resort to force or threat of force. The Joint Declaration on the Establishment of Sino-Japanese Relations, the Sino-Japanese Treaty of Peace and Friendship, and the Communique on the Establishment of Sino-American Relations have all incorporated the five principles of peaceful coexistence and the content of antihegemonism. We are resolutely opposed to the aggression, subversion, control, and interference by imperialism and social-imperialism in countries in Asia, Africa, and Latin America, and we warn the people of the world that they must maintain sufficient vigilance toward the danger of new wars of aggression which are likely to be started by the hegemonists, and that they must make preparations for them. This is of important significance to the safeguarding of world peace in the present world situation.

Chairman Mao's instruction that China has never wished to become a superpower is a general summing up of historical experience in the struggle between the two diplomatic lines fundamentally opposed to each other in the international arena; it is also the norm and guiding principle for our relations with foreign countries. While leading our people to resolutely oppose hegemonism, Chairman Mao and Premier Zhou at the same time repeatedly taught us not only that China will not seek to become a superpower today. but that she will not do so when she becomes economically strong in the future. China will never become a superpower. Chairman Mao also indicated to foreign friends face-to-face that if China should ever become a superpower, the people of the world should then attach to China the label of imperialism, and the people of the world and the people of China should unite together to oppose and overthrow Chinese hegemonism. All this demonstrates that our adherence to the policy of peace based on never becoming a superpower is absolutely not just a matter of expediency but a long-range, fundamental, national policy.

China's modern history is one in which China has been subject to aggression. Even today, China is still under the threat of aggression. In terms of fighting a world war, China neither has any reason, nor is she prepared, to do so. The Chinese people have suffered the havoc of wars in full, and hence they love peace to the fullest extent. One of the points of departure of our proletarian foreign policy of peace is the delaying of the outbreak of another world war and the safeguarding of world peace. Our country has consistently held high the banner of peace and, along with the people of the world, has opposed imperialism's policy of aggression and war, has made untiring efforts to struggle for world peace, has exerted great influence, and has earned the praises of the people of the world. But there was a period when we, because of the interference of the extreme-leftist line of Lin Biao and the "gang of four," failed to pay attention in our propaganda to putting emphasis on the safeguarding of world peace while exposing the root source of imperialist wars and telling the people of the danger of war. In order to conceal its true face of hegemonism, the Soviet Union also took the opportunity to oppose China, slandering China as "warlike"; this kind of anti-China lie of course cannot deceive the people of various countries of the world. In the era of imperialism, there are bound to be wars as long as imperialism exists; the danger of another world war exists objectively. From the realities and the development trend of the international situation, even though it looks as though the aggressive character of Soviet social-imperialism is unlikely to change and its forces of expansion are unlikely to become self-restrained, as long as our forces can continue to grow and become further strengthened, as long as we sharpen our sense of vigilance, make adequate preparations for our opposition to wars of aggression and consolidate as well as develop our antihegemonistic united front, promote the enhancement of antiwar forces, and fully expose and defeat every strategic deployment of Soviet hegemony, a postponement of an outbreak of war is entirely possible. The future of mankind and of the world is bright. In order to better adhere to, and carry out, our foreign policy of peace, Premier Hua, in his Report on the Work of the Government, at the Second Session of the Fifth National People's Congress in June 1979, reiterated our principled stand on opposing hegemonism and safeguarding world peace. In taking opposition to hegemonism and the safeguarding of world peace as our fundamental foreign policy, we have not only grasped the crux wherein lies the principal contradiction of today's world, hit at the vulnerable spot of hegemonism, and profoundly exposed and solemnly criticized global hegemonism, but we have also eliminated the interference of the extreme-leftist line and genuinely restored the true identity of our foreign policy of peace. Since the First Session of the Fifth National People's Congress, we have in our external work held high the banner of opposition to hegemonism and of the safeguarding of world peace, opened up a new situation, and achieved conspicuous results. The reason why Premier Hua's visits to the four countries of Western Europe in 1979 were solemnly received and warmly welcomed by the governments and people of the four countries, and hence achieved complete success, was precisely because we set the goals of the visits in terms of "promoting understanding, strengthening friendship, expanding cooperation, and safeguarding peace." From this, it can be seen that in holding high the proletarian banner of a policy of peace, our approach has already played a major role in elevating our international status and in promoting the international struggle against hegemonism, and it will continue to play such a role in the future. Our analysis of the international situation is persuasive, our external policy is appreciated by people everywhere, and our international prestige is high.

Construction of Our Four Modernizations Requires a Sustained Peaceful International Environment

At present, and for a rather long historical period hereafter, our principal task is none other than to carry out socialist construction in a planned way and then to take a step further to change our backward outlook and build our country into a modern socialist power. The destiny of our state and our nation hinges on whether or not we can realize the four modernizations within the present century. In order to realize this magnificent goal of the four modernizations, we must, apart from having as our guarantee a Marxist ideological line, political line, and organizational line, secure domestic and external conditions that are beneficial to the rapid launching of our peaceful construction. That is to say, domestically we need to maintain and develop a political situation of stability and unity, and externally we need a sustained peaceful international environment. As early as September 1954, Premier Zhou pointed out in his Report on the Work of the Government at the First National People's Congress: "All our efforts are designed to build our country into a prosperous, happy, socialist industrial state. As we carry out our peaceful labor, we demand a peaceful environment, a peaceful world. This basic fact determines a policy of peace in our foreign relations." From now on, so long as no large-scale invasion by an external enemy occurs, the work of modernization remains our central task. Therefore, gaining a peaceful international environment becomes an important premise for the realization of our four modernizations. With this condition present, our country can not only consistently adhere to our general line in the absence of an outbreak of war, but also carry out open-door international policies in a peaceful international environment and, under the premise of persisting in our independence and self-reliance, and through the international strengthening of cooperation and exchange, actively make use of foreign capital and the world's advanced achievements, import advanced science and technology, and thereby accelerate the pace of our four modernizations. During the past few years, we have gained major advances in our external work, and the situation of united opposition to hegemonism has already basically taken shape. The people of various countries of the world are all willing to make contributions to China's execution of her modernization plans. This is an international condition which was absent in the first 25 of the 30 years since the founding of our state. We should make use of this beneficial international condition, more speedily elevate our labor productivity and the level of the entire national economy, build our country into a modern socialist power, and make even greater contributions to the safeguarding of world peace. This tallies not only with the interests of the Chinese people but also with the interests of the people of the world.

Our socialist modernization construction requires a sustained, stable, peaceful international environment. When our country triumphantly reaches its goal at the end of this century, we will still need a peaceful international environment. By that time, our productive power will have greatly increased, but because our country is vast, our population large, and our foundation very weak, we must catch up with the developed countries of the world. In order to create an economic system higher than that of capitalist society, we need a long-range struggle lasting several generations so as to make a beginning through hard work. Our strategy is defensive. The realization of modernization in our national defense on the basis of modernization of the national economy consistently serves the defense of the cause of our socialist construction, our opposition to hegemonism, and our safeguarding of world peace. Upon our entry into the 21st century, when our outlook is going to undergo even greater change, we must still assert our firm and consistent stand to continue to carry out a foreign policy of peace with all forces and all methods at our disposal.

For the sake of construction, we need peace. But this kind of peace must be genuine peace under which the people of a country are not subject to aggression, interference, or abuse, and can all secure development and progress according to their wishes; it must not be a false peace under which we are subject to the threat of hegemonism or serious disturbances and sabotage of the serenity of our border areas. The realization of the four modernizations and the building of our country into a powerful socialist state serve to make it even harder for the expansionist ambition of the hegemonists to gain any ground. For this reason, either the big hegemonists or the small hegemonists will not resign to letting us work steadily and calmly toward our four modernizations. In this regard, we must have sufficient perception and full preparations. To realize the four modernizations is a great revolution in which are included the serious tasks of putting up resolute struggles against the aggression, threat, and sabotage of hegemonism. Our people never intend to threaten or commit aggression against anyone, but we will absolutely tolerate no threat or aggression imposed on us by others. In order to oppose aggression, there may come a time when we will spare no sacrifice and become forced to do what we ordinarily are not willing to do. Our defensive counterattack which repelled the Vietnamese aggressors and punished the aggressors was undertaken precisely to win a peaceful international environment and to maintain the peace and stability of the Southeast Asian and Asian-Pacific regions.

It Is Necessary To Oppose Hegemonism in Order To Safeguard World Peace

Safeguarding world peace and opposing hegemonism are the common desires and urgent demands of the people of every country. As the world enters the 1980's, the international situation has become more unstable and more tense; factors for war are still growing. The Soviet Union's invasion of Afghanistan is a serious escalation of Soviet aggression and expansion. It is a step further from the invasion of Czechoslovakia, as it has extended the notorious "theory of limited sovereignty" from the so-called "big family" to the nonaligned Islamic countries of the Third World; it has already escalated from behind-the-scenes plotting, utilization of agents, and organization of mercenaries to unabashed personal participation in battle and the direct dispatch of troops to invade another country; it has already developed from the undertaking of subversive activities and the propping up of puppet regimes to the glaring occupation of a sovereign country by armed forces. The Soviet Union's invasion of Afghanistan marked the entry to a new stage of Soviet social-imperialism in carrying out an offensive strategy. East of the Malacca Strait, which straddles the sealanes between the Pacific and the Indian Ocean, it has, by seizing the opportunity of Vietnam's invasion of Kampuchea, extended its naval and air force bases 4,000 kilometers to the south, up to the China Sea and the Gulf of Siam. Thus, toward the south, it threatens the Association of Southeast Asian Nations, and if necessary it is in a position to cut off the sealanes leading from the Indian Ocean to the Pacific. Toward the east, it is in a position to coordinate with its Far Eastern forces and establish a posture of pincer attack against Japan and the naval and air force bases of the United States in the Philippines; at the same time, it is also in a position to threaten China from both the south and the north. West of the Malacca Strait, it is intensifying the execution of its southward strategy, since, after securing control of the crucial Red Sea strait of Bab el Mandeb, it has invaded Afghanistan with its armed forces, begun to threaten Iran, Pakistan and the strategic narrow pass of the [Persian] Gulf, the Strait of Hormuz, and has moved forward to menace Saudi Arabia on the Arabian Peninsula, thus linking up the "Crescent" from the Middle East to Southeast Asia. The Soviet Union is connecting its European strategic deployment with its strategy in Asia and the Pacific, forging a pincer offensive on the sea-lanes between the Pacific and the Indian Ocean, and gradually trying to assume a strategic posture whereby the eastern and western lines complement each other, so as to grab oilfields in the Gulf region, seize strategic spots, take a further step to threaten the "lifeline of the West," and ultimately outflank Europe along a roundabout route. This is a matter of life and death to the Western countries. At the same time, it is "perfecting" its strategic encirclement of our country in a vain attempt to realize its dream of world rule. This cruel.fact of over a year's development of the international situation further proves that Soviet hegemonism is the principal source of war and a serious menace to world peace.

The pursuit of world hegemony is the purpose of the foreign policy of Soviet social-imperialism and a goal which it has "never changed, never overlooked." The Soviet Union is a latecomer to dinner with a great appetite for expansion and a fiery initial thrust. But because of the opposition of the people of the world, it has to spread a smokescreen of "detente" and has been forced to make gestures of "peace" in order to deceive the people. It also employs the tricks of "a thief crying 'stop thief'" and hoodwinking the world while stealing other people's reputation, in order to resort to hegemonism even more unscrupulously under the very signboard of antihegemonism, and to do all sorts of injurious and heinous things. Lenin taught us: Imperialist [countries'] wars are a continuation of their ordinary policy; peace is a continuation of their wartime policy. Insofar as the Soviet Union's hegemonism is concerned, peace is but an interval between two wars. It merely utilizes such intervals between military offensives to digest absorbed entities and to engage in more arms expansion and war preparations. With peaceful coexistence as its signboard from the mid-1950's to the end of the 1960's, it secured supreme rule in a separate sphere of its own, actively engaged in arms expansion and war preparations, and got ready to contest with the United States for hegemony throughout the whole world. Under the smokescreen of "detente" in the 1970's, it cerried out an offensive strategy. After its armed invasion into Afghanistan, with the pressure of world public opinion vigorously demanding the Soviet Union withdraw its troops from Afghanistan, it is now unfolding a "peace" offensive, trying very hard to keep its foothold steady under expressions of "peace" in order to carry out the long-range military occupation of Afghanistan. To sum up: sometimes it uses the two arms of "detente" and expansion simultaneously and sometimes it uses them alternately, with the "peace" strategy as a supplement to its offensive strategy; it practises expansion in the name of "detente," with "peace" as a cloak and strategic offense as substance.

Opposing hegemonism and safeguarding world peace are two sides of the same coin. The struggle for peace and the struggle against hegemonism are inseparably connected. The point of departure for opposition to world hegemonism is the safeguarding of world peace. Hegemonism is nothing more or less than aggression, than war. Struggling to safeguard world peace means struggling to oppose the aggression policy and war policy of social-imperialism. Only by opposing hegemonism can we safeguard world peace. The question now is: In the face of this threat by Soviet hegemonism, what is the correct path for safeguarding world peace?

1. It is necessary for us to recognize the worldwide strategic intentions of the Soviet Union. The Soviet Union is a world hegemonist. In order to realize its ambition of hegemony over the world, it has a clear world strategy. This strategy is namely an offensive one, with "disarmament," "detente," and "liberation of the people of various nationalities" as its signboard, military power as its foundation, the United States as its rival, and Europe as its center of gravity. Eyeing the whole world, and especially threatening the regions next to the West's core interests, it employs methods ranging from mainly fighting wars by proxy up to direct armed invasion, and it takes as its strategic aim the establishment of an unprecedented empire. In 1975, using Cuba as its mercenary, it stirred up civil war in Angola and carried out military occupation of Angola; in 1977, it twice instigated mercenaries to invade Zaire; in 1978, it seized the opportunity of conflict between Somalia and Ethiopia to expand its influence; in 1979, it supported Vietnam's large-scale invasion of democratic Kampuchea, so as to work for a "Federation of Greater Indochina" and to promote an "Asian collective security system." All this was designed to carry out its offensive strategy and constituted a component part of its world offensive strategy. The direct invasion of Afghanistan by the Soviet Union this time was by no means an accidental event; it was a painstakingly planned and long-plotted strategic action. Under the situation of military confrontation and stalemate in the European and Asian regions, which is not easy to break at present, the Soviet Union succeeded in achieving a breakthrough by way of the "soft belly" and thus expanded swiftly southward. This was not only an indispensable step in its advance southward to the Indian Ocean by the land route, but also of direct service to its world strategy with Europe as the center of gravity, and it was at the same time beneficial to the linking of Southeast Asia, West Asia, South Asia, the Middle East and North Africa into a single front, and hence the realization of its worldwide strategic deployment. The Soviet Union has always had an established offensive strategy for achieving hegemony over the world, with Europe as its center of gravity. We should therefore have a clear strategic point of view, and we can only realistically consider and cope with the problems of our own country and region from the point of view of the whole situation, from the overview of strategy and not from the angle of an individual region or country. Only thus can we attach sufficient importance to each expansionist action on the part of the Soviet Union, see far and wide enough and adopt our correct standpoints and attitudes accordingly, and thereby formulate correct policies and practical steps to continue to throw the war plotter's expansionist plans into disarray and safeguard world peace. Contrariwise, if we look at but do not see the Soviet Union's world strategic intentions, and take its every expansionist action designed to realize worldwide strategic deployment as some "oozing strategy," some "opportunistic incident," and hence let it gain an inch and aspire to a foot, and let it press forward step by step each time, then wars will follow one another and disasters will continue until we ourselves incur some catastrophe.

2. We must resolutely support the Afghan people and the Kampuchean people in their struggle against the invaders. The Afghan people's struggle against the Soviet invaders and the Kampuchean people's struggle against big and small hegemonism are problems of the same nature; they are both just struggles in defense of national independence and state sovereignty. The struggles of the oppressed nations of Afghanistan and Kampuchea against foreign invaders and the struggle of the people of the world to oppose Soviet hegemonism and safeguard world peace are entirely consistent with one another. The very fact that big and small hegemonism have

committed armed invasion in two sovereign states today is itself a serious threat to peace. If their aggression is tolerated, it will not only be of no help to the safeguarding of peace but will also surely bring about the dangers of expanded aggression and acceleration of another world war. Therefore, the adoption by peace-loving people and countries the world over of more varied, more effective measures to punish the aggressors and to provide powerful support to the Afghan people and the Kampuchean people politically, morally, and materially has already become an important component of the effort of the people of the world to oppose hegemonism's policy of aggression and war and to safeguard world peace. And the fact that the Afghan people and the Kampuchean people, by sparing no national sacrifices, have exerted themselves to resist the aggressors constitutes by the same token a great contribution to the cause of world peace. With the support of the people of the whole world, it is possible for them to turn Afghanistan and Kampuchea into traps ensnaring big and small hegemonism, making the burdens on their backs heavier, aggravating their difficulties, exhausting their strength, and exposing their expansionist essence as aggressors, and thereby to further mobilize the people of the world, including the people of their own countries, to rise in a just struggle against hegemonism. The big and small hegemonists are daring enough to resort to such wanton actions, so they are unlikely to halt in Afghanistan and Kampuchea and advance no further. Recently, Vietnam openly carried out an excursion into Thailand; it is necessary for people to become vigilant about a repetition of the Kampuchean incident in Thailand. The big and small hegemonists are cruelly suppressing the countries and people that demand national independence and liberation, and they carry on bloody wars every day. If we resort only to empty talk about opposing wars but somehow refrain from opposing wars that are precisely of this kind, refrain from sympathizing with and supporting the just struggles of weak and small nations safeguarding their national independence and state sovereignty, or even bargain, using the independence and sovereignty of small countries as our chips, then we will be evincing a hypocritical attitude toward peace.

3. People of the whole world must unite to promote the development of an antihegemonist situation. Safeguarding world peace is the common cause of people of all countries of the world. The purpose of this struggle for world peace today is to call forth the people of all countries of the world to oppose hegemonism and delay the new world war. This is not a struggle to overthrow capitalism and establish socialism. Therefore, under the banner of opposing hegemonism and safeguarding world peace, we should unite together all those who uphold peace and oppose hegemonism's policy of aggression and war, mobilize and organize all antihegemonist forces, including the developed countries facing the threat of Soviet aggression and expansion, and consolidate and develop a great antihegemonist association. Only when the ranks of the contingents participating in this procession become more powerful will the struggle to safeguard world peace become more vital and equipped with fighting stamina. The Afghan incident has stripped away the disguise of hegemonism and wiped people's eyes clear. The common interests of world peace and security have enabled the United States and the countries of Western Europe, the Middle East, South Asia, and the Asian-Pacific regions to gradually strengthen their ties. China and the United States are striving to coordinate their actions on the basis of equality and mutual benefit. China and Japan are strengthening their cooperation. Because of the Soviet Union's threat, the United States and the Association of Southeast Asian Nations [ASEAN] are also strengthening their cooperative relations. The United States likewise is strengthening its cooperation with Japan, Australia,

and New Zealand, and Japan has just participated for the first time in joint military exercises with the United States, Canada, Australia, and New Zealand. The European Economic Community and the conference of ASEAN foreign ministers have issued a joint communique in which they adopted a common stand with respect to the Soviet Army's invasion of Afghanistan and Vietnam's occupation of Kampuchea. The contradiction between the Western and Third World countries has become somewhat mitigated. The signing of an agreement on defense and economic cooperation between Turkey and the United States marked the end of Turkish-American tensions during the past 5 years. The Arab countries and West European countries have moved closer to each other. The West European Community has explicitly recognized the right of the Palestinian people to self-determination. Japan's special envoy Sonoda has visited the Gulf and Middle Eastern countries and decided to readjust his country's policy toward the Middle East. A special emergency meeting of the U.N. General Assembly and a conference of foreign ministers of Islamic countries have requested that Soviet troops be entirely, immediately, and unconditionally withdrawn from Arab territories, and they have also called upon countries of the world to support the struggle of the Afghan people. All of this illustrates that all countries concerned with international peace are now uniting to resist Soviet hegemonism. However, very angry and ill at ease with fear toward this trend of association on the part of various forces of the world, the Soviet Union has played the trick of sowing dissension in order to sabotage the world's sanctions against it. Especially with such methods as intimidation by war, inducement by "detente," and economic integration, it has done its best to drive a wedge between the United States and the West European countries and to create discrepancies between countries opposed to Soviet aggression, in the hope of defeating them individually. It has also taken advantage of the crisis in U.S.-Iranian relations to stir up differences and sabotage the united resistance to hegemonism by countries on the same front. Toward this, the countries of the world must raise their vigilance, strengthen their unity, support each other, and coordinate their actions in order to adopt a coordinated policy toward Soviet hegemonism. The development of this worldwide united antihegemonist strategy is created by the offensive strategy of the Soviet Union. The United States and West Europe are facing the serious threat of the Soviet Union together; their interests are consistent with each other. They are bound to coordinate their steps against Soviet expansion along largely similar and only slightly different paths. So long as the Soviet Union's strategy for achieving world hegemony does not change, the trend of united antihegemonism is unlikely to be reversed.

4. We must oppose the policy of appeasement. Over the years, because of the West's softness and retreat with respect to the Soviet Union, the latter's momentum for aggression and expansion has been greatly increased. This has emboldened the Soviet hegemonists to make the decision to occupy Afghanistan. The Afghanistan incident was an eyeopener to the appeasers. It seriously impinged upon the illusions of Western countries toward the Soviet Union, made the United States reconsider and readjust its strategic deployment, and also led certain other Western countries to adopt various sanctions against the Soviet Union's aggressive activities. This has been the main current of the developing situation. But recently, some people in the West, because of their fear and tension in the face of the war intimidation perpetrated by the Soviet hegemonists, and because of their illusions about "detente" and their desire to maintain the status quo, still think of bringing about a political solution through making concessions to the aggressor. At present, the struggle of the Afghan people against the invasion of Soviet troops is still developing. The

puppet regime in Kabul is very weak, and Soviet troops have become the only pillar proping up its rule. Under such circumstances, it is utterly impossible for the Soviet Union to withdraw its troops; but in order to attain their aggressive goals, the Soviet hegemonists are playing certain tricks. On 22 February, Brezhnev made a personal appearance, declaring in a speech to those present that "as long as opposition to the Afghan Government and people and all forms of external interference are stopped," the Soviet Union would "proceed to prepare for the withdrawal of troops." Therefore, once negotiations over the withdrawal are initiated with the Soviet Union according to the conditions recommended by them, it would be tantamount to acknowledging the pretext on which the Soviet hegemonists committed the aggression in the first place, and would enable the puppet regime they had fostered in Kabul to secure international recognition. Countries of the world would then have morally disarmed themselves, and the upshot would not at all facilitate a reprimand or sanction against the Soviet hegemonists. Such a political solution would not only help the Soviet hegemonists divert their goal and realize their long-range occupation and control of Afghanistan, but also would fundamentally remove the struggle of the Afghan people against the invasion and thereby create a bad precedent for the struggle by other countries and people of the Third World against big and small hegemonism. Any scheme for a political solution to the Afghan question must be based on the resolutions passed respectively by the special emergency meeting of the U.N. General Assembly and the conference of foreign ministers of Islamic states in demanding the immediate, unconditional withdrawal from Afghanistan of all troops of the Soviet Union, so as to allow the Afghan people to solve their problems themselves without any interference from the outside. The peace that the people of the world wish to strive to maintain is a peace in accord with the interests of the people, which the people of the world will have secured through struggle with hegemonism, and not appeasement or submission to hegemonism effected by hegemonism under the signboard of peace and by means of armed threat. Appeasement and submission are not peace; they can only aggravate the ambition of hegemonism and create conditions for the next expansionist action by the Soviet Union. In the face of Soviet hegemonism's fire-breathing expansionist offensive, is it to be appeasement and retreat, or resolute struggle? All of the countries of the world are faced with this solemn choice. History and realities both continue to prove that the adoption of a policy of appeasement toward an ambitious hegemonist can only increase international tensions and the danger of an outbreak of war, and that only the conduct of a tit-for-tat struggle can safeguard world peace.

The Soviet Union is a fierce and cunning aggressor; it is at the same time a paper tiger. It looks powerful, but it is actually feeble. As long as peace-loving countries and people of the whole world unite, insist on opposing hegemonism, dare to struggle, and are good at struggling, the cause of safeguarding world peace and justice is bound to continue to win victories.

PARTY AND STATE

COUNTRY-LEVEL DIRECT ELECTIONS BEING HELD IN SICHUAN

Chengdu SICHUAN RIBAO in Chinese 31 Jul 80 p 1

[News Report by Wu Youbin [0702 2589 1755] and Mao Shuren [3029 1859 0086]: "Sichuan Provincial County-Level Direct Election Work Conference Opens in Chengdu"]

[Text] A conference on the work of direct elections at county level in Sichuan Province was held in Chengdu from 25 to 30 July. The central task of the conference was to sum up experiences gained by units which have been selected to hold county-level direct elections; this will serve as a basis for conducting similar elections in other parts of Sichuan Province in the months ahead.

In addition to reviewing achievements and experiences in county-level direct elections which have been held on a selective basis, the conference discussed problems of how to hold similar elections throughout the province in the future. The conference pointed out: The results of elections that have taken place in 18 selected counties have proven fairly successful in broadening the political power base, in educating the broad masses in socialist democracy and the legal system, and in strengthening their sense of pride and responsibility as masters of their own country with a duty to manage affairs of state. This form of universal suffrage, in which all citizens of voting age can feel free to elect deputies of their choice for public office, has actually given the voters a kind of power to supervise cadres and to induce them to rectify their workstyle, and thus to strengthen their ties with the masses. At present, most of the aforementioned selected counties have opened their newly elected people's congresses so that they can elect their standing committees and form leading groups for the country-level people's governments. As a result of the elections, positive factors from all walks of life have been further mobilized to strengthen stability and unity and to promote production and other work. In short, the successful conclusion of the elections has given new impetus to production. On the basis of experiences has given new impetus to production. On the basis of experiences accumulated by the selected counties, the conference also adopted plans for county-level direct elections to be held in the future, calling on all remaining counties to work out their specific schedules for holding such elections as soon as possible and to bring them to a successful conclusion by the end of the coming winter or spring.

The conference pointed out: The county-level direct election is the first of its kind ever held in Sichuan since the PRC's founding and an important political event for the people of all nationalities in their province. When such elections are scheduled, the authorities in charge of elections should make it clear that candidates running for public office should be recommended and nominated by the masses, that the number of nominees can be greater than the actual number to be elected, and that all voting should be conducted by secret ballot. These new practices are in striking contrast to past elections. Since the election campaign is a popular, wide-ranging, strenuous activity, conscientious efforts must be made to carry it out. Various local authorities are required to strengthen their party leadership, to conscientiously organize and train cadres to widely educate the masses in the electoral law, and to nominate candidates according to the principles of democratic centralism and mutual consultations, in order to bring every election campaign to a successful conclusion. The electoral law must be strictly observed in order to effectively protect every voter's democratic right. When elections are scheduled for minority areas, the authorities should take into account specific local conditions and should work out plans to meet specific needs.

The conference also adopted the revised version of the "Bylaws Governing the Election of Country- and Commune-Level People's Congresses in Sichuan Province" for consideration by the coming session of the Sichuan Provincial People's Congress. This bylaw was drafted by the Sichuan Provincial Election Committee on the basis of the "Electoral Law for the National People's Congress and Local People's Congresses of the People's Republic of China," in line with Sichuan Province's specific requirements.

During the conference, Qiao Zhimin [0829 1807 2404], vice governor of Sichuan Province and vice chairman of the Sichuan Provincial Election Committee, delivered a report on results of county-level direct elections in selected localities. In his report, he outlined plans for future elections at the Sichuan Provincial People's Congress' request. The conference also heard a summing-up report by Du Xinyuan [2629 1800 3293], secretary of the Sichuan Provincial Party Committee. The conference was attended by vice chairmen of the Sichuan Provincial People's Congress Li Linzhi [2621 2651 2655], Zhang Xiushu [1728 4423 3578] and Ma Shitu [7456 6221 6634]; responsible comrades of various municipalities and prefectures and 18 selected units in charge of election work; responsible comrades of the organizational and civil affairs departments; and comrades of the provincial election committee.

REGULATIONS THAT HAMPER PROGRESS MUST BE ELIMINATED

Tianjin TIANJIN RIBAO in Chinese 25 Aug 80 p 2

[Article by Gao Lan [7559 1526]: "Abolish Obstructive Rules and Regulations"]

[Text] In a recent forum on how to display superiority, a comrade complained: If we want to bring our superior system into full play, "obstructive" rules and regulations must give way to "constructive" ones. He then followed this complaint with this story: Some time ago, the Tianjin Dagu Chemical Plant applied for a loan. The processing of the loan took 3.5 months to complete because it had to be approved by 10 ministries and 34 departments or bureaus. It might have taken longer if no one had been sent to push for it. If we go about our business at this speed, how can we hope to accomplish the four modernizations? A Japanese proverb says: "Quality is life, and time means money." A system that requies an application to be routed through so many offices costs us not only time but a lot of good opportunities. At a time when we emphasize economic results, we must take steps to wipe out such "obstructive" rules and regulations.

"Obstructive" rules and regulations are too numerous to mention here. For example, many localities still retain regulations protecting local products from competition with higher quality and lower priced commodities from other parts of the country. The consequence of applying such regulations to restrict competition and protect backward production units will cost us not only progress but also our capacity to compete on the national and international markets. Typical of these backward production units were the Tianjin Motor Plant and the Tianjin Electric Machinery Plant. The former used to be an enterprise that was unable to improve the quality of its diesel engine power-generating units and lower its production costs because it was required by regulations to form a partnership with another backward production unit, the Tianjin Electric Machinery Plant, in assembling its products. The latter was notorious for its poor quality and expensive power-generating units. Under such circumstances, it was impossible to improve the business outlook. Changes in this dismal outlook did not come about until new regulations were put into effect delegating to the enterprises greater power of self-determination. Under these new regulations the Tianjin Motor Plant has been able to select a different partner of its own choice to solve its longstanding problems. Confronted with strong competition, the Tianjin Electric Machinery Plant has also been able to remarkably improve its products through hard work. As can be seen from this, competition can serve as an incentive for progress. For this reason, we must foster competition with new constructive regulations and replace the old ones that hamper and discourage it.

As far as I know, the most obstructive regulations are those that "cut everything the same way." For example, when the regulation calling for "taking steel as the key link" was in effect, large steel mills had to be built in areas where neither iron ore and coke nor means of transportation were available. During the Great Cultural Revolution, Yuqi—a key to tobacco-producing center in Yunnan Province—was forced to give up this cash crop and convert its land to grow food crops in order to comply with the call for "taking grain as the foundation of the national economy." Herdsmen in Inner Mongolia were compelled to grow crops for their own sustenance for the same reason. The damage to the economy caused by such regulations has been appalling.

For a long time there have been economic doldrums in Tianjin, partly because of Lin Biao's and Jiang Qing's destructive counterrevolutionary measures and partly because of the aforementioned obstructive regulations. For 30 years, no steps have been taken to fully develop 900,000 mu of wasteland, terraces, and tideland, plus another 300,000 mu of riverside land on the outskirts of Tianjin which are suitable for the development of agriculture, forestry, animal husbandry, sideline production, and fisheries. Reed grass can be grown and fish, shrimp, and crabs can be raised in rivers and tideland on the outskirts of Tianjin; animal husbandry can be developed and fruit plantations can be grown along with ordinary trees on terraces out there. Counties on the outskirts of Tianjin can also make large tracts of land available for growing sunflower seeds. Per unit output of this crop can reach 200 jin, which can be converted into 80 jin of edible oil and 120 jin of feedcakes for pigs. One jin of such edible oil is worth 8 jin of rice. If they are not used that way, sunflower seeds can be sold at the market price of 0.6 yuan per jin, which would mean a higher income for peasants than growing rice and other food crops. Why can't we taken advantage of the land on the outskirts of Tianjin to grow sunflower seeds?

At present, our country remains in a stage of reconstruction and rehabilitation. To make it prosperous and strong, we must formulate and put into effect new, constructive regulations to replace the obstructive ones. The new cannot be established if the old are not destroyed first. Neither the aforementioned comrade nor this writer can specifically advise what constructive regulations should be enacted and put into effect, because they involve too much detail. However, I firmly believe that constructive regulations sooner or later will come into being to take the place of those obstructive rules and regulations, because we have wisdom and resources to do so.

PARTY AND STATE

STRUGGLE AGAINST REVISIONISM ON TWO FRONTS EMPHASIZED

Chungchun SHEHUI KEXUE ZHANXIAN [SOCIAL SCIENCES FRONT] in Chinese Vol 3 No 3, 25 Jul 80 pp 21-25

[Article by Qi Zhenhai [7871 2182 3189] and Xu Hongwu [1776 7703 2976]: "A Brief Discourse on the Two Forms of Revisionism"]

[Text] There are two forms of revisionism, or right and "left" revisionism. But the people have long maintained that there is only right, but no "left" revisionism. They have also put revisionism on a par with right opportunism, and have viewed "left" opportunism as something unrelated to revisionism. This view is theoretically wrong and practically harmful. We consider it absolutely necessary to straighten out this confusion with some historical experiences drawing from domestic and foreign sources.

I

A correct assessment of the two forms of revisionism first of all calls for a clear understanding of the true nature of revisionism.

What does revisionism mean? Revisionism is an anti-Marxist trend of thought or faction within the workers' movement, whose purpose is to "revise" (actually nullify) the basic principles of Marxism under the guise of Marxism. Lenin once suggested that theories "be revised as a result of practice." ("Selected Works of Lenin," vol 3, p 398) In that sense, the term "revise" denotes no intent to degrade Marxism. But the term "revisionism" is different. It is a synonym for total nullification of, and betrayal to, Marxism. Revisionism sprang up at the end of the 19th century. As a result of the extensive dissemination of Marxism, revisionism soon dominated the workers movement. Of course, Marxism had enemies. At first, they openly challenged Marxism. Then they changed their anti-Marxist strategy from one of open opposition to that of adulterating and nullifying the basic principle of Marxism under the banner of Marxism. In Lenin's language, at this time, "revisionism no longer takes its independent course but continues its struggle against Marxism under the common banner of Marxism." ("Selected Works of Lenin," vol 2, p 257) In other words, any trends of thought or factions intent on tampering with and nullifying the basic principles of Marxism under the banner of Marxism should be categorized as revisionism. As long as one can grasp this point, one will be able to understand the core and essence of revisionism. This being the case, can we call all forms of opportunism revisionism? It is not so simple. There are also two forms of opportunism: First, the form of opportunism which openly challenged Marxism cannot be called revisionism. This form of opportunism includes Proudhonism and Bukuninism which sprang up during the period of the First International. Second, another form of opportunism which does not assert its independence from Marxism but carries on its anti-Marxist struggle under the guise of Marxism is called revisionism. For example, Lenin called Russia's "economists" Mensheviks, and empirio-critics manifestations and variants of revisionism in Russia because they were all opportunists who opposed the basic principles of Marxism under the guise of Marxism. Bernstein, founder of revisionism, once cunningly said that he "revised" Marxism with the aim of "strengthening the scientific foundation of this theory so that it can withstand any rebuff." This form of opportunism founded by Bernstein can be called revisionism.

The theory of the aforementioned two forms of revisionism--right and "left" revisionism--was explicitly spelled out by Lenin in 1908. In his article entitled "Marxism and Revisionism," he said: "Revisionism comes from both right and left directions. The two forms of revisionism are hostile to Marxism although they flaunt the same banner of Marxism. Both have the same intention of revising Marxism." ("Selected Works of Lenin," vol 2, p 262) Because "left" revisionism was not so well known and "internationalized" as right revisionism at that time, it eventually escaped thorough analysis and criticism by Lenin. On an occasion of criticizing the "gang of four" for opposing the so-called "empiricism," Comrade Mao Zedong pointed out: "Our correct strategy is a struggle against revisionism, including empiricism and dogmatism, both of which have the same intention of reviving Marxism-Leninism." This remark by Comrade Mao Zedong not only exposed the "gang of four's" trick to oppose only empiricism instead of dogmatism but also clearly taught the people that revisionism sometimes takes the form of dogmatism. In this way, he rectified an incorrect proposal to put revisionism on a par with right opportunism. Furthermore, he listed "left" opportunism under the category of revisionism because it often assumes the form of dogmatism.

II

Both right and "left" revisionism adopt the same double-dealing attitude of endorsing Marxism in public and rejecting it in private although they follow different approaches. Followers of right revisionism often abandon the basic principles of Marxism under the pretext that Marxism is now out of tune with time, while "left" revisionism usually takes the form of a theory of "preserving and defending" certain Marxist conclusions and formulas without taking into account time, places and conditions. "Left" revisionism also has the intention of exaggerating certain Marxist conclusions and then transforming them into an erroneous ultraleft line. Typical of the promoters of the theory that Marxism is out of tune with time were Bernstein, Trotsky and other old revisionists. Bernstein once insisted that "the times change" and the Marxist theory was now "out of fashion," while using the so-called "new information on economic developments" to discredit the theory that contradictions do exist in the capitalist system and the economic crises are unavoidable in the capitalist world. Assuming that the capitalist system is unlikely to collapse with the emergence of Cartel, Trust and other monopolistic organizations which will strengthen the ability of the capitalist countries to meet the economic challenges of modern times, he contended that "the sharpening of social conflicts will not materialize as described by the 'Communist Manifesto'; this fact forces me to revise the concepts on which my original beliefs are based.'" Although Karl Kautsky "criticized" some of Bernstein's opinions, his basic viewpoint actually fell in line with Bernstein's. Kautsky also concocted a fallacy of "superimperialism," arguing that some of the Marxist principles would become invalid when imperialism progresses to a new stage. He alleged that the substitution of the international banking cooperation for the clash of capitalist interests has brought a "new hope" to capitalism, denying that imperialism is the highest stage of the development of capitalism and is doomed.

"Left" revisionism also can take the form of dogmatism, which denotes an intent to preserve certain outdated or invalid Marxist conclusions, to emasculate the living soul of Marxism and to ossify it into dead dogmatic formulas. Styling himself "a 100 percent Bolshevik" because he studied "orthodoxy" Marxism in Mowcow, Wang Ming ridiculed Mao Zedong and other comrades as "country pumpkin-oriented Marxists," "Narrow-minded empiricists," and "peasant ideologists." Although he could draw up some seemingly good reports and fill them with quotable quotes from the classic works, his knowledge about China's real conditions and the objective laws governing the development of the Chinese revolution was almost nil. He was also good at mechanically copying the individual Marxists-Leninist phrases. As an adherent to the formula that it is necessary to start armed uprisings in cities and then spread them from there to the countryside, he opposed the correct strategy to encircle the cities from the countryside and eventually take cities. His strategy on struggle with emphasis placed on dealing blows to the middle forces eventually destroyed the cooperative relations between our party and its allies, and undermined the party's policy for the formation of the united front. He also instructed the party to start violent uprisings everywhere in order to whip up a new high tide in the revolution. Wang Ming's "left" opportunist line was responsible for bringing our revolutionary forces to the abyss of annihilation. Although he appeared loyal to Marxism, he actually betrayed it.

Although the "left" revisionism promoted by Lin Biao and the "gang of four" also takes the form of dogmatism, it differs from the general form of dogmatism.

First, this form of dogmatism was inseparable from the creation of a modern cult of worship. While using the high prestige of the revolutionary leader among the masses as a tiger-skin to cover themselves and to intimidate others, they converted Marxism-Leninism-Mao Zedong Thought into a form of dogmatism and a cult of worship. Their diabolical design was to "vigorously promote themselves" under the pretext of promoting others, to create opportunities for them to move up to the supreme leadership position of the country and to carry out a variety of criminal activities under the "shelter of a tall tree."

Second, all signs indicated that Lin Biao and the "gang of four" were not believers in Marxism-Leninism." Their claim to go all the way to defend Marxism-Leninism was only a device to boost their political fortune. Unlike other revisionists, who wanted to preserve those obsolete Marxist-Leninist conclusions, Lin Biao and the "gang of four" took a different attitude toward Marxism-Leninism. Their method for distorting, adulterating and tampering with Marxism-Leninism was extremely diabolical and unscrupulous. They even committed forgery in this field. For example, they dished out such terms as the "exercise of dictatorship in an all-round way," "Omnipresence," "act according to the principles laid down" in order to serve their reactionary political aim.

As we have stated earlier, right revisionism is mainly devoted to directly "revising" the basic Marxist principles under the pretext that they are "out of tune with time" while the aim of "left" revisionism is to ossify Marxism into dogmatic formulas. But we must make clear that this thesis on right and "left" revisionism is relative but not absolute, because it deals with only key aspects but not the entire picture of them. We must note that right revisionists sometimes are also interested in applying Marxist phrases and formulas to rebuff the revolution. For example, Kautsky and other revisionists of the Second International once used Marx's theory that the proletarian revolution could succeed only when it was carried out in several economically advanced countries as a theoretical basis for rebuffing Lenin's doctrine that the socialist revolution could be won in a single country. After noting this, Lenin called Kautsky "a theorist capable of readily quoting everything written by Marx in an orderly manner." ("Selected Works of Lenin," vol 3, p 640) But Kautsky was also denounced by Lenin for emasculating the living soul of Marxism and for trying to make it acceptable to the bourgeoisie. "Left" revisionists sometimes also wanted to adopt the same theory to nullify the basic principles of Marxism. For example, the "gang of four" once declared that "the State and Revolution," "'Left-Wing' Communism, an Infantile Disorder" are now no longer valid!" Since revisionists are also pragmatists, they can resort to all available tactics to achieve their reactionary political aim.

III

Both right and "left" revisionism are politically devoted to negating and tampering with the Marxist theories of the proletarian revolution and the dictatorship of the proletariat, although they adopt different methods to achieve the same purpose. Right revisionism tends to scale down or ignore the class struggle while "left" revisionism is devoted to escalating it.

Before seizing the political power, both right and "left" revisionists did not agree to smash the bourgeois military bureaucratic state machine as a step in establishing and consolidating the proletarian political power. As the promoters of the theory of class conciliation, both Kautsky and Bernstein argued that both capitalists and the proletariat would benefit from the development of capitalism; the more the contradiction between the proletariat and the bourgeoisie diminishes, the greater the prospect of "peaceful evolution into socialism." They also contended that under the capitalist system, the proletariat could be organized to realize socialism through the practice of bourgeois parliamentary democracy. Their attempt was to put the proletariat under the perpetual control of capitalism. "Left" revisionism favors secret and violent struggles and rebuffs struggles by peaceful means. Its followers hated all state authorities and rebuffed the establishment of the dictatorship of the proletariat. They even conspired to overthrow the capitalist system by means of terrorism. For example, the massive struggle, the party leadership and the dictatorship of the proletariat were considered unnecessary to the revolution by those representatives of "left" revisionism named by Lenin in his article "Marxism and Revisionism." In their opinion, there was no need for the dictatorship of the proletariat in the struggle to overthrow capitalism and capture the power of the management of production because general strikes could be organized to do the job well.

After the proletariat captured the political power, both right and "left" revisionists in Russia acted against the interests in upholding the dictatorship of the proletariat and socialism, although they followed different approaches. The Bukharin branch of revisionism that appeared in the Soviet Union in the 1930's was a kind of right revisionism. In addition to calling for the realization of socialism through cooperation between the working class and the bourgeoisie, Bukharin suggested that in socialist society, socialist and capitalist economies "work together to bring about prosperity"; in cities, peaceful competition be encouraged between socialist and capitalist enterprises; in the countryside, a kind of rich peasant economy be developed, and freedom to hire workers be permitted along with free trade and freedom of tenancy. This suggestion was essentially a political line for developing capitalism and abolishing the dictatorship of the proletariat.

Trotsky, Lin Biao and the "gang of four" were "left" revisionists interested in escalating the class struggle. Trotsky called for drastic efforts to shift the emphasis of the class struggle under the socialist system to social reforms. He postulated that with socialism gaining ground, the "domain of the proletariat would become narrower and more shaky than ever"; with victory, reactionary elements would unavoidably emerge from among the members of the proletariat along with "new nobles of working class origin"; in the countryside, "bourgeois organizations consisting of new rich peasants" would become predominant forces. His proposed solution for this problem was a "world revolution" which would wipe out the "rule of the bureaucratic clique" in the Soviet Union.

Lin Biao and the "gang of four" pushed an ultraleft line aimed at steadily escalating the struggle. In addition to suppressing democracy, they misinterpreted the dictatorship of the proletariat as an "exercise of the dictatorship over the proletariat and the broad masses of working people in an all-round way." They mistook enemies for friends and friends for enemies, turned upside down the relationship between the resource and target of the revolution, and confused the two different types of contradictions. They emphasized only the necessity of escalating the struggle against the wishes of the broad masses of cadres and people, and ignored the need for unity. Although they stridently claimed to defend the dictatorship of the proletariat, they worked behind closed doors to change its nature by imposing a fascist dictatorship on some localities and units under their direct control.

Although the advocation of class conciliation appears at variance with the assertion of the escalation of class struggle, their consequence is the same. The Marxist theory of the dictatorship of the proletariat is based on a realistic analysis of the objective reality of class contradictions. Only by scientifically analyzing and correctly carrying out the class struggle, can we truly uphold the dictatorship of the proletariat. We must be aware that the class struggle exists objectively. Any deliberate attempt to ignore or escalate it will weaken or undermine the dictatorship of the proletariat. Just as Stalin pointed out, "although they proceed from two opposite extremes, both right and left deviations will arrive at the same conclusion. They are all bad." ("Collection of Works of Stalin," vol 11, p 200) Although the two forms of revisionism are poles apart, their political conclusions often coincide. For example, Bernstein and Kautsky proceeded from the right side to charge the Soviet power with "undermining democracy," "violating humanitarianism," and "exercising dictatorship," and vowed to "thoroughly crush it," while Lin Biao and the "gang of four" stepped forward from the "left" side to attack the dictatorship of the proletariat in our country as "the bourgeoisie exercising dictatorship over the proletariat," threatening to "completely smash it" and "replace it with another dynasty." Right revisionism often converges with "left" revisionism to oppose the dictatorship of the proletariat. Sometimes, their followers use almost the same language to confuse the people. On an occasion of criticizing "left revivalists" and right "abolitionists" at the beginning of the 20th century, Lenin pointed out: "Various trends of thought have converged to produce revivalism and abolitionism. The result is a mixture of the extreme right and extreme 'left' fallacies." ("Collection of Works of Lenin," vol 16, p 105) This fact shows that the two forms of revisionism can be practiced for the same purpose of abolishing the proletarian revolution.

IV

Both right and "left" revisionism are characterized by estranging subjective from objective reality and theory from practice. This is their common nature. But they differ in that the former lags behind reality while the latter transcends reality. In this connection, Comrade Mao Zedong pointed out: "There are two kinds of opportunism, being slow and being hasty." ("Selected Works of Mao Zedong," vol 5, p 204) The former is right revisionism and the latter "Left" revisionism.

There were "theories of a single revolution and dual revolution" in the history of both Russian and Chinese revolution. Among the Russian representatives of the "theory of a single revolution" were Trotsky and Zinoview. Their Chinese counterparts were Trotskyists. They all suggested that the democratic revolution be circumvented so that both bourgeois democratic revolution and proletarian socialist revolution could be accomplished at one stroke. Both Trotsky and Zinoview proposed that "we don't need tsars but we need the workers' government," advocating that "the democratic revolution must be accomplished under the dictatorship of the proletariat." They were all "left" revisionists who wanted the democratic revolution to be circumvented.

Russia's Mensheviks and China's Chen Duxiu were promoters of the "theory of dual-revolution." They argued that during the bourgeois democratic revolution, the proletariat should put itself under the command of the bourgeoisie and should not try to take over the leadership; after the revolution triumphs, a kind of bourgeois dictatorship should be established in order to create a condition for developing capitalism; the proletarian revolution can start only after capitalism has run its full course. They were all right revisionists whose revolutionary theory falls behind reality.

After coming to power, the proletariat still faces a problem of either going too far ahead of or falling behind schedule in handling the matters concerning the economic base and the superstructure and productive forces and the relations of production. Right revisionism represents a force which resists any attempt to reform that part of the superstructure that is not in harmony with the economic base, and to modernize the relations of production when the conditions are ripe for such actions. "Left" revisionism is known for its rashness and recklessness in pushing through similar reforms long before they are necessary. These two forms of revisionism can cause the same serious damage to the socialist cause. For example, in 1958, Zhang Chunqiao prematurely declared that "the bourgeois rights should be eliminated." Chen Boda then echoed him by saying that "the commodity system should be abolished." At the same time, that "theorist" also nonsensically alleged that "socialism heralds a beginning of transition to communism." During the Great Cultural Revolution, they went a step forward in cutting off the so-called "tails of capitalism," in prohibiting commune members from farming small plots for personal needs and from engaging in legitimate trade at village fairs, and in canceling the principle of "to each according to his work." Their vigorous propaganda effort to convince the people that "the road from socialism to communism is marked by a transitional stage of poverty" also caused extremely serious damage to the cause of the socialist revolution and construction in our country. Although the two forms of revisionism often move in opposite directions, they are mutually transferable to each other. Their transferability can occur to individual persons. For example, during the early days of the Soviet Union, Bukharin, organizer of the "left communist" clique, ganged up with Trotsky in opposing the signing of the Brest-Litovsk Peace Treaty. With regard to the question of the trade union, he threw his weight behind the call for its nationalization, and for using executive orders and coercive orders and coercive measures in dealing with the masses of workers. Upon entering the 1930's, he shifted his position to the right by promoting the theory of class conciliation in opposition to the policies of the Central Committee of the Russian Communist Party (Bolsheviks) on socialist industrialization and agricultural collectivization. During the Second Revolutionary Civil War in our country, holding high the "most revolutionary" banner, Wang Ming pushed an ultraleft line heading the Chinese revolution down the road to defeat. Shortly after the outbreak of the War of Resistance against Japan, he shifted his stand to the extreme right by agreeing to put "everything under the command of the united front" in an attempt to hand the proletarian leadership to Chiang Kai-shek. During the Second Revolutionary Civil War, Lin Biao was a pessimistic, disappointed and irresolute man with no confidence in the future of the revolution. During the liberation war, he feared the enemy troops as if they were tigers and hesitated to challenge them to a decisive battle. But during the socialist revolution, he shifted his position to the extreme left, masquerading himself as the "most revolutionary fighter" to cover up his diabolical design to usurp the supreme party and state power. Just as Stalin said it well, "Rightists and 'ultraleftists' are actually twin brothers." ("Collection of Works of Stalin," vol 8, p 9) It can be said that only a reactionary political stand, and the idealistic and metaphysical world outlook will contribute to the growth of such twin brothers.

V

Now resting on our shoulders is a heavy responsibility assigned by history to combat and prevent revisionism. A major issue that is laid before us today is how to persevere in practicing genuine Marxism instead of revisionism, and in safeguarding the basic interests of the working people so that we can prevent our country from taking a revisionist road of suppressing the people at home and indulging in aggression and expansion abroad. Efforts must be made to sum up our past experiences in combating revisionism. The battle to combat and prevent revisionism must be fought on two fronts. We must combat not only right but also "left" revisionism as well. We cannot just combat the one and forget the other. The fallacy spread by Lin Biao and the "gang of four" that "during the socialist period, there is only right but no 'left' deviation, and the right deviation is the main danger" should be eliminated. Only by summing up experiences in combating both right and "left" revisionism can we succeed in the revolution. This was the experiences we gained during the New-Democratic Revolution. Shortly after the PRC's founding, we concentrated on combating only right revisionism, thus leading us to neglect our struggle against "left" revisionism. Shortly after 1958, the conviction that there was only right revisionism in our country caught us ideologically and theoretically unguarded against "left" revisionism fanatically promoted by Lin Biao, the "gang of four" and that "theorist," causing serious damage to the cause of the socialist revolution and construction.

While endeavoring to combat and prevent revisionism, we must be aware that one tendency can often be covered up by another; everything does not advance along a straight course but in a zigzag manner. For this reason, we must apply dialectics to guide our work. In other words, we must guard against the "left" deviation while combating the right deviation and vice versa. Only in this way can we correctly chart a course for the great struggle to combat and prevent revisionism and prevent it from going astray.

QUESTION OF EXERCISE OF DEMOCRATIC RIGHTS EXAMINED

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 4, 20 Aug 80 pp 67-70

[Article by Li Dingwen [2621 7844 2429], Changwei Medical College: "Study Lenin's Discussions of the Democratic Rights of the Masses"]

[Text] The masses are the principal makers of history and their own masters in the socialist society. In socialist construction, how they can truly exercise their democratic rights is a fundamental question which must be solved.

In the course of leading the Russian working class and working people in establishing the Soviet regime, Lenin had many brilliant discussions about the masses exercising fully their democratic rights. It is of great significance to us in understanding clearly and solving correctly the question of the people's democratic rights under the socialist system.

1. Without exercising fully the democratic rights of the people, socialism cannot really come true.

After the establishment of a socialist regime, the reform of the political system will inevitably follow the reform of the economic system. The basic requirement of this reform is to really develop socialist democracy and really exercise the democratic rights of the masses, so that socialist democratic centralism is built truly on a broad democratic foundation, to overcome bureaucratic centralism that may possibly arise, and to guard against the occurrence of the tragedy of feudal fascist despotism.

First of all, Lenin believed that exercising fully the democratic rights of the people, and recruiting the masses to participate in state administration, is the source of Soviet political power and a reliable guarantee for the consolidation of the Soviet regime. The masses are the principal makers of history and the real principal body. This was the fundamental point of departure of Lenin's attitude in dealing with the masses. Lenin pointed out: "The main source of our strength lies in the workers, who are very conscious, very heroic and have all along gained the sympathy and support of the working peasants." ("Complete Works of Lenin," Vol 30, p 118). "The bourgeoisie has strangled, suppressed and destroyed a large number of talents among the workers and working peasants. These talents perished under the oppression of poverty, hardship and personal insults. At present our duty and responsibility is to be good at finding these talents and giving them work to do." ("Selected Works of Lenin", Second Edition, Vol 4, p 81.) "As far as I can see, the most important summation of the Soviet Republic's construction in the last 2 years is the lesson drawn from the building of the workers' political power....This lesson is that only by allowing the workers to take part in the whole work of administration of the state can we hold out under such hard to believe, difficult conditions. Only by taking this road can we win complete victory." ("Complete Works of Lenin," Vol 30, pp 108-109.)

Secondly, Lenin believed that exercising fully the democratic rights of the people and recruiting all residents to take part in state administration is the fundamental way to conquer bureaucracy. Lenin summed up the experience of the Paris Commune and believed that the three measures laid down by the Paris Commune to guard against cadres becoming bureaucrats provide the proletariat with "an outline" for "extending democracy and eradicating bureaucracy," "if we advance along such a road, we can destroy bureaucracy completely." ("Selected Works of Lenin," Second Edition, Vol 3, p 273.) After the proletariat seized political power in Russia, Lenin paid very serious attention to the struggle against bureaucracy, and emphasized the necessity of guarding against the revival of bureaucracy in the Soviet regime. The bureaucratic system is the product of the exploitation system. With the founding of public ownership, the bureaucratic system has been broken down accordingly. However, bureaucracy still remains and will still produce new bureaucrats. It interferes with the relations between the party, the state and the masses, and corrupts the Soviet regime. Therefore, Lenin pointed out repeatedly that "there should be still many more varied form and methods of supervision from below to above in order to stop all possibilities of poisoning the Soviet regime and repeatedly and indefatigably uproot the weeds of bureaucracy." ("Selected Works of Lenin," Second Edition, Vol 3, p 537.) If there are no full democratic rights of the masses, then their wisdom, ability and rights will be suppressed, and the ranks of cadres will also be aging because of the lack of replacement. The phenomena of lax discipline, dilatory style of work, bureaucracy and violation of law and discipline will inevitably occur everywhere, and the proletarian regime will face the danger of degeneration.

Thirdly, Lenin believed that exercising fully the democratic rights of the people is the condition for the state to wither away. State is a category of history. A state is born with the birth of classes, and will also wither away with the disappearance of classes. Fully developing socialist democracy is also an important way for a state to wither away. Lenin expounded on this truth in "The High Stage of Communist Society," the last topic of chapter 5 in his work "The State and Revolution." Until the stage of socialism, democracy expands continuously and the people increasingly take part in state administration and economic management, so that social life continuously pushes forward in all fields, and forms a true mass movement. When all people have learned the management of social life, "then the people will very quickly observe, from being of necessity to becoming a habit, all simple basic rules of the common life of mankind." ("The State and Revolution," p 91.) Until that time, socialism will develop to communist society, and the state will wither away completely.

2. The Soviet regime is the highest type of democratic system.

The Soviet regime is the first regime in the world in which the working masses take part in state administration. From the first day of the founding of the Sovier regime, the working masses began to enjoy democratic rights. Lenin said: "As far as the workers and peasants are concerned, the Soviet system is a democractic system of the highest limit. Meanwhile, it also means a break with the bourgeois democratic system and the birth of a new-type democratic system of world historical significance, that is, the emergence of a proletarian democratic system or the dictatorship of the proletariat." ("Selected Works of Lenin," Second Edition, Vol 4, p 568.)

In his famous article "The Current Task of the Soviet Regime," Lenin discussed the nature of the Soviet democratic system, and emphasized the democratic rights of the masses. He said: "The socialist nature of the Soviet democratic system, that is, the proletarian democratic system in concrete enforcement at present, lies in: First, the voters are the exploited working masses, without the bourgeoisie; secondly, all procedures and restrictions in the form of bureaucracy in election are abolished, the masses themselves decide the procedure and date of election, and have their complete freedom to revoke the elected; and thirdly, it establishes the finest mass organization of the working people's vanguard, that is, the proletariat of large industries. This organization helps the working people's vanguard lead the broadest exploited masses, absorbs them to take part in an independent political life, and gives them political education based on their personal experience. Therefore, it is unprecedentedly the first time truly all the people learn state administration and, moreover, begin to administer the state. This is the main feature of the democratic system enforced in Russia. This democratic system is one of the higher type." ("Selected Works of Lenin," Second Edition, Vol 3, p 524.)

After the October Revolution, Lenin led the Soviet regime in working out the regulations of supervision in all domains of politics, economy and education, and in all related fields. These regulations encouraged the masses to participate directly in state administration, and to wage struggles against all acts disrupting the socialist legal system. All personnel holding public offices of the government are persons to carry out the will of the people and under the supervision of the people. If they abuse their authority, usurp the rights of the people and infringe upon the interests of the people, the people will have the power to dismiss them.

Lenin believed that proletarian democracy must have the leadership of a proletarian political party. Lenin emphasized that the Soviet regime, led by the communist party, must put into effect, in the practice of revolution, the democratic rights of the masses, as laid down in the law. Lenin pointed out that the difference between bourgeois democracy and Soviet democracy lies in the fact that bourgeois democracy puts the stress on the lofty declaration of various freedoms and rights; on the contrary, proletarian democracy actually guarantees that the working masses actually take part in state adminstration. "The Soviet regime should unflinchingly continue to carry out a very important work, that is, to actually help the exploited workers really enjoy cultural, civilized and democratic well-being." ("Selected Works of Lenin," Second Edition, Vol 3, p 745.) It can be seen that a proletarian political party should transform legal democratic rights of the people into facts of practical life, and guard against lofty sham democracy.

Lenin believed that the point of departure of the principles and policies of the Soviet regime is the masses. "Policies should have the tens of millions of people in mind, not a few thousand people in mind. Only by having tens of millions of people in mind will there be practical and realistic policies." ("Selected Works of Lenin," Second Edition, Vol 3, p 464.) "Only when we can correctly express things which the people are conscious of can we manage; otherwise, a communist party cannot guide the proletariat, and the proletariat cannot guide the masses. The whole apparatus will break down." ("Selected Works of Lenin," Second Edition, Vol 4, p 651.)

From these statements of Lenin on the democratic rights of the masses, we can see that Lenin had not taken democracy simply as a means, but as the basic content of the socialist political system, and as rights which every citizen really enjoys.

Democracy and dictatorship are the unity of opposites. With democracy, there is dictatorship. The democratic rights of the people also include dictatorship imposed by law upon the enemy, through the political power of the state. "The absolute majority of people enjoy democracy, and those who exploit and oppress people are suppressed vigorously, that is, they are excluded from democracy. This is democracy which has changed its pattern under the condition of transition from capitalism to communism." (Lenin, "The State and Revolution," p 79.) While laying stress on exercising fully the democratic rights of the people, Lenin also laid stress on necessary discipline, law and unified will. "Socialism is the product of big machinery. If the working masses, while carrying out socialism, cannot make their own mechanism work as industries of big machinery should, then you can't take about socialism." ("Selected Works of Lenin," First Edition, Vol 3, p 503.) He said: "We advocate democratic centralism; however, we must see clearly its great difference from bureaucratic centralism on the one hand, and from anarchism on the other." (First draft of an article, "The Current Task of the Soviet Regime," "Complete Works of Lenin," Vol 27, p 190.) This is to say that you shouldn't turn centralism into bureaucratic centralism, and democracy into anarchism. In socialist society, we must carefully oppose these two tendencies, and guarantee the perfect development of socialist democratic centralism. Bureaucratic centralism does not take democracy as its basis, and places the will of a very few people above the will of the broad masses. A few people have the final say on everything, so that a very few people become the masters, and the broad masses are turned into servants only to carry out orders. Bureaucratic centralism is a kind of feudal thing even more backward than capitalism. The socialist system will never tolerate the existence of this decadent thing. Anarchism takes individualism as its core, preaches freedom as the highest, individuals as the highest, and absolute democracy, and opposes discipline, centralism and the leadership of the party, and holds that the party, the government and the collective must submit to the will of individuals. Such idealistic "solipsism" and "theory of free will" are idle dreams impossible to realize in any society.

Some comrades argue that with democratic centralism we cannot carry out autonomy and the federal system. Against this point of view, Lenin pointed out: "Democratic centralism will on no account exclude autonomy and the federal system and, at the same time, also will not in the slightest degree deny all localities and even all communes throughout the country complete freedom to adopt various forms in respect of national life, social life and economic life; moreover, on the contrary, it will also take such freedom as a prerequisite." ("Selected Works of Lenin," First Edition, Vol 3, p 499.) Democratic centralism does not reject the multiplicity of forms; moreover, "the more plentiful the multiplicity (of course, not doing something unconventional or unorthodox), the more reliably and more quickly can we attain democratic centralism and carry out socialist economy." ("Selected Works of Lenin, "First Edition, Vol 3, p 500.) This explains the fact that autonomy and the federal system are the important substance of democratic centralism, and that the masses may create still more democratic forms favorable to the people. The more numerous and plentiful these forms, the more favorable it will be to the cause of socialism. The idea of pursuing a unitary form is not in line with Leninism and, likewise, also departs from real life.

3. Struggle for the realization of the democratic rights of the masses.

After the founding of the Soviet regime in the Soviet Union, considering how to help the people become their own masters in reality as well as in name, Lenin, besides waging struggles against persons like Kautsky who clamored "pure democarcy," the bourgeois democrats, those who advocated bureaucratic centralism and anarchists, also adopted a series of measures contributing to the realization of the democratic rights of the masses.

For the true realization of the democratic rights of the masses, Lenin believed that it is necessary to vigorously promote the cause of education, and enhance universally the cultural and scientific knowledge of the masses, so that they can establish their democratic rights on the basis of their cultural and scientific knowledge. By so doing, the broad masses can be helped to take part in state administration in the best way. He said: "The task placed before us can be solved only by long-term education." ("Selected Works of Lenin," Second Edition, Vol 3, p 789.) Lenin also advocated bringing into play the role of the masses in the political and economic life of the state through multiple forms of organization, such as the worker-peasant congress and worker-peasant inspection institutes and trade unions, and training and promoting personnel by means of these organizations. Lenin said: "Our aim is to recruit all the poor people to actually participate in the work of administration. All measures for achieving this task--the more forms the better--should be recorded in detail, to be studied and systematized, and they should be examined with still more experience and be made into laws and regulations." ("Selected Works of Lenin," Second Edition, Vol 3, p 525.) Lenin pointed out enthusiastically: "In the course of our revolution, practice has created an organ, that is, the non-party worker-peasant congress. We are doing our best to support, develop and expand this organ, in order to observe the morale of the masses, approach the masses, meet their needs, and promote outstanding talents from among them to take jobs of state administration, etc." ("Selected Works of Lenin," Second Edition, Vol 4, p 204.)

To truly give play to the democratic rights of the masses, Lenin also believed that the democratic rights of the people must be protected by law, and struggles must be waged against all acts of violating people's rights. The proletarian law is the tool for attacking the enemy and protecting the people. After the founding of the Soviet regime, laws and decrees were promulgated to abolish classes, cancel restrictions on nationalities and beliefs, give women the same rights as men, and treat all nationalities in Russia with equality. In July 1918 the first Soviet Constitution was passed, in which it was laid down that the masses have the right of participating in state administration. Lenin set demands on the state cadres that they must obey strictly the socialist legal system, and act according to the law. Lenin utterly detested those ambitionists and adventurers, the self-claimed communists, who "only seek their promotion to higher official posts" but "use coercive means in the localities." ("Selected Works of Lenin," Second Edition, Vol 3, p 802.) He called upon the communists to wage struggle against acts violating the democratic rights of the masses. He stood firmly opposed to "the use of revolutionary violence and dictatorship in violation of law and discipline." ("Complete Works of Lenin," Vol 39, p 137.) He stood firmly opposed to "the abuse of rights for personal interests of the dictator." ("Complete Works of Lenin," Vol 31, p 309.) The masses should obey the law; the cadres and government offices should also obey the law. When the common people have violated law and discipline, they should be punished according to the law. When the cadres, even those of high ranks, have violated the law, they should also be punished according to the law. Under the protection of the legal system, the people can then exercise fully their democratic rights.

If this fundamental question is ignored, there is the possibility that the socialist system will deteriorate. Lenin pointed out: "Socialism of vigorous creativity is founded by the masses of people themselves." ("Complete Works of Lenin, Vol 26, p 269.)

Socialism works not against bourgeois democracy by means of despotism, but against bourgeois sham democracy by means of still more complete democracy. Socialist democracy is the natural results or historical development, which no force can resist. The socialization of production and the democratization of politics are historical trends which complement each other. Despotism is the enemy of socialized large-scale production, and democratic centralism is the partner of socialized large-scale production. The higher the degree of socialization of production, the more complete should be the democratic system. Otherwise, economic development will be hindered, and the democratic system will be punished economically. As we recognize this law, we must consciously apply it to avoid paying a great price for taking a roundabout course.

STUDY OF PRACTICE AS CRITERION FOR TESTING TRUTH

Editor's Note

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 6, 25 Jun 80 p 52

[Text] [Editor's Note] Taking the theoretical study of practice as criterion for testing truth in the in-depth direction is an important task which lies before our philosophical workers. Here, we publish in excerpts the manuscripts contributed by several comrades so that they may serve as reference material for our further study.

Results, Aims of Practice

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 6, 25 Jun 80 p 52-54

[Article by Li Jingyuan [2621 2529 0337]: "The Results and Aims of Practice"]

[Text] Practice is man's conscious and purposeful activity. The process of practice is one by which a subject transforms a material object with the assistance of a certain material means. The result of practice is the conversion of its aim into an objective object. The result and aim of practice are opposites which are at the same time in unity. Viewed from one aspect, the result is different from the aim, the result constitutes negation of the aim, and the two are opposites to each other in the sense that a subjective thing and an objective thing are opposites to each other. Viewed from another aspect, at the initial stage of the activity of practice the subject and the object exist as opposites; in the process of practice aim is converted into object with the assistance of a certain material means and becomes result, the opposition between the subject and the object thus disappears, and result emerges as the unity of the subjective desire and the objective outcome. Hegel said: the realization of an aim "negates the direct subjectivity reflected in this aim on the one hand and, on the other hand, also negates the direct objectivity reflected in the means or assumed object" (Micrologic," p 391). This idea on Hegel's part is acceptable. Since the result of a practice proves on the one hand the unity of the subject and the object, it is impossible for man to engage in the activity of practice without such unity; but on the other hand it also proves the relativity of this kind of unity, and this kind of relativity just serves to turn result into the motive force for the continued development of practice and perception.

A result is not only related to an aim but also associated with the characteristics of the means and the object involved. Therefore, the movement from an aim to a result reflects a complex and complicated situation. A concrete analysis of the movement of the contradiction between aim and result has an important meaning to people's activity of practice and activity of perception.

In the course of practice, there are generally the following three situations concerning the movement from aim to result:

First, the aim of an action is expected, but the result actually coming from that action is not always expected; a sharp contradiction is thus reflected between aim and result. This situation obtains either because the theoretical knowledge according to which the subject sets forth the aim does not tally with the nature of the laws pertaining to the object, or because [the subject] happens to have deviated from actuality and hence misjudged the situation on hand, whereby the possibility contained in the aim is no longer a realistic possibility but merely false possibility. The result of practice thus exposes the contradiction between the theoretical system and the realistic object. Under such circumstances, result often emerges as a "positive" aspect, demanding the subject to change the existing system of knowledge with the new perception, to negate the original aim and assumption, and to establish a new aim and assumption with realistic possibilities. This situation is bound to lead to the birth of a new theoretical system and thereby confine the old theory in definite limits.

Second, although some aims will not run into contradiction with objective laws, because of a lack of necessary means to realize a given aim in this category, a situation may also emerge wherein the result does not correspond to the aim. Here, because of this lack of a material condition, what is contained in the aim is but an abstract possibility; such an abstract possibility is the incipient form of an actual possibility, and along with the development of objective realities this abstract possibility is likely to transform itself in the direction of an actual possibility. Engels once took the realization of public ownership as an example to explain this question: "Ever since the mode of capitalist production emerged in history, possession of all means of production by society as a future ideal has often faintly appeared in the minds of individual personalities and whole schools of thought. But this kind of possession is possible or can become an inevitability in history only when material conditions for its realization are present" ("Selected Works of Marx and Engels," vol 3, p 321). This situation explains that in the process of the realization of aims, we must also be good at differentiating various possibilities contained in such aims under different material conditions, e. g., differentiating their realistic possibilities and abstract possibilities. If we disregard historical conditions, and take an abstract possibility for a realistic possibility, then we are bound to create danger in our practice. Of course, we must see that, under this situation, the contradiction between aim and result is temporary; once conditions are ripe, an aim is likely to be set forth anew and once again become the motive of the subject's action.

Third, the subject's aim tallies with the nature of the laws pertaining to the object and also possesses the means to attain that aim; thus in the process of practice, that aim "discards" itself with the assistance of that means and becomes concretely embodied in the result. Even in such a situation, the unity of aim and result is also relative; that is to say, the two still have contradiction between them, and such contradiction is not only reflected in form, as between subjectivity and objectivity, but also in substance in terms of concrete contents. Such a situation is determined by the nature of the aim, the means, and the object in practice.

The activity of the subject's transforming of the object is under the direct command of aim, and an aim is always established on the basis of a certain perception and takes knowledge as its core. A concrete aim always contains some knowledge such as the following: knowledge about the nature of the laws pertaining to the object; knowledge about the means of practice applied to the object; knowledge about the functioning mode of the subject and the object; etc. Aim is a reflection of future things appearing in reality, an assumption and expectation of the things subjectively striven for, and these things do not, as yet, exist in reality. Therefore, even the fullest theoretical knowledge (leaving aside experience and perception) cannot possibly thoroughly perceive all the dispositions of the object and means of practice, but only achieve a relative accord. When the subject proceeds beyond the mental realm and enters the process of practice, the relativity of that subject's perception of the object and means of practice becomes exposed. The various kinds of material means people create in the process of practice do not necessarily immediately reflect their diversity in quality; when they interact with different objects in different systems, their functions are also different. And in practice too, unanticipated new dispositions of an object also emerge and interact with the means of practice; these new dispositions and functions directly affect the results of practice, and unexpected new situations and new elements also emerge in these results. This kind of new elements have their objective basis in the means and the object; it is only because of the previous partiality of the processes of practice and perception that the subject did not yet recognize them. Comrade Mao Zedong pointed out: "Generally speaking, whether in the practice of changing nature or of changing society, men's original ideas, theories, plans or programs are seldom realized without any alteration. This is because people engaged in changing reality are usually subject to numerous limitations; they are limited not only by existing scientific and technological conditions but also by the development of the objective process itself and the degree to which this process has become manifest (the aspects and the essence of the objective process have not yet been fully revealed). In such a situation, ideas, theories, plans or programs are usually altered partially and sometimes even wholly, because of the discovery of unforeseen circumstances in the course of practice" ("Selected Works of Mao Zedong," vol 1, p 270).

The contradiction between the aims revealed in the course of practice and the new elements contained in the results becomes the motive force for the development of theoretical perception. This kind of new elements often become the objects of perception, and they constitute the urgent task that need to be solved in theoretical research; the entire history of man's perception of microscopic objects in the microscopic realm has proved this point.

Perception of the new dispositions reflected in the object expands the purview of men; people very naturally unite the new characteristics of the object with their own interests, leading to the shaping of new needs which further encourage them to carry out new practices. Therefore, the contradiction between aims and results likewise constitutes a motive force for the promotion of new practices. This motive force is contained in the organic system of practice itself; it propels the incentive for practice to develop vigorously so that it will never stops at the same level.

Lenin said: "The result of action is a test of subjective perception and criterion for the really existent objectivity" ("Complete Works of Lenin," vol 38, p 235). Here Lenin stressed the meaning of cognition of results of practice as the objective criteria for testing theory. Examined from the angle of this theory of cognition, the movement from aim to result in practice is at the same time the theory-testing process. Generally speaking, in the course of practice "if preconceived aims can be realized or, that is, if preconceived ideas, theories, plans or programs can be turned into reality or largely into reality in the same course of practice," then that would prove the correctness of those theories.

But, the complicated situation [of the movement] from aim to result tells us that, when we take the result of action as the criterion for testing theory, we must carry out concrete analysis from the dialectical point of view. An aim (here temporarily regarded as equivalent to theory although, in reality, the two are different from each other) can only get itself realized by interacting with the object according to a specific mode with the assistance of some material means. Here we can clearly see that the structure of an aim itself includes at least the three factors we have already mentioned above: perception of the nature of the laws pertaining to the realistic object; perception of the means for realizing what is foreseen; and perception of the mode according to which the subject and the object interact with each other. And a result has to do precisely with the subject acting directly in accordance with its perception in these three aspects. A problem occurring in whichever aspect is to directly affect the result of practice. Therefore, in the process of testing theory by practice, one cannot depart from logical analysis for a single moment; a practice excluding logical analysis can only be based on the utilitarian view of practice, which can neither help perceive truth, nor test truth. When an aim fails in the course of practice, the most important thing for a logical analysis of the result of practice is to find the direct cause for the failures; this would avoid projecting a part to the whole, and hence preclude the possibility of negating the whole chain because of a problem in a single link. This point is especially important in the testing of a complicated perception.

Correct Reflection of Results of Practice

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 6, 25 Jun 80
pp 34-56

[Article by Meng Xianzhong [1322 2009 1813], Wang Yanbin [3769 3601 3453], Liu Renke [0491 0432 0344], Wang Yitang [3769 5030 1016], and Hu Hao [5170 4110]: "It Is Necessary to Reflect Results of Practice Correctly"]

[Text] During the 2 years since the discussion of the question on the criterion for testing truth was launched, the principle of taking practice as the only criterion for testing truth has come to be accepted by more and more people. But to actually and not just orally uphold this criterion is a rather complicated task and requires the solution of a series of questions. One of such questions is to objectively and correctly reflect the results of practice.

Objectively and correctly reflecting the results of practice does not constitute a question in the eyes of certain people, because the results of practice are clearly there for all to see. But this question is not so simple. True, the results of practice are objective, and there can be only one correct reflection of the results of the same practice. Yet, people's reflection of the results of practice may not always be correct. People are often likely to derive several different, or even sharply contradictory perceptions from results of the same practice.

Before the armed uprising of the Russian people in December 1905, Lenin was of the opinion that armed uprising was the most important means for overthrowing the Tsarist system and winning the democratic republican system. The result of practice was that this uprising ended in defeat. How were people to correctly treat this result of practice? Prihanov maintained that the result of practice proved that the path of violent revolution was erroneous, saying: "It was never necessary to take up arms." But Lenin replied: "Exactly to the contrary, it was always necessary to take up arms more resolutely, more courageously, and more actively; it should have been explained to the masses that it would simply not do to rely entirely on peaceful strikes and it was necessary to carry out armed struggles heroically, dauntlessly, and relentlessly" ("Selected Works of Lenin," vol 1, p 666). Of the same result of practice, the reflections of Prihanov and Lenin were not only different but exactly opposite to each other.
